The first important place to fall into the hands of the Italians in their months of fighting is Rovereto, seven miles over the border. This is the chief industrial town of the Tyrol and has about 16,000 inhabitants, mostly Italians. It lies in the valley of the Adige River on the railroad leading to Trent, fifteen miles further into the interior, which is the chief objective of the Italians in this direction. The Austrian Government offered in the spring to cede Rovereto and adjacent part of the Trentino to Italy if she would remain neutral, but the Italians had made up their minds that they could obtain more by fighting than by peace.

The city was evacuated by the Austrians on August 2 after the forts protecting it were blown up. According to the Rome report the Austrians before leaving demolished all the historic Italian monuments and set fire to the Italian homes.

Rovereto is about ten miles straight east of Riva at the head of Lake Garda, and since the Italians are even closer to Riva on the south and west they should be able soon to gain command of the whole lake, all of which except the head has always been within Italian territory.

Besides advancing toward Trent from the south by way of Rovereto the Italians have been making progress in their approach from the east thru the Sugana valley. Here they hold the town of Borgo, thirty-three miles by rail from Trent, tho only seventeen as the aeroplane flies. In this vicinity the Italian positions were endangered by the Austrian artillery on Cima Cista, 6500 feet high. But on August 28 the Italian troops scaled the peak and captured the position.

For the National Defense

As soon as it was known definitely that the German crisis had been averted, President Wilson authorized the publication of two letters, written on July 21 and calling on Secretaries Garrison and Daniels to prepare programs of national defense which may be submitted to Congress at its next session. The letter to Secretary Garrison reads as follows:

> My Dear Mr. Secretary: I have been giving scarcely less thought than you yourself have to the question of adequate preparation for national defense, and I am anxious, as you know, to incorporate in my next message to Congress a program regarding the development and equipment of the army and a proper training of our citizens to arms which, while in every way consistent with our traditions and our national policy, will be of such a character as to commend itself to every patriotic and practical mind.
>
> I know that you have been much in conference with your professional associates in the department, and that you have yourself come to some very definite conclusions on these exceedingly important matters. I shall be away from Washington for a few days, but I would be very much obliged if you would be kind enough to prepare for me a program, with estimates of what you and the responsible soldiers in your command think the country ought to undertake to do. I should like to discuss this program with you at as early a time as it can be made ready. Whether we can prepare

ably propose the whole of it to the Congress immediately or not we can determine when we have studied it. The important thing now is to know, and to know fully, what we need. Congress will certainly welcome such advice and follow it to the limit of its opportunity.

To Secretary Daniels the President wrote in the same strain, asking him to "get the best minds in the department to work upon the subject; I mean the men who have been most directly in contact with actual modern conditions, who have most thoroly comprehended the altered conditions of naval warfare, and who best comprehend what the navy must be in the future in order to stand upon an equality with the most efficient and most practically serviceable." The program, he continued, should be "planned for a consistent and progressive development of this great defensive arm of the nation."

The Army War College and the General Board of the Navy have been at work for some time on such programs. The Navy Department has made plans for a National Naval Reserve composed of retired officers and men, the Coast Guard, and volunteer civilians who will receive special training for service. A third training camp for business men is to be held at Plattsburg, New York, from September 8 to October 6, and 600 patrolmen from New York City have asked for leave to attend it.

Eight-Hour Day Spreading

The Standard Oil Company of New Jersey, the parent and strongest company of the group into which the Standard Oil Company was divided by court decree in 1911, has decided to adopt the eight-hour day. About 7500 men in the plants at Bayonne, Parkersburg, West Virginia, and Baltimore are directly affected, but it is considered probable that the thirty-three subsidiary companies will take similar action.

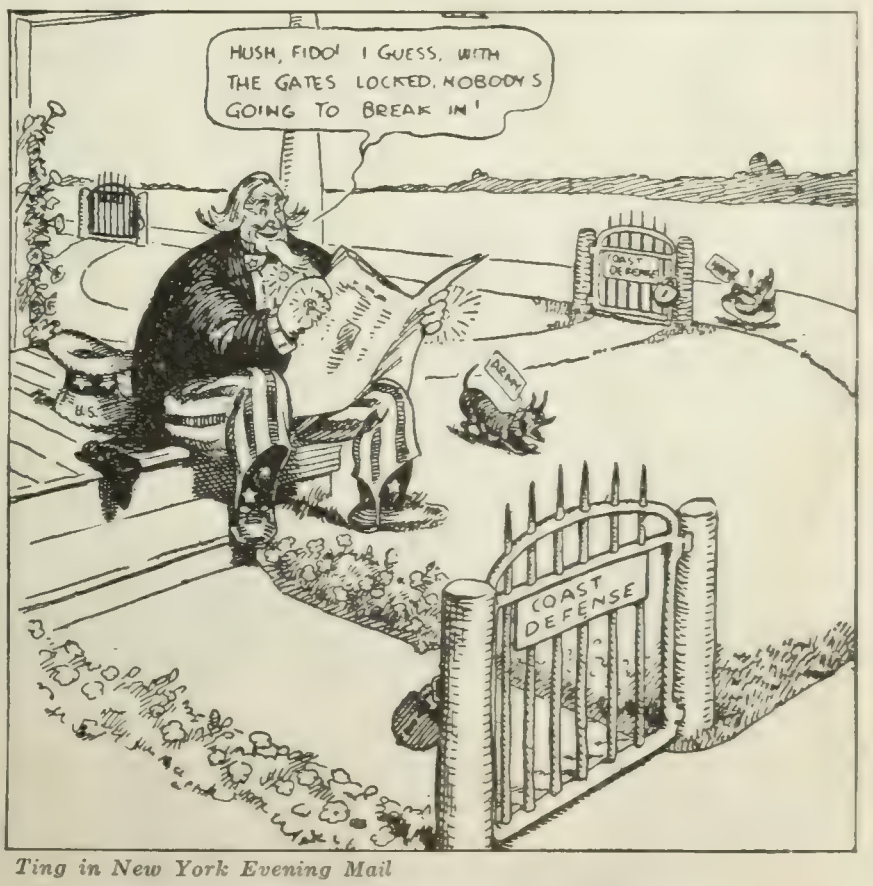
While the company claims that its action is entirely voluntary and in accordance with its policy "to keep its wages and working conditions equal to or in advance of the wages and working conditions of other men doing a similar class of work," it is significant that one of the recent reports of the Federal Industrial Relations Commission made a scathing attack on the company and on the Rockefeller family, charging that its policy was to exploit labor by paying unjustly low wages while making enormous profits. The strike at the Bayonne refineries in July, in which two men were killed, resulted in a wage increase, but no shortening of hours.

No Progress in Mexico

At both ends of the Texas-Mexico frontier the frequent border raids have been continued. Small parties of Mexicans slip over the border, attack ranches and burn bridges and other outlying works, and seek to take refuge in the mountains or escape to their own soil. On August 30 five such bandits were killed by a Texas posse in a running fight in a canyon near Sierra Bianca, about 100 miles southeast of El Paso. One of them proved to be General Pascual Orozco, once a Madero supporter and then a prominent Huerta general. He was arrested with Huerta last June and escaped while on bond. His death added to the uneasiness all along the border and a band of armed Mexicans crost the line to avenge him. Echoes of the preposterous "San Diego Plan" to seize Texan territory for Mexico were evident in the incendiary speeches of Mexican agitators who were arrested in San Antonio for inciting street crowds to kill the Gringoes. Seditious newspapers are being seized at the border by customs agents. In the vicinity of Brownsville two Americans were kidnapped and murdered. At the request of Major General Funston, commanding the patrol, two more regiments of infantry and one of cavalry were sent from Galveston to aid in suppressing these outrages.

On September 4 Mexicans fired across the border on an American army aeroplane reconnoitering over Brownsville and on a squad of soldiers guarding the Brownsville electric light plant. There were no casualties.

Carranza had made no reply to the American note. Washington was confident that he would not consent to the proposed conference, but the State Department replied to his inquiry as to the authority of the note, informing him that it was not private but official on the part of all the signatories. In an interview on August 31 Carranza reiterated his statement that "under no consideration" would he "permit interference in the affairs of Mexico." He was pleased by the unanimity of his generals in making their replies to the note conditional on his. He expected that the revolution would be over within six months, and claimed that his government was moving to supply the food needed by the people. Maximum prices for foodstuffs have been fixed in Mexico City.



American refugees from Mexico City who arrived in New York on the 29th repeated the familiar stories of suffering and starvation in the capital. Broken railway connections are holding up food supplies at Zacatecas and, in the north, at Piedras Negras. Carranza garrisons were said to be revolting in the state of Tabasco, and Villa was attacking Monterey in Nuevo Leon.

General Hugh L. Scott, sent to confer with Villa, reported to the President on August 31. He declared that Villa was ready to eliminate himself and sincerely desired peace. Emiliano Zapata has accepted the proposal made by the American powers, which has now been delivered to all the leaders for whom it was intended. The time limit for replies is September 10.

ELIHU ROOT, CHAIRMAN AND LEADER OF THE NEW YORK CONSTITUTIONAL CONVENTION

A PHOTOGRAPH TAKEN AT ALBANY WHERE SENATOR ROOT IS PRESIDING OVER THE CONVENTION OF WAR SEVENTY YEARS OLD LAST FEBRUARY

ELIHU ROOT—PROGRESSIVE

BY FREDERICK M. DAVENPORT

At a special election on April 7, 1914, the voters of New York, by a small majority, decided in favor of a revision of the State Constitution, and delegates to a Constitutional Convention were elected in November, 116 of them being Republican, 52 Democrats. The convention met in April, with Elihu Root as permanent chairman, and its work is now nearly done. The new Constitution will be submitted to the voters in November. Mr. Davenport has been at the head of the department of economics and political science at Hamilton College since 1904. He was a state senator during Hughes' governorship and was the Progressive candidate for governor in 1914.—THE EDITOR.

THERE has been genuine surprize and satisfaction over the change in the atmosphere of the New York State Constitutional Convention under the influence of the personality of Elihu Root. The members of the convention were elected last year under circumstances which gave little warrant that much of importance to the state and the country would come out of their deliberations. They were elected under the pall of the national reaction against progress and reform which extended almost to the Pacific coast. It was well known to those on the inside that the delegates, not universally but generally, were of the handpicked variety, most of them estimable men but known in their individual districts as having the point of view of the reigning political machine, and as dependable in the sense that they could be counted on to block any radical change. In fact there were almost no men of radical or even of recognized progressive tendency in the convention. There were a few leaders of liberal mind, such as Henry L. Stimson and Frederick C. Tanner, and John Lord O'Brian, and others of that stamp. But not many well informed persons prophesied, when the chosen lists were perused after the election, that much of importance to the eleven millions of people in the state would follow from the action of the convention.

For some time after the coming together of the delegates in January, reactionary proposals of the anti-social-welfare sort were introduced and prest by William Barnes of Albany and those leaders who agreed with them. There was talk of tearing down the structure of direct nominations, so painfully erected since the days of Governor Hughes, and as yet so incomplete. The loosening completely of the laboriously developed legal control over political parties was advanced as a proper program and debated as desirable and patriotic. It began to look as tho the Bourbon political dynasty, with whom the people of New York State have so long been contesting for supremacy, were about to write the fundamental law in phrases of reaction for a generation to follow.

But slowly a new and different spirit began to permeate the one hundred and sixty-five men who sat day by day in the Assembly Chamber in the State Capitol. It became increasingly evident that a process of mental and moral education was at work which was altering the point of view of a large number of very excellent citizens in the convention who all their lives had more or less followed the system of things in the belief that it could not be changed.

On the afternoon of Monday, the thirtieth of August, it was clearly revealed to the state and to the country what that influence was. It was the personality of Elihu Root. In a speech which has been characterized in all parts of the United States as one of the greatest of his career, he so quietly and powerfully wrought upon the mind and the conscience of the convention that, with opposition so slight as to be negligible, a revolutionary plan of reorganization of the state government was adopted. In sentences that were charged with the fervor of conviction and the vigor of experience, in words out of which all harshness was distilled, but which glowed with the passion of truth, he laid bare the whole system of reaction which for forty years has defied the public will in the commonwealth of New York and has made genuine free government in that state, as in so many commonwealths of the Union, a delusion and a sham.

And then he proceeded to show how corrupt and inefficient this rule had become, that it was a government of patronage, for patronage and by patronage, that the halls of the Capitol and the counties of the state swarmed with men who were on the payroll and were receiving money from the treasury of the state without honest service; that there had been created more than one hundred and fifty commissions and agencies of state government, big and little, "lying around loose, accountable to nobody, spending all the money they can get, violating every principle of economy, of efficiency and of the proper transaction of business."

He showed that this system found its opportunity in the widespread division of powers by which the Governor elected by the people was denied real responsibility and influence.

If the people ratify the work of the convention, the transformation in the form of government of the State of New York will be profound. The one hundred and fifty or more agencies and commissions are reorganized and coördinated into seventeen civil departments. The people's chief executive is made responsible and armed with power. Except in the case of four commissions, the confirmation of the Senate is no longer required in the appointment of administrative officials. This is the most vital feature of the reorganization. Hitherto the great professional politicians standing behind the members of the Senate have used the Senate as a club to harass the Governor and force appointments and bargains which the chief executive would not make of his own free will. And yet the Governor was responsible for the administration. The Senate was not responsible. It has been an altogether vicious and intolerable system. Under the new plan it will largely be swept away.

The convention also decided to put into operation the short ballot principle and voted to cut down the number of elected state officials from seven to four. This does not go as far as Mr. Root and those who think with him would like. In the committee, before the moral power of the Root speech was felt by the convention and the state, it appears to have been necessary to compromise with certain powerful leaders of the jobholders and agents of the machine. The Comptroller, who is a haven of patronage, is retained as an elective officer, and so is the Attorney General. But these defects cannot cloud the certainty that a very great advance has been made toward a more responsible and efficient government than New York has ever known.

It must not be forgotten also that there has been adopted an executive budget plan by which the Governor controls the preparation of the scheme of annual expenditure, and which checks unmistakably the torrent of waste and extravagance and "honest graft" which has been undermining the financial foundations and pushing the state on toward bankruptcy or confiscation of property thru unlimited taxation.

The speech of Mr Root and the radical change in the New York plan of government have a clearly national significance. In most of the commonwealths of the country the chief obstacle to progress and to free and efficient government is the unintelligent chaos and irresponsible machine leadership under the roof of the state capitols. State governments are in a condition of as low vitality as our city governments were twenty years ago. Mr. Root and the Constitutional Convention of New York have laid the ax at the root of the tree, and their example is likely to be followed speedily in all the leading states of the Union.

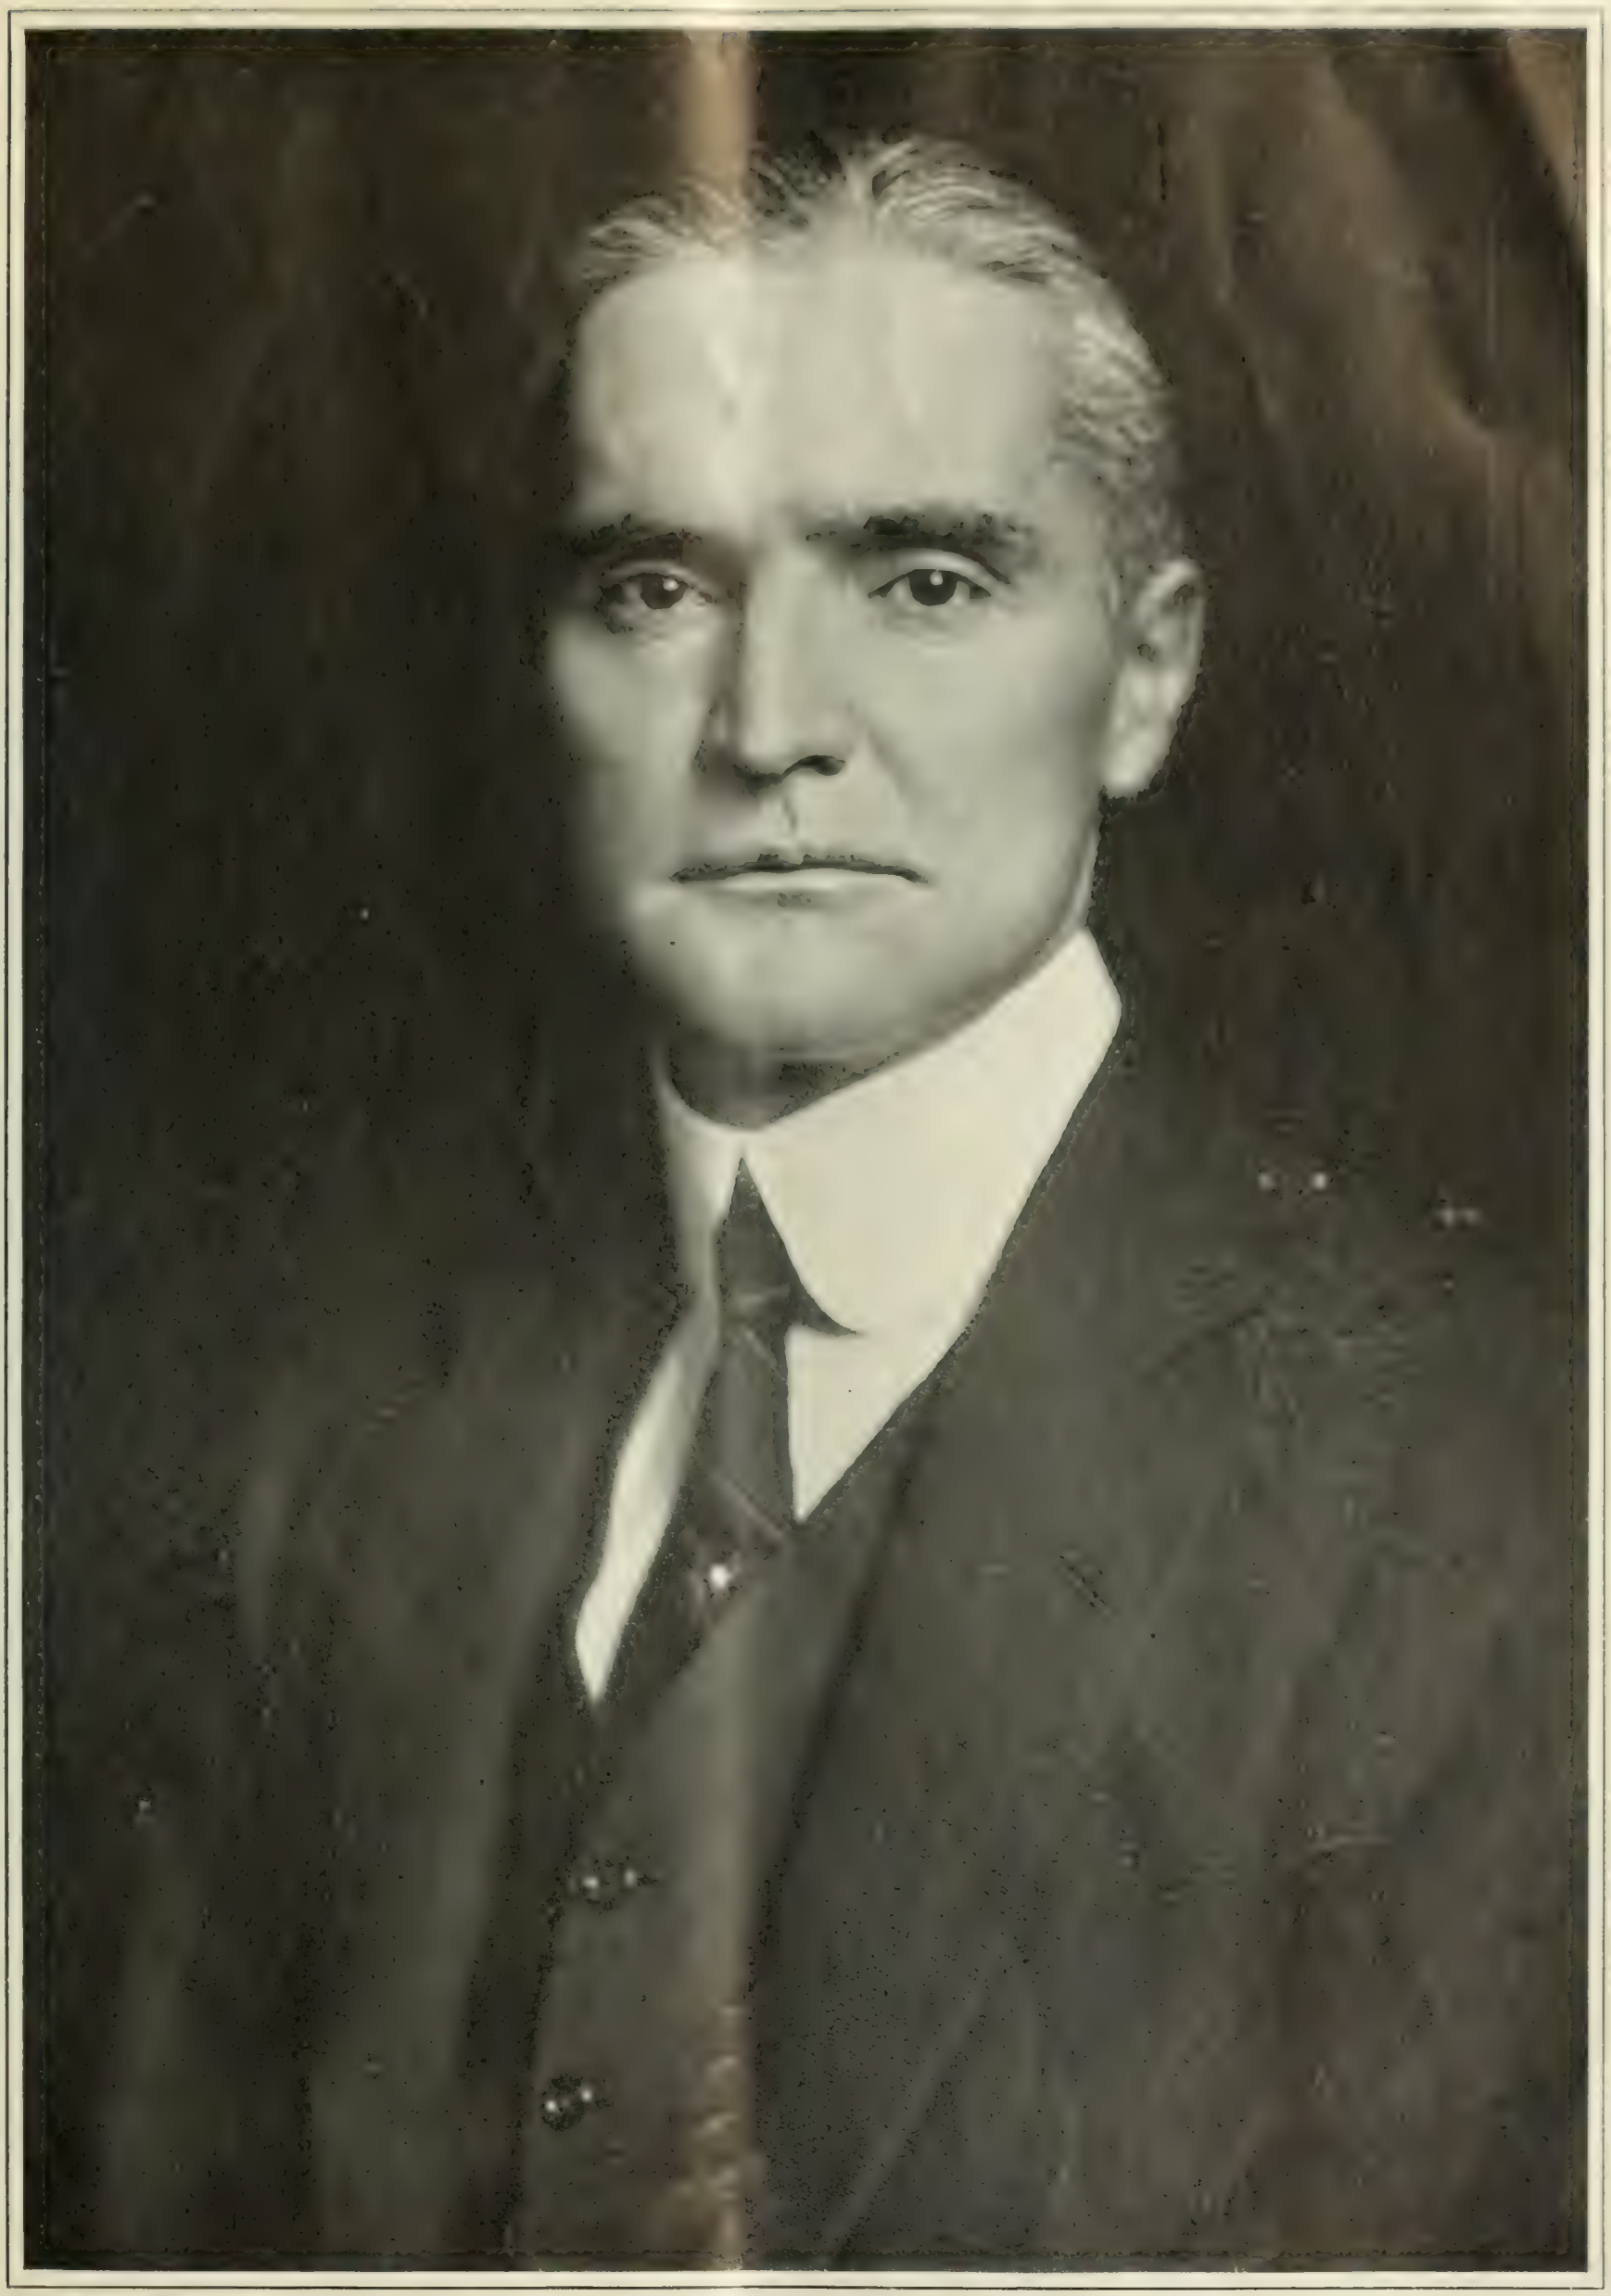
While there is no such thorogoing revision and radical advance as took place in the recent Constitutional Convention in Ohio, the remarkable thing about New York is that so much more is accomplished than anybody imagined possible in the rather deprest state of the public mind with respect to progress and reform thruout the Union. In New York the event has been made notable not only by the extraordinary speech of Senator Root, but by the moral conviction with which he has gone about his work, and the extraordinary sympathy with the new age and with the opinions of the young men of his party and of the nation which this statesman of seventy years has shown in this convention.

Hamilton College

THE NEW COUNSELOR OF STATE

FRANK LYON POLK, PROMOTED FROM A NEW YORK JOB TO A NATIONAL ONE

THE office of Counselor of the Department of State was established at the beginning of the present administration. It was suggested, we believe, by Elihu Root, who saw the need of having a sort of second Secretary in the department to share the responsibilities of office with the Secretary and act for him in his absence.



The first incumbent was Professor John Bassett Moore, generally considered the most profound and learned international lawyer in the United States. When he resigned during the Mexican controversy for reasons not stated but commonly understood, Mr. Robert Lansing succeeded him. Mr. Bryan was to supply the prestige, Mr. Lansing the technical knowledge. But with Mr. Bryan's return from the aristocracy of diplomacy to the democracy of the Chautauquas and Mr. Lansing's promotion to the premiership, the office of Counselor was again vacant.

The President last week picked out Frank Lyon Polk, of New York, for the job. Who is Polk? To go back to his ancestors, as Oliver Wendell Holmes said must be done with all great men, Frank Polk is a grandson of Leonidas Polk, the famous "fighting bishop" of Tennessee and a grandnephew of President James K. Polk. On both sides he is descended from members of the South's aristocracy. His mother was a Lyon from Alabama. His father, William M. Polk, was born in Tennessee and is now a distinguished physician of this city. Frank was born in New York, September 13, 1871, and thus being a Northerner of Southern descent he enjoys what some have averred to be the prime qualification for high appointment under the present administration.

At Yale Frank Polk made fourth division in his studies—another proof that academic rank does not always presage success in after life. But he had acquired the faculty of making friends and left New Haven one of the most popular men in the class of 1894—a class which, we are informed by one of its members, is undoubtedly the best that has graduated from Yale in recent years. After a course at the Columbia Law School he joined the renowned law firm of Evarts, Choate & Beamen, and at once began the practise of his profession, taking as much time as he could spare to participate in the political and social life of the city. He enlisted in Troop A, New York Volunteer Cavalry and saw service in Porto Rico. He joined the Democratic party and opposed Tammany whenever the issue made it necessary. Tho a strong party man, he has never hesitated to fight the bosses. He has always felt one can accomplish more as a "stay-inner" than as a "come-outer." It was not long before his abilities began to be noticed. Mayor McClellan appointed him a member of the Board of Education. Mayor Gaynor called him to head the Civil Service Commission, where he served with distinction and ability. His first really important political post, however, came when Mayor Mitchel appointed him last February Corporation Counsel of the City of New York. Tho the appointment was in no sense the payment of a political debt, it is a fact that Mr. Polk had more to do with the starting of the Mitchel mayoralty boom than any one else. When the independent citizens' "Committee of 107" was formed to lead the forces against Tammany at the last mayoralty campaign, Mr. Mitchel was hardly considered seriously—the two most prominent candidates being District Attorney Whitman and George McAneny, President of the Borough of Manhattan. But Mr Polk knew the ability and caliber of Mitchel and headed a delegation in his behalf that appeared before the Committee of 107. That put Mitchel in the running. Mr. Polk was the treasurer of the Mitchel organization during the campaign and such a friendship grew up between the two men that Mitchel made Polk a member of his remarkable cabinet of young men which have already given New York the best government it has ever had. So it happened that Mitchel made Polk politically and Polk made Mitchel politically. Mr. Polk as Corporation Counsel in the short time he has served the city has conducted his office with ability, efficiency, good judgment and tact. When the President was looking about for a man to supplement Mr. Lansing, he decided it was these qualities he desired in the new appointee rather than eminence in international law.

Tho he is still a very young man, as youth is reckoned these days, Mr. Polk's hair is turning a bit gray. His agreeable personality, democratic manners and his power to master any subject he sets his mind to, make it all but certain that if he cares to rise even higher in domestic statesmanship or foreign diplomacy, the doors will open for him. And his rise is all the more probable because he never seeks or has sought office.

Mr. Polk married in 1908 Elizabeth S. Potter, of Philadelphia. They have four children. Tho domestic in their tastes, Mr. and Mrs. Polk are much sought after socially and their going to Washington will make a distinct addition to the brilliant social life there. A trustee of many charitable organizations, a prominent worker in the Episcopal Church, a rising member of his profession, and now second only to our foremost cabinet officer, Frank Polk has an opportunity such as have few men of his age to serve his day and generation.

MY LADY SOURWOOD

(OXYDENDRUM ARBOREUM)

BY MARION PELTON GUILD

Here in our mountains you shall see
A piquant, delicate little tree,
Assuming but a modest place,
Too wholly fine to flaunt her grace;
Yet I suspect her, even in that,
A typical aristocrat,
Among her sturdier sisterhood
The peerless Lady of the Wood.

Her shape is slender, curving, lithe;
To gay Sir Breeze she courtesies blithe;
Her satin raiment's tender sheen
Was never matched by daintiest queen;
And on her nodding tresses set
She wears a maiden coronet
Of blossom-sprays, all sweet and fair,
Like valley-lilies lifted there.

Thus she at Summer's court. But when
Great Autumn smites the land again
With tingling prophecies of wo,
Of failing life and shrouding snow,
Then like some exquisite *marquise*
Before the Terror, brave she sees
Her noble comrades meet the call,
And stands the proudest of them all.

The indignant blood within her burns;
To one pure crimson flush she turns,
So beautiful, the foe must pause
And grieve to work his bitter laws;
And lo! on dauntless breast and brow
Pale blossoms linger even now,
Witness of youth that mocks the frost
And triumphs, tho the battle's lost!

TEN YEARS OF COLLEGE PENSIONS

BY HENRY S. PRITCHETT

PRESIDENT OF THE CARNEGIE FOUNDATION

THE Carnegie Foundation for the Advancement of Teaching completed its first ten years of history in April of the present year. Its purpose is set forth in Mr. Carnegie's letter of gift and in the charter framed to express the intent of this letter. Mr. Carnegie had in mind to provide pensions upon some equitable plan for aged teachers in colleges and universities which were free of denominational tests, and to promote by whatsoever means were possible the interests of the profession of teaching. The details as to how these objects were to be accomplished he left to the judgment of his board of trustees, including such men as Charles W. Eliot of Harvard, Woodrow Wilson of Princeton, Nicholas Murray Butler of Columbia, Arthur T. Hadley of Yale and Jacob G. Schurman of Cornell.

THE PENSION PLAN

This board decided that the interests of teachers would in the long run be best served by establishing a fairly generous system of pensions in a limited number of representative colleges rather than by voting pensions to individual teachers as they might apply. Much thought was expended in the effort to establish a system of pensions in such manner as not to offend the sense of independence of the teacher or to place him in the attitude of a dependent. Pensions in England and in the United States have not yet been accepted as a regular provision of the social order. There has always existed in our civilization a widespread feeling that the acceptance of a pension to which one had contributed nothing was not in keeping with that sense of independence for which the great professions have always stood. This feeling was voiced by Dr. Johnson in the first edition of his famous Dictionary of the English Language in his definition of the words "pension" and "pensioner." He defines the former as "an allowance made to any one without an equivalent. In England it is generally understood to mean pay given to a state hireling for treason to his country"; while "pensioner" is defined as "one who is supported by an allowance paid at the will of another; a dependent." These definitions were the source of no small embarrassment to the good doctor himself a few years later when upon the solicitation of his friends George III offered him an annual pension of three hundred pounds. After some hesitation, however, he accepted and lived contentedly upon the pension to the end of his life notwithstanding the insinuations made from time to time by the critics that his political views had been warped by its acceptance. Dr. Johnson's definition reflects a feeling still widespread in America and England which looks with some hesitation, if not suspicion, upon a pension provided without contributory effort, and which also views with a critical eye the effect which the acceptance of such a pension may have upon the views and opinions of the beneficiary.

Some such misgivings as these were voiced by various critics concerning the original gift of Mr. Carnegie, and the trustees in the formation of their rules sought to meet them. For these reasons they decided to pay and administer the pensions thru the colleges themselves so that a professor in an associated institution receives his retiring allowance thru his college as he receives his salary. He does not know the Foundation in the transaction. In every way the trustees have sought to place no limitations upon the freedom either of the colleges or of the teachers.

HOW IT IS WORKING

The pension system as maintained at the end of ten years is available to teachers at the minimum age of sixty-five or to those who become disabled after a period of twenty-five years of service as a professor. The pension amounts approximately to sixty per cent of the active pay during the last five years, this proportion being larger for small salaries than for large ones. The widow of such a teacher receives the half of this pension during her lifetime. At the end of the last year the privileges of the Foundation had been extended to seventy-three institutions which include in their faculties some five thousand teachers. These institutions are representative not only in the geographic sense but in the educational sense as well, including small colleges, larger colleges, moderate sized universities and a group

of the strongest American universities. At the end of the last year two hundred and fifty-nine teachers and seventy-six widows of teachers from these associated institutions were in the receipt of pensions. The total annual cost of these amounted to $550,000, the average pension being approximately $1600. In addition to these pensions in the seventy-three associated institutions about one hundred teachers and widows of teachers in institutions not upon this list are receiving pensions which have been conferred upon them as individuals.

The gift which Mr. Carnegie has made to American teachers thru the pension system has been accepted by them in a most friendly spirit. Whatever criticism has been made by teachers has had to do, and very properly, not with the desire and purpose of Mr. Carnegie, but with the methods of administration of the trustees. One cannot look over the record of the millions of dollars paid out during these ten years without realizing that its expenditure has brought to hundreds of teachers a freedom from anxiety, and in many cases a pecuniary relief of the most grateful sort. Few situations are more trying in our social order than that of the worn-out college teacher who, having given himself generously to the service of education, finds himself in old age dependent upon the charity of friends or of relatives. To such a one the relief afforded by a pension granted impersonally upon fixed rules thru his college is a very human and a very grateful service. The widow of a teacher in a small college in the Middle West in a recent letter to the Foundation voiced the feeling of the teacher as well as it can be exprest. Her husband had been for forty years a professor. His salary had never exceeded $1200, his pension amounted to $1000, and under the rules the pension of the widow was $500. In acknowledging the receipt of the first monthly payment she wrote:

> You cannot perhaps understand how much this small income means to me, but with my little home it means all the difference between dependence and independence. When I think of this I cannot help saying, God bless Andrew Carnegie.

QUESTIONS OF DEVELOPMENT

The trustees realize at the end of ten years of administration that they have made but a beginning in the study of the real problems of teachers' pensions. The fundamental questions which arise in the establishment of the pension system still remain to be discussed and decided. Is it to the interest of the college teacher that he should receive a pension out of hand without contribution on his part? If so, who ought to pay it? Ought such a pension to be supplemented by an annuity contributed by himself? What is the effect both upon the college and upon the teacher of a free system of pensions? These questions touch the very life and usefulness of the college and of the teacher, and altho much has been written about the actuarial problems of the pension system, little has been said as to the fundamental philosophy of teachers' pensions. The trustees of the Foundation with a larger experience hope to contribute to the solution of these questions, and to offer in the end a system of pensions general in its character and capable of application to all colleges and universities, which shall take into account not only financial and actuarial considerations, but the larger problems of professional and institutional freedom, of personal independence and thrift and of the highest usefulness of the Foundation itself. Such a development will necessarily be spread over a long series of years, and will be so carried out as to do full justice to those interested in the present system of pensions.

THE FOUNDATION AS INVESTIGATOR

While the conduct of a pension system and the determination of its social and educational influence offers the first great problem of the Foundation, it does not include all of the work which it seeks to do. It is an educational agency as well. By its charter the Foundation is authorized to undertake studies and to prepare reports in education, and this side of its activities has in some respects enlisted a keener interest than the pension administration. In scrutinizing and reporting upon institutions of learning and upon educational problems the Foundation has been hampered by no limitations. It has sought to deal as an independent, but sympathetic agent with all colleges and universities whether supported by the state, by a religious body or by a private endowment. In its discussion of educational problems it has sought to present the view of the independent, disinterested student. In seeking men for this work it has conscientiously avoided the building up of a bureau, but has drawn men from the universities and colleges for the study of particular problems, leaving them to return at the end of their studies to their regular work. These studies have had greater or less influence in American education during the last ten years, an influence due in part at least to the point of view from which the studies have been made. In the United States, as perhaps in no other country, institutions of higher learning have an intensive relation toward their own problems and their own fortunes. Their alumni are organized into loyal supporters, whose patriotism is quite akin to that of the average citizen who is ready to support his country right or wrong. So highly developed are these tendencies in some states that sincere, outspoken criticism of one institution by teachers in another is impossible. The state university hesitates to criticize the denominational college which in its turn hesitates to criticize the work of the endowed college. The adherents of all are enlisted in a struggle for the material and educational advancement of their respective institutions. The function which the Carnegie Foundation and similar educational foundations have served in this situation has been that of the independent student, sympathetic but critical, having no constituency to serve, seeking to view the problems of education from the standpoint of the general good rather than from the standpoint of the fortunes of a particular institution.

The studies of the Foundation appear in the annual reports of its president and in a series of bulletins containing the more elaborate studies. Two of the latter have dealt with medical education, the first with medical education in the United States and Canada, and the second with medical education in Europe. Another bulletin has dealt with a detailed study of education in the state of Vermont, another with the case system of legal education, a report prepared by Professor Josef Redlich of the University of Vienna. Studies of the general system of legal education and of examination for the bar are now in progress, as are also studies of engineering education and of the training of teachers. These bulletins and reports are sent upon application and are to be found in most libraries.

THE ENDOWMENT AND ITS CONTROL

This side of the activities of the Foundation was some three years ago endowed by Mr. Carnegie by a gift of a million and a quarter dollars, yielding an annual income of $50,000. This endowment is distinct from that devoted to pensions and by the terms of the gift is used to sustain a Division of Educational Inquiry. The two funds amount at present to something over fifteen millions of dollars.

Altho founded by the gift of one man the Carnegie Foundation is an educational agency administered by

a board of trustees, representative of the widest interests of higher education. Just as an endowed college such a foundation is an agency of our democracy and like colleges and universities is controlled in the last analysis by public opinion. A number of such agencies have arisen in the United States in the last decade. It is characteristic of American civilization that private wealth should be devoted to such uses rather than to family aggrandizement. These agencies have sought neither to fetter nor to control education, but to scrutinize, to study and to report upon it. They will attain success and usefulness in proportion as they are administered in a just, sympathetic and broad-minded spirit.

New York City

THE LIVING TEXT BOOK

BY FREDERICK HOUK LAW, A.M., Ph.D.

HEAD OF THE DEPARTMENT OF ENGLISH, STUYVESANT HIGH SCHOOL, NEW YORK

THE best recitation I have heard this year was made by a third-year student in a class where an article from The Independent was under discussion. The class was all attention, eager to present varying interpretations of the author's thought, but the student who had the floor gave his own views in such clear, coherent and logical form and with the force of such earnest personality that he held even his competitors in the spell of his own interest. A visitor who was present said, "It is the most wonderful recitation I have ever heard." "Our use of the paper made our work this term more interesting than it would have been without it," writes a high school senior, who also adds, "The use of The Independent this term has afforded me a great deal of pleasure, outside of the fact that it has given me much to think and study about."

No essay contest ever held in our school awakened more general interest than the contest originated by The Independent. Forty-seven classes, representing nearly fifteen hundred boys, took part in the contest. Of these about nine hundred read The Independent every week. The series of articles on "The Hundred Years of Peace" gave admirable material for high school students. The subject was related in principle to the great world events of the day. The material gave opportunity for further reading or for personal interpretation. It called for a mastery of facts and a relation of facts to principles that led to excellent work on the part of the students. The inspirational, literary and ethical values of this essay work were remarkably great.

Such articles as those on "The Hundred Years of Peace" made the students think. But there were many other articles of widely different kinds that awakened thought. "Reading The Independent has broadened my knowledge of things in general," says a thoroly representative student. He and his fellows had read such different articles as "Fifty-four

CLASS REPRESENTATIVES RECEIVING THEIR WEEKLY QUOTA OF THE INDEPENDENT

FREDERICK HOUK LAW, WHO BELIEVES IN THE LIVING TEXT BOOK

Mr. Law is head of the Department of English at the Stuyvesant High School, New York City, where the weekly order for The Independent reached one thousand copies

Forty or Fight," "Food and Efficiency," and Mayor Mitchel's article on "What We Have Done for New York." In every case there was a tie of interest between the subject in hand and something in the life of the student.

From time to time there have appeared in The Independent articles that set admirable examples of what the student may attempt in school essays. Every editorial article is such an example. The spirit, the general tone, the ethical note—or perhaps the evidence of cultured personality back of the article—give the high school student an example that he may well imitate. Such an editorial as "A Vacation from Yourself" is a type of the editorial that appeals to high school students. Another and even more appealing is the editorial on "Our Oldest Contributor," in which the individual element is emphasized. The most charming example of the essay that The Independent has given is E. P. Powell's delightful article on "Hunting Strawberries." Every sentence of this happy-hearted, exuberant, boyish article with its author's kindly old face beaming all thru it, made deep appeal to the interest of our boys. Here a simple, homely subject had been touched with reflective personality and so it had a rare beauty. Such an essay helps the student to dignify the common and to try himself to let personality add charm to expression.

In much the same way our boys have found The Independent a pathway to enjoyment of poetry. A student writes, "I had reached the age of understanding, if I may call it such, and it was 'up to somebody' to present poetry to me in such a way as to make me like it. This The Independent has done." The poem "Edison" awakened immediate response. Such poems as the homely-hearted war poems by Wilfrid W. Gibson, and "Peace on the Kijikon," with its rough picturesqueness leading to calm thought, are within the interest lines of high school students. For the more deeply poetic such poems as "Beauty That Was" arouse interest. Curiously enough, in our boys' school, the poem called "Woman a-Mending" awakened much interest and provoked long discussions. For some reason students approach the poetry in The Independent with less suspicion than that in the text books.

Another service that The Independent has done us is its proper presentation of news. Even an adult may well be confused by the daily papers. The adolescent lacks the ability of the adult to select his reading and especially to judge news items found in the mass of ephemeral information given in the daily papers. One of our students exprest somewhat the same thought when he wrote, "The Independent has given me the news of the week in such clear form that it helped me to clear the muddle caused by the daily papers."

In general, it is quite certain that our students have greatly benefited by their use of The Independent. It has greatly broadened their outlook on life, making them realize more than before something of the common brotherhood of man that should bind all nations into one. It has quickened their ethical perceptions, and made the moral values of life stand out in proper perspective. It has given examples of literary form that lie within their interests and within their ability to comprehend and imitate. It has given new and valuable material for thought. It has made them more manly and more scholarly. And it is worthy of note that it has restored confidence in English as a living subject. The words of students may well close an article of this sort, for one has written: "All in all, The Independent is one of the most interesting weeklies that I have come across," and another says, "I can personally say with certainty that I have greatly benefited from the use of The Independent this term."

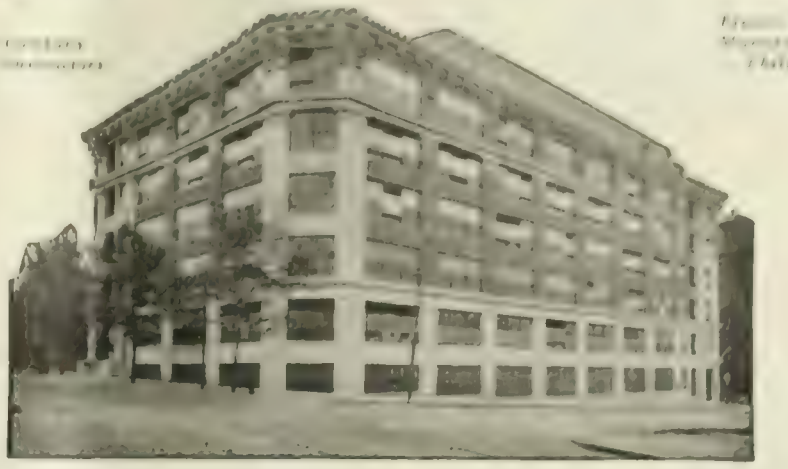
New York City

The New Books

WELLS HIMSELF

The charm of a masked ball is that it enables people to do and say what they please, in short to reveal themselves because their faces are concealed. Anonymity has the same effect, as many a name from "Currer Bell" to "Fiona McLeod" attests. So it is not surprizing that the book which purports to have been written by one "George Boon" and compiled by one "Reginald Bliss" shows Wellsian characteristics more pronounced than any of the volumes of which H. G. Wells owns authorship.

For one thing Wells obviously likes to start things better than to finish them. He is apt to run out of breath before he comes to the end of a novel, and if he gets his second wind it is likely to be some other kind of wind. In most of his books except the short stories the reader feels that the author is saying to himself, "I wish I had this thing off my hands so I could get at that new idea of mine."



Then, too, Wells is fond of putting a story inside of a story like the Arabian Nights and it often happens that the "flash-backs," to borrow a cinema phrase, are confusing. The framework of *The Modern Utopia* is an instance of this. It is sometimes hard to tell in this where we are or who is speaking.

Wells is inimitable in his ability to sketch a character in a few swift strokes, but he does not care much for the character afterward. He delights in taking such snapshots, but he hates to develop them. His mind is quick to change. He is liable to be disconcerted by a sudden vision of an opposing view. Sometimes in the middle of a sentence he will be seized with a doubt of what he is saying, and being an honest man, he leaves it in air rather than finish it after he has lost confidence. He may double on his track like a hunted fox within the compass of a single volume.

Finally, Wells is fond of satirizing his contemporaries, including his best friends and his former selves. He is given to mixing realistic description with recondite symbolism, desultory argumentation with extraneous personalities and other incongruous combinations of style and thought.

Now all these peculiarities, call them faults or merits as you like, are to be found intensified in *Boon Etc.* First Mr. Wells introduces Mr. Bliss, who then introduces Mr. Boon, a famous author deceased, and tells how they together invented a Mr. Hallery, who introduces a host of living writers, big and little, famous and unknown, at the World Conference on the Mind of the Race. There are some very clever caricatures,

LUPTON Daylighting & Ventilating Products

The Problem of Daylighting and Ventilating Has Been Reduced to an Exact Science

Progressive owners of Factories, Foundries, Power Houses, Modern Retail Stores, and those in charge of Educational Institutions, now realize the great importance of Daylighting and Ventilating in promoting efficiency and health.

Nowhere in the world has such perfection been attained as evidenced in the Lupton Counterbalanced and Counterweighted Sash and in the Pond Continuous Sash—Lupton Products.

The Lupton Service is extended to those who contemplate the erection of modern buildings, and in the Lupton Catalog No. 8 are many examples of the finest buildings as erected in various parts of the world, including such notable buildings as the

General Electric Co., Erie, Pa.
Willys-Overland Co., Toledo, Ohio
Deere & Company, East Moline, Ill.

Counterbalanced Sash

General Electric Co., Laboratory, Schenectady, N. Y.
Victor Talking Machine Co., Camden, N. J.
General Vehicle Co., Long Island City, N.Y.

Counterweighted Sash

General Electric Co., Erie, Pa.
Ford Motor Machine Shop, Detroit, Mich.
Union Tool Company. Los Angeles, Cal.
Central Moron Sugar Co., Havana, Cuba

Pond Continuous Sash

Mississippi River Power House, Keokuk, Iowa
Ford Motor Power House, Detroit, Mich.
Cleveland Electric Illuminating Co., Cleveland, Ohio

Lupton Steel Power House Sash

The above list is only a few of the many buildings illustrated in the Lupton Catalog

This comprehensive Book of Engravings mailed to any part of the world upon request.
All questions relative to Daylighting and Ventilating will be answered by experts.

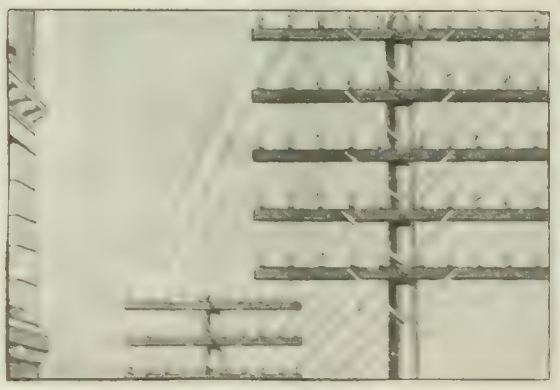
ENGLISH TEACHERS

"How to Use The Independent in the Teaching of English" is the name of a booklet prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend.

Send for this booklet. It is free.

THE INDEPENDENT
119 West 40th Street New York

Hidden Factors of Service



Records kept like this are practically useless for the management of a business. Efficiency is impossible and funds for improvement cannot be obtained.

Records, statistics and accounts kept like this are available for a complete knowledge of the cost and efficiency of each department of the business.

Such methods result in a telephone line which can give only poor service.

The result of such records is a telephone line like this, which gives good service.

The subscriber knows the difference! He demands a well-informed, intelligent business management.

the verbal, not the graphic ones, and amusing parodies of style. Perhaps the best is an imaginary conversation between Henry James and George Moore, in which both gentlemen pursue entirely independent trains of thought.

Here's the sketch of Dodd. We recognize him, altho we do not know who Dodd is:

> Dodd is a leading member of the Rationalist Press Association, a militant agnostic, and a dear compact man, one of those Middle Victorians who go about with a preoccupied, caulking air, as tho having been at great cost and pains to banish God from the Universe, they were resolved not to permit Him back on any terms whatever. He has constituted himself a sort of alert customs officer of a materialistic age, saying suspiciously: "Here, now, what's this rapping under the table here?" and examining every proposition to see that the Creator wasn't being smuggled back under some specious new generalization. Boon used to declare that every night Dodd looked under his bed for the Deity, and slept with a large revolver under his pillow for fear of a revelation.

One advantage of anonymity is that Wells can contradict himself with even more freedom than usual. For instance, he expresses great contempt for Bergson and his "Pragmatism for Ladies." But not long ago, in *Marriage*, he was contemptuous of "Doctor Quiller [Schiller] of Oxford, ignoring Bergson and fulminating a preposterous insular Pragmatism."

Much of the volume was manifestly written in the calm days before the war, but the fragment entitled "The Wild Asses of the Devil" expresses in fantastic guise his—and the world's—confusion and despair at the catastrophe which has overwhelmed the human race. "It is like a dying man strangling a robber in his death grip. We shall beat them, but we shall be dead beat in doing it," says Boon, and he rejects all suggestions that it may be a good thing in the end:

> No! War is just the killing of things and the smashing of things. And when it is all over, then civilization will have to begin all over again. They will have to begin lower down and against a heavier load and the days of our resting are done. The Wild Asses of the Devil are loose and there is no restraining them. What is the good of pretending that the Wild Asses are the instruments of Providence working better than we know? It is all evil. Evil.

From The Wind of the Dawn, The Wife Jane of the Dead and The Last Trump forms a five-Selection from the Literary Remains of George Boon. Appropriate to the Times. Prepared for Publication by Reginald Bliss, with an Appreciation Introduction by H. G. Wells. New York: George H. Doran. $1.25.

ONE OF OUR PROBLEMS

William A. MacCorkle, ex-Governor of West Virginia, makes a vigorous plea for American control over the affairs of Hayti in *The Monroe Doctrine in Its Relation to the Republic of Hayti*. He points out the natural and strategic advantages of the country, the successes of farmers which have constituted its history, the unusual misery of the people and the constant danger of European intervention in the Southern hemisphere unless we do something to prevent the publics of the Haytian type.

BRAINS AS WEALTH

The Creation of Wealth, by J. H. Lockwood, is an [illegible] which seeks to prove the correct idea that a human factor must be recognized in production besides the usual three: land, labor and capital. This fourth factor is intelligence, which the author regards as perhaps the most important of the four and entitled to high re-

ward. The doctrine is turned against both socialism and the single tax, since not only the profits of the *entrepreneur* but a large part of the "unearned" increment of the landlord is treated as the natural reward of superior brains.

Cincinnati: Standard Press. $1

HOW IT WORKS

A B C of Electricity, by W. H. Meadowcroft, makes plain to the layman the theory and practical working of the telegraph, wireless telegraph, telephone, batteries and electric light and power.

Harper. 50 cents.

MODERN PREACHING

If anyone thinks that scholarship spoils religion and that modern views are incompatible with sincere faith, the volume of *University of Chicago Sermons* will correct the mistake. Twenty three professors from the departments of theology, philosophy and sociology are the preachers, and their message is one to reach the heart of the modern Christian without offending his intelligence or shocking his taste.

University of Chicago. $1.50.

WHERE THE HEART IS

Homeburg? We have all visited there, and most of us grew up there. The one train a day; the volunteer fire department; the Marine Band—named from its moist marches to the cemetery; the struggles for social supremacy among the town's leisure class—they are as real as the late George Fitch has made them in his *Homeburg Memories*. And for those who still have a touch of sentiment there is the final chapter—Christmas at Homeburg.

Boston: Little, Brown. $1.25.

TWENTIETH CENTURY HIGH SCHOOL

The present end of secondary education is vocational distribution and guidance according to Director Judd (University of Chicago) in *Psychology of High-School Subjects*. The general principles laid down are broad training and concentration on some sequential line of study. High school teachers need to study pupils and to teach pupils to study as well as to know subjects. Adolescence can only be understood when we comprehend the lower stages. Progressive parents will find aid here.

Boston: Ginn. $1.50.

PANCALISM

Dr. J. Mark Baldwin's *Genetic Theory of Reality* rounds out the system presented in earlier volumes. It serves as an introduction to philosophy for those who conceive philosophy as inclusive of science. The latter tells us what is true. The former questions how such truth can also be good, beautiful, livable. According to the author anything is good and true because beautiful. Beyond the advanced positions of science and religion he places pancalism. (τὸ καλὸν πᾶν)

Putnam. $2.

THE PROVING GROUNDS OF YOUTH

What does a college stand for? What it will stand for to the next generation in terms of ideals, of culture, of fitting and training men to carry on America's heritage of democracy is the theme of *College Life and the Future*, by Richard Rice, Jr., associate professor of English at Indiana University. Primarily for the undergraduate, it will recommend itself no less to those for whom commencement is not a separation, but the beginning of a closer spiritual union with their alma mater.

Scribner. $1.25.

LIGHT INTO THE DARKNESS

A message similar to that of the "Passing of the Third Floor Back" is the theme of Maxim Gorki's *Submerged*, so named in the Contemporary Dramatists' Series, but perhaps better known under its German title of "Nachtasyl." It depicts the underworld, into which comes a man whose spirit is yet free, and his influence in reviving for the moment the fading life of souls, whom poverty, drink and crime have changed into worse than beasts. Vivid, bitter, and written with that prophetic power characteristic of Gorki.

Boston: Badger. 75 cents.

Linens *at* McCutcheon's

Write for Catalogue

It is easy to choose distinctive table linens if you have several hundred designs to choose from. You will find that wide variety at McCutcheon's, for in order to maintain the sixty year-old prestige of "The Linen Store" and to keep the leadership in our chosen specialty, we necessarily expand year by year.

Table Cloths and Napkins. Every type and quality, and all the sizes including the big and unusual sizes.

Independent Opinions

The editor's mail is always sure to be opened with interest, altho what other emotions it excites later depends of course upon what the letter contains. The fault-finding ones ought to be received with most gratitude, as they are supposed and intended to correct our defects and bring us nearer perfection. Doubless, too, if every reader who saw something he liked would write to tell us so we should find the letters too tiresome to read. But nevertheless, and things as they are, it does us good to get once in a while a simple note of approval from an old friend of The Independent:

I like your editorial on "Printing Both Sides." There is no reason why we should not be afforded the opportunity to see things from Señor Huerta's standpoint or that of the I. W. W.s from that of Arturo Giovannetti's. I take it that the readers of The Independent are fair minded enough to be willing to consider the merits of the various questions presenting themselves from their varied sides. How we shall miss the cheery articles by dear E. P. Powell! The series of Dr. Ward were alone worth to me all I have ever paid for the paper in the forty years I have taken it.

FORDYCE GRINNELL

Pasadena, California

To a Canadian reader your editorial "The Kings Must Go," of March 22, can be tolerated only on the supposition that the writer is the youngest member of your staff and totally unable to increase his wisdom during his first year. Send him into a retreat that he may have time to read history and think; first giving his grandmother an opportunity to spank him on her knee, for he must yet be small enough for that.

Even the Kaiser has not the power to wreck a state that the absolute dictator filling the presidential chair has for four years. And some time one of them may take the notion to say: *Après moi le Déluge.* Mexico must already be tired of presidents.

A modern constitutional king like ours is the evolutionary supreme head of the state, symbolizing the supreme fatherhood of the nation's familyhood, its laws and uniform principles of reform evolved from beyond historic time. The power and liberty of the people function thru parliament, which is immediately in touch with the people and can turn out the government in a day, while the people of the United States are helpless for four years should the presidential dark horse "take the bit in his mouth." Our present King George is not even your editor's New England school history king. Every one knows our King can do no wrong.

As the head of the state he does not have to go thru a process of being blackballed by nearly one-half of the people every time he is to preside for a year or two before his installation. No one has a reason to bear him even a grudge; and he has had a life training for the delicate and important function of representing the virtual personality of the state to his people within and other states without.

When we elect a President of the Republic of Mars some of the best trained subordinate statesmen will be provided over, we believe, by Kings.

A. H. MACKAY

Halifax, Nova Scotia

Now this is very distracting to the editorial mind. First the Superintend-

ent of Education for Nova Scotia wants us spanked because we don't like kings. He says that a king is better than a president because a king has no power. Then we open another letter criticizing the same editorial on the opposite grounds. The writer is an American and he wants a king because kings have more power than presidents:

The word king is derived from the idea of *can*. We in our republic have a constant change of officers from the President down. But all of them were not men that could bring things about. Some did things and some did not. A thoro organization for warlike, manufacturing and agricultural purposes like Germany was brought to a perfect state not in a kingless country. We must still look in this day of kingless nations for national efficiency to an empire. So much for The Independent's *kings must go*. It looks rather that history cries out: Kings, kings, give me kings! Once there was a time in our republic when a kingly act sent out naval ships to clear the pirates of the high seas. But today notes are clicked off on the typewriters when our ships, cargoes and citizens are destroyed by undersea assassin thrusts dealt by law-breaking and law-defying pirates.

If our President were a king, can it be possible for us to think he would remain inactive? I should rather say a king must come to end this indolent inaction of the great republic. J. DYKE

The Manse, East Moriches, New York

If "everybody knows" that the King of England "can do no wrong," of course we know it as well. But it follows that he can do no right either. In that case the only objection which an American could raise would be that a king was a superfluous and misleading bit of symbolism, misleading because the symbol does not stand for the truth, that the people of England rule, but just the opposite.

But our British cousins will not let us regard their King as inactive. They insist that he exerts a great influence over public affairs, tho always for good, of course. Just now they are giving King Edward the full credit for forming the Triple Entente and so saving Europe from German domination.

But we are glad to be able to agree with the plan implied in Dr. MacKay's last sentence. Let's start the Republic soon with all the English-speaking nations included, each to have its own king if it wants one. We wonder then if Canada would be a kingdom. The other day we read a newspaper letter from Western Canada which said that there are enough former Americans in the Dominion to double the Canadian contingent, that they are anxious to enlist but cannot bear the idea of serving under a king. Apparently then if a king can do no wrong, he can at least do some harm.

The British always seem to miss the point. We believe in the concentration of power in the person at the head of affairs provided he is responsible to the people. A president is elected by popular vote and can be removed by Congress. A king gets his office by chance and cannot be removed for cause. He has power without responsibility.

I suppose that tale by Adriana Spadoni, entitled the "City of Dreadful Night," in your issue of August 16, of the Bohemian boy who ran a power sewing machine, was intended to serve a purpose, but what pur-

AIM

To bring ... trained body ...
To make the girl capable, alert and womanly.
To make her thorough.
To make her reliable and resourceful.
To make her likable and sincere.
To teach her to think and act with intelligence.
To teach her how to study.
To teach her how to use her mother tongue.
To help her to find herself, and therefore
To make her happy and useful.

EQUIPMENT

Colonial house—atmosphere of simplicity — open-air sleeping and dining porches — open-air school-room — unstinted sunshine — gardens for all — space for play—woods and fields — experienced, understanding, motherly teachers.

METHODS

Individual and class instruction—close supervision of work — careful study of each girl's nature—work made a joy — power of concentration developed—intimate association with teachers—sports made a means of education—teaching by example rather than precept.

COURSE OF STUDY

An enriched high school course—general, special, and college preparatory —modern languages a part of daily life—Domestic Arts—Music—Gymnastics—foundations laid for culture.

PLAY

Tennis—basket-ball—tramping—coasting — skating — snow-shoeing — dancing — singing — games — story-telling — play-acting.

References given and required.

Conference with the Directors by appointment only.

William D. Gilbert, Ph.D., Principal, Providence, R. I.

pose? He had a good job sewing hats, and when there were no hats to be sewed he was not laid off, but instead his employers hustled around and found other work for him to do. He appears so highly nervous as to be almost insane. I should call him an undesirable citizen and should think that he ought to be deported.

He came from the country districts in Bohemia and doubtless his biographer thinks that he should never have left the country with its cold winters and hot summers, its lowing kine and crowing roosters. He would go barefoot there, but unfortunately a stone-bruise on the foot is more painful and dangerous than a sewing machine needle thru the finger. You see one walks on the sore stone-bruise. If you never picked blackberries or chestnuts barefooted and barelegged, then try it. The imagination of the youth would be greatly stimulated by his work around the lowing kine. How gushingly sentimental to care for their simple needs. Conceive the joy of cleaning out a foul cow stable while barefoot. After thirty years one can look back and feel the same crawly feeling of disgust; but the luscious aroma of the ammonia would always keep one from fainting. You see there are compensations in most forms of work. Just try that job some day, and then set your son at it.

Do you know, to my mind the good, steady, interesting work of the power sewing machine has some advantages over farm work.

Why does The Independent choose stories that are so gushingly sentimental? I thought that the journals had begun to realize the utter piffle of such mush as the Spadoni story. Why not select a tale with red blood in it, a masculine story, a tale where a young man sets his jaw onto his job and does things? Why not open your eyes and observe life and help instead of hinder? CLINTON ALVORD

Worcester, Massachusetts

Yes, the editor knows what it is to go barefooted and get stone bruises and care for the lowing kine. But he has never run a power sewing machine, so he would not venture to decide which is the better—or the worse. He would merely suggest that as cow stables have been made less foul since he was a boy, so machine shops may some time be made less dangerous and nerve-racking.

But about that "tale where a young man sets his jaw onto his job and does things." If Mr. Alvord or any one else knows of such a story, send it to The Independent right away. We want to see it.

Among many deserving editorials in the issue of August 9 I found one that agrees with my particular case of dyspepsia. That editorial was the one dealing with our educational system. I would like to bring to your attention one defect that you did not mention.

A boy goes thru the public schools and colleges and enters upon his business career with as good an education as he can secure in this country. What is he likely to have? He has studied two dead languages and two modern languages. He has studied some chemistry, some mathematics, some physics, some economics. In fact he has dabbled in nearly every branch of human knowledge, but he has not closely mastered anything. He cannot read or speak a foreign language fluently. He is indeed fortunate if he has a complete command of his native tongue. As it is, I suppose he is at it in some other branch he has learned. He has a smattering of many things, but not enough knowledge about any one thing to make himself of any great value.

His whole education has failed to prepare him concentrating on any one thing with an intensity thereby producing that one thing. When he enters the college he goes to have the mass and of any knowledge that schoolmen and teachers think he ought to get, whether it suits him or not and

soon places any responsibility upon him, he will likely form the opinion that well educated American youths are of far less value than those who have had no great educational advantages.

It ordinarily takes several years before a college graduate can settle down and actually produce. He has so thoroly formed the habit of trying a little of everything and mastering nothing that when he comes into competition with men who, tho they have no education, have been trained to excel in one branch of industry, he is at a distinct disadvantage.

I understand that the German school system differs from our own very radically in this respect. I understand that there each pupil is taught to do at least one thing well. It seems to me that we could well follow the example. It is well enough to have a good general education, but it is fatal not to be able to do one thing well. In these days we need more well trained men in the business world. Many men who have received college degrees but are now driving trucks or painting houses might have been fitted to fill some of the important positions in the business world had they learned a little more concentration while in school and had they learned to do well something that is really worth while.

J. E. BULLARD

Port Washington, New York

Did we have dyspepsia that week? Well, if we did, misery loves company. We agree with our correspondent that the schools should be made more thoro and practical and in particular that the teaching of languages does not accomplish its purpose. But on the other hand—to continue our fault-finding mood—is not Mr. Bullard taking too personal a view in regarding that education as alone "really worth while" which trains a boy to become what he is, a successful business man? A school exists not so much for fitting the student into his groove as for finding what particular groove he can best run in. That is one reason why the college course scatters so.

It has long seemed to me that the marked difference between commissioned officers and enlisted men is needless and improper. It is a mere relic of the medieval days when the officers were gentry and the privates were their peasant retainers. The distinction is not necessary for discipline, because we have thoro discipline in civilian services, both public and corporation, where there is no one line of distinction between the very lowest and the very highest official ranks. Furthermore, discipline is just as strictly enforced among officers themselves, tho they are all of the same class; and likewise, it obtains between privates, corporals and sergeants, altho they are all of the other class. I am told that in the Confederate army this distinction was not observed.

WILLIAM C. LEE

Bancroft, Virginia

Our correspondent is not the only one who has wondered whether it is necessary to maintain the rigid line between officers and men in our army in view of the fact that large bodies of men in railroads, shops, and construction works are kept at a high standard of efficiency and obedience without any of the saluting and segregation that military tradition requires. The French and Swiss armies are much more democratic than the German or, we believe, than the American. In the recent Reichstag debates almost the only criticism raised against the army was the insolent treatment of privates, often men of learning and prominence, by the drill masters.

SENSING PUBLIC OPINION

BY A. W. DOUGLAS

Mr. Douglas is vice-president of the Simmons Hardware Company, and is thus face to face with the large-scale problem of fitting production to public needs. His methods of discovering the temper of the public as it affects business, both directly and thru the medium of general political and financial conditions, are therefore of particular interest and significance.—THE EDITOR.

THE life and success of commercial business depend primarily upon two factors: material conditions, and the trend of thought among the people as exprest in public opinion. Nor can it be said that either factor is of greater moment. Since 1907 it has not been alone a series of disastrous droughts culminating in widespread damage to crops, but equally national unrest and general distrust of and hostility to those in high places, that brought about suspension of credit and halting of enterprise. Equally true it is that the general apprehension and widespread fear of "something to happen," caused by the European war, neutralized the stimulating effect of generally good crops, and settled down like a nightmare upon the business world.

Obviously there are no statistics as to what the people are thinking about, as there are of crops, manufactures, mining, transportation, and other business ventures, upon which to base business action. Yet it is of increasing importance that every organization of nation-wide interest have some definite and reliable information as to the drift of public thought. It is not to be had from the man high up, the man of great affairs, for he of all others, especially in the East, has usually the least knowledge of the thought and intent of the great mass of men, and the smallest sympathy with them. Nor is the daily press always the best and most reliable exponent of public opinion, for the men who indite the editorial page get their information second, and even third, hand, and are too often imbued and colored with partizan prejudice and local provincialism; and this latter trait is peculiarly the ear-mark of the metropolitan press. Every newspaperman will tell you, if you question him, that his desire is not the hopeless one of molding and guiding public opinion, but rather of learning which way it tends, and chiming in with it.

Obviously the only safe way to gage public opinion is to get it from him who makes it, the plain everyday man. But this latter person is very numerous and it is not always practicable to get at him. So inevitably there must be dependable agents in touch with wide spread humanity. Of such I know none so impartial, so dependable, so accurate as the commercial traveler. The necessity of his trade forces him to be a diplomat, for he depends for his living upon the favor of his customers, since successful salesmanship is a matter of personality rather than of prices and samples. He has that rare and illuminating gift, or acquirement as it may be, of understanding and sympathizing with the other fellow's point of view. Necessity also compels him to be a close observer of material conditions and the current of thought in his own limited territory, since his business depends on these matters. He is, in fact, the modern brief abstract and chronicle of the time.

It has been my good fortune for over a quarter of a century to be in constant touch with a large corps of these men representing a great distributing house whose interests embrace the entire country, and experience has taught me to rely implicitly upon the accuracy and trustworthiness of the observations of these knights of the grip, whether it be the condition of the crops, or the forecast thirty days in advance of the results of a presidential election. It soon became apparent, however, that I could not completely and intelligently interpret these reports, not only as to what was said, but what was left unsaid and what was to be read between the lines, unless I knew from personal observation and contact whereof my informants wrote. Which meant, and still means, much wandering to and fro on the face of the country, and much illuminating and informing travel. Likewise that I must gather my impressions and knowledge from the same sources as the salesmen, from the men who really made public opinion—the elemental, tho thinking and intelligent man, the farmer, the trainman, the small store keeper, the public school teacher, the member of the college faculty, the professional man in the small town and the large city. The long train trip is wasted in the Pullman when there is everything to be learned from the people in the day coach.

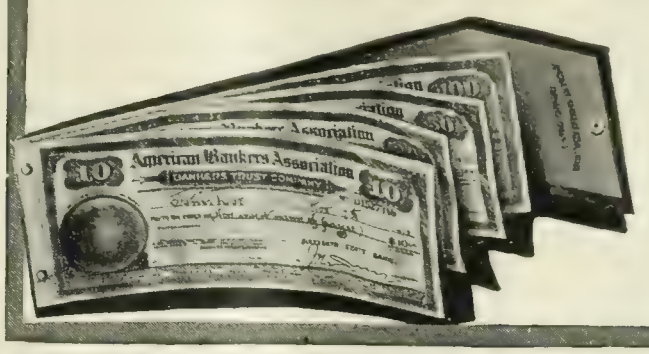
The average American man is easy to approach, and invariably civil and friendly if you are friendly yourself and democratic without pretense. Once in a day's trip from Cincinnati to Charleston, West Virginia, I gathered incidentally the prevailing sentiment in that part of the world on the liquor question from talks with eight men—farmers, trainmen and commercial travelers—each one of whom brought up the subject in an apparently casual conversation. It needed only a day's trip from Philadelphia to Pittsburgh on the Pennsylvania Railroad just before the last presidential election to realize that the state would vote for the Progressive candidate. The sentiment of the trainmen was only too conclusive in that regard.

The study of politics, or of any social question, has of course no part in my program other than affecting business matters, and nowadays under a democratic government practically every question of national import has a social and direct bearing on commercial

life. It is often a matter of much moment to know whether people in general have confidence in the national administration, or lack it. Such confidence means definite action for the future; its absence is a deterrent to commercial enterprise, since business ventures for the future must have some stable assurance of sound governmental judgment. Not infrequently has it happened that upon the action of the man in the White House has depended for the time being our commercial weal or wo. The man of large affairs in commercial or financial affairs is apt in such emergencies to be unconsciously swayed by his interests and his political affiliations. On the other hand it is true that the man on the street is naturally narrow and circumscribed in his views and endowed with his full share of ignorance and prejudice. Yet there is much in the constant clash of opinions with his fellow workers and the forced denials and trials of his hard everyday grind, that tones down his prejudices, enlarges his sympathies and clarifies his judgment. Most of all he has usually but little immediate personal interest in the great national questions involved.

So once upon a time when doubt and hesitation were widespread because the nation faced new and untried conditions, it was of great moment to know that general confidence was implicit in the judgment and intention of the national executive, and this regardless of party bias or affiliations. The story of the salesmen added strong confirmation to what my own observations told me. I mingled constantly with motormen and other workers in the large cities, brakemen and conductors on trains, professional men and teachers, farmers and small dealers in towns and villages. As a rule men of this type are not voluntarily communicative, but the direct question as to what the people thought of the President usually evoked the statement that he had an impossibly hard job, but that he was doing the best he could under most discouraging conditions. Their opinions were largely formed, I found, from a study of the facts on the front page of the newspapers, and not the perusal of the politically tinctured editorials. It is this invaluable service that the press renders the country, and to their credit be it said that the facts are much the same in all alike however much the editorial page may seek to color and distort them.

The question of the intelligence of a community is one of the most vital factors in commercial life. For not only does the existence of such intelligence imply increased likelihood and aptitude for business ventures and development, but also increased wants in business lines, especially for finer and higher goods, which are usually the most profitable for the dealer. There are many outward and visible signs of the inward and spiritual grace of a community in this regard. An attractive railroad station counts for much, especially if it be well kept and surrounded by grass plots and flower beds



For the enjoyment of your trip

The pleasure of many a trip has been marred by delay and embarrassment in getting checks or drafts cashed, or by worry over the safety of funds. Such annoyances are unnecessary.

"A.B.A." American Bankers Association Cheques

American Bankers Association Travelers Cheques relieve the traveler of inconvenience and anxiety in regard to travel money matters. They supply him with a form of credit accepted like cash by railroads, steamship lines, hotels, sleeping-car companies, and business houses throughout the world.

Identification is simple: The holder signs an "A. B. A." Cheque when purchasing it and countersigns it in the presence of the person accepting or cashing it. If the counter-signature and signature correspond, no one need hesitate to accept the cheque from a stranger.

Get them at your bank

Ask for descriptive booklet. If your bank is not yet supplied with "A. B. A." Cheques, write for information as to where they can be obtained in your vicinity.

Fateful Forty-five!

Success usually begins at the age of forty-five—jobs are apt to end there.

The ordinary business virtues will carry a man over the early stages of a career. Loyalty, diligence and intelligence win promotion up to thirty—but not at forty-five. At that age, a man must have everything or he has nothing.

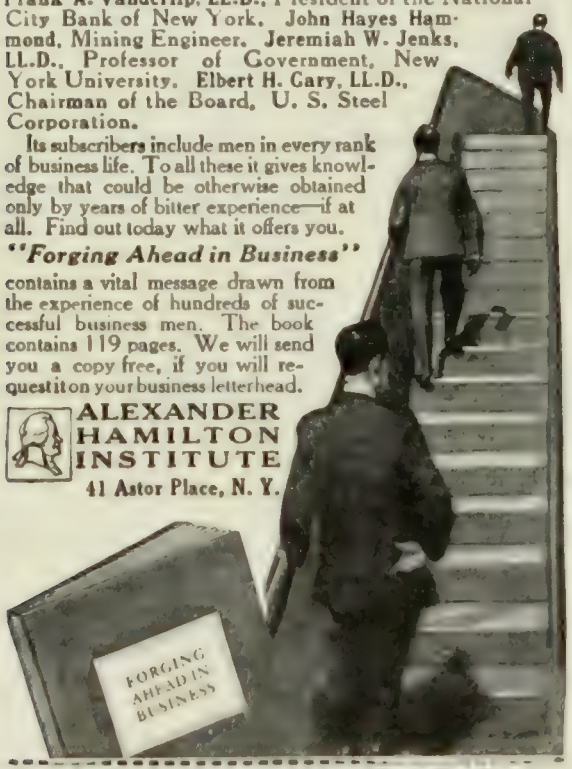
The ladder of promotion is really a moving stairway—when you get to the top you get off. Almost any young man can *hold* a job—but is he good enough for the next one? Will the next job be the top of the moving stairway?

Is he acquiring a grasp of the fundamental principles of business? Will he, at forty or forty-five, be ready to take hold of bigger work and become a leader—or will he get off?

The Modern Business Course and Service of the ALEXANDER HAMILTON INSTITUTE

is a reading course which covers the whole range of organized business knowledge. Every department and phase of business is covered. The financier learns of organization—the engineer, of finance. The corporation lawyer learns of transportation, distribution, sales, advertising, accounting; the business man learns business law.

The Alexander Hamilton Institute is planned and conducted by recognized authorities under the supervision of an Advisory Council composed of the following educators and business leaders:



Joseph French Johnson, D.C.S., Dean of the New York University School of Commerce, Accounts and Finance. **Frank A. Vanderlip, LL.D.**, President of the National City Bank of New York. **John Hayes Hammond**, Mining Engineer. **Jeremiah W. Jenks, LL.D.**, Professor of Government, New York University. **Elbert H. Gary, LL.D.**, Chairman of the Board, U. S. Steel Corporation.

Its subscribers include men in every rank of business life. To all these it gives knowledge that could be otherwise obtained only by years of bitter experience—if at all. Find out today what it offers you.

"Forging Ahead in Business"

contains a vital message drawn from the experience of hundreds of successful business men. The book contains 119 pages. We will send you a copy free, if you will request it on your business letterhead.

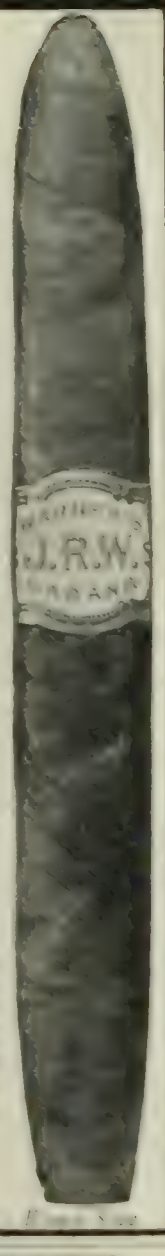
WANTED—Pleasant home for baby of unquestioned parentage and health with view to adoption. Box W, care of The Independent.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed that can be called absolute safety. The best regulated and strongest business enterprises are subject to certain hazards, and those investments which offer the greatest possibilities of profit are usually the most hazardous. After you have provided for your family, there is nothing more important than the question of how you yourself are to be protected in old age. The METROPOLITAN LIFE INSURANCE COMPANY is among the strongest financial institutions in the world. Its Industrial Policies are issued in amounts suited to the needs of persons of small means. Write a postal to the nearest Department of METROPOLITAN LIFE INSURANCE COMPANY and we will give advice as to the proper policy to suit your needs. No obligation.

as showing the interest of the women of the community. Concrete sidewalks, electric lights, paved streets, well-lighted stores with attractive display windows, carefully kept lawns, are all indications of that local pride and ambition which are the saving grace of every community. Curiously enough, good hotels are among the last creations of this spirit. But the nature and influence of the schools and churches are the things of real pith and moment.

A few years ago I had a striking instance of the commercial value of this instinct for education in a small town of some 3000 persons in the Ozarks of Arkansas, halfway between Fort Smith and Little Rock. The hotel was as bad as they make them, and at first blush I was not much imprest with the town itself. But I soon had reason entirely to change my point of view. It came out in conversation with a hardware dealer that the locating of one of the state agricultural schools became a matter of expense partly to be borne by the successful competing town, since the state revenues were not sufficient to finance the entire proposition. So this particular community went down into its pockets and dug up $36,000 or $12 per inhabitant and landed the school. I needed no gift of prophecy to see that in business phrase this was bound to be a "good town," and so it proved. Since my visit a fine new hotel has been built and the town has doubled its population.



The diversification of crops in the South is a matter of far-reaching import, not only to the South, but to the nation. Primarily it is a mental problem, being the result of inheritance and tradition that cotton is the one crop that can be grown to the best advantage in the South. Necessity and misfortune in the shape of the boll weevil invasion and the European war have done much to change this condition, but necessarily supplementing these is the long, patient and almost unnoted education of the farmers by the agricultural schools and colleges. It was necessary to know in advance whether this education was sinking into the minds of the farmers, for diversification of crops meant a radical change in business ways and methods.

In Montgomery, Alabama, one day I met a type of the intelligent progressive farmer. He told the story of his year's experience, of sufficient food stuff raised for his family and live stock, of cotton raised only as "velvet" and a money crop, and of constant contact and correspondence with the state agricultural college. His immediate purpose was to buy a gasolene engine that he might install running water in his home from his deep well. It needed but little vision and analysis to see in him the type of that intelligent agriculturist who was to break the bonds that bound the South to an unthinking past.

There are occupations more pleasant and lucrative than traveling, but none more educational, more illuminating and more profoundly human in their results.

St. Louis, Missouri

I'm the only man who can sell these 10¢ Cigars for 5¢

When I first began to buy rare Havanas for my own personal use they cost more. But soon all my friends wanted to order with me.

Before I knew it, my hobby as a fancier of fine cigars grew into a business. One man told another. Today 12,000 men in every state rely on me to divide up with them. So I'm using 2,500,000 cigars a year. Such volume means a great saving to all of us.

Not Sold at Stores

If you bought my cigars at a store—paid the dealer's profit, salesman's salary and expenses—you would pay $10 per hundred. But by joining me in this co-operative plan you can get them for only $5.00 per hundred—$2.60 for 50. You not only save 50 per cent, but you get a cigar of unmatchable quality—mild and sweet, not heavy and strong.

For forty years I've smoked cigars made solely from the choicest tobaccos grown in the Vuelta district in Cuba. I've never been able to find any flavor or aroma so delightful. Certainly not in ready-made cigars.

First Five Free

Just to convince you that you cannot duplicate these cigars for twice the cost—smoke five at **my** expense. Merely send [illegible] packing charge and revenue, with your letterhead, business card or reference. I'll then send you a box. Pick out five and smoke them; then, if you are delighted, send me a check, and I'll replace free, the five you smoked.

FIRE INSURANCE RESULTS LAST YEAR

The underwriting and investment exhibit compiled and published by the New York Insurance Department showing the results of the operations during 1914 of 191 American and foreign stock fire insurance companies reporting to that department makes the total of all premiums earned by the companies in that year $318,348,924 on which there was a net gain in surplus of but $722,524. It is unnecessary to say that the progress made is far from satisfactory.

There is probably no line of business in the country the results of which, year by year, are so precarious as are those in fire insurance. Altho the less than three-quarters of a million gain in net surplus, indicated above, is decidedly small when we consider the magnitude of the "turn-over," fire underwriters regard it with complacency and take comfort from the fact that they were not called on to face a poorer showing, for 1914 was a bad fire insurance year.

In truth the underwriting—in contradistinction to the investment or banking—end of the business in 1914 shows a net loss of $11,653,644. Out of the earned premiums of $318,348,924 were paid claims for fire losses amounting to $200,720,782 and $128,769,721 operating expenses, including provision for increased liabilities incurred, a total or $329,490,503.

The earned investment income aggregated $35,195,201 against which there was for expenses and losses a total of $7,272,507, leaving a net gain in this department of $27,922,694. Dividends on the capital of American companies and money remitted to foreign companies by their United States branches absorbed $15,546,526. Setting the remainder, $12,376,168, against the underwriting loss of $11,653,644, previously shown, we have a balance of $722,524 to add to surplus.

It will be noted that stockholders' dividends were furnished by the companies' investment departments, and not by profits made on the writing of insurance during the year. On the contrary, the underwriting went bad by nearly $12,000,000. It is plain that these companies would have made immense profits, in addition to paying dividends, if they had written no insurance last year.

A. H. B., Butler, Ind.—The standing, financial and otherwise, of the Presbyterian Ministers' Fund is fully up to standard. My judgment is that it would be better to put all the premium you would have to pay on a joint-policy into a policy on your own life for all the insurance protection which that sum will buy.

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall Street, New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	2,520,293.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Chairman of the Board

CORNELIUS ELDERT, Pres. CHARLES E. FAY, 2d Vice-Pres.

WALTER WOOD PARSONS, Vice-Pres. G. STANTON FLOYD-JONES, Sec.

FROM STATE TO STATE

ARIZONA: The announcement that the Moqui snake dance would take place in August this year at Walpi and that auto stages would run from various railroad stations to all parts of the Moqui Indian Reservation brought the usual number of curious tourists to Arizona. Students interested in the scientific phases of this weird old religious practise are not so much in evidence at the dances since the Indians themselves have come to regard the ceremony more as a show for revenue than as a pious appeal. It is said the older members of the tribe counsel the discontinuance of the dance as being now worse than meaningless.

COLORADO: The first organized effort to bring together specimens of the many hundreds of varieties of wild flowers growing in the vicinity of Colorado Springs was recently made by "The Wildlings," a nature club composed of high school boys of that city. For many days the boys and their friends systematically searched the various levels of the Pike's Peak region from the lower valleys to altitudes above timber line, locating the flowers, but not picking them until a certain specified day. Thus the flowers were brought in fresh for a free public exhibition which lasted two days. Many visiting tourists accepted the boys' invitation to compete for prizes for the most attractively arranged bouquets of wild flowers.

INDIANA: Farmers in the northern part of Indiana are beginning to realize that sugar beets are worth raising. Eight counties last year produced $171,251.45 worth of these beets, and this year the production has been more than doubled under contracts made in advance. Last year, according to a report lately made by J. A. Brock, field secretary for the Domestic Sugar Producers, there were 505 beet growers in the entire state. They produced 534,250 tons of beets from 3029 acres. This year 979 growers planted 7448 acres. The only beet sugar factory in the state was established at Decatur, in Adams County, three years ago. It has a daily slicing capacity of 800 tons. Last year it paid $213,461.40 for beets alone, and produced 4602 tons of sugar.

IOWA: The Greater Iowa Association has taken up as its next task the building of 1900 miles of good roads in the state within the next five years. Mr. Woodward Clum, the secretary, thinks this can be accomplished. A bill authorizing a bond issue and providing for the building of these roads has been drafted, and during Greater Iowa Week, late in September mass meetings will be held in all the counties. President W. W. Marsh of the association hopes to see work begun in the spring on three or four east and west roads and five or six north and south ones. He goes so far as to suggest the possibility of engaging Colonel Goethals to put the work through. Apparently the association means to have it well done.

KANSAS: Under a new state law the holder of a mortgage on a Kansas farm, after having it registered for taxation purposes, may have it examined by the State Treasurer. If that officer finds that the title is good, that the mortgage does not exceed one-half the assessed value of the property and bears not more than six per cent interest, he so reports; and on this report the holder may cut the mortgage into small parts, called "debentures," bearing five per cent interest, and sell them anywhere. They are not taxable in Kansas. The seller of the debentures guarantees their principal and interest, taking the difference between the two rates of interest as his profit and for the payment of the state's tax of fifteen cents on each $100. The state gives no guaranty. It only reports on the mortgage upon which the debentures are based.

MASSACHUSETTS: Professor H. R. Francis, director of the landscape engineering department of the New York College of Forestry at Syracuse, has been making a survey of the highways on a circuit of 320 miles in Massachusetts for the purpose of informing the Massachusetts Forestry Association as to how many and what kinds of shade trees are necessary for the beautifying of these highways. The intention is to dig the holes for the trees this fall, tho the planting will not begin until next spring. Effort will be made to avoid monotony by taking each section of the highway as a unit, and by considering the practical as well as the esthetic side in selecting the trees—low-growing kinds where overhead wires are numerous, flowering shrubs on rough embankments, etc.

MISSISSIPPI: The Jackson Board of Trade has adopted a plan which, it is hoped, will not only encourage boys in Hinds County to make money, but will give them a general idea of business and inspire them to honorable dealing. The plan is to sell a pig of good pedigree to any boy of reasonably good reputation, taking his note for $10, at six per cent interest, in payment. No security is to be demanded. Principal and interest are to be payable in one or two years from the proceeds of the pig. It is estimated that the boy who merely fattens and sells his pig can double his money in a year, but the boy who keeps his original pig and sells only the increase can clear at least $100 in two years, and in addition will have learned something useful.

NEW MEXICO: Plans for a new $75,000 tourist hotel at Las Cruces, for which the woman's park board of that town has given the public park at the railway station, have been completed. It is said the building will be one of the most attractive in the state. It will have wide portals, several campaniles, the central portion rising three stories and the wings two stories. There will be three distinct elevations of Spanish cloister encircling in a tower five stories high. As a return for a ninety-nine years lease of the public park, $10,000 will be expended for a hospital to be under the auspices of the Woman's Improvement Association.

NORTH DAKOTA: Mr. A. Wells of Sanborn, in the eastern part of North Dakota, recently sold nineteen fat Hereford steers in Chicago for what is said to be the highest price ever paid for beef cattle raised in that state. The steers were three years old, prime, and averaged in weight more than 1600 pounds each. They were born in North Dakota, grazed there and finished on corn and alfalfa grown in that state, so they were strictly North Dakota cattle. They brought $10.25 a hundred, an average of $170.15 for each steer.

OHIO: As part of the program in fulfilment of the policy of making Cleveland's city farm self-sustaining, three new activities have been recently added by Commissioner of Charities and Corrections W. H. Winans. They are: The raising of popcorn for use at the refreshment stands in the city parks; the raising of guinea pigs required by laboratories at the city hospital, the tuberculosis sanitarium and the bacteriological division of the Health Department, and the manufacture of shirts for use of inmates of the infirmary and other city institutions. Commissioner Winans also announces that with the completion of the refrigerating plant at the correction farm the institution will be able to buy live stock in carload lots and handle and dress meat for all other city institutions.

OKLAHOMA: When your iceman explains that the high cost of refrigeration is due to the openness of the winter before, tell him to spend his next vacation in Weatherford, Oklahoma. Weatherford claims the distinction of having been the first city in the United States to establish a municipal plant for the manufacture of artificial ice. It also claims to have learned from experience that such ice can be manufactured by a city and sold profitably at prices ranging from forty cents a hundredweight in small quantities to fifteen cents a hundredweight in carload lots.

OREGON: Some time ago the city of Roseburg voted to issue $300,000 bonds to aid in the building of a railroad from that city to the Umpqua National Forest Reserve to tap one of the richest timbered districts in Oregon. Some local taxpayers brought suit to prevent the bond issue, but the Oregon Supreme Court recently decided against them. When the news of the decision reached Roseburg stores and offices were closed and practically the entire city took part in a celebration which lasted all day and far into the night. A procession of nearly 2000 persons, 100 automobiles, an array of floats and a dilapidated hearse containing two dummies to represent the chief "knockers" paraded the streets to the sound of the city fire siren and thousands of horns, bells, firecrackers and other noise-making devices.

PENNSYLVANIA: The Civic Club of Philadelphia has started a movement for a year's survey of food conditions in every section of the city. Committees of women are to investigate neighborhood markets, grocery and chain stores in practically all the city wards, the purpose being to show every woman where and how she can buy food cheapest. In each neighborhood housewives will be informed as to standard prices in all the districts, that they may know whether they are paying higher prices than others. It is believed this concerted action will result in breaking the prices in many districts where the cost of necessaries has been much higher than in others.

TEXAS: At the suggestion of Joseph Hirsch of Corpus Christi, president of the Texas State Bankers' Association, a conference of southern bankers was recently held in Galveston at which it was agreed that the bankers would advance money to farmers on cotton securities. The purpose is to maintain steady prices by offering only as much cotton as the market can instantly absorb, and the plan is intended to benefit producers, not speculators. It is said four federal reserve banks have agreed to rediscount the paper. The meeting resulted in the perpetuation of the Cotton States Bankers' Conference, which will meet again in November or December.

VERMONT: Springfield in the last census decade showed a larger percentage of gain in population than any other Vermont village or city—a growth all the more remarkable because Springfield is not on a steam railroad. The explanation is found in the fine water power accorded by the conjunction of the Black River with the Connecticut at this point and the building of the largest shoddy factory in the world by the John T. Slack corporation. The new mill was recently opened. Most of the employees are Russians and Poles, and at the dedication the flags of Russia and Poland were intertwined with the colors of the United States. Russian and Polish music and dances formed a large part of the program.

WASHINGTON: A young Seattle inventor, Arthur F. Erickson, is said to have perfected a device by which telephonic eavesdropping, one of the great drawbacks to "party" wires, will be prevented. He claims that the subscriber, as he calls his invention, not only prevents other stations on the line from listening, but does away with the annoying vibrations of the intruding party's talk. In short, it creates a clear line from the subscriber to the central station by making desired contacts and breaking undesired ones. The replacing of the receiver on the hook automatically restores the line to the other stations.

REMARKABLE REMARKS

HENRY FORD—Eat only when hungry.

ARNOLD BENNETT—When in doubt, ignore style.

JULIA MARLOWE—Genius is simply hard work with no let-up.

CHARLIE CHAPLIN—Laughter is the gold of human emotions.

RUDYARD KIPLING—I want to kneel before every Frenchman.

JESS WILLARD—I don't like boxing for itself and never did.

DR. WOODS HUTCHISON—No two peas in a pod are ever alike.

HUGH BLACK—The measure of a man is the quality of his hope.

MANAGER GEORGE STALLINGS—Only the game fish swim upstream.

THEODORE ROOSEVELT—A treaty can always be honorably abrogated.

DAVID STARR JORDAN—The power of graft is a transient deception.

KING ALPHONSO—After the war the nations will arm more than ever.

AGNES REPPLIER—History is, and always has been, hampered by facts.

ED. HOWE—When a thing is wrong a man should know it as soon as his wife.

RICHARD RICE, JR.—Mediocrity is strong in all of us—it usually conquers.

TY COBB—The most effective pitching is the kind that carries control of a low ball.

DR. H. FORBES—The human being belongs on all fours, instead of standing on two legs.

LABOR COMMISSIONER COFFEY—Pig pens ought to be a quarter of a mile from the kitchen.

CZAR NICHOLAS—My duty to my country, which has been intrusted to me by God, etc.

M. HANOTAUX—The Germans are fighting for the enslavement, not the liberation, of the world.

GEORGE BERNARD SHAW—I do not think anybody is justified in asking anybody else to join the army

WILLIAM R. WILLCOX—In the ventilation of the subway we have not advanced from prehistoric times.

FRANCIS HACKETT—The salt of this American soil is Lincoln. When one finds that, one is naturalized.

GERALDINE FARRAR—One can be a splendid woman and a great artist, but not a great artist and a mother.

VICE-PRESIDENT MARSHALL—Perfect trust can be reposed in President Wilson. He will save us from war.

CONGRESSMAN A. P. GARDNER—No one realizes more clearly than I my ignorance of many things that I ought to know.

JEAN FINOT—There is every probability that the Allies will win a complete and final victory about May, 1916.

JOHN BASSETT—It is probable that Canada will desire to become an active member of the Pan American Union.

PRESIDENT HADLEY—A newspaper owes its power to the fact that its readers think as its editor wishes them to think.

CARDINAL GIBBONS—It does not appear that vice prevails in the United States in proportion as public education advances.

BANK PRESIDENT GEORGE M. REYNOLDS—When peace is declared we will be in command of the gold supply of the world.

COLONEL GEORGE HARVEY—The crux of the President's blundering is to be found in his misconception of his own functions.

W. J. BRYAN—Back of the big navy is the shipbuilder and back of the shipbuilder is the subsidized newspaper which spreads hatred.

H. G. WELLS—Democracy has still to work out some method of discussing its affairs more satisfactorily than the newspaper.

GENERAL WOOD—The talk of a volunteer army is all foolishness. . . . Our system of raising volunteers has always been a failure.

COLONEL HENRY WATTERSON—Mr. McAdoo may be the ablest of Secretaries and the best of sons-in-law. But he is yet an experiment.

MR. DOOLEY—Whiniver I'm called on to fight for Gawd an me counthry, I like to be sure that the senior partner has been consulted!

ARNOLD BENNETT—The abolition of beer and whisky would be as miraculously beneficial to this country as the abolition of vodka has been in Russia.

EDWIN LEFEVRE—If I were compelled at the point of a pistol to name what in my opinion is the greatest of all novels, I should say *Anna Karenina*.

LADY RANDOLPH CHURCHILL—How many marriages have been nipped in the bud by the premature and indiscreet congratulations of idle busybodies.

WOODROW WILSON—With all due respect to editors of great newspapers, I have to say to them I never take my opinion of the American people from their editorials.

REAR-ADMIRAL C. F. GOODRICH—These, then, as I see them, are the chief lessons of the war in Europe, the protean changes in tactics and the immutability of strategy.

PROFESSOR SCOTT OF THE UNIVERSITY OF MICHIGAN—To my mind the speech of Abe and Mawruss might easily prove the beginning of a type of standard English.

NICHOLAS MURRAY BUTLER—Armed with the international mind rather than with huge navies and great armies, a civilized people is equipped to march in the front rank.

ABBE VIOLLET—There are only two things that keep Roman Catholics and Protestants apart. The first is the sins of the Catholics; the second is the sins of the Protestants.

FRANK L. CHANCE—An Alabama nigger is as full of superstition as any human being, but a big league ball player has him tied, if not beaten, when it comes to believing in signs and omens.

NAVY LEAGUE OF GREAT BRITAIN—The sea can endure but one master, and that master must be the widespread British Empire, whose navy must dominate every line of sea communications to any place in which she has any affairs.

COMMODORE HANSEN OF THE "U-16"—When moving under sea there is a deathlike stillness in the submarine, as the electric machinery is noiseless. As the air heats it gets poor and mixt with the odor of oil from the machinery. The atmosphere becomes fearful. An overpowering sleepiness often attacks men and one requires the utmost will power to keep awake.

Cadillac
Standard of the World

You must surely realize, now, that the Cadillac dominates the quality class "by right of conquest."

Time was when it was surrounded by clamorous contenders for a share of Cadillac success.

Of all these ambitious aspirants, not one remains—they have all descended into a lower price-class.

The Cadillac has maintained its price and at the same time has held the loyalty and allegiance of an intelligent following which has steadily grown larger as the years advanced.

It has maintained its own class, and drawn from all classes—attracting by its inimitable performance, those who have paid much more than the Cadillac price, and those who have paid less.

The time is at hand for the complete fulfillment of the ideal upon which this business was built.

That ideal was the production of a car of the highest quality, at a price more moderate than any then known.

We said, then, that we would demonstrate that it was not necessary to pay more for such a car than the Cadillac would ask.

Ask yourself if the Cadillac "Eight" has not brought about the consummation of that ideal?

How many cars remain which you would willingly and instinctively consider worthy of comparison with the new Cadillac Eight?

It is firmly established in the esteem of the nation as the highest known type of quality.

In the number of parts and operations refined to an accuracy of one-thousandth and the half of one-thousandth of an inch, it is accepted as the world's standard.

Its engineering pre-eminence is universally conceded.

It is the one car in the world which has *demonstrated* the efficiency and stability of its V-type engine to the satisfaction of more than 15,000 users.

In the opinion of tens of thousands of discriminating motorists, it represents the very uttermost in steadiness, in smoothness and quietness—the very uttermost in efficiency at high speed or low speed—the very uttermost in everything that constitutes luxurious motoring.

In announcing its purpose years ago, this Company said that the Cadillac would create a new standard of automobile values.

The very phrase itself has passed into automobile English and become a part of the language of the industry.

But the Cadillac has translated the phrase into practise and made it come true in the most literal sense of the word.

The Cadillac is in very fact the standard of the world.

VOLUME 83 SEPTEMBER 20, 1915 NUMBER 3445

PREPAREDNESS

THERE can no longer be any doubt that the question of national defense will be the paramount issue before the next Congress. What, therefore, should be the attitude of sane and patriotic citizens in regard to this most controverted question?

The Constitution imposes upon the Government of the United States the duty of maintaining such a force as will enable it to suppress domestic insurrection, to enforce the laws and to protect the states from invasion. For over one hundred years the United States Army and Navy have been able to accomplish these purposes. Yet in times of peace the army has been little more than a police force and until within the past generation our navy has been almost as insignificant in size. But now, we are told, the golden day of our security is past. The oceans have become rivers. We are in the world movement whether we like it or not, and all mankind is armed or arming.

President Wilson has called for the facts of the situation. Secretary Daniels wants more fast cruisers, a host of submarines and a great aeroplane auxiliary. Secretary Garrison, in a temperate article published recently in these columns, asks for an increase in the regular and reserve army. If such extremists as the Army and Navy Leagues have their way our fleet will be doubled, our little army of less than 100,000 raised to 500,000, and our current military appropriations increased from $259,000,000 to $500,000,000 or more a year, a sum larger than the combined revenue produced by the Aldrich-Payne tariff, the income tax and the corporation tax.

Many of our most eminent newspapers and public men are calling for an investigation of our "unpreparedness." No reasonable person can object to this. An inquiry should be made into any matter of public concern whenever a considerable portion of the public want it. We agree, therefore, with President Butler when he recently said:

> I should welcome a properly conducted inquiry into the military and naval expenditures made by the Government of the United States in recent years, because I believe that the first result of such inquiry would be to show that under better administrative conditions and under more business-like management we should have gotten much more for the money spent—or to put it in another way, we should have gotten what we need for less money.

This surmise of President Butler is right. There is something wrong with the way our military appropriations are expended. It has cost us more in the past decade to keep our army of 90,000 than Switzerland to maintain her citizen army of 500,000. Our army of 1913-14 cost $173,000,000, which was about what Germany expended on her entire army in the same period. It costs us about $1200 per year to keep a soldier, while the soldiers of the European nations can be provided for at a third or even a quarter of that amount. When we add pensions to our expenses for the army, navy and state militia, our total military bill was $497,000,000 when the war began—the greatest sum ever spent by any nation for military purposes.

We can all agree that our military expenditures need investigation and efficiency methods installed in the operation of the army and navy. If such an investigation showed there was imperative necessity of an increase, The Independent would of course favor it. But is there any need now apparent for such an increase in our army and navy as to make them equal to the best in Europe or Asia? We can do this, of course, if we wish. We have the men. We have the material. We have the money. We have a manufacturing genius.

Our navy is probably equal to any in the world except England's and ship for ship is said to have no superior. Yet it is quite evident that we need more submarines and fast cruisers. This war has demonstrated that harbors and coasts can be fully protected with mines and submarines. Even the great English fleet does not make a landing on the German or even the Belgian shore. A corollary from this would mean that with enough of such defenses the whole coast line of the United States could be rendered safe from attack.

AS for the regular army it should doubtless be enlarged by a moderate quota of men. Our outlying possessions and our increased responsibility in this hemisphere would in any case require this. The length of service might also be reduced from seven to three years so that more men would enlist. Then those who have served three years could be put on the reserve list for four years. The various states could also be encouraged to strengthen their militia. We need also more highly trained officers. West Point should be enlarged or other training schools such as the Virginia Military Institute at Lexington should be raised to West Point's level.

But we want no military training in the schools, universal conscription, or a large standing army. A nucleus army ready to hold an enemy at bay until the citizen army can be put in the field is sufficient. A larger force than this would be the first step toward militarism. No one can read the early history of the United States without seeing how our forefathers feared a large standing army as the greatest foe of liberty. And no one can read the lessons of the great war now raging without coming to the same conclusion.

What we want is not to withdraw thousands of young men from the fields and factories to the barracks, com-

pelling them to go thru the drudgery of drill for years, but we need rather arsenals of ammunition, accouterments and equipment ready for use at a day's notice, factories to produce more if the occasion requires, and a carefully prepared plan for the instant and most efficient utilization of troops and equipment.

Then with an efficient navy for the first defense, a nucleus army sufficient to hold the trenches until the citizens can take the field, and plenty of equipment, we are safe from any conceivable invasion.

BOMBARDMENT FROM ABOVE

IT seems that we must add aviation to the list of those arts and inventions which owe their development largely to war. Certainly men have learned to fly in the last year faster than they would have learned in fifty years of peace. They have shown more enterprise and taken more risks for the purpose of destroying life and property than either commerce or sport could have incited. The power of the air for which the human race has longed and striven from the time of Dædalus and Leonardo da Vinci to Lilienthal and Langley has been at last attained and is being most horribly misused. What the poet foresaw three-quarters of a century ago has been half realized, the bad half of it:

For I dipt into the future, far as human eye could see,
Saw the Vision of the world, and all the wonder that would be;

Saw the heavens fill with commerce, argosies of magic sails,
Pilots of the purple twilight, dropping down with costly bales;

Heard the heavens fill with shouting, and there rain'd a ghastly dew
From the nations' airy navies grappling in the central blue.

Those who read this first were willing enough to believe in the possibility of aviation, but they were shocked at the poet's pessimism in assuming that war would not have been abolished before that far future time. We are always reluctant to believe that moral progress does not keep pace with industrial advance. But the curse of Tennyson's third couplet is now upon us, while the promise of the second has still to be hoped for.

During the first year of the Great War the airship was employed in scouting more than in fighting. To the intelligence department it proved invaluable, but its military possibilities were undeveloped. Now a change has come about, and it is obvious that aircraft in their offensive capacity are to be an important if not a decisive factor in the war hereafter. This is shown by the change in the type of aeroplane. Every nation is building heavier and stronger machines. The monoplane, which the French and Germans strongly favored before the war, is being replaced by the biplane, which American builders have always preferred. The new German "Aviatik" bears about the same relation to their earlier "Taube" as the automobile does to the motor cycle. The line of evolution is the same as in naval construction. More engine power, larger size, stronger armor and greater speed are the objects of the competition, and the aero dreadnought is almost in sight.

The German "Aviatik" is equipped with two engines of 150 horse power mounted in separate fuselages or frameworks, with a propeller in front of each. The armored cabin lies between and carries two rapid-fire guns directed fore and aft. The vital parts are protected by steel armor and it carries fuel enough for a flight of twenty hours, which would give it a range of more than a thousand miles.

The killing of Pégoud, the most famous of French aviators, in single combat with an "Aviatik," made plain to France the need of more powerful machines, and these are being constructed. The English have been making secret preparations for an aerial campaign on a vast scale. The newly appointed "Admiral of the Air" will have at his command a fleet rumored to number several thousand, some of the largest and latest model. The "Canada," just completed by the Curtiss works at Toronto, at a cost of $40,000, is claimed to be bigger and swifter than the "Aviatik," which it resembles in structure. Its wings have a span of 102 feet and it will carry more than a ton of bombs. The first flights indicate that it will have a speed of over ninety miles an hour. A hundred war planes of the type of the "Canada" are to be constructed.

Exactly what is to be done in the way of offensive warfare by the aerial navies remains to be seen. So far the raids into the enemy territory have caused more irritation than damage. A Zeppelin has reached Trafalgar Square at last, but, so far as we can see, the feat has accomplished nothing, except, perhaps, to delight the heart of the aged count. It might as well have dropt bombs of confetti instead of trinitrotoluol so far as military advantage is concerned. Doubtless the Germans hope by making these raids frequent and frightful enough they will weaken the heart of the Englishman, or at least of his wife. So far, however, the effect has been quite the opposite. After each raid the recruiting office is crowded, and the English people have come to regard the Zeppelin casualties as ordinary dangers of life, like automobile accidents and consumption, only not so bad. The First Lord of the Admiralty, Mr. Balfour, states that the total result of the aerial attacks of the Germans on England for the year ending in August was 71 civilian adults and 12 children killed and 189 civilian adults and 31 children injured. This is insignificant compared with the death list of every day's battles or the 1,198 lives lost on the "Lusitania." In the latest bomb-throwing expedition one British soldier was killed.

The French and British aeroplane raids into German and Belgian territory have probably caused more deaths and among them many women and children, but it is doubtful whether they either have accomplished much in a military way. The Allies report every little while that a squadron of forty to sixty aeroplanes has visited the Saar Valley or other German territory and inflicted great damage to barracks, hangars, railroad stations, bridges and the like, but the German versions of the affair will minimize the military injury and denounce the barbarity of attacks on undefended towns and the slaughter of civilians, in the same way that the English papers speak of the Zeppelin raids. It is impossible to determine from these reticent and conflicting reports how much the armies and navies have suffered from the aircraft attacks, but the conclusion seems justified that so far the raids into the interior of France, Germany and England have not been of sufficient military advantage to excuse their frightful depredations on the lives and property of noncombatants. This unnecessary cruelty is doubtless due in part to the difficulty of dropping a bomb just where it is intended. It is hard to hit

a bull's eye on a target a hundred miles in diameter. There is no possibility now of ruling out aircraft as a weapon of warfare, and the best that we can hope for at present is that their aim may improve.

THE MIRACLE OF MONS

THE war has afforded what the historian and the psychologist have always been longing for, the opportunity to watch the growth of a legend of the miraculous before their very eyes. Within the last year a beautiful story, equal to anything in the lives of the saints, about the visible interposition of angels in defense of the British at Mons has arisen and found credence in England and even in the United States. The religious and secular press devote large space to it. It has been attested from pulpits of Manchester, Weymouth, Hereford and elsewhere by clergymen who claimed to have received personal evidence of its truth from friends at the front.

There are many interesting variants of the legend, but the best version is probably that told by the Hon. Mrs. St. John Mildray in the *North American Review* for August. We hear of a young soldier who, before he enlisted, used to eat at a vegetarian restaurant in London. Here he noticed on the plates the motto, *Adsit Anglis Sanctus Georgius*, and learned that it meant "May St. George be present help to England." At the battle of Mons, August 24, 1914, the British contingent was in danger of annihilation, for it had lost touch with the French and had to stand the full force of von Kluck's right swing. The steel gray masses swept up to the British trenches in irresistible waves.

The vegetarian Tommy thought to himself that this was the time, if ever, when King George needed the help of his patron saint. So he prayed for the help of St. George and at once there appeared before the trenches a host of shining bowmen who charged the Germans with shouts of "Harow! Harow! Monseigneur St. George, Knight of Heaven, Sweet Saint, succour us!" Their arrows cut down the enemy faster than the machine guns. Not one was left alive and the German General Staff, finding the bodies of ten thousand of their men on the battlefield with no discernible wound, came to the conclusion, natural to their prosaic minds, that the British had used poisonous gases.

But even the Hon. Mrs. Mildray herself, while accepting the miracle, feels impelled to provide a rationalistic explanation of it:

> At death the fluid ether which holds the material body together escapes into the surrounding atmosphere, and according to the temperature, the dispersal of the essence is retarded or accelerated, thus explaining the disintegration of the body. Atoms suitable for materialization may be collected from the atmosphere as well as from the emanations proceeding from the body and shaped by spirit will into the forms of their earthly bodies.

This materialistic theory of the spirit, considerably more incomprehensible and incredible than the legend itself, is best met by Haeckel's old joke, that if the temperature has such an effect a greater degree of cold would precipitate "soul-snow."

But fortunately we are not obliged to accept this pseudo-scientific explanation, for the origin of the legend is known and can be purchased for one shilling. It is a short story entitled *The Bowmen*, written by Arthur Machen for the London *Evening News*. Mr. Machen is a Roman Catholic and believes in the interposition of saints and angels, but he insists that he made up the story out of his own head, archers, vegetarian, unwounded slain and all. But his denials avail nothing. It is too late to stop the growth of the legend he started. In the August *Nineteenth Century* H. B. Simpson repudiates this explanation and rejoices that the war has freed the English "from the fetters of German dogmaticism" and enabled them once more to believe in miracles. The *Church Times* publishes columns of letters from those who believe in the angels at Mons and claim to have "first-hand evidence of soldiers." When called upon to produce this evidence, however, they decline on the ground

PERHAPS

THE Great War is over; the peace-pact signed. The grimed and wearied veterans are coming home.

The flags fly. The bands play. The Monarch stands bareheaded on the palace balcony. Below the crowds cheer. They weep for joy. Glory to the Fatherland! God save the king!

* * * * * *

The tumult and the shouting dies. The armies disband. The soldiers return to their loved ones. Every home is a house of mourning. They try to pick up again the broken threads of peaceful industry. All is ruin.

They contemplate. Five million men killed. Ten million men crippled. Wives and daughters ravished. Children mutilated. Babies starved. Hundreds of cities burned. Thousands of farms laid waste. Thirty billion dollars of accumulated wealth consumed in smoke.

They council together. They cannot endure the desolation. They will not suffer the privation. Men fight harder to keep from sinking than to rise.

They go to the nobles and the rich. They ask for bread. They are given a stone. When in the annals of history has Privilege chosen to sacrifice itself for the common weal?

They turn to the governments. The governments listen. But what can the governments do? They have spent the substance of the living. They have spent the substance of those to come even to the third and fourth generation.

* * * * * *

Then a thing epochal happens. First a murmur, then a rumble, then a roar, then—the Revolution, peaceful or bloody; and all the emperors and kings, all the autocrats and aristocrats, go.

that such things are too sacred to be submitted to scientific scrutiny and that when "a wicked and adulterous generation seeketh after a sign there shall no sign be given unto it."

So far as we have seen no one has come forward to say he has actually seen the angels with his own eyes, but the number of people who have heard about those who know about those who have seen them is increasing daily. Some report merely that a luminous cloud came down from heaven between the British and their pursuers, and in it shining shapes could be seen combating. An Irish soldier, with the contrariety of his race, says it was a black cloud. We hear of a Catholic officer who was cut off in a trench with thirty men and, resolving to sell their lives dearly, they charged the Germans with shouts of "St. George for England!" The foemen fled and the German prisoners who were caught asked who was the officer on the great white horse who rode at the head and was invulnerable to their bullets. The vicar of St. Albans tells of a sergeant who had seen a picture of St. George and the dragon in a Y. M. C. A. and told the story to his comrades in the trenches during the battle. The Germans turned and ran as the old English battle-cry rang out and one of the Germans who was captured exprest surprize that the Allies had taken to armor and arrows.

We are also told that Berlin is excited over the account given by the German soldiers of the battle of Mons. In explaining why when they had the British at their mercy they allowed them to escape, they say it was due to the witchcraft of "those devils of Englishmen." A German lieutenant is reported to have said:

> I only know that we were charging full on the British at a certain place, and in a moment we were stopped. It was most like going full speed and being pulled up suddenly on a precipice, but there was no precipice there, nothing at all, only our horses swerved round and fled and we could do nothing!

The mysterious archers are supposed to be the same as those who saved the day for the English at Agincourt five hundred years before. The battlefield of Agincourt lies indeed within sound of the guns at Mons, but the skeptical mind might inquire why if their firing aroused these ancient warriors from their graves they did not direct their arrows at the French, whom they were fighting the last they could remember. The same query might be raised in regard to St. Joan of Arc who, it appears, was invoked by the French and came to their rescue in visible person. She also had learned of the *entente cordiale* and fought by the side instead of against the English, who had burned her at the stake.

It will be interesting to watch what new versions of the legend will continue to crop up and whether it will flourish in spite of the efforts made by leading Anglican and dissenting clergymen to nip it in the bud. Dean Henson preached a sermon in Westminster Abbey against the present tendency toward "grovelling superstition and belief in miracle" with special reference to the angels of Mons. There are many other manifestations of the same spirit. The Devon peasants report hearing the boom of Drake's drum which hangs in Buckland Abbey and, according to the legend, would be heard to beat thruout the land whenever England needed Drake again. Over a million and a quarter amulets of the "touchwood" type have been sold since the war began and they were officially presented to every one of the 1200 officers and men of a London battalion at a recent review in Hyde Park. Certainly the level-headed men of England will have to be vigilant if they are to check the superstitions which spread in the tense and almost hysterical atmosphere of the time.

DUMBA'S DISMISSAL

THERE will be but few, on either side of the ocean, to question the propriety of the President's action in handing passports to the Austro-Hungarian Ambassador. That Dr. Dumba should desire to relieve his nationals who would be thrown out of employment because they had conscientious scruples against making munitions to be used against their fellow countrymen is natural enough, but it is outrageous that he should conspire to foment strikes for the purpose of putting a stop to the manufacture, as he proposed to do.

It is hardly likely that in so flagrant a case the Austro-Hungarian Government will resent our action, however much it may have desired the success of his plan. We have in the history of our country sent seven foreign representatives home for the same offense, that is, interfering with our domestic affairs. Three of these were British, two French and two Spanish, not to count those cases where the representative was more or less voluntarily recalled because he had made himself obnoxious. In no case has this led to war or to the severance of diplomatic relations. In 1793 President Washington sent back Citizen Genet, representative of the French Republic, because he was trying to involve us in the war with England. In 1888 President Cleveland dismissed Lord Sackville-West because he was innocently entrapped into answering a letter of inquiry from an alleged British-American and telling him that a vote for Cleveland was a vote for England.

The United States has never had any serious difficulty with Austria-Hungary, and in recent years the connections between the two countries have become peculiarly intimate. Hundreds of thousands of Czechs, Slovaks, Rumanians, Jews, Magyars and Croats have come to America to find religious and political freedom and industrial opportunities denied them at home. The "white slaves" of Bethlehem, as Dr. Dumba calls them, are evidently better off than in their native land, since his Government has been for years trying in vain to prevent their escape to this country.

Since the dual monarchy has for the first time a Hungarian Premier, why should not a Hungarian ambassador be sent to us? Count Albert Apponyi on his recent visit here made a fine impression, and Franz Kossuth might revive the enthusiasm which his distinguished father aroused here in 1851.

A STILL SMALL VOICE

THERE is some precedent for the theory in this country that "taxation without representation is tyranny." But the many women of New York City who are forced to pay an inheritance tax have improved on the masculine spirit of '76 in voicing their protest to the tyrant, and instead of giving a Boston tea party have merely sent the following statement with their checks:

> This tax is paid under protest by a woman taxpayer. If the Government takes the taxes of women it should give them the vote.

The men who think that suffragists are always militant ought to be considerably cheered by this ladylike plea. Whether they heed it or not is another question.

THE STORY OF THE WEEK

THE GREAT WAR

September 5 Germans gain bridgehead of Friedrichstadt on Dvina River east of Riga. Allan liner "Hesperian" struck on 4th and sinks on 6th.

September 6 Forty French aeroplanes bombard Saarbrücken. Germans approach Vilna.

September 7 Czar takes command of Russian forces. Russians announce capture of 17,000 men and 89 guns on Sereth River, Galicia.

September 8 Zeppelins bombard London. Austro-Germans take Dubno fortress.

September 9 Heavy German drive in Argonne repulsed. Germans gain trenches in Vosges.

September 10 Second Russian victory on the Sereth. Austrian Ambassador Dumba dismissed.

September 11 Russian Coalition Cabinet proposed. Zeppelins raid English east coast.

September 12 Hard but indecisive fighting north of Arras in France, near Tolmsin on Austro-Italian frontier and in the Gallipoli peninsula.

The Wreck of the "Hesperian"

The "Hesperian," of the Allan Line, running from Liverpool to Montreal, was struck about eighty miles southwest of Fastnet at 8:30 p. m. on September 4. The explosion tore a great hole eight feet below the water line on the starboard side forward and sent water sixty feet into the air. There was at first a panic and some jumped into the sea even without life-belts, and two or three of the boats were capsized thru improper launching. But there proved to be no need for such haste, as the vessel did not sink until the morning of the 6th while she was being towed to Queenstown.

There were 333 passengers and 200 crew on board and ten of the passengers and twenty-two of the crew were lost. Among the crew were several Americans, one of whom, F. J. Wolff, aged twenty-one, from New Jersey, was drowned. The victims included also six women and one child. The "Hesperian" had been conveying Canadian troops to England, but being on her outward voyage, she had on board only forty wounded soldiers returning home.

No submarine or torpedo was seen, but the officers state that the metallic fragments that fell upon the deck and the odor of the explosive prove that the vessel was struck by a torpedo. The German Foreign Office believes that the "Hesperian" ran on a mine. It is also argued in behalf of Germany that the vessel was virtually a troopship and was secretly armed. On this point the American Consul cables:

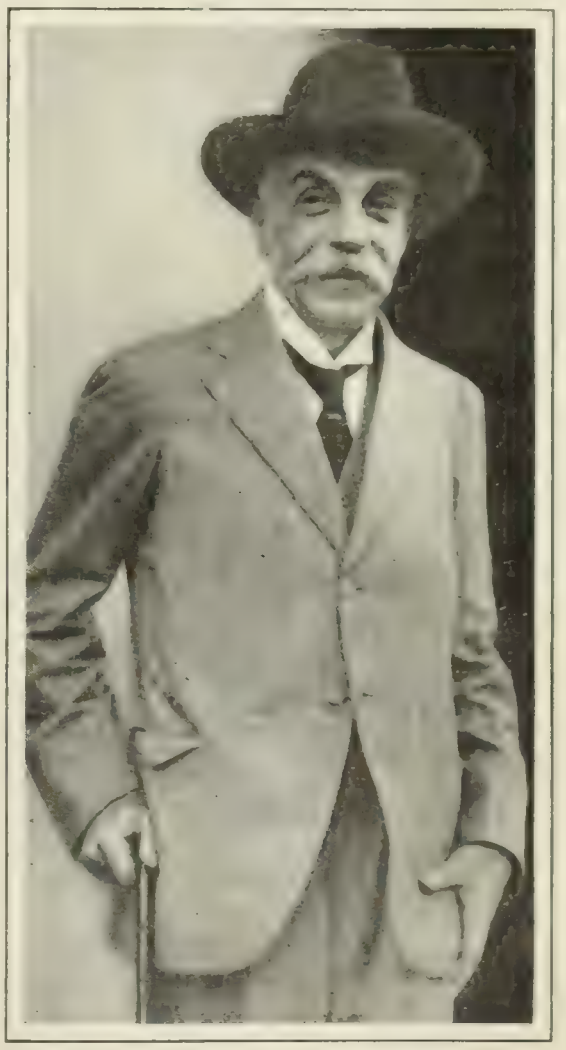
> A 6-inch gun mounted on the stern of the "Hesperian" was painted a service gray, and would not have been conspicuous even at a short distance, and the officers think it could not have been observed at all thru a periscope.

The officials of the Allan Line deny that the "Hesperian" carried any gun.

The "Arabic" Case

The wreck of the "Hesperian" caused great surprize in the United States and apparently also in Germany as it appears to be in direct violation of the assurance of the German Government, conveyed a few days before by Ambassador Bernstorff, that no more liners would be sunk without warning. The unfavorable impression and the feeling of disappointment with Germany was intensified when the note from the German Government in regard to the "Arabic" was received, for the note expressly disclaims any obligation to grant indemnity and refuses to submit the question of the propriety of the German submarine policy to The Hague. If the commander of a submarine is to be allowed to sink any vessel which he suspects may attack him the German assurance has very little value. According to the account of the officers of the "Arabic" the submarine was hiding behind the "Dunsley" when the "Arabic" went by. The essential portions of the German note are printed on the following page.

Ambassador Dumba Dismissed



The Austro-Hungarian Government has been requested to recall Dr. Constantin Theodor Dumba, its Ambassador at Washington. Dr. Dumba is "no longer acceptable" because of his advocacy of a plan which in his opinion would "strongly disorganize" "if not entirely prevent the production of war material in Bethlehem and the Middle West," and because of his use of James F. J. Archibald, an American war correspondent traveling on an American passport, as a "secret bearer of official despatches thru the lines of the enemy of Austria-Hungary."

Mr. Archibald was detained on August 30 by British officials when the Dutch liner "Rotterdam," on which he sailed, on his way to Berlin and Vienna, stopped at Falmouth, England. Among his papers were found the memorandum of a plan prepared by the editor of a Hungarian-language newspaper, the *Szabadsag*, published in this country, to bring about strikes in the Bethlehem Steel Company's works and other munitions factories, and a letter from Dr. Dumba to Count Burian, Austrian Minister of Foreign Affairs, commending the plan to his "favorable consideration." The significant parts of this letter are reprinted on the following page. Mr. Archibald denies that he knew the contents of the package which Dr. Dumba entrusted to him for delivery in Vienna, and it is not certain that he is criminally liable for his unneutral act but his passport has been canceled and he is returning to this country.

Dr. Dumba made no effort to deny the objectionable letter, but defended its propriety. He explained to Secretary Lansing that he had been ordered by his government to give the widest publicity to a warning that Austro-Hungarian citizens who aided in the manufacture of munitions for the Allies were guilty of treason and would be liable to severe punishment if they returned to their own country. In lending his influence to a plan to cripple the manufacture of munitions, an industry explicitly approved by the United States Government in its note of August 12 to Austria-Hungary, Dr. Dumba was guilty of the unpardonable diplomatic offense of interference in the domestic affairs of this country.

Captain Franz von Papen, military attaché of the German Embassy, the Austrian Consul General in New York, Alexander Nuber von Pereked, and the unnamed Hungarian editor, thought to be William Warm, formerly of the Cleveland *Szabadsag*, are all implicated in Dr. Dumba's letter, and may be dismissed or deported.

While no serious strikes have yet occurred in munitions factories in the region mentioned by Dr. Dumba, five Chicago plants are now tied up by machinists' strikes, about 750 men in

THE RETIRING AMBASSADOR

Dr. Constantin Theodor Dumba, ambassador from Austria-Hungary, whose recall has been asked by the American Government

OUR CONTROVERSY WITH GERMANY

The Note of the German Government on the "Arabic" affair:

On August 19 a German submarine stopped the English steamer "Dunsley" about sixty nautical miles south of Kinsale and was on the point of sinking the prize by gunfire after the crew had left the vessel.

At this moment the commander saw a large steamer making directly toward him. This steamer, as developed later, was the "Arabic." She was recognized as an enemy vessel, as she did not fly any flag and bore no neutral markings.

When she approached she altered her original course, but then again pointed directly toward the submarine. From this the commander became convinced the steamer had the intention of attacking and ramming him. In order to anticipate this attack he gave orders for the submarine to dive, and fired a torpedo at the steamer.

After firing he convinced himself that the people on board were being rescued in fifteen boats.

According to his instructions, the commander was not allowed to attack the "Arabic" without warning and without saving the lives unless the ship attempted to escape or offered resistance. He was forced, however, to conclude from the attendant circumstances that the "Arabic" planned a violent attack on the submarine.

This conclusion is all the more obvious as he had been fired upon at a great distance in the Irish Sea on August 14—that is, a few days before — by a large passenger steamer apparently belonging to the British Royal Mail Steam Packet Company, which he had neither attacked nor stopped.

The German Government most deeply regrets that lives were lost thru the action of the commander. It particularly expresses this regret to the Government of the United States on account of the death of American citizens.

The German Government is unable, however, to acknowledge any obligation to grant indemnity in the matter, even if the commander should have been mistaken as to the aggressive intentions of the "Arabic."

If it should prove to be the case that it is impossible for the German and American governments to reach a harmonious opinion on this point, the German Government would be prepared to submit the difference of opinion, as being a question of international law, to The Hague Tribunal for arbitration, pursuant to Article 38 of The Hague Convention for the Pacific Settlement of International Disputes.

In so doing, it assumes that, as a matter of course, the arbitral decision shall not be admitted to have the importance of a general decision on the permissibility or the converse under international law of German submarine warfare.

Berlin, September 9, 1915.

all having walked out, and Detroit and Cleveland report that a campaign is being pushed by Austro-Hungarian agents to induce 50,000 workmen of that allegiance to lay down their tools. Federal agents in Chicago are investigating the resources and control of the Machinists' Union.

Argonne and Vosges

There has been an increase of activity all along the western fronts but no decided movements have so far materialized. It is rumored that Kitchener's new army of a million men have been safely landed in France and that the British who during the year have held only about thirty miles at the front in Belgium have extended their line to two or three times its former length, releasing thereby a large number of French troops for action elsewhere. But where the new British positions are it is impossible to tell, for almost no information has been out as to operations on the British front for several weeks.

But at the other end of the line in the Argonne forest and among the Vosges mountains there are reports of furious tho ineffective fighting. The Argonne forest lies between the Aire and the Aisne, just west of the town of Varennes, well known to the readers of Carlyle's French Revolution as the place where Louis XVI and his family were stopt in the flight from Paris. Just here in September, 1914, the German Crown Prince was stopt in his march toward Paris and because he has not been able to get any further in a year his military reputation has suffered and his popularity has been lost.

The slaughter in the Argonne has been frightful. It is said that one German army corps of 40,000 men has lost more than that number, the ranks having been kept filled as fast as they were depleted. In the effort made by the Germans the last of June to break thru the line at this point they report capturing 2560 French prisoners and burying 1600 French dead. On the 8th of September the Germans began another drive and succeeded as before in carrying a few hundred yards of trenches. They report the capture of 2037 men, 49 machine guns, 64 mine throwers and one cannon. The German official observer describes the fighting in the Argonne as follows:

The charge begins. Not with fixed bayonets, as in peace-time training, do the storming columns dash forward. Instead almost every man has his rifle slung over his shoulder, a number of hand grenades in his right hand, on his left arm like a tar-

THE AUSTRIAN AMBASSADOR'S OFFENSE

The Note of the Austro-Hungarian Ambassador at Washington to Baron Burian, Foreign Minister:

I am under the impression that we could, if not entirely prevent the production of war material in Bethlehem and in the Middle West, at any rate strongly disorganize it and hold it up for months, which, according to the statement of the German Military Attaché, is of great importance, and which amply outweighs the relatively small sacrifice of money.

But even if the disturbances do not succeed, there is a probability at hand that we shall compel, under pressure of the crisis, favorable working conditions for our poor, opprest fellow-countrymen. In Bethlehem these white slaves at present work twelve hours a day seven days in the week! All weak persons succumb, become consumptive. As far as German workingmen are found among the skilled elements, provision will be made forthwith for their exit. There has, besides this, been created a German "private" registry office for providing employment, and which already works voluntarily and well for such persons. We, too, shall join, and the widest support is contemplated for us.

C. DUMBA.

New York, August 20, 1915.

The Note of Secretary of State Lansing to the Austro-Hungarian Government:

By reason of the admitted purpose and intent of Mr. Dumba to conspire to cripple legitimate industries of the people of the United States and to interrupt their legitimate trade and by reason of the flagrant violation of diplomatic propriety in employing an American citizen, protected by an American passport, as a secret bearer of official despatches thru the lines of the enemy of Austria-Hungary, the President directs us to inform your Excellency that Mr. Dumba is no longer acceptable to the Government of the United States as the Ambassador of his Imperial Majesty at Washington.

Believing that the Imperial and Royal Government will realize that the Government of the United States has no alternative but to request the recall of Mr. Dumba on account of his improper conduct, the Government of the United States expresses its deep regret that this course has become necessary and renews the Imperial and Royal Government's assurance of its sincere desire to continue the cordial and friendly relations which have always existed between the United States and Austria-Hungary.

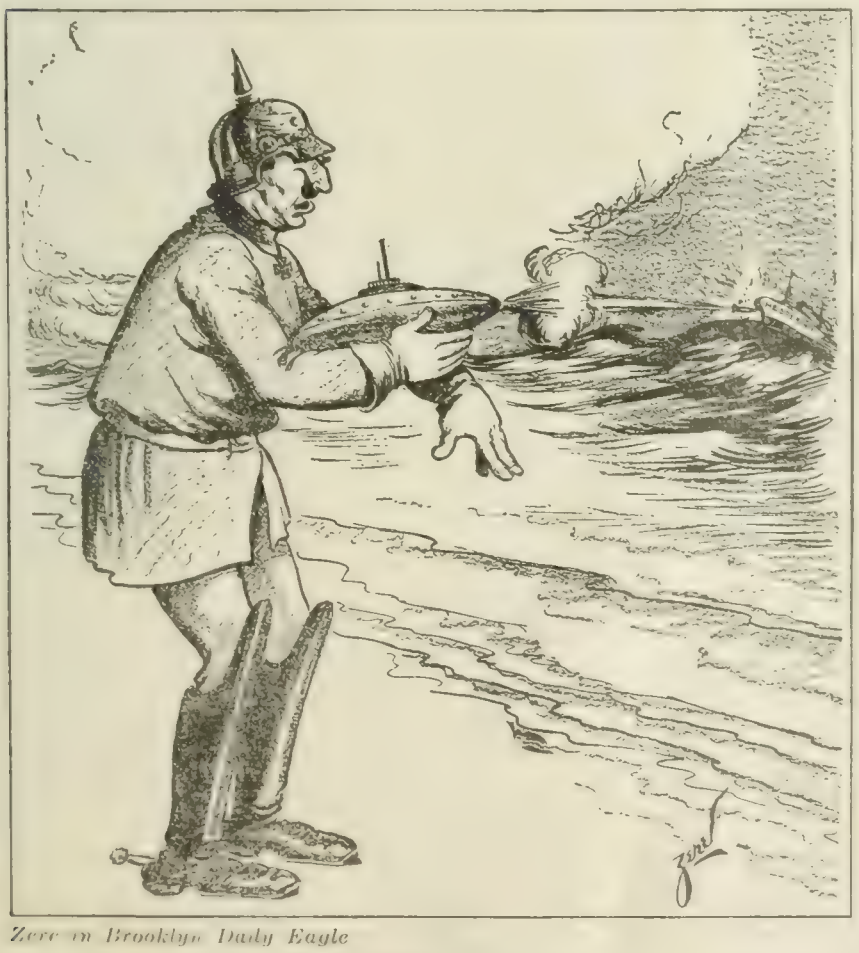
HELD BY A SUPERIOR FORCE

This communication trench, just back of the first line, contains a pretty large proportion of the "big men" who are conducting the Allies' war. Kitchener leads, M. Millerand, the French Minister of War, follows, and General Joffre is just behind

man of old, a buckler (tho of steel and not of bearskin), and over his mouth and nose a respirator for protection against fumes from the French bombs.

In Alsace the struggle for the eastern peaks of the Vosges mountains continues with unabated violence. The Germans succeeded in recapturing the summit Hartmannsweilerkopf but could not hold it. The importance of this peak lies in the fact that it overlooks Mülhausen, ten miles southwest. The mountains of Schratzmännele and Lingekopf, which stand about the same distance west of Colmar, were taken in August by the French after siege operations involving the building of miles of roads and trenches. Some of these positions were regained by the Germans on September 9 with the aid of flaming liquids and asphyxiating bombs.

Aircraft Raids



England has suffered from visitation of the Zeppelins twice within twenty-four hours. On the night of the 7th they passed over the eastern counties, and on the following night they reached London. Nothing is allowed to be published or cabled as to what places were hit, but it is surmised that bombs have been dropt in the heart of London about Trafalgar Square. Thirty-seven persons are reported dead including several women and children. A large number were injured and many fires were caused by the incendiary bombs. One soldier is dead and three injured. This is the first time that any except non-combatants have suffered in the Zeppelin raids.

The French and British aviators have been extremely active in attacking the towns behind the German lines. On August 25 fifty-two French aeroplanes flew over into Rhenish Prussia and dropt more than 160 bombs intended for the German munition factories at Saarlouis. According to the German report they killed several persons but did no material damage and four of the machines were brought down by the German guns. On the following night a combined squadron of French, British and Belgian aeroplanes of about the same number bombarded the German positions in the wood of Houthulst, north of Ypres in Belgium.

French aviators have also bombarded Lorrach, Dornach, Leny Freiburg, Mülheim and other towns in Baden, Rhenish Prussia and France. On September 6 a squadron of forty attacked Saarbrücken, dropping bombs upon the barracks and railroad buildings. This was announced to be in retaliation for the recent German raids on the open towns of Lunéville, St. Dié and Gerardmer in which women and children were killed. The Germans report that the military damage by the French raids was inconsiderable but many civilians lost their lives.

The Czar Takes Command

A change has taken place in the Russian Government which seems to amount to a veritable revolution and may well prove to be a turning point in the history of the nation. The Duma or Russian Parliament, which has never since its establishment been able to exercize any real power, has now apparently got control of the

SUPERSEDED BY THE CZAR

The Grand Duke Nicholas, appointed to command the Russian armies on August 3, 1914, and now sent to the Caucasus, while the Czar takes his place at the head of the army. His handling of his forces has been praised by strategists here and in London and France

Government. The Cabinet is likely to resign and be replaced by a Coalition Government. This will have the backing of a majority of the Duma, 300 out of 439 votes, composed of the Liberal, Progressive and Radical parties. Their program is said to comprize autonomy for Poland, a conciliatory policy for Finland, amnesty for political and religious offenses not of a criminal character, complete cessation of religious persecution, removal of restriction upon Jews, and the recognition of the legality of trades unions. More remarkable still, we hear of committees of a hundred or more prominent citizens being founded in Moscow and Petrograd for the investigation of the conduct of the war and the manufacture of munitions. The Emperor presided over a congress of representative men from all parts of the country in which public affairs were discussed with unprecedented freedom.

Another startling change, doubtless a part of the same movement tho its significance is by no means clear, is that the Emperor has placed himself at the head of the Russian forces and sent the Grand Duke Nicholas to the most distant seat of war, the Caucasus. The imperial rescript is concluded as follows:

> My duty to my country, which has been entrusted to me by God, compels me to do[illegible] when the enemy has penetrated into the interior of the empire, to take supreme command of the active forces and to share with the army the fatigue of war and to safeguard with it Russian soil from attempts of the enemy. The ways of Providence are inscrutable, but my duty and my desire determine me in my resolution for the good of the state.
>
> The invasion of the enemy on the western front, which necessitates the greatest possible concentration of civil and military authorities as well as the unification of command in the field, has turned our attention from the southern front. At this moment I recognize the necessity of your assistance and counsels on the southern front, and I appoint you viceroy of the Caucasus and commander in chief of the valiant Caucasian army.

What the change portends for Russia is uncertain, for nothing is known of the military capacity of the Czar or of his new advisers. The Grand Duke, in spite of the appalling disasters which have befallen the Russian armies, has been unceasingly praised by the English and French writers for his skill in conducting retreats without losing his army. He has been regarded as having more power in Russia than the Czar himself and he has had the support of the conservative and official class.

Austrian Drive Checked

The recent advance of the Austro-German forces drove the Russians out of Galicia except the northeast corner about Tarnopol. Here in the angle protected by the Sereth and Dniester Rivers the Russians have made a stand and repulsed their pursuers. The Vienna reports acknowledge that the Austrians were forced to retire from the Sereth River by force of numbers and the Petrograd reports claim the capture of over 23,000 prisoners and a large number of guns. This is denied by the Germans.

But unless the Austrian power is exhausted this success of the Russians in Galicia is not likely to avail them much for north of Tarnopol the Austrian advance continues. Of the triangle of fortresses in this region Dubno has been taken this week, Lutsk had been taken before and Rovno is likely soon to fall also. The Russians evidently anticipate the possible loss of Kiev altho this lies two hundred miles further in the interior, for the government and the people are removing their goods from the city.

All along the line from the Galician frontier north to the Gulf of Riga, German gains are reported during the week. They have advanced in the Pripet marshes east of Brest Litovsk. They have reached the suburbs of Vilna, the chief railroad center east of Warsaw. They have extended their lines on the Dvina River, east of Riga, but have not yet attempted a crossing in force.

Carranza Rejects Conference Plan

General Venustiano Carranza has declined to participate in the conference suggested by Secretary Lansing and the six Latin-American diplomats as a means toward the establishment of a stable Mexican government. His answer, received on September 10, bases the refusal on two arguments: that in joining such a conference he would "impair profoundly the independence of the republic and would establish the precedent of foreign interference in the determination of its interior affairs," and that the Constitutionalist forces, already in control of "the greater part of the national domain," could not sacrifice the "cause of the people" by compromising with other factions. The note is a long one and summarizes the history of the revolution, asserting that Madero's revolution failed because of concessions to the "enemies of the people" and that Villa was bribed by the reactionaries to lead a counter-revolt.

In lieu of the proposed conference of all Mexican leaders, Carranza, "convinced of the sincerity and the noble desires of the governments . . . to contribute toward the reëstablishment of peace in Mexico," invites the seven diplomats to meet with him at a border town "to the end of considering the affairs of Mexico from the international viewpoint only" and with the object of determining whether the Constitutionalist Government be not worthy of recognition.

By delaying his answer until Villa had suffered considerable military reverses, Carranza was able to make a plausible claim to success in conquering Mexico. During the week Villa was beaten all along his line thru the states of Durango and Coahuila, losing Durango, Saltillo and Paredon, and evacuating Torreon. This throws him back on Chihuahua, and the surrender of Piedras Negras on the border leaves him without a port of entry on the lower Rio Grande. Carranza now holds central Mexico as far north as Torreon, tho the character of his tenure may be judged from the border raids originating in territory he supposedly controls. The state of Morelos, to the heart of Mexico, Tepic on the west coast and Tabasco, adjoining Yucatan, are, however, still unconquered.

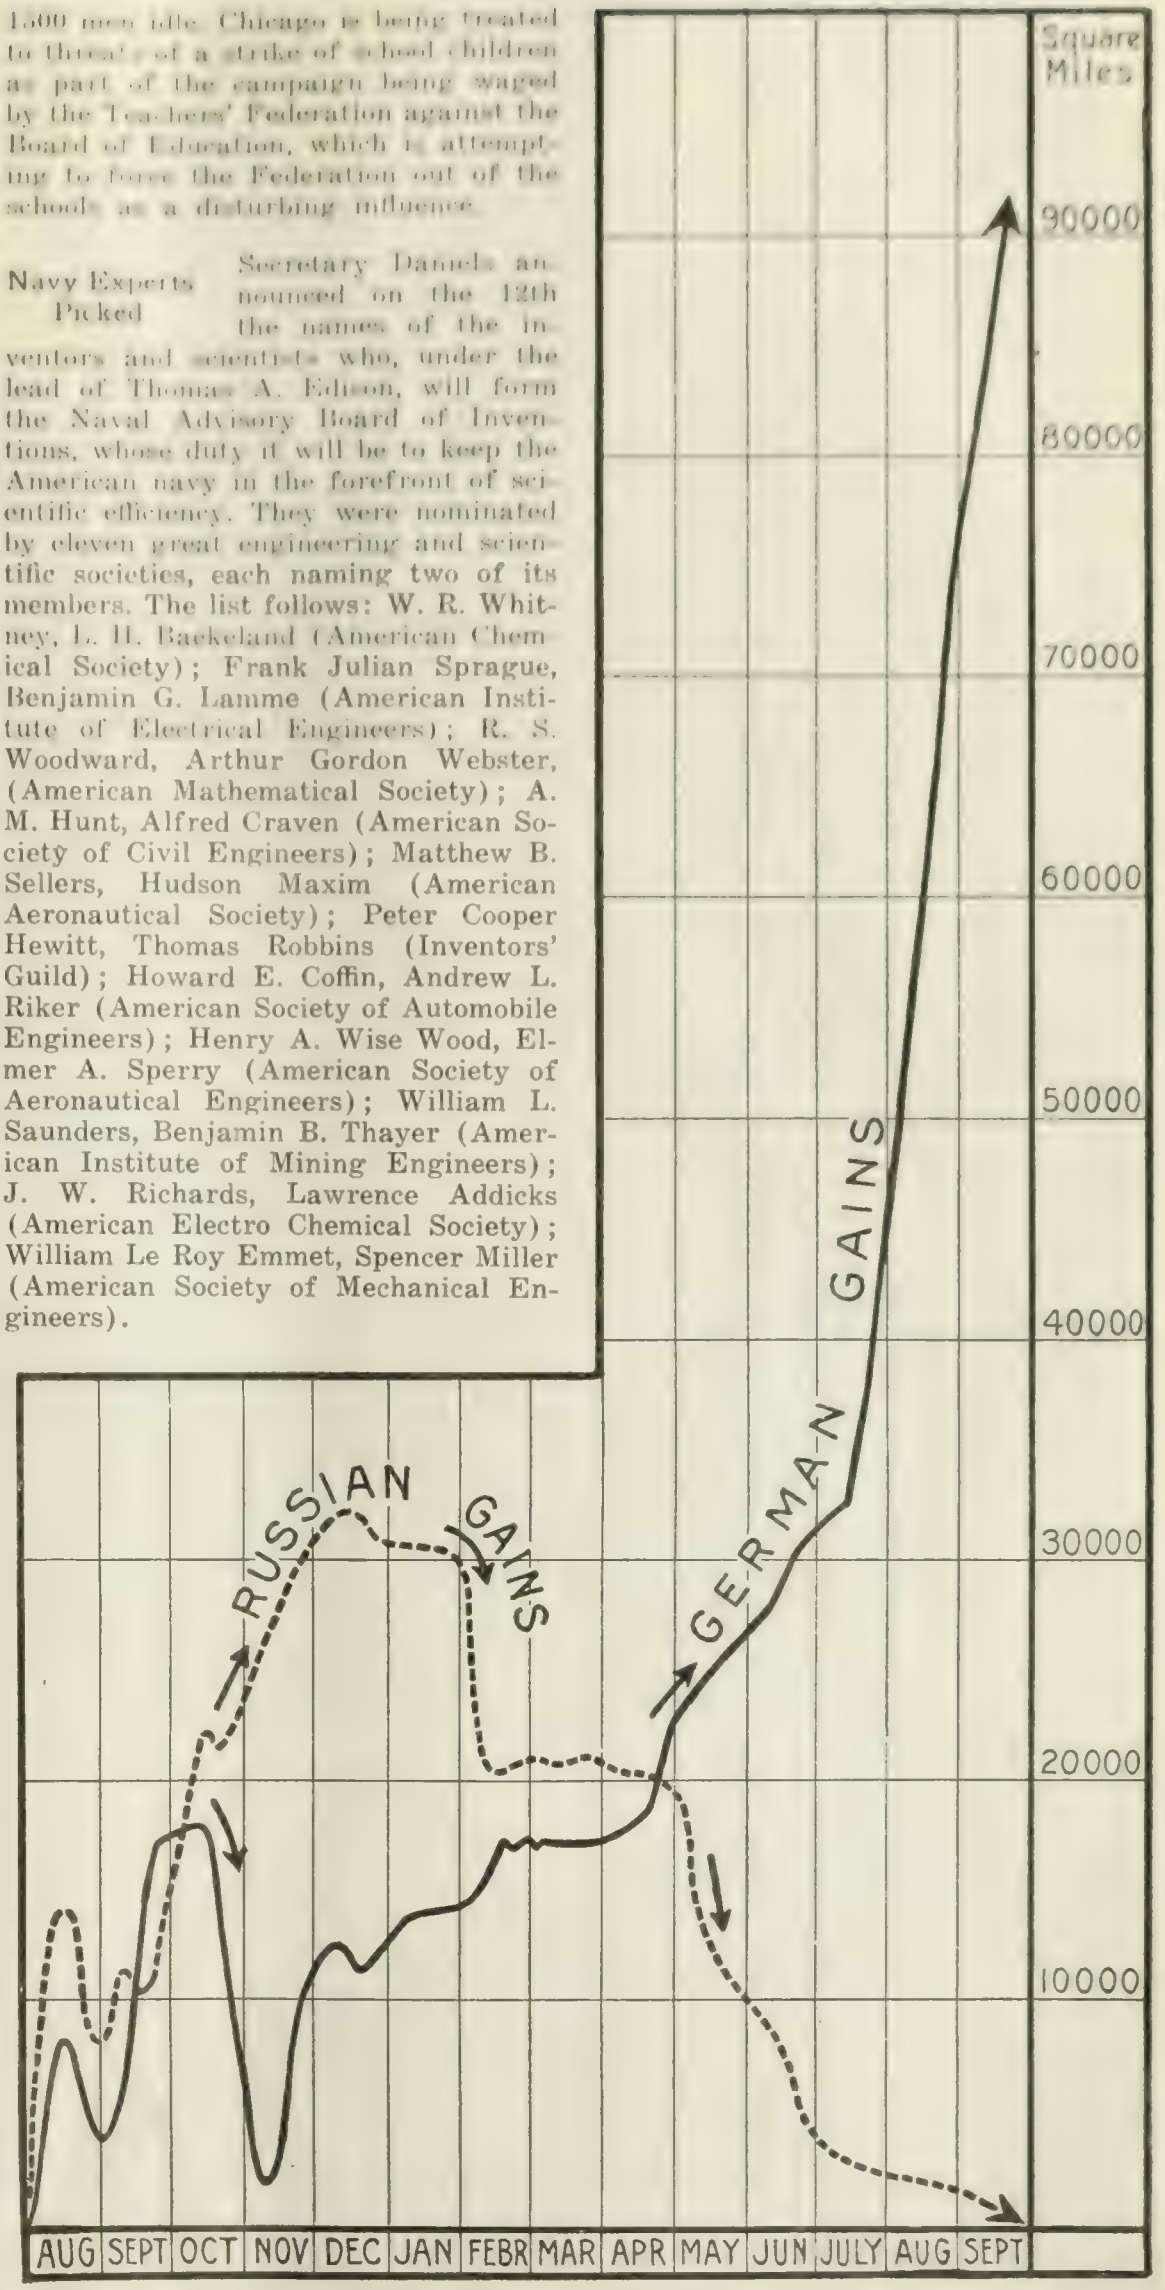
Another meeting of the Pan-American Conference was to be held before September 15, when Senor Naon was to sail for Argentina, where he was

BULGARIA'S BARGAIN

Turkey has ceded to Bulgaria the territory shaded on the above map, in return for which, it is assumed, Bulgaria agrees not to engage in the war against Turkey on the side of the Allies. The concession gives to Bulgaria the whole of the railroad route which runs along the western bank of Tunja and Maritza rivers to the port of Dedeagatch. The railroad station of Adrianople is included in the concession

said to be likely to run for the presidency.

The border fighting reached a climax on September 4, when a band of Mexicans and eighty United States cavalrymen, with Texas Rangers and civilians, fired across the Rio Grande at each other for most of the day near Old Hidalgo, Texas. Carranzista soldiers were suspected of engaging in this fight and of the recent firing on the United States military aeroplane. Carranza and his generals denied this, and the Constitutionalist forces were withdrawn from the border, relieving the tension.



Strikes

Bridgeport, Connecticut, is still in industrial upheaval. More than 1600 employees of the American Graphophone Company have struck for the eight-hour day and wage increases. Two strikers arrested in last week's small riot at the Crane Valve Company's plant have been sentenced to a year in jail, and the American Federation of Labor is preparing to fight their cases on appeal. Concessions made to the men resulted in the ending of strikes in an American Locomotive Company plant at Dunkirk, New York, in several factories, employing together about 1700 men, at Torrington, Connecticut, and in other Connecticut shops. The Empire Steel and Iron Company of Allentown, Pennsylvania, and the American Brass Company of Waterbury, Connecticut, have announced wage increases; the Warner Manufacturing Company, which makes automobile parts in Toledo, and the Stevens-Duryea Automobile Company of Springfield, Massachusetts, have voluntarily adopted the eight-hour day, the former as an experiment to last a month.

In Albany, Troy and adjacent cities in New York a street-car strike has tied up all electric traffic and holds 1500 men idle. Chicago is being treated to threats of a strike of school children as part of the campaign being waged by the Teachers' Federation against the Board of Education, which is attempting to force the Federation out of the schools as a disturbing influence.

Navy Experts Picked

Secretary Daniels announced on the 12th the names of the inventors and scientists who, under the lead of Thomas A. Edison, will form the Naval Advisory Board of Inventions, whose duty it will be to keep the American navy in the forefront of scientific efficiency. They were nominated by eleven great engineering and scientific societies, each naming two of its members. The list follows: W. R. Whitney, L. H. Backeland (American Chemical Society); Frank Julian Sprague, Benjamin G. Lamme (American Institute of Electrical Engineers); R. S. Woodward, Arthur Gordon Webster, (American Mathematical Society); A. M. Hunt, Alfred Craven (American Society of Civil Engineers); Matthew B. Sellers, Hudson Maxim (American Aeronautical Society); Peter Cooper Hewitt, Thomas Robbins (Inventors' Guild); Howard E. Coffin, Andrew L. Riker (American Society of Automobile Engineers); Henry A. Wise Wood, Elmer A. Sperry (American Society of Aeronautical Engineers); William L. Saunders, Benjamin B. Thayer (American Institute of Mining Engineers); J. W. Richards, Lawrence Addicks (American Electro Chemical Society); William Le Roy Emmet, Spencer Miller (American Society of Mechanical Engineers).

THE TEUTONIC STEAM-ROLLER

The rapid gains made by recent German-Austrian drives are shown by the above diagram. The dotted line gives the area of enemy territory held by the Russians at the dates given below. The solid line gives the area of enemy territory held by the Germans at the same time. It will be seen that the war began in August, 1914, by gains on both sides, for the Russians invaded East Prussia, while the Austrians invaded Poland. The invaders in both cases were expelled. The German invasion of Poland in October was also a failure, but it was promptly repeated and since then the Germans have gained almost continuously until now they hold over 90,000 square miles of territory in Poland and the Russian provinces beyond

"WE PAST A SUBMARINE. IT CAME UP, LOOKED, DIVED AND DISAPPEARED"

SAILING PAST SUBMARINES

BY HAROLD J. HOWLAND

Mr. Howland tells here the story of his voyage to England on the American liner "New York." In London he has been at Morley's on Trafalgar Square, which was probably under Zeppelin fire in the raid of September 8, about which so little information has passed the censors. Doubtless he could tell much more of this alarming event, the "Londoners' first glimpse of the war at close quarters," had he been permitted to do so.—THE EDITOR.

SATURDAY, August 21. We are off. Already the towered pile that is lower New York looms diminishing astern. Ahead thru the Narrows opens a straight path upon dubious seas. It is only two days since the "Arabic" was sunk in the very waters we are to traverse. True, the "New York" is an American ship. But—who knows?

It has been a quiet sailing. We have no crowded passenger list—106 first class instead of 375 as it would be if the ship were full. There has been no holiday mood on deck or dock. The few brave attempts at jocularity—the straw hat sent skimming over the rail from an impulsive hand, the mighty cabbage, fluttering with American flags, that drops solidly into our embarrassed arms—savor sadly flat. Too many thoughts of the strange Cyclops fish that may be lurking near the journey's end throw shadows across the coming days. It has been a sober sailing.

Down the harbor past the little anchored steamers waiting their appointed tides. The usual tramps, some in unusual dress. One bears amidships on her side in great capitals the word DANMARK and fore and aft a painted flag—the red St. Andrew's cross on a white ground. Another proclaims her neutral nationality by the word NORGE with the vertically striped tricolor of Norway at either end. Our own freeboard, we know, shouts out our identity with NEW YORK, AMERICAN LINE, and the emblazoned stars and stripes. No German eye at the undersea end of a periscope shall mistake our neutral registry if we can help it.

On thru the Narrows, where two low lying destroyers, grim in battle gray, guard our country's neutrality against abuse. Out upon a quiet sea under a smiling sky. May it be an omen.

Sunday, August 22. A placid day. As usual at this stage of a voyage, we are chiefly interested in our shipmates. We look them over, guess about them, discreetly chat with them with a question mark in our minds, gossip about them. Soon a bit of news pops up. One hundred and more cancelled their reservations since the "Arabic" was sunk. In fact more stayed behind than came. Were they the wise ones or we the foolhardy ones? *Nous verrons.*

A curious thing. Almost every passenger's story one hears begins—or ends—with the war. Most of us are going over because of it; a very few in spite of it, but only on urgent business. Sailing in war time recalls the marriage service, "not by any to be enterprised, nor taken in hand, unadvisedly, lightly, or wantonly."

The little Canadian girl three steamer chairs away has a fiancé down with fever in a hospital in Havre. She is going over with his father and sister to cheer him up. That other pretty Canadian girl, barely out of school one would say, is on her way to be married to her boy officer in the Dominion forces. He is still in England, but he may go to France any day. He would rather leave a wife behind in England than a sweetheart in Canada.

These mothers with children—babies, toddlers, scamperers—all have husbands at the front. It will be easier to fight—and to wait—with only the Channel between than all the Atlantic. Here is a young surgeon from remote Alberta offering up his skill to the Empire's need.

There are no Teutons among us. There is no reason why they should not sail on an American ship; there is every reason why they should not land at a British port. Not a quarter of us are Americans—and all on business bent. This is no holiday trip.

Monday, August 23. A discovery. Our table steward is a soldier. The fact comes out at breakfast, when the dining saloon is empty save for a few of us early birds. As thus:

Steward (respectfully in our left ear): "I've been at the front, sir. In France, sir."

Passenger (interested): "Then what are you doing here?"

S. "Wounded, sir. Discharged 'unfit for further service,' sir."

P. "Where were you wounded, steward?"

S. "In the arm, sir."

P. "I mean in what engagement."

S. "St. Eloi, sir. Last April."

P. "How did it happen, steward?"

S. "I was goin' ahead not thinkin' there was anybody anaht, sir, when up jumps, no further awai than that table, sir, a brute of a big German. 'E cime for me with the b'y'net, sir. I 'ad me own knife—b'y'net, sir—in me right 'and an' tried to catch 'is in me left an' missed it. 'E got me a nawsty one thru the thick o' me upper arm, sir. An' then I got 'im, sir. An' then I knew nothin' till I woke up at the Casino. The 'ospital, sir. Yes, sir. Unconscious, sir."

P. "How did you get him?"

S. "I daon't loike to think of it, sir. With the b'y'net. Thru the fice, sir."

P. "Are you going back, steward?"

S. "Not till some o' these other young fellas 'as 'ad their turn, sir. It mikes me fair sick. 'Ere I comes back after all I've suffered and sees these young fellas enjoying themselves. It ain't right, sir. We ought to 'ave conscription, that's what I say. An' mike some o' these young fellas that's 'angin' round 'do their bit.'"

Do all Englishmen who have done their bit feel this way about those that have not? That way lies compulsory service, distasteful to the Anglo-Saxon temper.

Tuesday. The bedroom steward supplements the announcement that the bath is ready with sensational news. The German Ambassador has been sent home. Congress has been called together. An appropriation for a hundred million pounds—half a billion dollars—has been asked for. Food for the imagination. The usual shock of the cold sea water in the tub is hardly felt this morning. Shaving is a rather nervous process. Shall we have to "do our bit"?

But a glance at the wireless bulletin steadies the pulse. That is only what the Washington correspondent of the London *Times* thinks that the Cabinet has decided to do if Germany does not finally render satisfaction for the trespass of her submarines. No need to enlist just yet.

Wednesday. Still a calm sea, but a gray and drizzling sky. There is nothing to report.

Thursday. The young folks are arranging a program of deck sports for tomorrow. For the second day no news from America. Is there a censorship in the captain's cabin?

Friday. Still no news. One cannot

help wondering. During the morning the steward takes down a life-belt from the rack and lays it handy. Well, one might as well try it on. It fits.

In the afternoon the sports on deck. A pleasant time for all. Strange how the Englishman comes out of his shell at the call of sports. As the games are ending, the life-boats are swung out on the davits and lowered to the rail on the promenade deck. Tonight we enter the war zone. Cheerful thought, isn't it? We look the boats over with a curious and calculating eye. It is a novelty to have the life-boats play some other rôle than that of obstacles on the boat deck.

As night comes on the watch is busied rigging strange contrivances along the sides. At intervals on either side a spar is thrust out from the ship bearing at the end a big bowl shaped reflector with a cluster of electric light bulbs inside it. They cast a blinding light inboard; by leaning far over the rail one can see the painted stars and stripes brilliantly luminous in the glare. The white letters of our name, too, stand out unmistakably.

It is, like the ready life-boats, a comforting precaution. But the good ship must look a very harlequin. It is galling to think that an American ship must adopt such sensational billboard methods to protect American men and women and children from lawless attack. But will it protect us after all? One cannot help wishing we had some news.

Toward midnight a fantom cruiser slips out of the dark, steams alongside a while for a little chat with our bridge, and fades away. The war zone at last.

Saturday. Awaken early from a refreshing sleep. But did not the aristocrats in the Conciergerie often sleep well the night before the guillotine? Anyway not all of us have been so fortunate. The deck chairs, one hears, were well patronized till nearly dawn.

A day of days. Golden sunshine on a sea that gives a new meaning to the word ultramarine. The mind refuses to grasp the thought of a menacing death hiding beneath that brilliant blue. But not all minds have been so stoical. The woman in the next chair, sensible, reasonable, self-possest, suffers a bad case of nerves beneath a quiet calm.

"Several times in the night," she confides, "(I turned out my light at five) I found myself standing in the middle of my cabin floor. The slightest noise brought me out of my berth."

In the offing lies a cruiser, a seaplane sailing and drifting and circling above her. A second cruiser steams by on the other side. We are well within the war zone and here the Mistress of the Seas has vigilant watchers. But what watcher can be sure to detect the strange death-dealing fish that swims beneath the rippling waves?

The splendid day wears on. Now one ship, now a dozen are in sight. We are in traveled waters now. In the early afternoon another cruiser steams across our bows, drops back alongside and signals us with grotesque gesturing semaphore and parti-colored strings of signal flags. Her message given, she goes away upon her further business. Was it a warning she offered us? They're close mouthed there upon the bridge.

Between tea and dinner we sight a fleet of fishing boats. More than a score there are, a fleet of painted ships upon a painted ocean. From afar they look a helter skelter group; but as we draw up to them they resolve into a drawn up line, stretching to right and left as we pass thru. They're all gray, too, like cats that roam at night. Each has its net straight out astern, the net floats reaching half way to the next in line. What are the fish they fish for? Are they those men eat or do they eat men themselves?

The night drops down, and on either bow a light gleams out. We sail narrower waters now.

Sunday. A rattling anchor chain brings us on deck. We ride the waters of a river that divides a city. It rains and it is bitter cold. This must be England.

Now comes the startling news. Last evening we past a submarine. They saw it from the bridge. It came up close, looked, dived and disappeared.

Was it the sight of the emblazoned stars and stripes that held their hand? Thank God the voyage is done.

On board U. S. M. S. "New York."

ZEPPELINS

BY CABLE FROM MR. HOWLAND IN LONDON

Wednesday, September 8.

LONDON this morning is particularly urbane. The air that comes in at my window overlooking Trafalgar Square is soft and mild. The damp shiver of the past few mornings has gone out of it. Only the faint scent of coal smoke in the nostrils whispers "London." The Square lies dreaming in its early quiet. The Landseer lions about the Nelson column half smile, half frown—benign, severe. Only the dry pools of the fountains—the gleam of water carries far to an eye, possibly alien, looking down from the clouds—make an unfamiliar note.

They say England is at war. Nonsense. Does it look like it? This is the old familiar London, the London that not only Englishmen love. If war were assailing the Empire, could London be so little changed? The mind knows the fact, but the imagination refuses it.

So down to breakfast, a meal as inscrutably English as the lions in the Square. No use to look for news in the morning paper—the censorship draws too close a veil. But stop a moment; here's a line that's news—if such a bare cropped fact deserves the name.

"Hostile aircraft visited the Eastern counties last night and bombs were dropt. It is known that there have been some fires and some casualties, but particulars are not yet available."

The Eastern counties. That's a large order. It may be anywhere in a many square miles. But conjecture is useless—unless the hall porter knows—for many things have been hid from the wise and prudent and revealed unto hall porters. So I ask—and discover.

In a typical British street stands a typical British crowd, quiet, orderly, silent. A barrier at either end of a block guarded by stoically alert policemen holds back the throng. A British crowd, at least on an occasion like this, is almost too patient and peaceful to be quite canny. It is a street like a thousand others. Uniform rows of two storied brick houses, painted yellow perhaps, but smoked a depressing gray, as like as the proverbial pod of peas.

But on one side half way down is an empty space as clean and even as if your thumb had pushed a pea from out the pod. One house an equal fraction of the whole, simply is not. A cellar full of rubbish is all that's

left. It is a scrap heap that even a rat would scorn to hide in.

And what of the folk that live there? Are they entrapped too? Rumors drift thru the patient crowd. A dozen, they say, have been rescued—the word is quaint to use about the dead—from this house and the one in the next street. Men, women, children—a fine harvest for the frightful ones.

A woman in the crowd, a decent, homely soul, imparts her story. "I lived just there around the corner. We had not gone to bed when suddenly I heard it come. A long drawn whish as the bomb fell down."

It must have sounded like a rocket when it starts away.

"There was a great blue light the color of that."

She points a finger at a child's blue pinafore.

"No, more like that."

The second dress is lighter—more washed out.

"It made the whole room bright. Then the great noise like—like—I can't tell what. And then the dust that spread like smoke from a big bonfire. My man was partly drest. I had my nightdress on. I pulled my blouse around me and we ran before you could say knife. The street was full of folk like us. Then the constables came crying that we should go indoors. But we would rather stop outside."

The crowd stands patient there and shifts and drifts about. Now comes a gruesome thing. It is an ambulance, a little two-wheeled barrow thing pushed by two men in blue. Its hood is down, but the space beneath looks short. What does it hide? A little girl, they say. It rather makes the blood run cold. There's such a one at home across the seas.

Off thru the streets it moves. A little crowd goes, too, but soon that crowd breaks up till only I and two or three are left. Your Englishman's a curiously incurious thing. On moves the barrow, twisting and turning in the narrow streets. Is it a funeral march, or what? From over a church door some words spring to the eye: "Let the wicked forsake his way." Yes, there's the funeral sermon's text.

A last turn brings us to a door with "Hospital" above it. The barrow stops, the hood goes back and there in blankets lies a little girl, her head bound round with cloths. She's round faced, pink cheeked, a bonny thing. Her eyes are open and they look out at the world in patient wonder that she should be lying there in that strange place with her head aching so.

They lift the barrow; bear it up the stairs. The door is shut.

So this is war—as waged by some. As we go back the streets are quiet, commonplace. Life flows on normally.

Can war come thus and leave a people as they were before? Or must it light a flame that burns hot underneath—and burns and burns—and will not out till it has consumed the frightfulness that kindled it?

London, England

MUST WE INVADE MEXICO?

BY AN AMERICAN ENGINEER

The author of this article is a mining engineer who has traveled thru much of Latin America and worked for many years in Mexico. He knows the country thoroly and has made it the subject of numerous magazine articles and of one novel. His opinions—like those of nearly all Americans who have been living in Mexico and have business interests there—clash with those which President Wilson has followed.—THE EDITOR.

THE revolt against Diaz, with which the present chapter of Mexico's troubles opens, was a just protest, and being so it was intensely popular. It had its origin in an effort to restrict the arrogant dominance of alien influences in the country. Coupled with it was the cry of the wronged masses against the absorption of vast estates into the hands of a favored few. The story of that aggression of the grafting land barons would make a pathetic history. Now that the foreigner has been almost completely driven out of Mexico, the agrarian problem is almost the only one that the common people think about. Whether the revolutionary leaders and their voluntary followers think of the agrarian question is open to doubt. They are subsisting on revolution. The end of the revolution means for them return to labor, which is less alluring than the excitements of their present adventurous existence.

The only conspicuous leader who does seriously erect the solution of the agrarian problem to the hight of an ideal is Zapata. He has been called "the revolutionary standpatter." He has consistently fought and argued for a re-distribution of the land among the poor, in accordance with his "plan de Ayala." When other chiefs have sought his coöperation he has been as imperturbable as Pope Leo when the Anglican bishops sought a basis for consolidation of the English and Roman communions. In effect the reply was, "The way lies open; espouse my standards." Zapata would be the logical leader if he were of larger intellectual calibre. His limitations of legal knowledge, and his narrow radicalism, however, put him out of the race for large executive authority.

A man of great ability and understanding is needed for the reconstruction of the Mexican Government. To be successful such a man must be not only an organizer and a stern administrator, but also a sincere reformer. The agrarian problem must be solved. It cannot be solved by the wholesale confiscation which the revolutionary programs proclaim. The measures that must be adopted will seem like half-measures to the simple people, who merely demand the land because they believe it ought to be theirs. Hence the wisest reform will be unpopular, and only an iron rule can maintain order while the delicate adjustments of equity are being made. An attempt to do it by a truly free and representative government would end in a violent whirl into fresh anarchy.

If any man, not a Mexican, can pick out the capable ruler to grasp this situation, he must be a genius in discernment of human ability. The man who can accomplish this political miracle has probably never been seen before in the kaleidoscopic turmoil of Mexican affairs. He is more apt to be some petty lieutenant like the little Corsican who threw undiscriminating grape-shot down the avenue and then reported Paris at peace. The Mexicans must find him for themselves, or he must rise up with the Mexicans clenched in his fists.

To hark back to Tagle because he is in line of succession from Madero, would be a folly only comparable with the pitiful fiasco at Vera Cruz. Tagle is a good man; he would be eminently useful for detail work in reconstruction under a masterful administrator. There are many other such men in Mexico. Ability is by no means lacking among the Mexicans,

but genius is always rare, and Mexico needs transcendent qualities in its new ruler.

It must not be overlooked that the Mexicans have not that tender regard for the Madero régime that has been accepted at Washington. They are profoundly conscious of the fact that his spectacular capture of a little port of entry opposite El Paso did not drive Diaz from Chapultepec. It was something far deeper than that. It was because the civil government of Diaz stopped. The people refused to obey the orders of the central government. Local self-government, altho still possessing some taint of dictatorial appointment, had become a fact. To that extent had Diaz developed his plans for leading up to a self-governing republic. When these local officials sat stolidly and repudiated the frenzied commands of the científicos, the machinery of government was paralyzed.

It is not without significance that the unhorsing of Diaz was accomplished by a temporary stoppage of the machinery of government. It is also significant that the machinery started again just as soon as De la Barra assumed control as provisional President. It argues a respect for law and order, and it must not be forgotten that the mass of the people who acquiesced in that almost bloodless revolution are still in Mexico. This is something for the future strong reorganizer to build upon. They elected Madero because he was the only conspicuous man before the people. Then followed a rude jolt to popular confidence when an obedient Congress voted some 800,000 pesos out of the national treasury to recoup the President's brother for outlays in the revolution, while other claims were conveniently shelved. It was this that helped to render Orozco's rebellion possible, precipitating one new movement after another until a horde of people had tasted of the maddening wine of brigandage and loot.

Nevertheless, the great mass of the Mexican common people are not engaged in revolution. It is doubtful whether those in arms, including office holders and their adherents, constitute twenty-five per cent. of the adult male population. The remainder are deprived of means of aggression, defense, or flight. They are struggling against starvation as best they can. By virtue of a sort of freemasonry, born of mutual want and desperation, they ingeniously protect each other in cattle raids for the sake of food, and in the hiding and surreptitious distribution of the necessaries of life, so as to exist despite the ruthless exactions of the officials. Their disposition toward the foreigner is not inherently unfriendly; many of them will even protect the hated Yankee as far as they can if he happens to be a personal friend. These people—probably seventy-five per cent of the Mexican population—are the hope of the future. The trades people are almost wholly on their side. The cultured Mexicans, now almost entirely expatriated, include a large proportion whose habits of mind and whose purposes are equally pacific. Given an opportunity, the conservative element, according to its light, would endeavor to hold in check the friends of anarchy.

Thus it would seem that, so far as a foreign power can directly assist in the restoration of government in Mexico, its most useful function would be to place an absolute embargo upon all munitions of war, both by land and sea. Our administration at Washington has had glimpses of this truth, but its policy has been vacillating, and the orders of one day have been reversed the next. To render such an embargo effective an adequate patrol by land and sea would have to be maintained, and the force of inspectors at border ports of entry, and at shipping points where vessels clear with cargoes for Mexico, would have to be greatly augmented. It is even possible that for a time an absolute blockade would be necessary in order to prevent the surreptitious shipment of arms and ammunition.

All thinking Americans who are interested in Mexico, have been in full agreement with President Wilson that armed intervention would be deplorable, but they have been equally condemnatory of the policy which he has pursued in order to avoid it. He has undertaken to dictate what Mexico should or should not do, and he has always followed his ultimatums with an announcement thru the press that he would not resort to arms. Even his last call for peace and order, backed by a half-hearted coöperation of the A B C powers, was nullified by the same stupid blunder. In the very beginning of the revolutionary disturbances a simple demand for the observance of the treaty rights of our citizens in that Republic, unaccompanied by public comment or explanation of future purposes, would have produced results. Americans of wide experience in Latin America are quite used to going about their business while revolutions rage around them. As a rule it has been necessary merely to keep under cover when the political storm was central over the particular spot where one happened to be. When the battle was over doors reopened and the routine of business was resumed. The American was not spat upon, jailed, shot, or driven away. The pusillanimity of our government has made us despised by the Mexicans as a race of weaklings and cowards, until at last we have come to such a pass that a simple manly insistence upon treaty rights could not prove effective. The psychological moment for that has long gone by. President Taft made the initial mistake in adopting a policy of temerity. President Wilson then had the chance to assert a proper standard of national dignity, and he sacrificed his opportunity.

The conquest of Mexico in itself would be no light affair. In the beginning our unseasoned troops would meet with discouraging defeats. At the sound of the war trumpet factions will disappear, and every Mexican will fly to the colors, burning with patriotic ardor to repel the invader. The women are as intensely patriotic as the men, and would take their part in the struggle. The notion that Mexicans are disloyal and cowardly is a superstition grown out of boastful tales of Texas rangers. The true spirit of the Mexicans is better illustrated in the siege of Tomochic, a mountain town in Chihuahua, some years ago, when Diaz was compelled to make an example of his authority in quelling a revolt against the tax levies. It was a place of only 500 inhabitants. The first body of rurales sent to command obedience was annihilated. Finally two thousand soldiers invested the town, and it took a week to capture it with the aid of two field guns that battered down the larger buildings. When the troops entered and searched the wreckage, the oldest survivor was a girl of thirteen, and the little children kicked and clawed their captors like wild-beast cubs.

It would require a large army to subdue and garrison the country. An era of unexampled graft in the subversion of Mexican land-titles would ensue, which would be as a mountain to a molehill compared with the disgraceful land grabbing that followed the annexation of the Southwest. It would be so monstrous as to corrupt the whole nation. The assimilation of so large a population of aliens would present other problems of the gravest character. Conquest and annexation are undesirable and unnecessary. Until we have tried a simple embargo upon all that can contribute to the dominance of a few by force in Mexico, we have not exhausted the peaceful and dignified means at our disposal for ending the Mexican trouble.

COULD I LOVE ANOTHER YOU?

BY IVAN SWIFT

My Love hath locks of hazel hair
  And eyes of tender blue;
She's little, lithe and debonair
  And wears a tiny shoe.
O Curly Locks, of lovely hair
  And laughing tear as clear as dew!
O Cherry Lips and Bonny Fair—
  I wish you *would* be true!
But could I love *another* You
  As once I loved the You I knew—
The truant eye and taunting air,
  The elfish laugh and lips of rue?

My Love hath banks of beauty-locks
  And ears of rose-of-dawn;
Her tongue's a hundred silver clocks,
  Her movements like the fawn.
She makes and mends her tiny frocks
  Of wool and dainty lawn,
And feeds her father's hungry flocks
  And sings at early morn.
O, would I had not lingered on
  Her wistful waiting at the docks!
But lassies and a laughing Faun
  Are lithe as love and lightly gone!

All day my Love's a busy bee,
  At dawn a lark, a flower at noon;
At eve a drooping willow tree
  And sleeping moth-of-moon.
I weave my tributes into tune,
  But sigh in secrecy—
The lily and the *clair-de-lune*
  Are fair but ever faded soon
And *never* true to me!
  The morn hath passed; and now the noon;
The night will be a thankless boon—
  But *sweet* is Memory!

AN ACTRESS WHO PLAYED BROWNING

BY WILLIAM LYON PHELPS

LAMPSON PROFESSOR OF ENGLISH LITERATURE AT YALE

IN the death of Mrs. Lemoyne, the American stage loses its best actress and most admirable elocutionist. Her manner of speech delighted our ears, so often tortured by the vulgarities and silly affectations of the dress-models that pose as artists.

Altho Mrs. Lemoyne appeared in many rôles, her greatest contribution to the drama was her production of the tragedies of Browning. She understood both Browning and the art of interpreting him. Her enthusiasm for the poet began when she was a little girl, and continued to the last days of her life. She learned particularity in citation from the man himself. Many years ago, meeting Browning in Europe, she told him she would like to recite one of his poems. "Go ahead, my dear." She began "Meeting at Night" and read the third line "And the little startled waves that creep," when she was emphatically interrupted by the poet. "That's wrong!" She was sure she was right, until Browning proved to her that it was not "little startled" but "startled little." I suppose he wished to produce the effect of a sea coming in on the beach when there is no wind. His chosen order of words accurately represents the tiny waves breaking and crumbling in brittle fashion; her misquotation gives a regular movement, which was out of harmony with the stilly night.

October 26, 1900, Mrs. Lemoyne produced at Wallack's Theater, New York, the short play "In a Balcony." She took the rôle of the Queen, Eleanor Robson that of Constance, and Otis Skinner, Norbert. I shall never forget the tremendous excitement of the audience. The three actors were recalled ten times. Mrs. Lemoyne was too hoarse and too excited to make a speech, so she whispered something to Mr. Skinner, who said, "Mrs. Lemoyne requests the audience never again to make fun of Robert Browning." This tragedy was so successful that Mrs. Lemoyne took it on the road.

Lenox Dupont

SARAH COWELL LEMOYNE

In the spring of 1905, Mrs. Lemoyne, at the Hudson Theater, New York, revived "A Blot on the 'Scutcheon," which had not been seen in America since Lawrence Barrett's memorable production. Grace Elliston, who satisfied eye and ear alike, was the Mildred, and Mrs. Lemoyne of course took the part of Gwendolen. I can judge of the dramatic intensity of plays only by their effect on intelligent audiences. We were all oblivious of everything but the tragedy, so complete was the illusion. Mr. Henry B. Harris, the manager of the theater, told me not long before his tragic death on the "Titanic," that he was so imprest by Mrs. Lemoyne's performances that he had the intention of producing a Browning cycle.

On November 12, 1906, Mrs. Lemoyne gave, for the first time on any stage, Browning's "Pippa Passes." It did not seem possible, even to a thorogoing Browningite like me, that this drama could be a success. Yet a sufficient number of people were enthusiastic enough to make what was intended to be a unique representation a pretty good run. Henry Miller managed and staged "Pippa." Mrs. Lemoyne was the cardinal, and I shall never forget her ascetic, pontifical face and bearing, and the terrible revulsion of feeling when she heard the voice of Pippa. Mabel Taliaferro took the part of the little silk-girl, and did it extremely well.

These services of Mrs. Lemoyne both to the lovers of great drama and to the students of Browning should never be forgotten.

THE SOLDIER WHO SMILES

A RUSSIAN MUJIK, WHO HAPPENS TO BE A PRISONER OF WAR IN GERMANY. THE WAR HAS CONFIRMED THE MUJIK'S REPUTATION FOR STOLID, COURAGEOUS, PATIENT OBEDIENCE. HIS MORALE HAS SURVIVED GREAT RETREATS, AND NOW THAT THE LITTLE FATHER HIMSELF IS IN COMMAND HIS DEVOTION WILL DOUTLESS BE COMPLETE

THE WORLD OVER

Much Learning

Twenty-two million persons were enrolled in educational institutions in the United States last year. And they required 700,000 teachers, of whom 566,000 were in public schools, to guide them in the paths of learning.

About $34 apiece was what it cost to give them a year of schooling. Compared with some of our other expenses as a nation public schools seem to be a decidedly inexpensive hobby. They cost less than one half of the nation's expenditure for alcoholic liquors, and their expense is $300,000,000 less than that of running the Federal Government. Even for admission to the "movies" we spend a third of what the schools require.

Measured in terms of products of the soil, the United States spent a little more for education than the value of its wheat crop, and less than half the value of the annual harvest of corn. What the ultimate value of the educational harvest will be is another question.

A Life-Saving Suit-Case

In these days of repeated sea disasters, any one with an idea by which this terrible yearly sacrifice of life may be reduced is given an attentive ear. A vessel sinking in the high seas presents two problems, first to keep the passengers afloat, and secondly to prevent their dying from exposure.

John L. Edlund, of Claresholm, Alberta, has invented a traveling bag which will keep any person afloat, dry and warm for four or five days. The bag can be made to suit the purchaser as to shape, size and material. The model used is 22 inches long, 15 inches wide and 17½ inches in hight, with a framework of copper. In the finished product aluminum will be used and so reduce the weight to twelve pounds or less. A brown waterproof cloth covers the bag and the suit for the legs, arms and body made of the same material. This folds compactly into the bottom of the suitcase, leaving ample room for anything one desires to carry.

The body of the case is equipped with a small window and two air valves and can be locked from the inside. The flappers on the side, or arm holes, can be used or not, as the occupant sees fit. They do not in the least aid in keeping the bag afloat, but would come in handy as propellers. Neither is it necessary to close the bag, as it floats just as readily open.

Tests have proved its buoyancy far beyond the most optimistic hopes of its inventor. A man of 160 pounds failed to weigh the bag down more than three inches. The position of the occupant is one of perfect comfort. He can stand upright, rest his weight on his arms, or lean to the back or sides without danger of tipping. Food enough to

A COMFORTABLE VOYAGE

last a number of days can be taken into the compartment. There is also an emergency airbag attachment which may be blown up from the inside in case of an accident to the outer covering.

With the wireless in its present perfection, it is seldom more than a few hours before rescuers are on the scene after the sinking of a vessel. It is during these ofttimes fatal hours, when men and women are forced to take to the icy seas, that the passenger fortunate enough to possess a life-saving

READY FOR USE AS A LIFE PRESERVER

suitcase would find himself with a far better chance of being numbered among the survivors.

Alaska's Railroad and Gold

Rarely in these days is there any news from Alaska. It is generally known that our Government has begun to build a railroad from the south coast northward to the agricultural valleys and plains of the interior, but we hear nothing about the gold miners. The territory's gold output last year, however, was $15,764,250, or $140,000 more than the product in 1913 and nearly $4,000,000 must be added for copper. In the three years immediately preceding 1913 the average output of gold was about $16,500,000. Our purchase of the territory in 1867 for $7,200,000 was a profitable investment.

Immediately after the selection of the route for our Government's railroad the rush of Alaskans to the tidewater terminus was something like the stampede of miners to Bonanza Creek in the Klondike twenty years ago. In June 3000 men had assembled at the mouth of Ship Creek, on Cook's Inlet, where the main base of operations is situated. The new settlement is called Anchorage, and it already has a newspaper. Lieutenant Mears, who has charge of the work, arrived with his engineers in the last week of April. He built docks at which supplies from Seattle were unloaded a month later. Employing 500 men and intending to increase the number to 2000, he established construction camps along the route, which for a considerable distance follows the coast. There is no lack of workmen. Supply exceeds demand.

Over in the Klondike, which is just outside of our territory, the rich pockets of placer gold have been emptied, but it is estimated that $20,000,000 more can be found and taken out. In Dawson City, where there were 25,000 people in 1899, there are now less than 2000. After the rush in 1896 and 1897 the Klondike's annual output of gold rose from $10,000,000 to $22,000,000, but it has now declined to about $3,000,000.

Emblems of Office

In the old days of illiteracy, symbols were all powerful. To people who could not read, the charges of heraldry were perfectly intelligible. The barber pole with its quaint symbolism and the mortar and pestle signified respectively the tonsorial, accompanied with blood letting, if necessary, and the saving grace of the apothecary.

Scepters or maces were indicative of kings, who were recognized thru their agency, and a crozier performed the same office for an archbishop, when it was befittingly borne before him. Roman magistrates were similarly pro-

THE FOOL'S BADGE
17th CENTURY

ceded by the fasces. Mercury's badge was a herald's staff or the Caduceus and Neptune's symbol was the trident. The use of such badges of authority and office was very widespread. Originally weapons of offense, they became mere symbols of legal, civic or academic dignity. They were evolved from a barbaric club into art objects upon which the arts and crafts lavished all of their skill and technic.

Beadle's staves are found in many old churches. Some of them are surmounted with figures admirably modeled.

The king's scepter was caricatured into the fool's bauble which was modeled along the lines of the nobler emblem but was often debased by the added feature of a head, ornamented with asses' ears, fantastically carved upon it, and with bells. The accompanying illustrations show two jester's baubles from the French court, which are among the recent acquisitions of the Metropolitan Museum of Art.

Why a Watch Goes Wrong

People who wonder why their watches occasionally exhibit vagaries will hear with interest that the fault after all is not always with the watch. In the Dundee *Advertiser* is reported a paper read to the Royal Astronomical Society, which suggests that in order to keep good time a watch must not only go, but must go in harmony with the motion around it.

Tests have shown that a watch, which varies less than a second a day when worn, may gain or lose a quarter of a minute in the twenty-four hours if it is hung up on a stand. The angle at which it is hung is also an important factor. So it seems probable that the well-known fact of a watch keeping bad time when worn by some one else than the owner is not due to bodily temperature or animal magnetism, as is generally believed, but to the different rhythm of motion.

A Valuable Weed

A remarkable discovery which seems destined to influence the sheep raising industry of the Pacific Northwest states has been announced by Mr. Y. C. Mansfield, a successful sheep grower of Endicott, Washington. It is to the effect that the once despised Australian salt bush, which is found in abundance in Washington, Oregon, Idaho, Montana and other western states, and which thrives in soil where nothing else will grow, is one of the best forage crops for sheep to be found anywhere in the United States.

Mr. Mansfield's announcement is made after two experiments in feeding a flock of 1000 sheep exclusively on the salt bush. The sheep at the Mansfield ranch are not only in excellent flesh, but bear a quality of wool superior to that of other flocks kept on ordinary pasture in the same vicinity.

These results have been secured with what was generally considered a worthless weed. There are literally millions of acres of the salt bush in the West, and at a conservative estimate they are now worth millions of dollars a year as feed for sheep. In the past this crop has been allowed to go to waste, and several states have actually passed laws prohibiting farmers from allowing it to go to seed. Now farmers on whose land the weed grows may find that they have overlooked a real bonanza.

A remarkable thing about the salt bush is that it grows better in hard, firm soil than on loose, well-cultivated land, and after once getting a stand it requires practically no attention. The weed grows so fast that an ordinary flock of sheep cannot keep a field of good size clear of it, and there is considerable left to be harvested. Another advantage of the weed is that while the sheep like it extremely well, and grow exceedingly fat on it, they never eat enough of it to make them become sick and die, as they do on alfalfa and a number of other plants.

17th CENTURY
LABLEE OF ART

A New Broom

Motorcycles for fun, motorcycles for work, for ambulances, for delivery-wagons, for messenger service, and for traffic "cops"—the phases of a motorcycle's usefulness are many.

Street-sweeping has recently been added to the list of its accomplishments. A side-car chassis is peculiarly designed to carry the sweeping apparatus and a steel brush loosens the dirt before the broom takes it up.

The broom is lowered by a handle to the left of the driver's seat, and when in contact with the pavement it engages the mechanism connected to the side-car wheel, which causes the broom to rotate. It is designed to be used on streets paved with asphalt or wood blocks.

GOODLY PASTURE

THE NEW BOOKS

THE FUTURE OF MAN

WHAT the ancients represented as a conflict between will and destiny is being threshed out today as the issue between heredity and environment. Without questioning the facts of heredity it is quite possible for people to plant and execute practical undertakings depending upon the control of the environment; and without ignoring the influence of the environment upon development we may reasonably understand the essentials of breeding and eugenics. The specialist can be reasonable, too, when he is not called upon to make a case. This is amply demonstrated in Professor Conklin's *Heredity and Environment*, in which the biological principles are developed with special application to man. "The determinism of heredity is matched by a corresponding determinism of environment," says Dr. Conklin, and we wonder why there should ever have been any conflict of minds over so obvious a proposition. The history of the germ, in the evolution of life and in the evolution of the individual, is described so that the reader cannot escape the meaning of the germ's *potentiality*. On the other hand, the factors of the embryo's development are explained so that one is compelled to understand how the emergence of the individual's actuality depends upon external conditions.

The danger of indiscreet friendships is illustrated by a volume on *Eugenics*, containing the twelve best lectures on that subject selected from over thirty delivered in one year to undergraduates at as many universities and colleges. As Dr. Barker says in the introduction, a vast deal of nonsense is being talked and written about the subject, and much harm may easily result from eugenic zeal without sufficient eugenic knowledge! It is only fair to say that several of the professors represented in this collection really know something about eugenics.

A convinced, but hardly convincing, champion of an environment detached from heredity is Dr. W. Hall Calvert, who argues rather insistently from the cannibal "habit" in certain carnivorous males to a number of conclusions that do credit to his wholesome sentiments. *The Further Evolution of Man* rejects the Darwinian doctrine of natural selection, but not on the demonstration of the inadequacy of the theory; it rests on certain vague spiritual necessities that require a belief at once in the maintenance of a "general average" thru the regressive action of intermarriage, and in an evolution whose general features, tho ill-defined, lead to universal amelioration and righteousness. The author, while claiming to use "recent arguments and discoveries," has apparently never heard of his countrymen, Bateson and Punnett, has missed entirely the Mendelian principles of heredity and failed to get the point of DeVries' work. Nevertheless, his argument for a saner environment in the interests of developing mankind must receive hearty support.

Heredity and Environment in the Development of Man, by Edwin Grant Conklin. Princeton University Press. $2. *Eugenics*. Twelve University Lectures by Morton A Aldrich, William Herbert Carruth, Charles B Davenport, Charles A. Ellwood, Arthur Holmes, W. H. Howell, Harvey Ernest Jordan, Albert Galloway Keller, Edward L. Thorndike, Victor C. Vaughan, Herbert J. Webber, Robert H. Wolcott. With a Foreword by Lewellys F Barker Dodd, Mead & Co. $2. *The Further Evolution of Man*, by W. Hall Calvert, M.D. Fleming H. Revell Co. $1.

THREE CONTEMPORARY NOVELISTS

An interesting series of studies of some present-day beacon lights of literature is in course of preparation under the general editorship of Bertram Christian. Three volumes have appeared already and each has been entrusted to a fellow-craftsman of established reputation.

The best of the three studies is *Anatole France*, by W. L. George, author of *The Making of an Englishman*. Mr. George is a devoted but not undiscriminating admirer of the great French satirist. He sympathizes fully with France's subtle sapience, his delicate scepticism and even his "benevolent contempt for man," a contempt fully compatible with enjoying its object. He also recognizes in France a charm and lucidity of style and a fine sense of intellectual justice; "he is as impartial in his attacks as a mosquito." But he admits that France's novels are deplorably weak in construction, and he cannot endure their utter lack not only of common decency but even of the idealization of illicit love which is the least one might expect even from a French writer.

H. G. Wells, the most complex and multifarious of living English writers, can be adequately treated only in a five volume critical biography with a thousand page concordance and a series of German monographs. In such thumbnail booklets as Van Wyck Brooks' *The World of H. G. Wells*, or J. D. Beresford's study of *H. G. Wells* in the present series, the writer can at most emphasize one or two salient ideas which most appeal to him and leave the rest of the man in comparative shadow.

F. J. Harvey Darton's sketch of the life and work of *Arnold Bennett* is less of an appreciation and more of a criticism than the other volumes of the series. He believes *The Old Wives' Tale* is the only one of Mr. Bennett's books belonging to the highest order of lit-

BOOKS ABOUT EUROPE

India and the War. Compilation of articles by authorities on India, including Lord Syndenham, former Governor of Bombay. Tells how India rallied to the defense of the British Empire. Profusely illustrated in color.

Doran. $1.

Bohemia under Hapsburg Misrule, edited by Thomas Capek. A sketch of the ideals and character of the Bohemians. Describes Austrian oppression and concludes with a plea for Bohemian national freedom.

Revell. $1.

Modern Warfare, by Henry Smith Williams, describes the mechanisms and methods used in the European conflict. Emphasis is placed on arms and ammunitions. Thoroly popular treatment of technical subjects.

Hearst. $2.

Sir John French—A Biography, by Cecil Chisholm. A brief and laudatory account of the Field Marshal's life: hardly more than a record of military achievement, with little about Sir John, the man. Stokes. 50 cents.

War and Lombard Street, by Hartley Withers, tells how England met the sudden financial problems brought on by the war. All about the moratorium and the impregnable Bank of England.

Dutton. $1.25.

Punch Cartoons of the Great War holds much grim and some great humor. The famous "Dropping the Pilot" is there and Partridge's splendid "Unconquerable" with two hundred others worth seeing.

Doran. $1.50.

BOOKS ABOUT US

Principles of Floriculture, by Edward A. White, is one of the series of rural textbooks edited by L. H. Bailey. Tho with useful notes on outdoor growing, the book deals mainly with greenhouse culture and marketing.

Macmillan. $2.75.

The American Country Girl, by Martha Foote Crow, is a book of sane and helpful suggestions. The Y. W. C. A., Camp Fire, canning clubs, pageants, and all sorts of country activities figure in its pages.

Stokes. $1.50.

Sammy Jay and *Chatterer, the Red Squirrel*, by Thornton W. Burgess, are two new Bedtime Stories. These tales are so good as to be constantly paid the tribute of unequal imitation.

Little, Brown & Co. $1.

The Valley Road, by Mary Hallock Foote. A pleasant, human sort of story, set on the Pacific coast, with the San Francisco earthquake bringing to a crisis certain matters in the leisurely romance.

Houghton Mifflin. $1.35.

The Making of an American's Library, by Arthur E. Bostwick, has some good suggestions on judgment of taste, the value of browsing books as tools, and children's reading.

Lippincott. $1.

Canning, Preserving and Jelly Making, by Isaac M. Hill, is a good guide to the art of "putting up fruit," and with its clear directions contains also some fine old fashioned receipts.

Hinds, Noble & Eldredge. $1.

The Man Who Didn't Go to College

"JOFFRE—French—von Hindenburg! Nonsense!" Bob Townsend rose from his chair and stood, tall and distinguished-looking, smiling at the three men. "Two thousand years ago Alexander with only fifty thousand men almost annihilated an army of one million Persians. He defeated another army of six hundred thousand with a loss of only ninety of his soldiers. That's generalship"—with which parting shot, Townsend bade good night to the little group before the club window.

"Isn't that just like Bob?" exploded Cartwright, the bank president. "It beats me how he manages to have his information so 'pat'. Here we are—three college men—and I understand Townsend didn't even go to high school. Yet what do we know about Alexander—Alexander the Great I suppose he meant. Jim, you knew Townsend in the old days. What's the answer?"

Jim Scott was the best-liked man in the club. His meagre success in business was the more regretted.

"Bob Townsend and I were school kids together. When I entered high school Bob went to work. I remember in our talks how he envied me—*I* was the one with the bright future. And look where he is today." Jim lit a fresh cigar.

"Well, I went away to college. Lost track of Bob and when I met him after some years he was married and with the B. E. Co. Had two boys then. We lunched together and he wanted to talk College all the time. Asked all manner of questions about Yale and whether I thought it would be a good school for his boys.

Another thing he said was that he wanted his boys to *want* a real education, and that meant it was up to him to set the example.

"His wife told me long afterward, that Bob bought a dictionary and an encyclopaedia and that he used to read that encyclopaedia evenings while she sewed. Any unfamiliar subject he ran up against during the business day or in conversation, he would track down evenings in the encyclopaedia and the books it referred him to.

"Well, you know the kind of boys he has. And do you know a better-posted man, any of you, than Bob Townsend? He told me that his old encyclopaedia was his Alma Mater. It's still on his shelves although he has newer and better editions. I'll tell you why Bob is the best informed man I know. It's because he owns an encyclopaedia and *uses* it, thanks to a habit formed in early life because of his own ambitions as well as his ambitions for his boys."

Jim's story is like most stories in that the point comes at the end. Perhaps you would never have read it had you known it to be an advertisement of an encyclopaedia. That is why it is not a regular advertisement, but a story based on fact. The point is this. *The New International Encyclopaedia, Second Edition,* published by Dodd, Mead & Co., is the latest encyclopaedia to be published. It can be ordered now for future delivery *at a special introductory price.* It can be purchased by small monthly payments. You can find out all about it without obligating yourself one particle, by writing your name and address on the margin below and mailing it to the address given. Why not do it now?

Three Leading Novels

FELIX O'DAY

By F. HOPKINSON SMITH

In this story the author has reached the climax of his power as a novelist. Unquestionably it is the greatest literary achievement of his life—the *chef-d'œuvre* of a master hand. It is a veritable Dickens novel of New York, full of real people, lovable and intensely human.

Illustrated. $1.35 net, postage extra

THE FREELANDS

By JOHN GALSWORTHY

"It is his best book to date; ripest also in its beautiful artistry."—*New York Tribune.*

"Mr. Galsworthy's power of depicting pure and passionate love has never shown finer effect."—*New York Times.*

$1.35 net, postage extra

THE HIGH PRIESTESS

By ROBERT GRANT

Author of "Unleavened Bread,"

The story of the married life of a modern woman

"It is keen, shrewd, and it handles debatable themes with a gentleness that shows Judge Grant to be a humorist and a philosopher as well as a novelist."—*Boston Transcript.*

"Told with fineness and firmness of purpose."—*New York World.*

$1.35 net, postage extra

CHARLES SCRIBNER'S SONS

erature and regards most of his writings outside the series of novels and stories dealing with the Five Towns as practically without value. But in one respect Mr. Darton has earned the gratitude of every lover of Arnold Bennett. Each of the books in the series contains a bibliography, but Mr. Darton's volume contains something more useful to the Bennett reader, a map. With a full page map of the Five Towns district and a chapter in explanation of its intricate literary geography the most uninstructed reader can pilot his way thru the greater and more important part of Mr. Bennett's contributions to English literature.

Anatole France, by W. L. George. *H. G. Wells*, by J. D. Beresford. *Arnold Bennett*, by F. J. Harvey Darton. Henry Holt & Co. 50 cents each.

A VILLAGE PROTAGONIST

An English village tells its own story of the Great War in *The Tollhouse*, by Evelyn St. Leger. A former nurse at the Squire's house becomes recruiting officer for the army thru her capacity for leadership: and some of her sayings, as "After dinner! I never talk to a hungry man," have a homely wisdom reminiscent of Mrs. Poyser.

Dutton. $1.

ANCIENT GREECE

William L. Snyder, in his *Military Annals of Greece*, defends the truthfulness of Herodotus. He treats only the period preceding the Peloponnesian War, but there is much of interest to travelers in the excellent exposition of the geography, archæology, and customs of the ancient Greeks. One chapter treats of the difference between the Homeric poems and the poetry of the Old Testament.

Boston: Badger. $3.

UNLIKELY—BUT LIKEABLE

Empty Pockets, by Rupert Hughes, is a lively novel of mystery, adventure and the extremes of New York life, upper Fifth Avenue and lower East Side; but it is more than that. There are some real people entangled in the meshes of the plot; some vivid scenes of Manhattan life both high and low; an automobile chase as thrilling as any in the movies; and a choice among a half dozen "copper-haired" girls as to which is the murderess.

Harper. $1.35.

CYCLOPEDIA OF ETHICS

Volume VII of the *Encyclopedia of Religion and Ethics*, edited by James Hastings, includes the topics from Hymns to Liberty. This work is one of [illegible] scholarship. Just criticism, however, may be directed against at least two articles: that on the "Kingdom of God" is meager and the article on "Jesus Christ," writing from the theological point of view, is out of harmony with a work which has for its scope a world-wide range of religion and ethics.

Scribner. $7.

THE RULES OF THE GAME

In *Defeating the Boss*, William Hudson Foster analyses in simple fashion as to its natural source and form, with sufficient examples to clarify without overburdening. The result is a most satisfactory little handbook. But the unique and finest feature of it is the author's happy [illegible] existing this form of social government to definite action and intelligent citizenship without a trace of didacticism.

[illegible] & Wilkins Co.

BUSINESS OF IMPORTANCE

A clear idea of the possibilities in the church school is the first requisite of the Sunday school worker the effective the best can be obtained. To the outside of the half-learned teacher there is a revelation in the two practical and suggestive books [illegible] Successful Teaching Today [illegible] by Amos R. Wells and The Sunday School at Work, by various workers. If a pupil's

tendent could get his teachers to read the second he would probably find no difficulty in carrying out the advice of the first.

The Successful Sunday School Superintendent. 75 cents. *The Sunday School at Work.* $1.25. Philadelphia: Westminster Press.

FEEDING THE FUTURE CITIZEN

Among many books for the guidance of young mothers is one on *The Care and Feeding of the Infant*, by George D. Lyman, which is clear, concise, sensible, and contains enough detailed advice to equip even the inexperienced parent.

San Francisco: Elder. $1.

TO ERADICATE SOCIALISM

The Call of the New Day to the Old Church, by Charles Stelzle, summons those who would "accomplish the biggest things in behalf of the people" to work thru the church, whose democracy makes it a natural leader in the fight for justice. The church must face present conditions and eradicate socialism by wiping out the conditions which have given rise to socialism.

Revell. 25 cents.

AN UNPOPULAR VIRTUE

The Book of Thrift, by T. D. MacGregor, celebrates a neglected means of facing high prices with measurable equanimity. With the world spending fifty millions a day for war, frugality will be forced upon many who have spent lavishly hitherto, not only abroad but in more favored America. "Thrift" implies not only saving but wise management, and providence was never needed more than today with the future so uncertain.

Funk & Wagnalls. $1.

A HISTORY OF THE ESSAY

The eighth volume in the series entitled the Channels of English Literature is *The English Essay and Essayists*, by Hugh Walker. The book is comprehensive and well balanced. The author follows the English essay from its first appearance in the Elizabethan period thru the various stages of its development down to George Gissing. Tho the ground has been covered comparatively often before and by master hands, this recent contribution to the bibliography of the essay well merits attention.

Dutton. $1.50.

DEDUCTIVE POLITICS

The Orthocratic State, by John Sherwin Crosby, contains nothing original except its striking title. It is interesting as a manifesto of the most rigidly dogmatic type of political theorist—the orthodox single-taxer. How simple life must seem to a man who can write such a sentence as: "It having been seen what the state ought to do, and what is quite as important, that it ought not to do anything else, it should not be difficult at any time to determine whether it is in any way abusing its power"!

Sturgis & Walton. $1.

THE ANTILLES IN STORY

The Cruise of the Cormorant must go back to the Rollo books for its form. The search for buried treasure is a thin thread on which to hang so much geographical and historical information as this has to carry. Still it is at least as readable as a guide book and better worth publishing than most books of travel, for few places are as unknown to Americans as these near neighbors. This tour, personally conducted by A. Hyatt Verrill, takes us to fourteen of the lesser islands, Danish, French and British.

Holt. $1.35.

THE CHILD AND THE HISTORY BOOK

John W. Wayland's little manual on *How to Teach American History* is designed for the instruction of the teacher in the elementary grades. Classroom methods are detailed and the advice given is sound if not original. The author recognizes the necessary limitations of formal pedagogics and adds to other counsels the excellent maxim that "With a wise teacher almost any rule will work well; with an unwise teacher almost any rule is dangerous."

Macmillan. $1.10.

A GREAT NOVELIST AT HIS BEST

Read MAURICE HEWLETT'S *Wonderful New Romance*

THE LITTLE ILIAD

Frontispiece by Edward Burne-Jones. $1.35 net.

A "Hewlett" that you and everyone else will enjoy! It combines the rich romance of his earliest work, with the humor, freshness and gentle satire of his more recent. The whimsical, delightful novelist has dipped his pen in the ink-horn of modern matrimonial difficulties. Helen of Troy lives again in the twentieth century, married to a ferocious German. Maurice Hewlett makes him one of the most interesting and portentous characters portrayed by the hand of an Englishman for many a day.

Thousands Have Been Waiting For

Peg Along

By the Author of "Why Worry"

By GEORGE L. WALTON, M.D. Net, $1.00.

The goal is not to the swift; the prize is
not to the strong;
The best of life is always for the man
who "Pegs Along."

Dr. Walton's slogan, "Why Worry?" swept the country. "Peg Along" is the 1915 slogan. Hundreds of thousands of fussers, fretters, semi- and would-be invalids, and all other halters by the wayside should be reached by Dr. Walton's stirring encouragement to "peg along."

Send copies of this inspiring little work to friends who appreciate bright wisdom. Win them into joyful, happy "peggers along" to health and happiness.

Heart's Content

By RALPH HENRY BARBOUR.

Six illustrations in color, page decorations, handsome binding. In sealed packet, $1.50 net.

Romance and plenty of it; fun and plenty of it; a happy man who "starts things," and who at the end makes a woman happy, too. "Bright, cheerful and snappy" will be the opinion of all readers.

Heroes and Heroines of Fiction

Classical, Mediæval and Legendary

By WILLIAM S. WALSH. Half morocco.

Reference Library style. Net, $3.00. Uniform with "Heroes and Heroines of Fiction—Modern Prose and Poetry." The two volumes in a box. Net, $6.00.

These books comprise a complete encyclopedia of interesting, valuable and curious facts regarding all the characters of any note whatever in literature.

JOSEPH PENNELL'S PICTURES

In the Land of Temples

With forty plates in photogravure from Joseph Pennell's Lithographs, with notes by the author. Introduction by W. H. D. Rouse, Litt.D. Crown quarto. Lithograph on cover. Net, $1.25.

Mr. Pennell's wonderful drawings presents to us the immortal witnesses of the "Glory That Was Greece" just as they stand to-day, in their environment and the golden atmosphere of Hellas. The art of Greece is perhaps dead, but we are fortunate in having such an interpreter. Uniform with Joseph Pennell's Pictures of the Panama Canal.

Aeroplanes and Dirigibles of War

By F. A. TALBOT. Profusely illustrated. Net, $1.25.

Herein are pictures and descriptions of the very latest developments of the air craft of all the European nations. The illustrations taken on the front revealing every phase of aerial warfare are of deepest interest.

Famous Days and Deeds in Holland and Belgium

By CHARLES MORRIS. With 16 illustrations. Net, $1.25.

Fleets of the World 1915

Compiled from Official Sources and Classified According to Types.

103 large photographs of typical fighting ships of all nations. Net, $2.50.

Diet and Digestion

Indigestion is so common, it causes so much needless pain and suffering and leads to so many ills which are dangerous, that Dr. J. H. Kellogg has written a book telling how the discomforts of indigestion may be prevented. Dr. Kellogg is the greatest living authority on diet. He has invented many health foods and, for nearly forty years has been Superintendent of the great Battle Creek Sanitarium—leading diet institution of the world. Here he has observed, treated and prescribed for thousands of cases of indigestion and other more serious ills to which indigestion leads. This means Dr. Kellogg's writings are based on experience. He deals with facts—not theory. His teachings are easy to understand and follow, and in his new book "Colon Hygiene," he tells about disorders of digestion, how to remove their causes and the natural methods of relief which you may apply at home. A book of nearly 400 pages, with many illustrations, diet tables, and instructions for exercise, rest and sleep. Price, cloth, $2. Half leather, $4. Send your order today. You take no risk. If you are not entirely satisfied, return the book for prompt refund. Send order to GOOD HEALTH PUBLISHING CO., 309 W. Main St., Battle Creek, Mich.

Health is Yours

Suggested by G. S. K.—Traffic rule for submarine commanders: Keep to the right. —*F. P. A. in New York Tribune.*

What the shade of Napoleon remarked when he heard of the capture of Warsaw: "Mind the steppe."—*Punch.*

It is comparatively easy to start a new party; the difficulty is in getting anywhere with it.—*Atchison Globe.*

The Mexican leaders see a possibility of peace ahead—and gosh! how they dread it.—*Don Marquis in New York Evening Sun.*

Why not turn the navy over to Brother Ford? In six months he would be turning out a battleship every forty-nine seconds. —*Life.*

The German Crown Prince says the war will end in December, but neglects to say December of what year.—*Don Marquis in New York Evening Sun.*

There are compensations in all things. When women get the suffrage they won't want to be moving all the time, for fear of losing their votes.—*Puck.*

George—You will make me a good wife, I know.

Jane—I know I will make you a good husband.—*Sydney Bulletin.*

Despite the presence of "In God We Trust" on our coinage, the great American motto in reality is, "Somebody ought to do something about it."—*Puck.*

Bacon—What is your daughter doing at the piano?

Egbert—Sounds as if she was setting her class yell to music.—*Yonkers Statesman.*

An officer was showing an old lady over the battleship. "This," said he, pointing to an inscribed plate on the deck, "is where our gallant captain fell."

"No wonder," replied the old lady. "I nearly slipped on it myself."—*Exchange.*

European—Our war is terrible. I know of a colonel who commanded a regiment of 1000 privates and lost half of them in one battle.

Mexican—That's nothing compared with *our* war. I know of one private who was commanded by 1000 generals and lost 750 of them in one battle.—*Puck.*

Robert, the four-year-old son of a scientific man, had lived in the country most of his short life. One day a caller, wishing to make friends with the little fellow, took him on his knee and asked, "Are there any fairies in your woods here, Robert?"

"No," responded Robert promptly. "But there are plenty of edible fungi."—*Youth's Companion.*

"I can't swim!" shouted the man in the water. He went under and when he came up he shouted again: "I can't swim!"

The man on the bank watched him with languid interest.

The man in the water sank again. When he came up he gasped: "I can't swim!"

"Well, my friend," commented the man on the bank, "this is a queer time to be boasting of it."—*Life Boys.*

"One popular type of beauty proclaims itself in its fullest material development at every shop in which an Oriental periodical is sold. The same dusky-faced girl with the same coarse smile and sullen or other expression whatever appears on the cover page of illustration week after week and month after month, all the year round."

Dear! Dear! How humanized are the magazine covers of today over those of 1815, when the preceding paragraph from Willis Gaylor's Ham and Wife was written!—*Century Forum in New York Evening Post.*

The Market Place

THE ALLIES' FINANCIAL COMMISSION

A commission of financiers from England and France sent here to negotiate a great loan or credit arrived in New York on September 10 and immediately began a series of conferences with American bankers at J. P. Morgan's residence. The Lord Chief Justice of Great Britain, Baron Reading (formerly Sir Rufus Isaacs), is chairman, and the other British members are Sir Edward Hopkinson Holden, chairman of the London City and Midland Bank; Sir Henry Babington Smith, president of the National Bank of Turkey, and Basil P. Blackett, a British Treasury expert, secretary of the commission. From France come Octave Homberg, of the French Treasury, and Ernest Mallet, a Regent of the Bank of France.

Before the actual arrival of the foreign financial mission on Friday and the conference in the Morgan library that will become historic, the coming settlement of the international exchange problem had already begun to be discounted. From the break to 4.50 in the first week of September sterling rallied rapidly, advancing nearly as many cents in a day as it does hundredths of cents in normal times, until by the end of that week it had risen to 4.70. On Tuesday of last week it turned again, demand falling to 4.63¼, notwithstanding the arrival of $19,466,000 in gold from England and a block of American securities believed to amount to $30,000,000. Steady recovery followed and late on Friday a price of 4.69¼ was reached.

While a definitive arrangement between the Allies' bankers and our own, which will make possible their war and commercial purchases in this country on an undiminished scale, may be held in abeyance until it is known whether a graver problem within this country will be presented to our bankers, the conferences are proceeding on the assumption that there will be no interruption of them. That eventually investors in this country will be invited to subscribe for a great issue of British bonds, secured in large part by a deposit of American securities, seems certain in view of the tentative invitations addrest to important banking institutions thruout the United States. The size of the issue cannot be forecasted reasonably because the bankers themselves are uncertain whether all the needs of

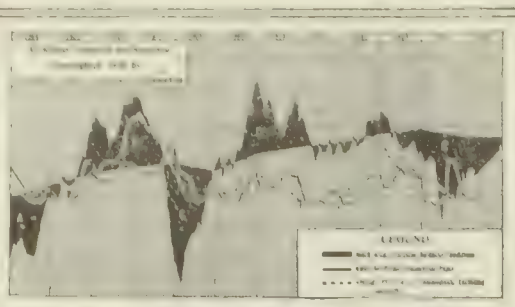
NATIONAL BISCUIT COMPANY

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation. Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries.



Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

F. W. MOFFAT, Secretary.

UTAH COPPER COMPANY

120 Broadway, New York, Sept. 9th, 1915.

DIVIDEND NO. 29

The Board of Directors of the Utah Copper Company has this day declared the 29th quarterly dividend of One Dollar (1.00) per share, being at the rate of four per cent (4%) per annum on par value, payable September 30th, 1915, to stockholders of record at the close of business on September 15th, 1915. The books for the transfer of the stock of the Company will remain open.

LIPMAN, Asst. Secretary.

the situation should be covered by a bond issue or whether a distinction should be made between the methods of financing commercial purchases and of financing those which are strictly for war. But it may be said on authority that the arrangement soon to be concluded is expected to cover the whole period of the war, however much longer it may last.

THE WEEK'S STOCK MARKET

International affairs were the dominant factors in last week's stock market, relegating everything else except the Government's monthly crop report to the background. Over the double holiday had come the astonishing news of the attack on the "Hesperian," in cynical disregard, as it was thought in the financial district, of the explicit promise of Ambassador von Bernstorff. At the same time there had come the no less surprizing admission of the Austro-Hungarian envoy, Dr. Dumba, that he was behind the plot to incite strikes in American munitions plants. Later in the week, on Friday, it became known that the German Government, in referring to the "Arabic" case and the possibility that the German submarine commander had erred in supposing that he was acting in self-defense, had narrowed, rather than broadened, the implications of Count von Bernstorff's pledge.

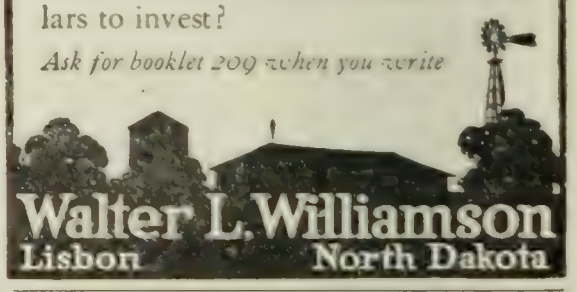
In all these matters was found reason enough for restricted stock trading. On none of the four full days did transactions much exceed half a million shares and the average turnover was well under that figure. It was all the more notable, therefore, that prices should have held firm and in the case of some specialties scored sharp advances, Bethlehem Steel and General Motors both making new high records, at 335 and 271, respectively. The net gain for the week of the former was 36 points, of the latter 20 points.

Beginning the week on Tuesday, because of the Labor Day holiday, the stock market kept within narrow bounds, the anthracite railroad shares proving something of an exception. General Motors and Bethlehem Steel began then the advance that was not interrupted in the later days, but in general the war stocks were comparatively quiet. So trading continued until Thursday, the brilliant crop report of Wednesday having little reflection in stock prices. There was a good deal of selling for foreign account, whose influence was more evident in the market outside the Stock Exchange than on the floor.

On Thursday there was more activity than at any previous time in the week, a circumstance that was due partly to the belief that the Dumba incident would be without serious consequences, partly to expectations arising out of the coming of the Anglo-French financial mission. Substantial gains were made in the general list, but all these were lost on Friday. At noon on that day the Steel Corporation made public its unfilled tonnage as of August 31. There was shown a decrease of

THINK THIS OVER—

If you knew a man who all his life had paid every indebtedness in full on the day it came due you would naturally trust him.



In the twenty-four years that I have conducted this business I have sold approximately $4,000,000 worth of

NORTH DAKOTA FARM MORTGAGES

to thousands of investors and not one of them has ever lost one dollar of interest or principal.

Doesn't this mean that my North Dakota Farm Mortgages are worth very careful consideration the next time you have a few hundred dollars to invest?

DANDA MFG. CO. [illegible] N. Y.

20,085 tons—not in itself a disappointing exhibit, considering that it was due rather to greatly increased production than to smaller bookings, but traders made it the excuse for retracing their course of the morning. In that way belated recognition was given to the Administration's demand for the recall of the Austrian Ambassador and to the possibility that other recalls would be sought.

Price changes during the week were so irregular that a summary would not be really typical of the market. In general little headway was made, except by a few of the specialties, and among these the most notable gains were made by Bethlehem Steel and General Motors, as already noted, and by Studebaker and American Woolen shares, each of which advanced 5¾ points. There should further be noted declines of 5 points and ¾ of a point in the Missouri, Kansas & Texas preferred and common shares on the expectation that there will be a reorganization of the property.

A BILLION BUSHELS OF WHEAT?

The Government's crop report for September, made public on Wednesday, was even more brilliant than that of the month before and coming so late in the season it established beyond doubt that this year will see some magnificent harvests. A billion bushels of wheat, for the first time in the country's history, is not impossible. The indications, as of September 1, were for 981,000,000 bushels, or 90,000,000 more than were harvested last year. It is expected that there will be 2,985,000,000 bushels of corn and this estimate may yet be raised, for the weather since September 1 has been almost ideal for the crop. Likewise the estimated production of rye, barley, hay, rice, tobacco and sweet potatoes indicates further broken records.

The following dividends are announced:

American Car and Foundry Company, preferred, 1¾ per cent; common, ½ per cent; both payable October 1.

Liggett & Myers Tobacco Company, preferred, 1¾ per cent, payable October 1.

Otis Elevator Company, preferred, quarterly, $1.50 per share; common, $1.25 per share; payable October 15.

Manila Electric Railroad and Lighting Corporation, quarterly, 1½ per cent, payable October 1.

DOOR KNOCKERS

There is no more decorative feature of the entrance door than the old-time door knocker.

It was often made in brass, brightly burnished, and when so made it formed a most effective foil for the dark or polished surface of the wood of the door.

Door knockers were characterized by a ring, by a hammer and by human figures and animals' heads. The grotesque also often figured.

The lion, with ring, has always been more popular in England than in the United States. The eagle as a door knocker decoration has grown steadily in favor in this country and is still rising.

The use of door knockers on all classes of houses flourished during the fifteenth and sixteenth centuries. Medusa's head, garlands of roses, animals' heads, as well as oval or plain shapes, entered into the construction of the knockers of this period.

Insurance

Conducted by

W. E. UNDERWOOD

CHARACTER AND REPUTATION

Within a month serious difficulties which may result in injury to the interests of their policyholders have developed in two Pennsylvania insurance companies—the American Assurance of Philadelphia, writing industrial accident, health and life policies, and the Pension Mutual Life, doing a regular life insurance business.

As the result of an investigation of the affairs of the American Assurance made by the Pennsylvania Insurance Department, the capital of the company was found impaired $62,000. The examination disclosed that the finances had been juggled and that a certain lot of bonds, listed in its assets at $71,000, had been rented from an Indianapolis broker for a consideration of $1000. The company will probably be placed in the care of a receiver, with what results to policyholders it is difficult to predict.

The Pension Mutual's troubles became public thru a suit commenced in a United States court by some New York financiers to recover bonds valued at $820,000, held by the life insurance company. The securities were impounded and locked up in a safe deposit box in Pittsburgh pending the conclusion of the litigation.

From such reports as I have seen of the allegations made, I conclude that the capital of $839,925, claimed by the company, consisted largely of notes given by purchasers of its capital stock. It seems that subscriptions to the stock were secured from a number of financially responsible people (aggregate amount not stated) by persuading them to give notes under a side agreement that the makers of the notes would not be called on to pay them, the representatives of the organizers promising to re-sell the stock before the notes matured. The notes were then brought to New York, so the story goes, minus the side agreements, and exchanged for $820,000 in the bonds of certain public utility corporations. When the notes reached maturity, the New York parties attempted to collect them and the side agreements were disclosed.

If, as seems to appear on the face of these alleged facts, as much as $820,000 of the capital of the Pension Mutual is involved in this transaction, and if the New York people succeed in regaining their bonds, the capital of the company will virtually consist of past due notes—assets not acceptable to any insurance department. The management of the company, thru court proceedings, will be compelled either to enforce the payment of these notes or to find other money. The Pennsylvania

The Brookfield School

An open-air school for a small group of girls

Directors: Miss Helen Fairman Cooke, A.B. Wellesley College; Miss Marion F. E. Cooke, A.B. Wellesley College

AIM

To develop a sound mind and heart in a sound body.
To make the girl capable, alert and womanly.
To make her thorough.
To make her reliable and resourceful.
To make her likable and sincere.
To teach her to think and act with intelligence.
To teach her how to study.
To teach her how to use her mother tongue.
To help her to find herself, and therefore
To make her happy and useful.

EQUIPMENT

Colonial house—atmosphere of simplicity—open-air sleeping and dining porches—open-air schoolroom—unstinted sunshine—gardens for all—space for play—woods and fields—experienced, understanding, motherly teachers.

METHODS

Individual and class instruction—close supervision of work—careful study of each girl's nature—work made a joy—power of concentration developed—intimate association with teachers—sports made a means of education—teaching by example rather than precept.

COURSE OF STUDY

An enriched high school course—general, special, and college preparatory—modern languages a part of daily life—Domestic Arts—Music—Gymnastics—Formal lessons laid for culture.

PLAY

Tennis—basket-ball—tramping—coasting—skating—snow shoeing—dancing—singing—games—story-telling—play acting.

References given and required.

Conference with the Directors by appointment only.

Address

Miss Helen Fairman Cooke
The Brookfield School
North Brookfield, Massachusetts

Insurance Department will doubtless move vigorously in the case and hasten repairs of the damage done.

We have here an illustration of the difficulties encountered by the insurance supervising authorities of the states. Both these companies were in possession of acceptable securities, and it was to be presumed they were owned free of all incumbrances. The conditions under which they were held remained concealed. It also demonstrates to how great an extent the insuring public are forced to rely—independent of state supervision—on the integrity of the men in charge of the companies. These are factors deserving of large consideration in choosing a company. In this, as in every other business relation, character and reputation count heavily.

A. G., Athol, Kan.—It would be difficult to estimate the market value of any life insurance stock. Such securities are generally held by a small number of people and traffic in them is private. I have never known of a life insurance stock being listed on any of the exchanges. If you have a stock you desire to sell, it is my opinion you would do best in offering it thru the home-office management of the company.

C. L. G., Eugene, Ore.—The company about which you inquire altho but five years old has firmly established itself, is financially sound and is in the hands of capable life underwriters and financiers. At the beginning of this year its assets were $1,802,501 and its surplus to policyholders, $1,117,008. It had total insurance in force on that date amounting to $14,462,171. As the company writes non-participating policies only, you are not interested in any dividend earnings, your premium rates carrying a guarantee of reductions. Keep your policy.

W. H. G. H., Tallahassee, Fla.—An examination of such reports as I have of the company which has reinsured the one in which you hold a policy does not impress me favorably, and I am satisfied that if its financial condition were subjected to the tests applied in New York or Massachusetts its claimed surplus would disappear and be replaced by a small deficit. Some items of the assets seem to be overvalued, while others should be excluded. Precisely what the financial condition is at present, nothing short of an examination by expert accountants under a proficient actuary will reveal. On the face of the record I am inclined to the opinion that the management is either incompetent or reckless; perhaps both. You do not state how much longer your policy has to run to reach maturity, nor its anniversary date, but I feel that the facts will not warrant me in advising you to invest further premiums in it. As a death claim at present, I believe it to be secure—further than that I should not care to go.

General Information—A correspondent in Hamilton, Ohio, inquires about the Midland Mutual Life Insurance Company of Columbus in that state. For the benefit of others interested the following summary is presented: The company was organized in 1905 and began business in 1906; present capital, $225,000; dividends to stockholders limited to 10 per cent a year; the management is efficient; expenses are reasonable; cost of new business is moderate; mortality rate low; death claims are promptly paid. Most of the company's policies are of the annual dividend class, but there is a small amount of business on the deferred dividend plan. Financial condition on December 31, 1914: assets, $1,357,119; total liabilities (excluding capital stock), $1,036,531; capital and net surplus, $320,588; insurance in force, $15,146,555. A good average company and one which should and probably will render efficient service to policyholders.

SCHOOLS AND COLLEGES

THE METROPOLITAN TRAINING SCHOOL FOR NURSES

offers a **three years' course, FREE**, and pays besides maintenance $10 a month for the first year, $12 a month for the second and $15 a month for the last year.

Classes are formed every month

The Nurses' Home is located on one of the finest sites in New York City. The rooms are all single with spacious entrance hall, library and sitting rooms. The school is registered and connected with a hospital of over 1300 beds.

Applicants must be over 18 and under 35 years of age, and have had one year in high school or its equivalent.

EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON IN CONNECTION WITH THE INDEPENDENT EFFICIENCY SERVICE

145. A Business Man. "A youth of twenty-five, healthy, moral, enthusiastic, industrious, tactful, is employed as correspondent and traveller with a large manufacturing concern. He wants to go into journalism; worked his way thru college, and has saved enough money for more time at college. Would he better spend two years in taking a course in journalism, or secure a position on a city daily?"

Let him bank his money quickly and safely—he is likely to need it all soon—and immediately search for the job as reporter. But let him search quietly, anonymously, and not resign his position till a new one is found. But why not become first a newspaper *correspondent*, rather than a reporter, contracting with a nearby daily or weekly, or newspaper syndicate, for a series of news letters from the places covered in the man's route for his present employer? Always plan to utilize experience in looking for new fields to conquer. A man who is now professional correspondent for a large concern should make easiest connections on the same line in other spheres of work. The better equipped schools of journalism are doing good work and if one has time and money their courses are helpful.

---

146. Miss M. H. K., Illinois. "Can you give me practical advice in the direction of mental efficiency? I lack power of concentration and mental control. My work consists of study in a scientific line, the weighing and interpreting of facts, and the expression of ideas in writing. Often when I try to apply my mind, it is partially, or absolutely powerless, and much time is wasted. What do you suggest?"

Among the causes for the mental inefficiency you describe are these: lack of interest in the study, lack of fitness for it, lack of aim ahead of it, bodily fatigue or anxiety or depression, overloaded stomach, overheated or impure air, tight clothing, deficient exercize, inharmonious surroundings. Do any of these causes apply to your trouble?

Mere brain culture avail little—our schools to the contrary, notwithstanding. Physically the brain belongs to the body, spiritually the brain belongs to the soul, and as you strengthen both body and soul you will strengthen brain. Your diet may be lacking in the essential mineral salts forming brain tissue, and a starved brain cannot work. A splendid circulation of pure, rich blood is most important; have you this?

More vital is a temperamental fondness for your work; do you love it and enjoy it supremely? If not, learn to.

---

147. Miss F. C., Florida. "Do you think that being on one's feet all day would cause nervousness, where one is troubled with fallen arches? Would it be better to seek an employment which enabled one to sit while working?"

Fallen arches frequently cause great nervousness and sympathetic ailments. A person with a high instep (the kind that "falls") generally has a refined, artistic nature, and is peculiarly sensitive to nerve disorders. A sedentary occupation would be advisable till your trouble is cured. But don't sit down and leave those arches in collapse. Build them up again. A new kind of arch support has recently been devised, to be worn inside the shoes. Ask any large shoe store. A good orthopedic specialist or hospital should be consulted if possible, for the best means of restoring the strength and shape of the foot.

---

148. Mr. O. M. R., Ohio. "I am a student in a small college, expect to graduate next year. I am troubled as to the amount and kind of social life desirable. Can you enlighten me on this problem, with respect to my efficiency present and future?"

The social activity in a college has, or should have, three main objects: *service*, *education*, *preparation*. It should help you to relieve the loneliness, lighten the tasks and brighten the lot of your fellows who need you; to renew and invigorate your own mind and body; to acquire the poise, tact, courtesy, adaptability, grace, wit, fluency, neatness, thoughtfulness, which belong in every one's full equipment for life. Do the social functions that you attend offer satisfactory opportunities on these three lines? Most young people are extremists; and most college students are society sheep—they herd too much and follow too much. A caution is generally proper against overdoing the follies of gregarious and fatuous hullabaloo that college kids mistake for real sociability. If you had made your question specific we would give a specific answer.

---

149. Miss A. T., New York City. "I expect to be married soon, but hate the artificiality, commonness and cheap display of a big church wedding. It seems to me that one's marriage should be a quiet, sacred, personal event, with none of the joking and feasting that go with a public celebration. We are thinking of an elopement, but our families are prominent, and would be offended by a secret wedding. Of course, we dare not consult any one here. Would it be wrong to elope?"

Dreams and duties must be balanced in this foolish world, and we fear you would sadly regret a marriage condemned by your relatives, however wrong their customs and thoughts may be. Could you not have a simple home wedding, inviting only your best friends, with a request that there be no throwing of rice and old shoes? If the ceremony came just before train-time, you could leave the house in advance of all merry-making. And if you made your feeling clear to all your friends, they would surely refrain from adorning your trunks with valentines and pink ribbons. People are only thoughtless, in marriages as in most things. Having ideals and convictions, you will do more good by sharing them and gaining for them people's respect, than by running off to the woods and playing butterfly.

---

150. Mr. W. A. L., Kansas. "Kindly give me efficient program for a college student, concerning hours of study, amount of sleep and exercise needed, and some information on correct diet for a student."

Under normal conditions, allow eight hours for studies and recitations combined; eight for sleep; one or two for outdoor exercize; two to three for meals; perhaps two for social meetings, general reading, and so forth. Whatever time remains would be well spent in altruistic work, or in planning your future and learning to do things with your hands.

Aim to study less at night than is usual—more in the early morning. Many a brain was burned to death in "midnight oil." Study alone, study hard, study early in the day. Exercize late in the afternoon; read, and be sociable and helpful, in the evening.

A book on diet, such as those by Lahmann, Kellogg, Lindlahr, Christian, Wiley, McCann, would be a great benefit to you. Eat slowly and chiefly of natural cereals, eggs, fish or fowl; green salads, fresh fruits, well cooked vegetables. Nothing between meals.

---

151. Mr. W. M. Michigan. "What is a good cure for stammering, when it is due mostly to fright, tiredness and fear? I have been afflicted with this for some time, and I think it is due to causes above. I seem to bother me only when I get excited or become afraid or timid."

Look thru the advertising pages of the large popular magazines where the claims of various modes of treatment are presented. You would probably be helped by such books as Horace Fletcher's *Psychurgy*, *Menus Eupathicus*, Dr. O. S. Marden's *Power, Poise and Plenty*, William E. Towne's *Hurry, Worry, Cured*. Have you tried the regular practise of speaking or reading in public? Learn how Demosthenes cured this impediment of speech. You could strengthen your vocal cords and throat muscles by massage, cold water applications, and exercizes for the neck and chest. You may need a course of mental suggestion in a modern sanitarium for nervous affections; your physician could doubtless refer you to such a place. There is nothing and nobody on earth to be afraid of, all your fears are groundless; try to convince yourself of this, and be sensible.

---

152. Rev. E. J. R., Pennsylvania. "A friend of mine is interested in domestic science, but at present cannot attend any college where such a course is offered. Can you name a few of the best books that would open up the subject, and give one a fair knowledge of the same?"

There are so many branches and phases of domestic science that a variety of books would be needed, to include them all. Two of the most modern works, based on extended research and experiment, are Mrs. Christine Frederick's *The New Housekeeping* and Mrs. Frank A. Pattison's *Principles of Domestic Engineering*. Both of these cover in a thoro and practical way the new methods of scientific household management.

If you would write for the catalogs of nearby state universities and agricultural colleges, asking particularly for details of domestic science courses, you should get a fairly comprehensive idea of the scope of the subject. Then you could write us more specifically for names of books on the different branches.

---

153. Mr. W. M. B., Ohio. "Is meat necessary for the maintenance of strength and vigor, and the building up of muscular tissue? Is entire abstinence from meat efficacious for a young man who receives but little physical exercize, but is under no severe mental strain? Can you suggest any books on vegetarianism which would be helpful?"

The Japanese are one of the hardiest races, eating little or no meat; the ancient Greeks were the physical models of the world, and practically vegetarians; records of "strong men" are held by non-consumers of flesh food. Theoretically, meat is unnecessary, and undesirable.

Actually, the trouble is to provide a sane vegetarian diet in modern civilization; and I personally believe that fish or fowl or a light meat is for most people advisable once a day, in small quantities. The protein equivalent of meat is found in eggs, milk, cheese, nuts, legumes, cereals such as wheat, oats, corn. But excess of these foods will overtax the liver and they take longer time to digest than do meat meats. Try vegetarianism, approximate it as nearly as you can.

---

154. Mr. J. W. O. Missouri. "As general secretary of a Y. M. C. A. in a small city, how can I become more efficient in my work, to which I have been devoted for ten years? Have tried to get out Board of Directors to put on a campaign for a new building now. They acknowledge the need, but doubt our ability to raise the sum required, saying 'This is different from other days; we can't do what others have done. We can't we?'

You can. But an outsider should organize the campaign—an expert specially engaged. Write the International Y. M. C. A. Committee, 124 East Twenty-eighth street, New York, for advice in this matter. See their publication, "Association Men," for general hints on your problem. Ask also the general secretary of the West Side Y. M. C. A., 318 West Fifty-seventh street, New York, for reports of the many departments and innovations for efficiency promoted by this remarkable institution. There is an International Y. M. C. A. Training College at Springfield, Massachusetts, and another at Chicago; obtain particulars.

Bank Cashier—This check, madam, isn't filled in.

Madam—Isn't what?

Bank Cashier—It has your husband's name signed to it, but it does not state how much money you want.

Madam—Oh, is that all? Well, I'll take all there is.—*The Bankers' Magazine.*

A few mornings since, a ragged little beggar stopped at a door and plaintively suggested victuals.

As the benevolent lady of the house was filling his basket, she asked:

"What is your name, my son?"

"My name is Grimes."

"Is your father living?"

"Yes, marm."

"I thought old Grimes was dead long ago."

"That was my grandpa."

And the youngster walked off, thinking what a good soul the lady was.—*Exchange.*

THE NEW PLAYS

Many of our readers live in localities where the opportunities for seeing first-class plays are few and far between. But when a touring company brings one around that is really worth while they want to know of it and when they pay a brief visit to a large city where the best are to be seen, they do not wish to waste their few evenings on something trashy or distasteful. The percentage of the poor and harmful is greater among plays than among books, so dramatic criticism is even more needed than literary. It is for the purpose of meeting this need that we have started this column, in which we will every little while express our opinion frankly and briefly as to the merit and character of the new plays that are being produced.

The House of Glass. Criminological melodrama. Clean, purposeful, harrowing and creditably played. (Candler.)

Rolling Stones merits neither praise nor blame. It is a second rate melodrama comedy of gentlemanly thieves. (Harris.)

Young America centers about a juvenile court and a real live dog. A wholesome story of boy life prettily portrayed. (Gaiety.)

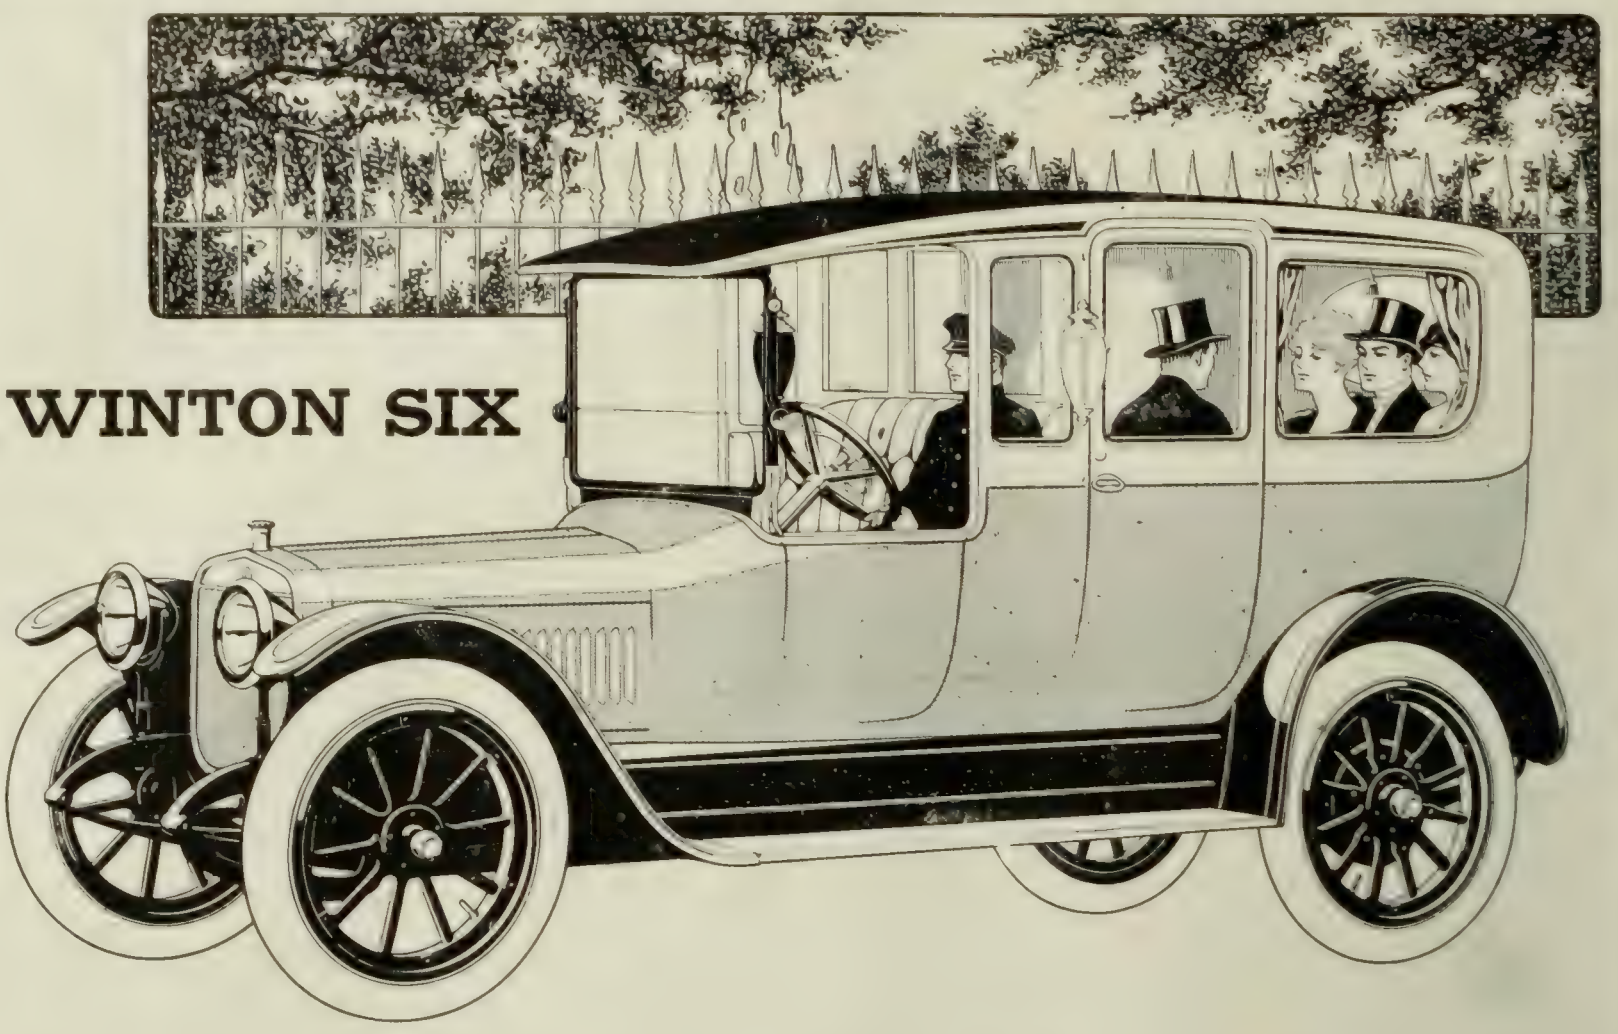
At *No. 13 Washington Square*, there is good, clean fun. May Irwin as professional housekeeper, amateur burglar and involuntary liar. (Park.)

Some Baby. Amusing plot, flat lines, fair acting. There is the elixir of reinvenescence, same as *Faust;* otherwise quite unlike Goethe. (Fulton.)

Bombs, bromidic but unimpeachable sentiments, movie thrills and spectacular staging make *Under Fire* a good play as war plays go. (Hudson.)

"She loves me, she loves me not" ponder the men in *The Boomerang* thru three acts of clean, snappy comedy—cleverly written and well acted. (Belasco.)

See My Lawyer, by Max Marcin. Exceptionally good farce. Every rôle well taken and played with vim. No vulgarity. No horseplay. Theme: synthetic rubber. (Eltinge.)



Marie Tempest has never been seen to better advantage than in the revival of that delicious society comedy, *The Duke of Killicrankie*, and *Rosalind*, one of Barrie's most whimsical whimsicalities. Her support is perfect. (Lyceum.)

Cousin Lucy is mostly gowns and giggles, with an occasional song. Julian Eltinge plays both leading lady and man and keeps the audience guessing until the inevitable policeman brings order out of confusion just in time for the curtain. (Cohan's.)

On *The Road to Happiness* one meets William Hodge, one spavined horse, a chicken, a collie, a plate of ginger cookies and an assortment of rural "types." The star does well with a crude play, but dramatic honors rest with the live stock. (Shubert.)

Common Clay is one of those sex dramas that cause a great furore among the professional critics and the groundlings. Its morality is conventional and sound enough. It is the best acted play in town. Nevertheless it is theatrical, unwholesome and often repulsive. (Republic.)

In *Hit-the-Trail Holliday*, by George M. Cohan, "Billy Holliday," the barkeeper revivalist, is of course Billy Sunday, but not an offensive caricature. With the removal of some inconsistencies in characterization, such as the curtain pantomime of the third act, the farce might be raised to first class comedy without being any the less funny. (Astor.)

Success Rides in Closed Cars

The successful family requires a closed car. Useful the year around, it is indispensable from October to April—when social engagements are most numerous and—the weather at its worst.

The closed car defeats rain and snow, wind and cold. Weather never stops the closed car family. They ride in coziest comfort and avoid the burden of cumbersome robes and heavy wraps even in mid-winter. Closed car elegance alone harmonizes with the good cheer of evening dress and the gaiety of dance, theatre, and dinner.

If you prefer to drive your own car, the sedan, with driver and party all together, is ideal. In limousines, passengers and driver occupy separate compartments.

The closed car is distinctly ***the*** car of the successful family. No other car so fully bespeaks its owner's taste. In finishing fabrics from world-famous designers, in rich and harmonious color combinations and in appointments, your Winton Six sedan or limousine will be a creation individually your own.

Prices are unusually attractive. A card from you will bring full information.

THE AMERICAN AMBASSADOR TO TURKEY

WHILE THE GUNS OF THREE GREAT POWERS ARE HEARD IN CONSTANTINOPLE, AMBASSADOR HENRY MORGENTHAU HAS REMAINED AT HIS POST AND ASSUMED THE PROTECTION OF THEIR NATIONALS. HE HAS PREVENTED THE TURKISH MILITARY AUTHORITIES FROM CARRYING OUT THEIR PLAN OF COLONIZING GALLIPOLI TOWNS WITH BRITISH AND FRENCH NONCOMBATANTS TO SHIELD THEM FROM THE SHELLS OF THE ENEMY. HE HAS ASSISTED THE ITALIANS AND GREEKS TO RETURN HOME. HE HAS ENABLED THE AMERICAN SCHOOLS TO OPEN IN SPITE OF THE REVOCATION OF THE CAPITULATIONS, AND HE IS DOING WHAT HE CAN TO SAVE THE ARMENIANS FROM DISPERSAL AND DESTRUCTION. A SKETCH OF THE AMBASSADOR AT WORK WILL BE FOUND ON ANOTHER PAGE

THE PROPOSED HALF-BILLION DOLLAR LOAN

THE negotiations which have begun this month, for a loan, in the amount of $500,000,000 or more, by the American markets to England and France, is so unusual an operation, that full description of the surrounding circumstances is necessary to show its significance. Whereas last autumn the market for exchange on London was unfavorable to the United States in an unprecedented degree, with sterling exchange in October ruling at abnormally high figures, a decline in those rates during the early spring brought exchange to an utterly abnormal discount. What this proved was that Europe's current payments to us were now vastly in excess of our own current obligations to Europe. For this very striking change—which culminated, a month ago, in a rate of 4.50 for sterling exchange, which is thirty-two cents below the possible minimum of ordinary times, which has not been reached in this market during half a century, and which was this time accompanied by an equally unprecedented flow of gold from Europe to New York—there are a number of special and unusual explanations:

(1) Our enormous exports of grain, which, because of the war's blockades and the shortages of last year's European crops, reached this past season a value of several hundreds of millions of dollars above the usual figures.

(2) Extensive reduction of England's exports to the United States, because of diversion of her industrial energies to the making of war material.

(3) Our repayment, during the early months of the war, of practically all of our floating obligations to Europe.

(4) Repurchase by our markets, since the Stock Exchange reopened in December, of $500,000,000 of American securities previously owned in Europe; against which, therefore, our markets no longer have to remit interest and dividends thru purchase of exchange.

(5) Disappearance, because of the war, of the heavy remittances heretofore made to Europe against the expenditures of American tourists in Europe—a sum amounting annually to something between $100,000,000 and $150,000,000.

(6) Purchase of war munitions in this country by the Allied Powers to a prodigious amount—a wholly new form of export from this country, yet estimated ultimately to aggregate not much less than $1,000,000,000, and hardly yet shipped in full quantity.

TO these accumulating influences must be added two others, less visible but by no means least important. One arose from the fact that London, thru resigning to New York, temporarily, and by force of necessity, its position as central market of the world, and by ceasing itself to provide capital for the needs of outside communities, had virtually compelled the diversion of the outside world's surplus working capital and trust deposits to New York. Previously, these credit balances of outside communities went as a matter of course to London. Under present circumstances—especially in view of the moratorium at London itself last summer, and of the recent extreme disorder in the rate of exchange—there was the strongest reason why that flow of capital should now take the direction of New York. But naturally, such diversion of the movement to our market, in some cases involving actual withdrawals of balances from London, was bound to weigh down still further the balance of international exchange in favor of New York. The second of the less obvious considerations is the vague doubt, which has unquestionably existed, as to whether gold payments could be maintained indefinitely, even in England, if the prodigious economic strain of war were to be prolonged.

The situation, then, was that England's current accruing payments to New York so immensely exceeded New York's current obligations to Europe that, in the ordinary course of the markets, the balance could be restored only thru wholly unprecedented shipments of gold from Europe to America. As a matter of fact, such gold shipments during the last few months have surpassed all records in our history. Yet it was quite universally admitted that settlement in this form was unsatisfactory, since Europe needs the gold to safeguard the soundness of its currencies, whereas the American markets are at the moment literally overstocked with gold. Not only so, but the limited facilities for shipping gold, and the prevailing rate of insurance risks, made it virtually impossible to send the precious metal fast enough to restore the balance in exchange—even if it should be possible to obtain from the European banks enough gold for the purpose.

THE proposed loan of $500,000,000 or more is designed to establish a credit fund in New York City, on which the Allies could draw in paying for part of their commercial purchases of the United States, thereby reducing the volume of drafts on London, the enormous magnitude of which was the primary cause of the depreciation in exchange. The plan undoubtedly would be to raise the loan in terms of American dollars, and to leave the proceeds on deposit in the American market, there to be drawn upon as requirements for payment of commercial indebtedness by Europe should arise. The expedient is familiar; it was employed by the United States itself in 1895, to remove similar difficulties in our own foreign exchange market.

It is usually mutually advantageous. Its mutual advantages in this present case arise from the fact that such an expedient would preserve the credit of the English market, protect the gold supply of the European banks and governments, and yet obviate further violent depreciation of sterling exchange. For such depreciation not only embarrasses England, but has extremely unpleasant influence on the profits of American business men engaged in the export trade. If, as is very common, they have contracted to receive payment for their shipments in pounds sterling, they may have to turn the proceeds into American dollars at a moment when the declining value of the pound sterling on our market may reduce the actual proceeds six or seven per cent. Meantime, also, the disadvantageous market for exchange, combined with a wish to reduce so far as possible England's balance of obligations to the United States, would naturally divert from our own ordinary commercial markets into competing markets the English buyers of our

own commodities. A typical instance is the already visible tendency of English importers to buy Canadian wheat, of which the crop this year is abundant, instead of wheat from the United States.

The delegation of eminent London and Paris financiers, lately arrived in this country, appears to have proposed in general a five-year loan at a rate of something around five per cent, guaranteed by the French and English governments, and payable, interest and principal, in American currency. The sum under discussion is very large; it has raised the question whether an operation of the sort is prudent, and who, after all, will buy the bonds. The answer seems to be that the American money market is in absolutely plethoric condition, that our banks are provided with available credits to an almost unprecedented degree, and yet that new issues of securities in the United States, to banks or to private investors, have been of extraordinarily small volume during the twelvemonth past. The question, then, is not so much of ability to subscribe as of the value of the investment.

It is difficult to see how any serious question can arise regarding this, since the whole credit of the French Republic and of the British Empire stands behind the bonds. The further question, as to whether so large a loan of capital by our markets to France and England would be a violation of neutrality, is already answered. No valid objection to the operation on that ground could exist. As a matter of fact, not only was the Russian Government last winter permitted to raise a substantial credit fund in New York City for purchase of war munitions, and not only did the French Government borrow for that and other purposes in New York on its short-time notes, but the German Government itself sold $10,000,000 five per cent notes on the American market last spring, and even went so far as to invite and receive subscriptions in the United States for the Imperial German war loan.

PEACE-AT-ANY-PRICE

THE peace-at-any-price pacificists are the most contemptible milksops now in existence, according to many of our virile editors and puissant publicists. But what shall we call the peace-at-any-price militarists who are ready to pay any price under heaven for an army and navy big enough to lick all creation?

HELPING OUT HAYTI

IT is very gratifying to learn that a treaty has been signed with Hayti which will enable us to help that unhappy republic out of its difficulties. The treaty has not been published in detail, but is understood to provide for an American administration of the finances sufficient to prevent peculation and safeguard the interests of the Haytian people. Order is to be maintained by a native constabulary under American officers. This regime is to last for ten years, but may be extended at the request of either signatory.

A similar arrangement for the Dominican half of the island has worked wonders in restoring the financial credit of that republic in spite of the attempt of our late Secretary of State to use the offices as rewards for "good Democrats." The Haytian half of the island is in still greater need of reform, but the task is not an impossible one. Our marines have restored order and President D'Artiguenave, former President of the Chamber of Deputies, has received official recognition by a salute of twenty one guns.

We hope that the Senate will ratify the Haytian treaty without quibble or delay. Prompt and loyal support of the administration is necessary if the policy is to start in with the best prospects for success.

TWO QUESTIONS TO UNUSUAL WOMEN

"I DON'T like to hear a woman harangue on things that she knows nothing about."

He who spoke was an "Anti," listening to suffraget street oratory.

But not every woman that talks harangues; and there are women who know a great deal about many things, including politics.

Close observers of the suffrage campaign, whether "convinced" or "anti," have noted a progressive substitution of new premises for old ones in the argumentation of late. The assertion that women are not "really interested" in politics has been retired. The allegation that they are not practical in business matters has too often been embarrassing. There are politicians who lament that women so well understand the problems of municipal housekeeping. When peace returns to an exhausted Europe there will be no repetition of the slander that women cannot fight, or otherwise defend their nation, in war.

But with the passing of these familiar objections to woman's participation with men in voting and in administrative affairs, new ones have been brought forward that, we have observed, seem to give the "fors" more annoyance. The area of equal suffrage is now extensive, and we are beginning to get "returns." Interesting folk wisdom is accumulating on "how it works." Women have served on juries. They have been mayors, commissioners and fence viewers. They have exhibited their own ways of rewarding and punishing, "putting it across," and "jamming it thru." They have given indications of how they will fit into "the system." It is these indications that are now being turned into "anti" arguments of a new kind.

The questions now being asked seem to us to be more fundamental than the old ones were, and we should be glad to see answers to them from women of the thoughtful, scientifically-minded sort, who are not too strongly partizan on one side or the other. What are the facts? They should be known, and be dispassionately weighed.

Is it true, as some of the lawyers and judges, as well as certain psychologists are saying, that a woman "intuitively" arraigns, tries and judges an accused man, and above all an accused woman? Does evidence ever make any real impression on her mind after it is "made up"? Can she, like a man, in fact reopen a case, and grant a new hearing, even when she appears most conscientiously to go thru the form? Of course the unusual woman can, but can the usual, the representative woman, as the representative man commonly can?

Can the usual woman think about human relations on the big scale in terms of impersonal causation? Madame Curie, we know, does not think of chemical reac-

tions as exhibitions of the deviltry of "some man." Herbert Spencer would not have taken the Emperor of Germany at his own self-valuation, nor held him solely responsible for the Great War. Not many women, however, think like Madame Curie, nor many men like Herbert Spencer. Are there as many women as men who are capable of grasping the idea that "hard times," "crime waves," Sunday ball games, and "rum selling" may have some other cause than the election of a Democratic President?

These are fundamental questions and much more worthy of discussion than those which were raised in the earlier days of the feminist movement.

SING SING

SING SING under the ancient régime was a smothered hell. Despite the most hideously repressive measures vice flourished, keepers were bribed, dope was smuggled in, prisoners escaped, rebellion smouldered and murder occasionally broke out. Cunning was met with cunning, force with force. All the power of the state could not keep order.

A mollycoddle and sentimentalist came along and substituted the law of love for the law of force, the rule of right for the rule of might. At once the outcasts and depraved were transformed from beasts into men, vice withered, order was maintained, and for the first time the germ of self respect and good citizenship found soil in which to grow. Sing Sing was transformed and transfigured.

Where is the Tom Osborne big enough to apply the principles of Sing Sing to this warring world?

SOME NEEDED NAMES

THE most conspicuous exception to the rule that a demand creates a supply is in the matter of words. A happy appellation has often been the making of a party, a reform, a religion or a school of thought, but on the other hand many a movement has languished or been ignored for lack of a specific name. A striking instance is the change that is taking place in the British Empire, a process of unification and solidification that has been going on gradually and almost imperceptibly for many years, but now is accelerated by the war. There are at least three nouns and corresponding adjectives needed in this connection: one applicable to the inhabitants of the British Isles, another applicable to all the subjects of King George, and a third applicable to all English-speaking peoples. "English" and "British" and "Anglo-Saxon" are sometimes used for the three purposes, but none of them really fits. They are too narrow in some of their meanings and too wide in others. "English" was formerly intended to discriminate against what it is now desired to include. It meant first not Saxon, and later not Norman, not Welsh, not Scotch, not Irish, and not American. To call an Irishman an "Englishman" is almost as dangerous as to call a Virginian a "Yankee." The Scotch have spent a hundred years in explaining away Nelson's signal, "England expects every man to do his duty." The best of the varied explanations is that of the Scotchman who said "England might only be able to *expect*, but Scotland *kent*—and kent fine—that every son of hers would dae his duty. There was nae fear and nae doot on that point."

The word "British" has expanded in like manner. Its early meaning is shown by this quotation from a seventeenth century author: "He calls Helen an Englishwoman, whereas she was purely British." If "British" applies to Great Britain only it excludes the Irish; if it applies to the British Empire it includes the Zulus. The latter usage is of late becoming rapidly established, so we may regard the imperial adjective as settled upon.

But there is no noun to match! "Britisher," which was first used as a contemptuous epithet in the American Revolution and long regarded by grammarians as an "odious vulgarism," has been creeping up into respectability and is now received into the highest official circles. "Briton" suffers from the opposite cause. It is too "high-brow" if we may employ an Americanism in this connection. In a song, "Britons never will be slaves," it may pass, but the average Briton or whatever he calls himself, shies off at scent of anything poetical.

Doubtless this aversion may be overcome in time and "Briton" come into common usage, but there is still the question of its scope. Does it apply only to the inhabitants of the British Isles and their unalienated descendants, or to all the fifty-seven varieties of humanity under the British flag? In some of the colonies it has become customary for the officials to use "Britisher" in referring to the "native" races, black, brown, yellow or white, and reserve "Briton" for themselves.

But here a more serious difficulty arises, which shows the necessity of a fourth new word. What name shall be given to those members of the empire who live in the self-governing communities of Canada, Newfoundland, South Africa, New Zealand and Australia? Their growth in numbers and importance and their loyalty as shown in the present war will make it necessary soon to admit them to some form of participation in the government of the British Empire and eventually more as partners to the United Kingdom than dependencies. They resent being called "colonials," but the word persists because there is no good substitute. When the royal title was changed in 1910 to read "King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas" the United-Kingdomers thought they were doing a handsome thing by the "colonials" because "Dominions" has a noble sound. But they spoiled it all by the phrase "beyond the Seas," which betrays their insular standpoint and makes it permanent. Besides it does not provide the needed noun and adjective to take the place of "colonial." "Dominioner" is unusable, and when a letter appears in *The Times* signed "An Overseas Briton" it excites amusement.

The term "Anglo-Saxon" is so obviously inapt that it is never likely to prevail in spite of the urgent demand for a word to designate that large part of the human race which is distinguished from the rest by a common speech and similar political institutions and ideals. It comprizes only about a seventh of the subjects of the King-Emperor George V, but most of the people of the United States. But "Anglo-Saxon" as a

racial term excludes the Celts and British and Normans and Danes of the United Kingdom, and it is becoming less applicable to the United States at the rate of a million a year. It has always amused or angered our tourists in Europe to find Cooper and Hawthorne among the "British authors" of the Tauchnitz edition.

But that reminds us that we of the United States are just as badly off for a noun and adjective as the people of the United Kingdom. It is this lack, and not our national egotism, which has led us to usurp the term "American," thereby arousing the justifiable resentment of all the other nationalities in this hemisphere. Esperanto provides as the needed word "Usona," formed from the initials of "United States of North America" after the manner of "Anzac," "Spug," "Nylic," "Mesco," and "Socony." As a derivative "Usonian" does not sound badly and might be justified by the analogy of "Canadian" and "Panamanian."

But this is a matter for experts and ought not to be left to chance under the spur of necessity. If our professors of English would undertake such constructive work as the formation and introduction of these needed words instead of devoting themselves to the detection of the typographical errors of the First Folio and the influence of opium on Coleridge, the language would cease to be an impediment to progress.

AUTHORS' AUTHORS

THE *New York Times* has induced twenty-eight of the most popular novelists of the United States and England to answer the question: "Which, in your opinion, are the six best novels in the English language?" The combined result of this literary referendum is as follows. The date is the year when the novel was published. The parenthesis gives the number of votes it received:

Vanity Fair, by William Makepeace Thackeray, 1846. (14)
Tom Jones, by Henry Fielding, 1749. (11)
David Copperfield, by Charles Dickens, 1850. (7)
The Scarlet Letter, by Nathaniel Hawthorne, 1850. (7)
Robinson Crusoe, by Daniel Defoe, 1719. (6)
Ivanhoe, by Sir Walter Scott, 1820. (4)
Lorna Doone, by R. D. Blackmore, 1869. (4)
Tess of the D'Urbervilles, by Thomas Hardy, 1891. (4)
Tristram Shandy, by Laurence Sterne, 1759. (4)

From this it appears the authors of our best sellers, those who write the liveliest and most up-to-date fiction, are strictly academic in their personal tastes. What torture it must be to these admirers of eighteenth and early nineteenth century literature to have to spend their lives writing the detective stories, the tales of adventures, the studies of quaint characters, the sex problems, the romances of modern business, the pictures of real life among the wealthy and the poor in which we all delight. The list is just such a one as would be prepared by an undergraduate of our most orthodox of colleges who had never read a book outside the required list of "Eng. Lit. I."

It is indeed distressing to see what a poor opinion these novelists have of one another and of their contemporaries no less highly esteemed by the public. There is not a living author among the nine except Hardy, and he is seventy-five years old. No first-class novel, it appears, has been written in the last twenty-four years, notwithstanding that during this period more novels have been written and published and read than ever before in the history of the world. One would conclude from this that teaching everybody to read and giving courses of instruction in schools and colleges all over the land on the art of writing and on the choice of good books has been the ruin of literature. According to this consensus of opinion of those whom we have ignorantly regarded as good writers, the art of novel writing was best at its birth and has been running down ever since until now it produces nothing worth mentioning. The average date of publication of the nine best novels is 1817. This is—if true—a sad state of affairs. Let's hope that it isn't and that all the best literature is not confined to "Everyman's Library."

THE DEPOPULATION OF ARMENIA

THE shocking news of the massacre, torture and deportation of Armenian Christians makes a special appeal to American sympathy and helpfulness. From numerous and reliable sources in Turkey it seems certain that this is not a matter of local disorders or petty oppression, but a systematic effort to extirpate the Armenian race. Thousands of families have been driven from their homes to starve upon the roads. Towns and villages have been divested of their inhabitants. Many are being put to torture to force them to renounce their Christian faith. Women are interned in the harems and children are sold as slaves.

These outrages cannot be excused on the ground of military necessity, for the regions devastated are in some cases beyond the reach of any possible Russian invasion and the Armenians have not manifested any disposition to revolt except where, as at Van, they have been driven to it in self-defense. It looks as tho the Turks, despairing of maintaining their supremacy, were resolved to crush out the Armenians so as to forestall forever the establishment of an autonomous Armenia in case the Allies conquer Turkey.

But this is something in which we have a deep interest, for American money and American lives have been spent for the uplift of the opprest peoples of the Ottoman Empire. The American Board of Commissioners of Foreign Missions has been at work in Turkey for almost a century and has expended some twenty million dollars. There are now maintained in Turkey ten American colleges: Robert College, Constantinople; Constantinople College for Girls; Syrian Protestant College, Beyrut; International College, Smyrna; Anatolia College, Marsovan; Euphrates College, Harpoot; Aintab College; Central Turkey College, Marash; St. Paul's College, Tarsus; and Teachers College, Sivas. In these institutions and other schools there are over 40,000 pupils, a large proportion of whom are Armenians. It is not too much to say that the Armenian people owes its racial consciousness and ideals chiefly to American influence, altho our missionaries and teachers have always been careful to discourage any insurrectionary movements. Thousands of Armenians have sought refuge in America from Turkish tyranny and have become good citizens of our country. The present distress and imminent danger of the Armenians in Asia will cause widespread concern in the United States.

THE STORY OF THE WEEK

Capture of Vilna

The best of war maps is a late railroad guide. Only by this reference can the strategic significance of the military movements be understood, for this is a war by railroads and for railroads. The capture of a junction counts for more than the capture of a fortress. The invention of railroads has evolutionized warfare more than the invention of cannon.

For instance, the most important item in the news of last week was that Hindenburg had taken Novo Svyentzyani. The Berlin despatches were jubilant over the feat. Petrograd was manifestly struck with despair and prayed for the speedy arrival of "General Snow."

But what is this place they are making such a fuss about? If we look at an ordinary map we fail to find it. The only cities in this region which seem to be of importance are Dvinsk and Vilna. The first of these, better known to the outside world by its German name of Dünaburg, is a fortress of the first class, founded in 1278 by the Livonian Knights as an outpost against paganism. Two hundred years ago, curious to recall, it was occupied by a joint force of French and Prussians when they were fighting together against Russia. It is now a thriving industrial city of over a hundred thousand inhabitants.

A hundred miles southwest of Dvinsk is Vilna, still more ancient since it has figured in history for a thousand years. It was once the capital of Lithuania and has never become reconciled to its subordination to St. Petersburg, as shown by its welcome to Napoleon in 1812 and its later revolts. It also is a commercial center and has a population of about 200,000, half Jews.

Now the railroad connecting these business centers is crost about half way between them by what Americans would call a "one-horse" or "jerkwater" railroad, running east and west to nowhere in particular. The station at the crossing is "New" Svyentzyani, or, as we would say, "Svyentzyani Junction," because the railroad in running between the two cities missed this insignificant town by a few miles. The Germans, instead of besieging either of the cities, struck at the railroad between them at this junction and following out the eastward branch about fifty miles reached the second of the trunk lines which run southwest from Petrograd. Then swinging south they cut the railroad behind Vilna with the object of preventing the withdrawal of its garrison. The Russians at first called this a mere cavalry raid, but it turns out to be one of the most important movements of the war and they have gathered all their forces to meet it. Vilna has surrendered and the Russian army is trying to fight its way out. If the Germans are victorious the country will lie defenseless before them and if they have men enough to cover such a vast range an advance on either Petrograd or Moscow is not beyond the bounds of possibility.

The cutting of the railroad between Vilna and Dvinsk leaves Petrograd with only the line to Kiev as a southern outlet and this lies more than a hundred miles behind the Russian front. General Mackensen's army has made astonishingly rapid progress thru the Pripet swamps and following the railroad eastward from Brest Litovsk has reached and taken the city of Pinsk.

The Russian counter attack in Galicia seems to have lost its force. They drove the Austrians back to the Stirpa River and took, if we may believe the Petrograd report, 40,000 prisoners, but since then the Russians have retired to the shelter of the Sereth River near their own frontier.

THE GREAT WAR

September 13—Russians drive Austrians back to Stirpa River, Galicia. German aeroplanes raid English coast and French aeroplanes raid Baden towns.

September 14—Italians gain west of Lake Garda. Germany claims "Hesperian" was sunk by British mine.

September 15—British prize court confiscates $15,000,000 worth of American meat on Swedish and Norwegian ships on the ground that it was intended for Germany.

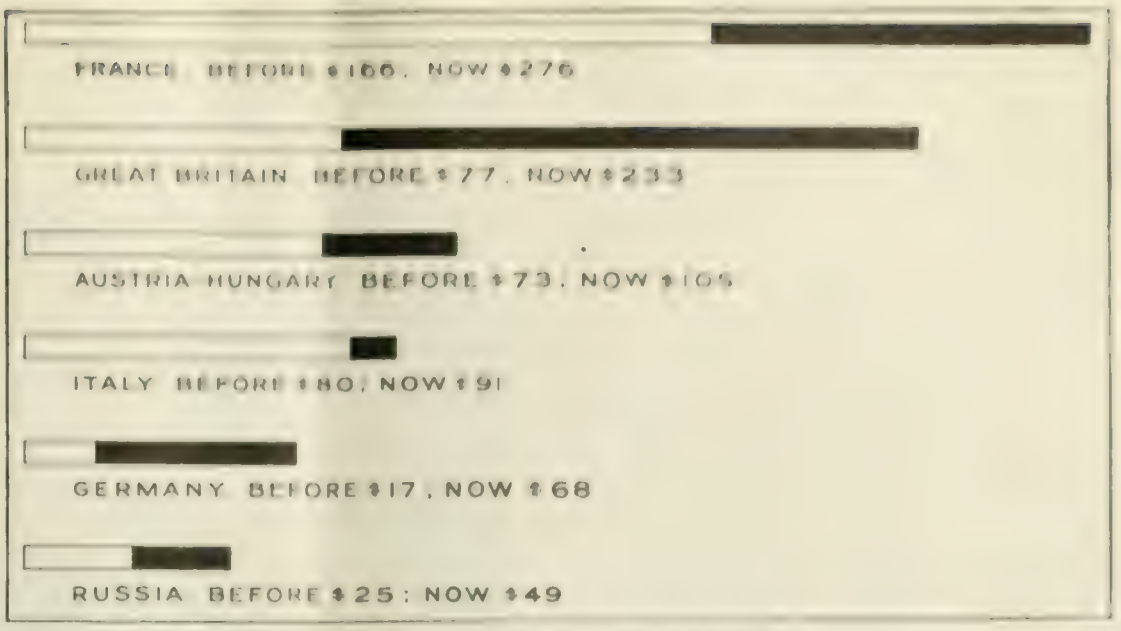
September 16—Germans capture Pinsk on Pripet River. Russian Duma prorogued.

September 17—Allies demand that Bulgaria take sides. French destroy bridges at St. Mihiel.

September 18—Germans take Vidzy, thirty miles east of Vilna. Austrians retreat to Sereth River, Galicia.

September 19—Germans capture fortress of Vilna. Bulgars take possession of territory near Adrianople ceded by Turks.

THE GERMAN ADVANCE



The German invasion continues to make rapid progress in the north. The fruits the capturing Dünaburg with Warsaw has been cut between Dvinsk and Vilna and the latter, the old capital of Lithuania, has been captured. The Germans now hold the left bank of the Dvina River and it may command to crossing it. Riga will fall very shortly. The astonishing success of the Germans in this region has led to the rumour that they may strike for Moscow next. Petrograd or even further northeast. The shaded area is that still held by the Russians.

The Duma Prorogued

The attempt of the Russian parliament to assume power in the Government has been nipped in the bud. Czar Nicholas, the aged and reactionary Premier, secured the Czar's signature to a decree proroguing the Duma until the middle of November, and this was read at a session lasting only three minutes. The Socialist and Radical deputies left the hall, denouncing the act as a crime.

The rest listened to it in silence. It is expected that an appeal will be made to the Czar in person by the members of the Duma. The prorogation has caused popular dissatisfaction and the zemstvos or provincial assemblies and the municipal councils are likely to take up the question. But the Premier has given orders to the police and military authorities which it is believed will prevent such discussion and protest. The strikes which have broken out in the munitions factories will be suppresst with an iron hand by General Ruzsky.

During the recess of the Duma the Emperor has the power to promulgate laws by edict and the Premier proposes to take advantage of this to put into effect some of the reforms in the program of the progressive majority of the Duma and in this way to forestall criticism. The revelations of incompetency and corruption in the administration, especially the failure to supply the army with the shells needed to hold back the German invasion, has aroused widespread indignation which may result in an open outbreak of some sort. It is now said that the failure of the new British army to make the expected advance in the spring was owing to the fact that the arms and ammunition prepared for use in France had to be sent to Russia instead. The dismissal of the Grand Duke Nicholas to the Caucasus and the assumption of command by the Czar was apparently intended to appease the popular demand for a scapegoat. The Grand Duke is held responsible for bringing on the war, as he is said to have forced the Czar to sign the mobilization order in July, 1914, under threat of a revolution.

THE BURDEN OF THE WAR DEBT

How the expense of the war has increased the national indebtedness of the countries involved is shown in this diagram. The white part of the line gives the amount of the debt per head before the war. The black part of the line gives its increase per head according to the latest published figures. If the war last thru a second year the burden of the financial obligations of the belligerent governments will become almost unbearable. It must be remembered, however, that a disgraceful showing the financial ability of the various nations would look much like the above diagram of their indebtedness. Great Britain and France have the greatest wealth per capita of any people, while Italians and Russians are comparatively poor. Germany would come in the order of power above Austria

GERMAN ASSURANCES

Dr. von Jagow, the German Foreign Minister, gave out on September 18 an interview in which he said:

Neutral merchantmen, including Americans, are exempt from interference, as stated long ago, except when carrying contraband, and will then be destroyed only under the conditions laid down in the international code concerning maritime war, when provision is made for the safety of those aboard.

These two categories, restricting submarine procedure against passenger ships and neutral owned ships, cover cases wherein the interests of the United States may be involved, and confine the application of retaliatory measures to shipping owned by belligerents—a field which belongs to the belligerents themselves to regulate. . . .

The Government—the whole Government—is agreed upon the instructions to submarine commanders, which, as I said, are very precise and definite, and our submarine officers have been impress with the necessity of carrying them out in letter and in spirit.

The limitation of activities of our submarines has not been carried thru without certain resistance of our public opinion, for, as you know, the whole nation takes keen interest in this arm and is jealous of anything affecting its success. But the present policy, based as it is upon the approval of his Majesty, will have the support of all. . . .

Should the present instructions governing the submarine campaign be exceeded in any respect the Imperial Government, as the Chancellor assured you recently, would not hesitate to give such complete satisfaction to the United States as would conform to the friendly relations between the two governments.

Conscription Issue in England

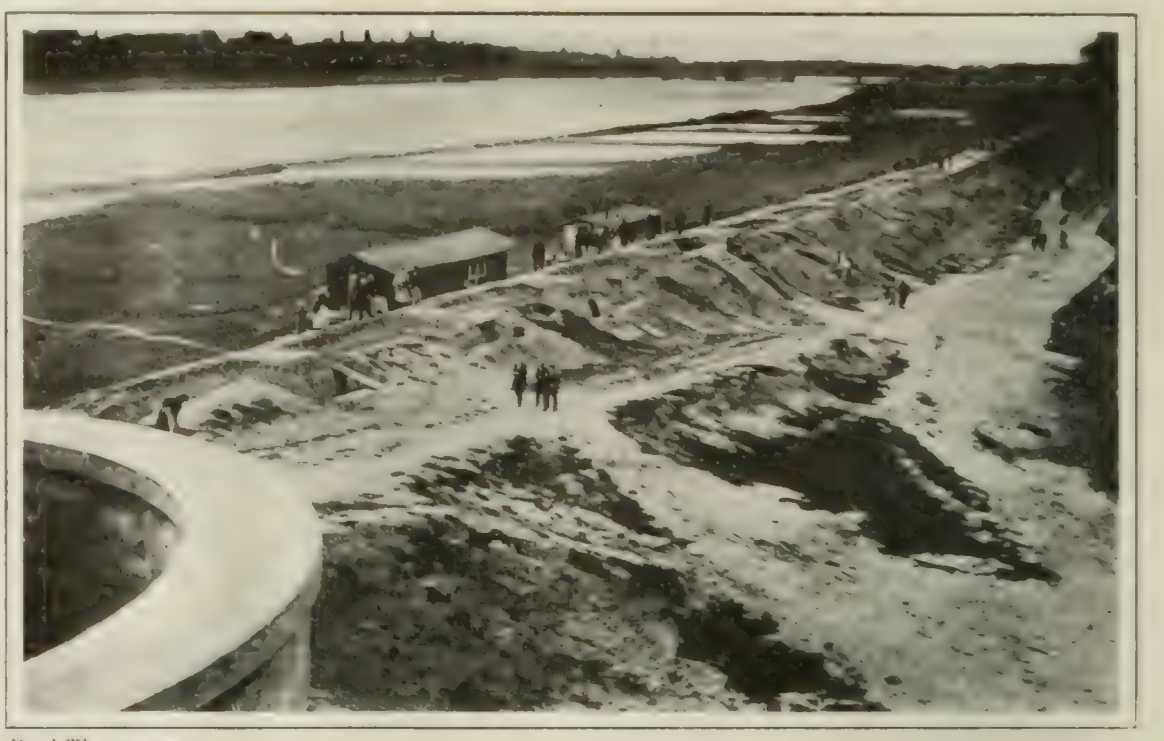
The failure of the Allies to make gains anywhere during the spring and summer and the falling off in recruiting for the British army has convinced many that compulsory military service will have to be resorted to. The total losses in the British army amounted to 391,913 by August 21 and since then the daily official lists of casualties contain from 1500 to 3500 names. The total number of troops raised by voluntary enlistment in the United Kingdom is officially stated to be "not far short of three million." Earl Kitchener announced to the House of Lords that reinforcements amounting to eleven divisions, some 200,000 men, had been sent to France, and with these Sir John French had been able to extend his lines by about seventeen miles. This means probably that the British troops now hold some fifty miles of the western front.

The *Times* and other papers controlled by Lord Northcliffe have entered upon an active agitation for conscription, and a large faction of the coalition cabinet have come to the conclusion that this step is necessary. The Tory members of the cabinet with the exception of Balfour are said to favor conscription and to have converted Lloyd George and Churchill to this policy. But Premier Asquith and most of the other Liberals are opposed to conscription and Kitchener has not publicly declared himself.

The labor men are bitterly opposed to conscription and any attempt to adopt such a policy would be met by strikes which would very likely tie up the railroads and close the mines and munitions factories. J. H. Thomas, of the railwaymen's union, declared in the House of Commons that revolution would be the result if the Government introduced conscription. The Trade Union Congress meeting at Bristol adopted unanimously the following resolutions:

This Trade Union Congress, while expressing opposition to all systems of militarism as a danger to human progress, considers the present action of Great Britain and her allies as completely justified, and expresses its horror at the atrocities which have been committed by the German and Austrian military authorities, and the callous, brutal and unnecessary sacrifice of the lives of noncombatants, including women and children, and hereby pledges itself to assist the Government as far as possible in the prosecution of the war.

We, the delegates to this congress, representing nearly three millions organized workers, record our hearty appreciation of the magnificent response made to the call for volunteers to fight against the tyranny of militarism. We emphatically protest against the sinister efforts of a section of the reactionary press in formulating newspaper policies for party purposes and attempting to foist on this country conscription, which always proves a burden to workers and will divide the nation at a time when absolute unanimity is essential.



No reliable evidence has been produced to show that the voluntary system of enlistment is not adequate to meet all the empire's requirements. We believe that all the men necessary can and will be obtained thru a voluntary system properly organized, and we heartily support and will give every aid to the Government in its present efforts to secure the men necessary to prosecute the war to a successful issue.

The speeches on the question at the Congress were very violent and exprest a determination to prevent conscription by any means. Havelock Wilson, president of the Seamen's Union and former member of Parliament, said that the quickest way to stop the conscription talk would be to hang a half dozen newspaper proprietors on the lamp-posts.

It is said that the labor members of Parliament have been privately assured by the Government that conscription will not be proposed, at least for the present.

The St. Mihiel Bridge

In the monotonous reports of artillery duels and grenade fighting along the line of trenches from the North Sea to the Swiss border there is at last a break in the announcement that the French artillery mounted on the river bluffs have shelled and destroyed the bridges across the Meuse at St. Mihiel. The great bridge, a pontoon bridge and three foot bridges were demolished. This cuts off the German forces at Chauvoncourt on the western bank and is likely to lead to the abandonment of that position. The Germans took this point on September 26 but they have never been able to use it for an advance so it has remained as the apex of an acute angle pointing like a dagger at the breast of France. Doubtless it was because the renewed efforts of the Crown Prince in the Argonne forest threatened to surround Verdun by making a juction with St. Mihiel that the French determined to destroy the line of communications across the Meuse.

The Balkan Crisis

One by one the Balkan states are being forced to declare themselves. It seems that the Allies must now abandon hope of securing the coöperation of Bulgaria. Turkey has ceded to Bulgaria the corner of territory between the Tunja and Maritza Rivers with the railroad station of Adrianople at the angle, and the Bulgars have already taken possession of their new acquisition. On the other side the offer, which Serbia under pressure of the Allied Powers was induced to make. a cession said to include the Macedonian territory as far as the Vardar River, has been rejected by Bulgaria as inadequate. The only question then is whether Bulgaria will remain neutral or take up arms on the side of the Teutonic Powers. The Allies are reported to have asked Bulgaria to declare her intentions. The central position of Bulgaria would enable her to direct her armies either into Rumania, Serbia or Greece, and these 400,000 fresh troops would be a powerful aid to the Teutonic forces in case they attempt another invasion of the Balkan peninsula.

Altho Premier Venizelos, who formerly favored the intervention of Greece on the side of the Allies, is back again in power, he has apparently abandoned his war policy and Greece seems likely to remain neutral for the present.

Rumania's attitude is also still in doubt. The German Government has offered to buy $40,000,000 worth of gasoline from Rumanian oil wells and other supplies if the Rumanian Government will permit the passage of troops and munitions by the Rumanian railroads to Constantinople. Rumania is also said to have been promised the Russian province of Bessarabia by the Germans.

In the meantime all the Balkan states have mobilized in preparation for any eventualities and a renewal of the attack upon Belgrade by the Austro-German troops is momentarily expected. The German papers are discussing, with suspicious ostentation, the prospects of obtaining a speedy peace by means of a conquest of Serbia, thus breaking a way thru to Constantinople and establishing a chain of German, Austrian, Hungarian, Bulgarian and Turkish territory stretching from Riga to the Dardanelles.

Dumba's Defense

Constantin Theodor Dumba, Austro-Hungarian Ambassador to the United States, had not been formally recalled by his Government at the end of the week. But on September 14 he announced that he had asked to be recalled "on leave of absence for personal report," and the Foreign Office in Vienna complied with this suggestion. The Administration was satisfied with this method of meeting its wishes, since it was tacitly understood that Dr. Dumba would not return.

A few days later the Ambassador made public a long letter to Secretary Lansing in which he complained of the manner in which he had been treated and declared that his course had been entirely proper. Since the American Government's censorship over the wireless stations communicating with Vienna had prevented him from communicating privately with his Government, he argued, he had no apologies to make for using Mr. Archibald as a messenger. Our Government's action in preferring charges against him without warning, together with the refusal of the censor to transmit his message of explanation and defense to his Government, he said, was unjust and contrary to diplomatic usage.

Having sought from his Government a relaxation of the laws which made the work of Austro-Hungarian subjects in American munitions factories a treasonable act, and having been overruled, he claimed to be doing no more than his duty in warning his compatriots of their peril. But as to the most

objectionable passage in the letter which caused his dismissal, proposing to "disorganize" and "hold up" the manufacture of war supplies here, he had no comment to offer further than to say that none of the suggested plans had yet been acted upon, as they seemed not feasible, and to imply that the small sum asked for, $15,000, was *prima facie* evidence of the innocence of his intentions.

Strike Plots and Strikes

The president and vice-president of the International Longshoremen's Union, T. V. O'Connor and F. P. A. Vacarelli (Paul Kelly), have confirmed the report of attempts made last May to instigate strikes in both eastern and western ports which would have crippled the trade in war supplies. Over $1,000,000 was to be paid for a strike of 23,000 men on the Atlantic coast to last about six weeks. The officers of the Union reported the matter to the Department of Labor and took prompt action to prevent trouble. Two-year agreements providing for a wage increase were made with most of the New York ship companies. Samuel Gompers, president of the American Federation of Labor, declares that he had knowledge of such projects, in which "the corrupting influence was being conducted by agents of a foreign government." It is charged that a pro-German grocer of Boston was the agent who approached the longshoremen's leaders.

The shipment of war supplies from New York was briefly interrupted last week when longshoremen and freight handlers employed by the West Shore, Baltimore & Ohio, Lehigh Valley, and Central Railroad of New Jersey struck in the yards on both sides of the Hudson. About 2000 men in all were affected. They are not members of the Longshoremen's Union and are largely Austrians, Hungarians and Poles. At Elizabeth, New Jersey, there were half a dozen strikes in various industries, and Socialists predicted a city-wide fight for the eight hour day such as has been going on in Bridgeport, Connecticut.

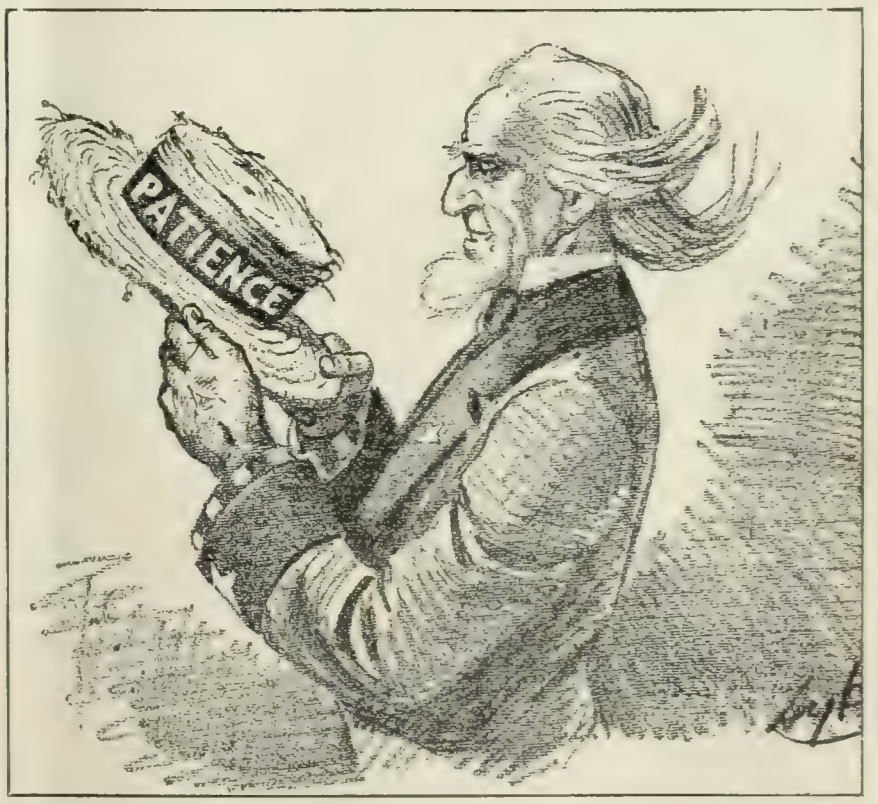
The Suffrage Campaign

"We are striving for higher standards in politics by the abolition of party lines," said the women who met in San Francisco last week for the first women voters' convention ever held in the United States. Four million women were represented by about 3000 delegates coming from all of the twelve equal suffrage states. Mrs. O. H. P. Belmont, chairman of the convention, said in her opening address, "It means now, as it always has and always will, that when women come together to work, the moral, better side of humanity intends to assert itself."

At the same time the practical side intends to assert itself too in the four eastern states, Massachusetts, New York, New Jersey and Pennsylvania, which will vote on the suffrage question this fall. Flying squadrons, state-wide campaign tours, street meetings by the hundred, canvassing and all sorts of publicity methods are to culminate in two spectacular parades—one in Boston on October 16th and one in New York on October 23rd.

In New York City street speaking and Yellow Rallies have advertised the suffrage campaign widely. One of the most successful was an invasion of Wall street by eight automobiles full of women who distributed "Votes for Women" fans and propaganda.

Recognition of Carranza Expected



It is now probable that the Constitutionalist Government headed by General Carranza will be recognized by the United States and the six Latin-American nations represented in the conference called by Secretary Lansing. The seven diplomats met in New York on September 19, and decided that since the factions in Mexico had failed to co-operate in setting up a joint provisional government they would recommend to their respective governments "the recognition of any provisional government with the material and moral capacity necessary to protect the lives and property of nationals and foreigners." [illegible] the alternative program adopted at the same time that the invitation to a joint peace congress of Mexican leaders was issued. In order that each of the seven nations may have an opportunity to determine for itself whether any faction meets this qualification, the conference adjourned until October 3.

Since the Constitutionalists unquestionably have the upper hand in a military way there is little question that Carranza will be recognized if he offers satisfactory guarantees that he will meet the international obligations which the government of Mexico will be expected to assume. In anticipation of fresh fighting in northern Mexico—for Carranza will naturally endeavor to press home his advantage over Villa—and in fear of outrages by Villista troops if Carranza is recognized, the State Department has renewed its instructions to consuls in the states of Durango, Chihuahua and Sonora to advise and assist American residents to leave the country and to withdraw themselves if it became expedient. This warning, which implied that our Government did not believe that Villa could preserve order, nettled the erstwhile friend of the United States and he wrote a polite letter of remonstrance. Earlier in the week he had issued a long reply to Carranza's message to the seven diplomats, indignantly repudiating the charge that he was a tool of the reactionaries. and denying that Carranza controlled as much territory as he claimed. Apparently the reports of Villa's evacuation of Torreon were premature, but they were renewed after he had wired on September 14 that he still held the city. Carranza has not yet

held the city. Carranza has not yet moved his Government back to Mexico City, but the railroad to Vera Cruz has been opened and food is being shipped to relieve the capital.

Conditions on the border have not greatly improved. A band of Mexicans surprized a patrol of ten cavalrymen at Santa Maria, Texas, on September 13, killing two. The marauders were thought to be Mexicans living in Texas, and three suspects were shot later when they tried to escape from the civil authorities. Two skirmishes occurred on September 17, troopers and Mexicans exchanging fire across the Rio Grande at Brownsville and Donna, but no Americans were hurt. At Brownsville, Carranza officers stopped the firing. Texas Rangers and civilians have been warned to keep away from the border.

Hayti Sees the Light

On July 27 the President of Hayti and his general murdered 160 political prisoners. On July 28 a mob invaded the French Legation and murdered the President. On July 29 Rear Admiral William B. Caperton of the United States Navy landed marines. In a week a force of 1400 held Port au Prince and Cape Haytien. On August 12, under American auspices, General D'Artiguenave was elected President. Negotiations looking toward a financial protectorate were renewed. On September 4 Admiral Caperton proclaimed martial law in Port au Prince. On September 16 a treaty placing Hayti's finances under American control was signed. On September 17 the United States recognized the new Government and saluted President D'Artiguenave.

This is a summary of the episode which will probably result in the re-establishment of order in Hayti. The treaty, which the Haytian Congress was expected to ratify promptly and which will come before our Senate in December, provides that for ten years, or longer at the request of either signatory, the Haytian customs shall be received by an American collector, there shall be a native constabulary under American officers, ostensibly to protect the customs but evidently to maintain order, and all the financial operations of the Government shall be under American supervision. The control is more rigorous than that which has been exercized in Santo Domingo since 1905, since there only a specified portion of the revenues is spent under our direction and we have nothing to do with the police force.

Stefánsson Finds New Land

Vilhjálmur Stefánsson is alive and has found new land in the Arctic Ocean, a mountainous island about one hundred miles north of the tip of Prince Patrick Island. No word had been received from him since April 7, 1914, and it had been assumed that he was lost. But on September 16 despatches were received at Nome reporting him safe at Herschel Island and telling of his plans for another year of exploration on behalf of the Canadian Government.

If the Arctic region is quartered, the quadrant lying between 90° and 180° west longtitude, north of Alaska and the western half of Canada, is probably the least known, tho the effort to find a Northwest Passage resulted in considerable exploration of the archipelago lying partly in the southeastern corner of this sector, west of Greenland and Baffin Land, before 1860. In 1906, 1908 and 1910, Captain J. E. Bernier made important explorations and took possession of many islands for Canada, but to the west and north of these lie the unknown waters of the Beaufort Sea. Here Stefánsson hoped to find new land, and thus, as he wrote before starting in 1913, "close forever the chapter of geographical discovery."

The expedition was only partly successful, owing to various misfortunes and the failure of different parties to work in harmony. After the loss of the "Karluk," reported last year, Stefánsson was last heard of as traveling north with two companions from a point

ADMIRAL SIR PERCY SCOTT

He has been put in full command of London's defences against Zeppelin raids. He is considered the leading gunnery expert of the Navy

about fifty miles off shore and seventy east of Martin Point, Alaska. He had a sledge-boat, food for forty days, rifles and cartridges. Kerosene gave out and provisions ran low, but from seals and bear which the men shot, blubber for illumination and meat for food were easily secured. After discouraging gales they finally reached Banks Land on June 26 after 700 miles' sledging over the sea ice. Here Stefánsson expected to be met by one of his two light-draft gasoline boats, but one had not appeared and the other had been prematurely laid up for the winter, and he was forced to give up his plan to sail northward. After a winter trip to Victoria Land, where he failed to find the "white Eskimos" whom he had discovered there on his earlier expedition, he set out northward from Cape Kellett, his winter base, in early February. He followed the coast of Prince Patrick Island to its northern end, and on June 18 sighted the new land. The party followed the unknown coast for three days, taking observations at 77.43 north 115.43 west. They saw about a hundred miles of shore and from a point twenty miles inland mountains were visible in all directions, so that the island must be of considerable size. There was an abundance of caribou and other game. Turning south on account of the summer, and fixing possession of a few new small islands on the way, they reached Cape Kellett on August 8 and there chartered the schooner "Polar Bear" which took them back to Herschel Island.

Beside charting previously unmapped coasts, and casting further doubt on Nansen's theory that the unknown parts of the Arctic Ocean would be found to be deep open water, Stefánsson has demonstrated the truth of his own contention that in this part of the world a party of white men can live off the land—or rather ice—with a reasonable degree of comfort.

A DEMOCRAT IN CONSTANTINOPLE

AN AMERICAN WOMAN'S STORY OF AMBASSADOR MORGENTHAU AT WORK

HENRY MORGENTHAU has made the United States a force in the diplomacy of Constantinople. That he has been able to use the opportunities that have come to him, and to sustain his responsibilities with success, is due in large part to the man's personal power. This power in turn seems to have its roots in the Ambassador's single-minded adherence to certain ideals which we count peculiarly American, an adherence which attracts attention and arouses pride in those of us in the American colony who have seen him at work this winter.

Mr. Morgenthau is a delightful man to meet. He is absolutely genuine. At the first encounter I was sure of two things: that while Mr. Morgenthau never pretends to be what he is not, he never allows any one to estimate him at less than he is. Picture a small man, gray haired and rather bald, with good shoulders, and a head set slightly forward on them; keen eyes, a mouth which smiles so much that the stern lines about it are not much in evidence, a decided chin with a close-cropped beard, a brisk step and a hearty manner, and you have "the Ambassador"—so he is known to high and low of many nations in Constantinople.

Perhaps our most boasted American ideal is democracy. We fall short in it often enough, but in Pera, devoted to the etiquet of Continental diplomacy, the virtue is a very rare article, and this renders Mr. Morgenthau's possession of it very conspicuous. I had not been in Constantinople a week before I heard my first anecdote about it.

I arrived in Constantinople when the ambassadors of the Entente were leaving the city. There were large numbers of subjects of the belligerent nations who were anxious to get away, too, and for these people the Turkish Government promised trains, that is, one train a day, leaving at seven at night. The first time the crowd gathered they were told, after waiting until late, that no train would go. Mr. Morgenthau was appealed to, and the next night by dint of his personal demand upon Enver Pasha and personal superintendence, the train did leave.

Succeeding nights found the Ambassador at the station, at an hour when Pera is usually comfortably at dinner, assisting the people who wanted to get out of the country.

One poor French woman with a three-months-old baby discovered that something was wrong with the visée of her passport. The crowds were almost dangerous, and there was nothing to do but to leave the child on her heap of hand luggage and go into the jam in search of the proper official. It was some time before she could get back, but when she came, she found the child in the arms of the Ambassador, who was serenely directing secretaries and giving orders to gendarmes while he played his role of nurse-girl.

America is the country of religious toleration. Turkey is a country where a sense of spiritual brotherhood is sadly lacking, and Mr. Morgenthau has stood more, perhaps, for this than for any other one thing. One of Mr. Morgenthau's most intimate personal friends is a missionary of an evangelical board in America. So is the Grand Rabbi of Constantinople, who, thru the Ambassador's influence has sent two brilliant Jewish girls to be educated in the American College for Girls, which is a non-sectarian Christian institution. On the other hand, the French religious orders call him their best friend. At the time when the ambassadors of the Entente left Constantinople there were continual police raids upon the convents and monasteries of the Roman Church. The French Brothers were evicted without notice, their money seized and their museum confiscated and many of them thrown into prison. Thru Mr. Morgenthau they were permitted to leave the country and their treasures were placed in safe keeping for them. All this sort of thing was at the price of eternal watchfulness. The case of the French Sisters illustrated that.

One morning about five o'clock Mrs. Morgenthau wakened much troubled by a dream about the French order of Little Sisters of the Poor.

"Henry," she said to her husband, "I am sure those women are in trouble."

The Ambassador had been uneasy over them himself, and altho he had a tremendously busy day ahead of him he said: "Let's go and see."

It was too early to order their motor, but Mr. and Mrs. Morgenthau went to the convent on foot and arrived to find the Sisters being thrown out into the street. The official in charge greeted the Ambassador with cheerful regret. He had met Mr. Morgenthau on similar occasions before.

"Mashallah!" he said, "we hoped we should get ahead of your Excellency this time!"

Of course he didn't. Proceedings were stayed, and the Sisters were given time to pack and leave. Later, I believe, some of them were imprisoned on political charges, and Mrs. Morgenthau has visited them regularly.

Education has always been one of Mr. Morgenthau's greatest interests, and Turkey, of course, has never had her share of it. This accounts, I suppose, for the Ambassador's constant and affectionate service of the two American colleges in Constantinople, Robert College and the College for Girls. He calls these two institutions his "children"—and it is only thru his efforts that they were able to complete their academic work last June. Enver Pasha gave his word at the beginning of the war that nothing should happen to the Ambassador's "children" and so far he has kept it.

It may of course be, in a crisis now approaching with Germany, that Mr. Morgenthau's influence is on the wane. I remember his warning to an enthusiastic admirer who purposed to sing his praises thru the American press at the beginning of the winter.

"Wait," he said, "until I get you thru. Wait until the end of the long day."

The end of the long day may be a dark one for Americans in Constantinople, but its anxieties will be greatly lessened by the confidence they can feel in Mr. Morgenthau.

PEACE

BY BLISS CARMAN

The sleeping tarn is dark
  Below the wooded hill.
Save for its homing sounds,
  The twilit world grows still.

And I am left to muse
  In grave-eyed mystery,
And watch the stars come out
  As sandalled dusk goes by.

And now the light is gone,
  The drowsy murmurs cease,
And thru the still unknown
  I wonder whence comes peace.

Then softly falls the word
  Of One beyond a name,
"Peace only comes to him
  Who guards his life from shame—

"Who gives his heart to love,
  And holding truth for guide,
Girds him with fearless strength,
  That freedom may abide."

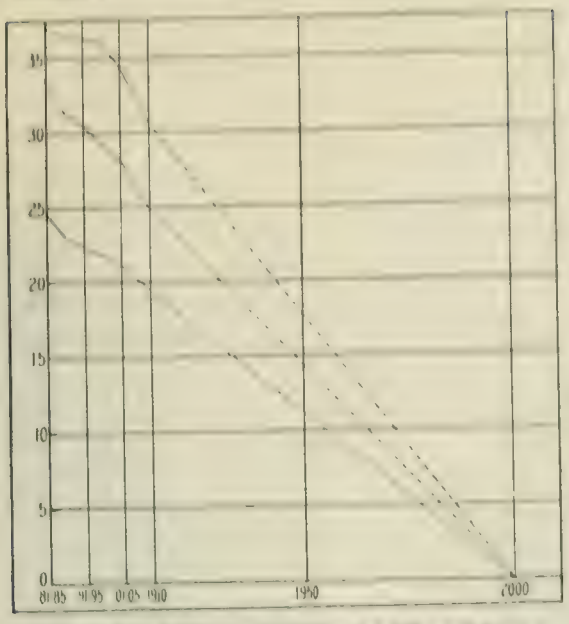
THE DIMINISHING FAMILY

BY J. McKEEN CATTELL

PROFESSOR OF PSYCHOLOGY IN COLUMBIA UNIVERSITY

FROM prehistoric times the population of the world has been held in check by war, pestilence and famine. Toward the close of the eighteenth century these were relaxing in severity, thanks to the applications of science and to a gradually ameliorating civilization, and the population of Europe was increasing at the rate of about one per cent a year. It is no wonder that Malthus was appalled by this geometrical compounding of human beings, which would exhaust the food supply and even leave no standing room on the earth, and that his point of view dominated the economic theory of the nineteenth century. But two factors already in existence soon gained force. The applications of science—the use of the steam engine in manufactures and transportation and innumerable other advances—increased the means of subsistence more rapidly than one per cent a year, and the birth rate was beginning to decline.

Owing to a remarkable balance between a decreasing birth rate and a decreasing death rate, the population of Europe continued to increase thruout the nineteenth century at a rate in the neighborhood of one per cent a year, rising from 175 millions in 1800 to 420 millions in 1900. The population increased about as rapidly as it could be conveniently assimilated, with gradually improved conditions of living for all. A new factor in the adjustment of population was emigration on a large scale, some thirty-five million people leaving Europe in the course of the century, more than half of whom came to the United States, where the increase in population has been in the neighborhood of two per cent a year.

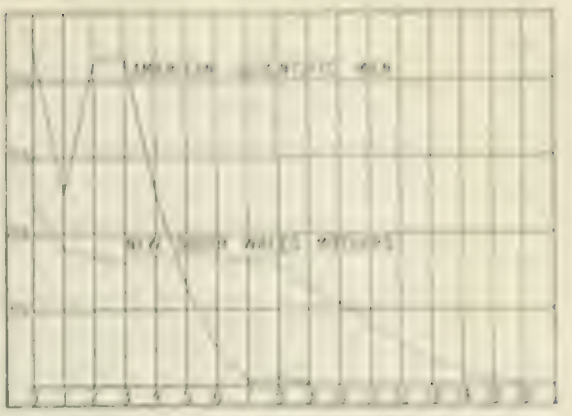


The adjustment of population to means of subsistence appears at first sight to be so exact that there is likely to be an assumption of a controlling mechanism such as exists in a state of nature. The fact of the matter is, however, that the food supply and the other necessities of life are not fixed quantities, but increase in proportion to the number of men who both use and produce them. In an era of the applications of science, there are no diminishing returns with increasing population, but rather increasing returns, owing to the production of larger numbers of men who make discoveries and improvements for the benefit of all. The average well-being has been about the same in France with a stationary population, as in Germany with a rapidly increasing population; but Germany thru its greater share in the advancement of science and its applications has contributed more to the world than has France. The first effect of a lowered birth rate is to increase wealth—tho it is generally consumed in luxuries—by saving the cost of the rearing of children, but later when the productive workers are lacking there is an economic loss. France, as compared with Germany, saved each year over a billion dollars by having fewer children to support; but the gain in wealth was temporary. In fact it ended in 1895, whereas the increase of wealth in Germany in the course of the last generation was enormous.

It is a fundamental question whether the relation between the birth rate and the death rate will be maintained under existing conditions so as to give an increasing, or, at all events, a stationary population. Will both continue to decrease or remain approximately as at present, or will the balance of the nineteenth century be lost as has apparently happened in France? The death rate has been halved by the partial abolition of war, pestilence and famine in their grosser forms, and by alleviation of their milder aspects—improved conditions for the struggling classes, the limitation and mitigation of disease, and better conditions of living. There is abundant room for further improvement; it is stated that the death rate can again be halved. But this is impossible; indeed, it seems that in certain nations the death rate has now reached its minimum. Australia and New Zealand report a death rate of ten. This means that in a stationary population the average age at death is 100 years. For every infant that dies, a man must live to be 200 years old, or ten men live to be 110. This is beyond the limit of possibility. The death rate in England and Wales is about thirteen. It is so low because decreasing birth rates and death rates have given a population so constituted that an unusually large part is of the age when deaths are few. In France, with its small birth rate and stationary population, there are relatively about four-fifths as many young children and nearly twice as many old people as in England. When the latter country attains a stationary population its death rate must increase, and if the birth rate continues to decline the population will soon become stationary and will then begin to decrease.

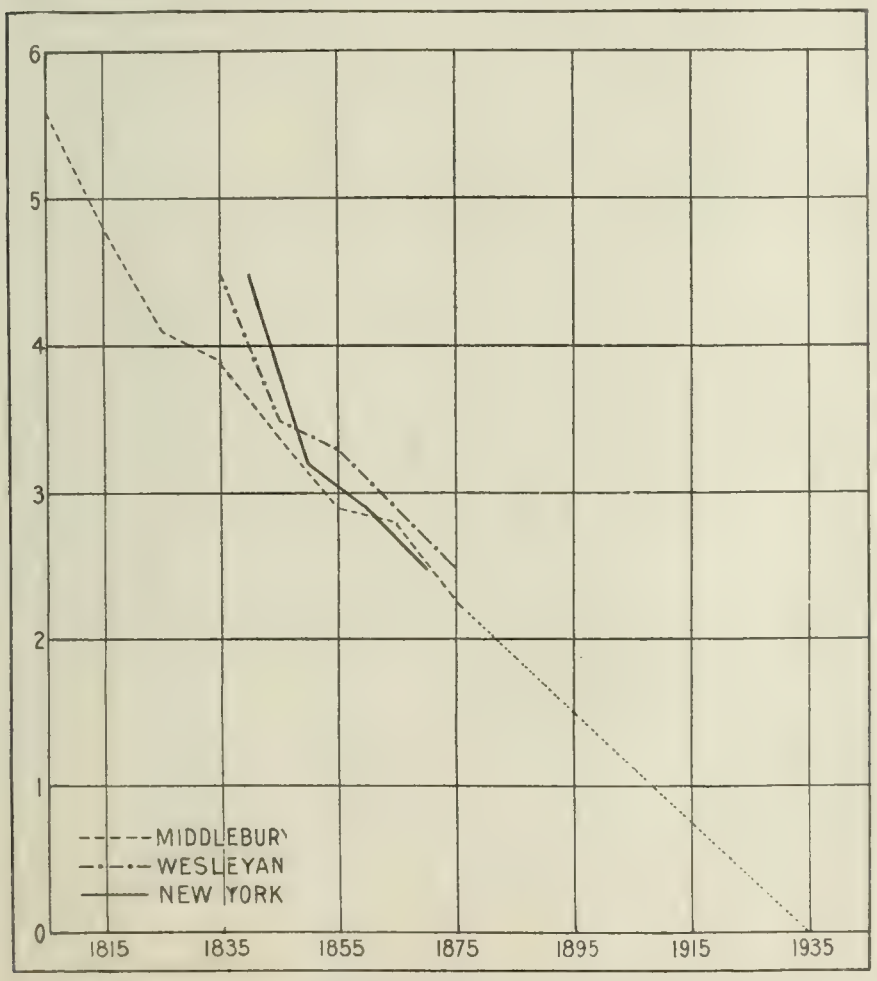
The vital statistics of the United States are entirely inadequate. Where registrations of deaths and births exist, they are imperfect, and the changing population, its age composition and the amount of immigration render them difficult to interpret. But some information concerning birth rates is given by the proportion of children as determined by the census. If the percentage of children under sixteen years of age in the population should continue to decrease as it did from 1880 to 1900 there would be no children two hundred years hence. From a special study by Mr. Kuczynski it appears that the birth rate of the native population of Massachusetts was sixty-three per thousand women of child-bearing age, as compared with eighty-five in France, 104 in England and 143 in Russia. As the French population is stationary, the native New England population, even apart from any further decline in

IN ENGLAND AND WALES



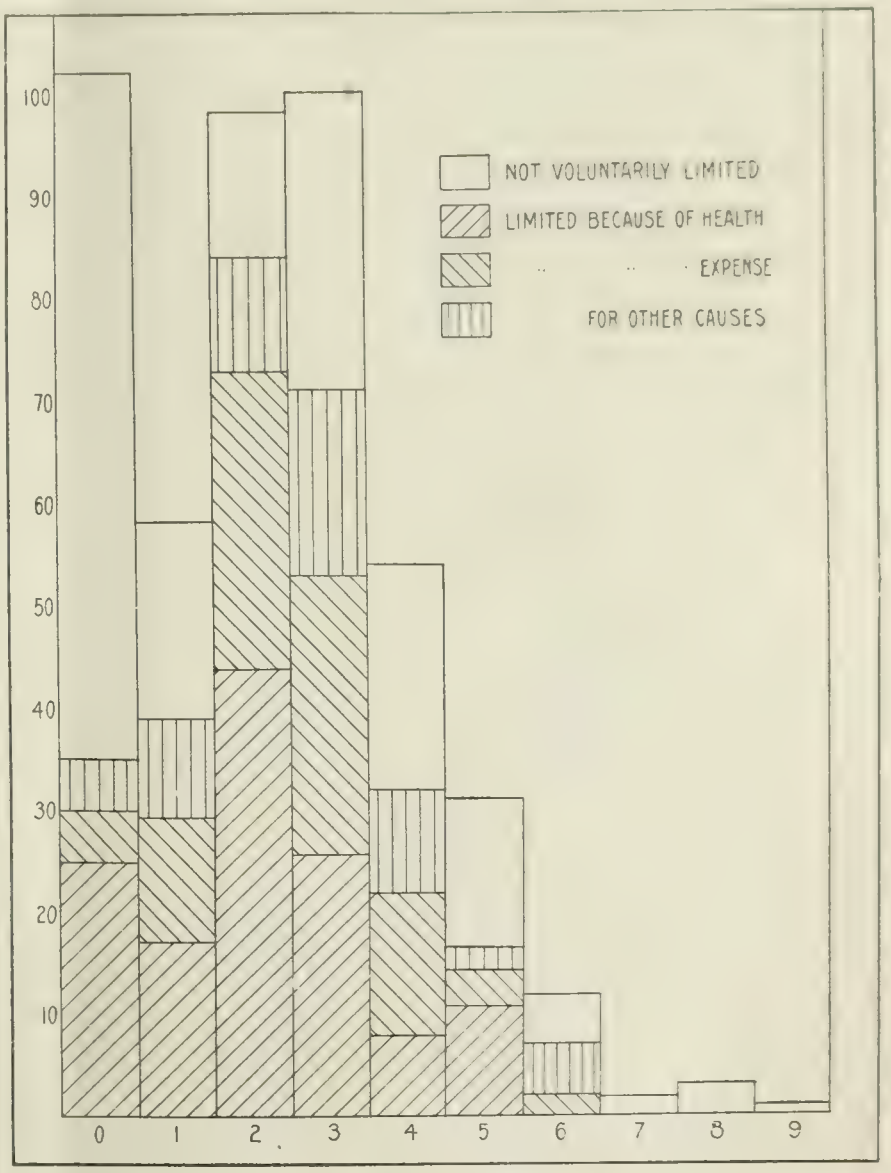
THE DECLINING BIRTH RATE ABROAD

The figures at the left indicate births per thousand of population. The top curve represents Germany, the middle one England, the lowest France. The decline for France has been very regular since the beginning of the last century at the rate of one and one-half per thousand for each decade. The decline for England since 1876 is also nearly in a straight line and much faster than for France. The decline for Germany, beginning later than for England, as that was later than for France, has since 1895 been more rapid than for England. These three curves, if continued, give the queer result that births in these three nations would cease altogether at about the same time one hundred years hence. Such results are, of course, absurd. Still it should be remembered that there are now only three births to replace four deaths in some French departments and in the native population of New England



the birth rate, decreases to three-fourths in one generation. Special statistics have been gathered for college graduates. President Eliot in his report for 1901-02 stated that 634 married Harvard graduates of the classes from '72 to '77 had an average family of two surviving children. Other data concerning the families of college graduates have been published by Professor Thorndike, President Hall and others. The Harvard graduate has on the average three-fourths of a son, the Vassar graduate one-half of a daughter.

What, then, are the causes leading to the recent decline of the birth rate, and are they likely to alter so that the rate may again increase, to maintain the existing state of affairs, or to produce a further decrease? There is a biological adaptation which limits the average fertility of women to about twelve children, and social conditions have led to one-half of the women of child-bearing age being unmarried. The further decrease of the average family to three or four—in the case of American scientific men or college graduates to two—must be due to infertility or to voluntary limitation. Both causes have been recognized since the time of the writing of the book of Genesis; both have doubtless increased in force in the course of the nineteenth century. It is generally believed that the principal cause of the small size of the modern family is voluntary limitation. A definite answer is supplied by information given to me by 461 leading scientific men.



AMERICA AND NEW SOUTH WALES

The curves show the distribution of the families of 461 scientific men in comparison with the families of some twenty thousand New South Wales mothers who died toward the close of the last century. In both cases all children, whether they survived or not, are included and no stepchildren would be born. The figures at the bottom indicate the number of children to a family; those at the side the percentage of families in which these numbers occur. The New South Wales families of from one to eight children are nearly equally numerous, and there is then a gradual decrease to families of sixteen and larger. The families of American scientific men which may be regarded as typical of the professional classes and other college graduates show a remarkable contrast. Nearly one-fourth are childless; less than one in four is larger than three, only one in seventy-five is larger than seven, none is ever larger than nine. The average size of family is 2.2; the surviving family is about 2, and the number of surviving children of each scientific man, including those unmarried, is about 1.8

THE DECREASING FAMILIES OF COLLEGE GRADUATES

The figures at the left indicate the average size of the families of alumni of three eastern colleges. The curves show that the size of the family of college graduates has decreased from 5.6 at the beginning of the century to 2.5 and 2 for classes graduating in 1875. The dotted line is the projection of the average decrease, indicating that if conditions should remain the same students graduating in 1835 would have no children

THE FAMILIES OF 461 LEADING AMERICAN SCIENTIFIC MEN

The figures at the bottom indicate the number of children to a family; those at the left the number of families of equal size. The chart shows for each size of family of 461 American men of science in how many cases the limitation was involuntary and in how many cases it was voluntary. The shaded areas, showing the numbers in which it was voluntary, are subdivided to indicate the causes. Thus when the marriage was childless, this condition was involuntary in 67 cases and voluntary in 35 cases. The reasons assigned were health in 25 cases, expense in 5 cases and other causes in 5 cases. In the family of two, the limitation was voluntary in 84 out of 98 marriages. The reasons assigned were health in 44 cases, expense in 29 cases and inconvenience or other causes in 11 cases

Of these families 176 were not voluntarily limited, while 285 were so limited, the cause of the voluntary limitation being health in 133 cases, expense in 98 cases and various other reasons in 54 cases. Childlessness was involuntary in two-thirds of the cases. In the standardized family of two children the condition was desired in six cases out of seven. In over one-third of the 461 families the limitation was involuntary, due to infertility and other pathological causes, but if these had not obtained, voluntary limitation would have occurred later in nearly all, perhaps in all, cases. In seventy-one marriages prior to 1890 the average size of family including all children born was 2.9, and the limitation was voluntary in forty-eight per cent of the cases. In the decade of the 80's with 132 marriages the size of the family was 2.6, and the limitation was voluntary in sixty-four per cent of the cases. For 198 marriages contracted in the 90's, when no more children will be born, the average size of family is 2.0, and the limitation is voluntary in seventy per cent of the cases.

Neither the prevalence of the voluntary limitation of the size of family, nor the fact that the size of family is limited directly or indirectly thru infertility or ill-health in more than three-fourths of the cases, can be regarded with satisfaction. It is indeed evident that a limitation of the number of offspring was an essential condition of the evolution of a higher race and of the civilization to which it has attained. There was first a biological adaptation limiting the fertility of women to an average of about twelve children, then a development of social institutions reducing the average number of children for each woman to about six, and now we have a psychological restriction limiting the number to about three. This number appears to be nearly ideal, in so far as the most desirable rate of increase of population is concerned. It might be as undesirable and be made as illegal for a man to have six children as to have two wives. But we are playing with edged tools when we substitute rationalism for fundamental instincts. In practise the family is not voluntarily limited for the welfare of the race, but to avoid risk and ill-health —real or fancied—expense and inconvenience, and to give the individual child greater advantages. There seem to be no existing conditions which will check the decreasing birth rate, while there are powerful forces tending to its decline below the danger point of the death rate.

We should accustom ourselves to the idea that social control is necessary to maintain the vigor of the race and perhaps to provide for its continuation. If the struggle for existence and natural selection are largely eliminated by enabling most of those who are born to attain middle age, then the vigor and fertility of the race can only be maintained by a eugenic selection of healthy parents. If social conditions become such that children are no longer of economic value to their parents, while they have for the state a greater economic value than ever before, then the state should be prepared to pay the cost of bearing and rearing them. When laws are past forbidding the marriage of the feeble-minded, of the diseased, of cousins and between different races, it is evident that we regard social control of marriage as feasible. If we supply free schools on the ground that this is of advantage to the individual and to the state, there is no reason why we should not give free medical attendance and much else. When we learn that the privileges of property are subordinate to the welfare of children, there will be no difficulty in providing that the cost of children shall be shared equally by all.

The relation between the birth rate and the death rate has been the principal factor in modern history, leading to the present position and relations of the great powers of Europe. This mad war will probably close with a stalemate; in any case the losses will not depend on the terms of peace. France will lose most, Great Britain next, Germany next, Austria-Hungary and Italy next, Russia and the Balkan States the least; and the longer the war is persisted in the greater will be the disproportion. The losses depend less on victories or defeats on the battlefield than on the relative birth rates of the nations. The lesson applies equally to us. We can do incomparably more to make the nation strong in defense by caring for our children than by increasing our armaments.

Garrison-on-Hudson, New York

SOBERING THE UNDERGRADUATE

BY ALVIN E. DYER

POPULAR government in the form of the initiative, referendum and recall has found a home at the University of Washington. The adoption of a provision placing matters of student discipline in the hands of the student body has brought to completion the several years' task of establishing undergraduate rule.

The students elect yearly a president, vice-president and a board of control which, like the national Congress, is the legislative body.

These legislators and all other elected officers are subject to a recall election upon the petition of twenty-five per cent of their fellows and may be recalled by a majority vote. The referendum can be invoked by a ten per cent petition and measures initiated by fifteen per cent. A majority vote is required for action. The difficulty with the initiative is the tendency of the students to vote in favor of any initiated measure; however, it may be that extremely good judgment is used in regard to what is brought before the body.

The censorship of the official student daily, originally a function of the student board, has been transferred to the president of the university. Thus the organ of public opinion is placed beyond the power of any faction in control.

Judicial authority is in the hands of the student discipline committee. Financial matters are placed in the hands of a salaried student manager and a tax of five dollars a student is levied at the beginning of the school year to furnish necessary funds. The book store and other student enterprises are cooperative.

Student government at the University of Washington has been eminently successful, and there have been no abuses arising from this experiment of self-control. It has facilitated many improvements in student affairs. This year the classes in one of the buildings were so large that between periods there was dangerous congestion in the halls. The board of control immediately organized a "traffic cop squad" to keep these halls clear. Traffic in the buildings is now handled as systematically as on the street crossings of a business section of a large metropolis. The board has now undertaken to abolish cheating in examinations by establishing the "honor system." Responsibility sobers these undergraduate citizens, and they are receiving the best possible training for the life of the republic.

THE ORDERLY LIFE

THE NINTH ARTICLE IN THE SERIES ON EFFICIENCY AND LIFE

BY EDWARD EARLE PURINTON

IF a man were to engage passage from New York to Chicago on an ox-cart we should call him crazy. Hundreds of thousands of men are traveling in an ox-cart mind. Their relation to their work, daily life, ultimate goal, is that of a mental medieval, jogging, bumping, lagging along in an intellectual ox-cart over a stony road of ignorance and inertia. These men—the majority of them—haven't any system.

System is the difference between the automobile and the ox-cart. The cart was not quick enough, roomy enough, easy enough, fine enough. So the automobile came by means of a *system* of experimentation, a *system* of construction, a *system* of capitalization, a *system* of advertising, a *system* of selling, a *system* of service. All advancement is by means of a system.

Few *minds* are quick enough, roomy enough, easy enough, fine enough. And by the right combination of systems any sane man could, and if he is a sane man he will, change the style of his intellect from an ox-cart to an automobile. You can make a month's progress in a day when you know how. Time is measured not by how long we live but by how much we attempt.

A science is the conclusion of a system. There is no science of law, of medicine, of theology, of education, or of marriage; in these realms we find conflict, confusion, groping, erring, despairing—because no system has yet been evolved. There is a science of accounting, of banking, of bricklaying, of merchandising, of a thousand trades and industries, where men work at a minimum of error and friction—because a universal system based on experience has been adopted and is being maintained. A joyless, profitless job is merely systemless.

"WOMAN'S WORK IS NEVER DONE"

We often hear that man works from sun to sun, while woman's work is never done. Why? Because woman's work, generally speaking, is never done right. And it shouldn't be done until done right. A wrong act is always unfinished. Man's work is systematic, woman's haphazard. This explains the "servant" problem, the extravagance problem, the tired-mother problem, the food problem, and largely the health problem, the divorce problem, and other serious problems.

It has taken the women of the world 1900 years of Christian civilization to produce their first readable, workable, reliable book on systematic housekeeping. Yet the home preceded all other trades and professions. Even to this day we have no book which tells a man how to be a thoroly efficient teacher, preacher or physician. Yet these ministers to mind, soul and body are the central figures in the community; on them lie the great responsibilities of molding the men and women of tomorrow. A saint without a system is a fool, and a fool never yet convinced anybody.

Most human failures are due to a lack of system. Wagner, the stupendous composer, was a pauper and by many considered a lunatic; the opera singer of today, having a system of popular acclaim, gets $1000 a night and lives in a rose-bower of adoration. The great inventor Langley thought out the flying-machine, and died broken-hearted, of misunderstanding and persecution; the Wright brothers, putting a system into Langley's idea, charted the sky and brought the heavens into the grip of man. Edgar Allan Poe might have been a Colossus of literature, but he had not the system to overcome his weakness.

A ten-point success is likely to be two points talent, three points character, five points system. There is consolation here for the man not born a genius.

By system I do not mean the worship of detail, or the substitution of mechanism for humanism. System is *inspired* mechanism. System is experience condensed and applied. System is the substitution of choice for chance, intelligence for worry, composure for care. System is decrease of effort and increase of result. System is the conversion of drudgery into destiny thru the sustained power of a coherent purpose.

Observe, however, that system as a part of our scheme of life is neither first in time nor final in importance. System merely shows us how to do a thing, it does not tell us what to do, or why to do it.

We are a compound of body, brain, heart and soul. The brain and the body should be made perfect machines, operating as regularly, easily, faultlessly, powerfully, as the finest automobile or electric plant. The desires of the heart should impel these twin-machines, but without waste of energy, sympathy, worry, sentimentality. The soul needs no system and will have no system. The soul must be free. But system is not only a material aid to efficiency but is even more a subtle aid to spirituality. System is to the soul as the track to the engine, the forge to the fire, the sail to the breeze. A good man plus a good system becomes a great man; and a great man who is also good is better than a hundred good men who are merely good.

STARTING THE DAY'S WORK

What do you do when you first wake up in the morning? Your answer will imply how far you apprehend and use the right system of daily habits.

The inefficient man wakes thus: he grunts, yawns, turns over sleepily, hunches up angrily, growls thickly "Hang that alarm clock!"—and with a petulant scowl goes to sleep again. This performance is bad for him, first because it undermines his will power, second because it demoralizes his schedule for the day.

Dozing irresponsibly, he oversleeps. When some kind friend shakes him, he wakes with a start, slights his bath and exercize, shoots into his clothes, gulps down a hungerless breakfast in a panic lest he be late to work, and darts for his train after the manner of a frightened goose. Now, the first hour of the morning determines our physical and mental status for the day. If at nine o'clock we have our nerves, brain and stomach in a condition of turmoil, we reduce our thinking and working capacity for the day by perhaps twenty per cent. If in addition we allow such irregularity to pervade our desk, office and routine, we further abridge our maximum output by perhaps thirty per cent more. Besides, our health, influence, character, will suffer to an equal extent.

The man of power gets absolute control of his brain, heart and body before he starts his work. In order to have time to get this control, he plans to wake a half hour before he has to (hurry enslaves). The efficient man has his sleep out, because he fixed the right quantity and quality of it beforehand. He takes five minutes' exercize—the kind that he has proved best for him. He finds himself in a healthy glow, and likes his bath even more than his breakfast. He keeps his fresh linen, shaving apparatus and other toilet accessories in such order and location as to reduce motions to the minimum. He follows a plan whereby his clothes

There Are 25% More Chautauqua Readers Now than a Year Ago. Last Year Showed 16% Above the One Before. Why?

Now, as in the past for forty years, men and women find in Chautauqua what they need from a reading course; and on the world-old impulse to tell somebody about it, they bring their neighbors in. So the circle grows. It serves:

The Parent who dreads having the children educated out of his reach.

The College Graduate who realizes that he must keep on being educated.

The Busy Person who must make the most of spare moments for culture.

The Person of Leisure who does not wish to stagnate.

The Newspaper Reader who wants a perspective on the confusion of daily items.

Why don't you ask about it? Address

are never buttonless, or his collars all cracked, or his shirts all in the laundry; hence he does no fuming while he dresses.

Our sensible man does not eat fried sausage one morning, oatmeal and bananas the next, sirloin and biscuits the next. He standardizes his breakfast. By this I mean that he studies and experiments until he finds just what kind of food, and how little of it, will keep him from starving till lunch time. Then he takes this breakfast, with but slight variations, every working day. Breakfast and luncheon for the brain worker should always be standardized, but dinner never standardized. We should live by an exact system, from the time we wake till the time we finish our day's work; after that, to blazes with the system!

I can do three times as much in a day as I could a few years ago. The secret lies chiefly in the fact that I have learned to get a clean grip on my work and myself during the first hour of the day. This control is mental, even more than physical. For the mind is the animating force in any work that prospers and endures.

The average mortal never knows how much he can do. He never can know until he puts in his work a systematic method and a spiritual motive. A man recently drove an automobile at the rate of 100 miles an hour. A century ago this would have been called a miracle. Such a feat is possible now because the system of automobile construction has been made well nigh perfect, and because the man in the machine was out for a world's record, which ambition gave him something approaching superhuman vision and control. You in your work may reasonably hope to become a world-leader; but first you must have a faultless system, and a colossal aim.

SCRUTINIZE YOUR HABITS

Every human action is either habitual, or occasional, or independent, original and unforeseen. All habitual actions must be reduced to a system, based on the quickest, easiest and best mode of accomplishment. To discover and apply these various modes of improved action is one of the first steps in personal efficiency. For example, nearly every man, and a large proportion of women (about one in three in New York State) go to work every business morning. What is the best way to go to work? In New York City one may travel by subway or "L" train, by surface car, by taxicab or carriage, or on foot. The ideal way is to walk to business. This, however, is impossible for the man who lives in upper New York five or ten miles away from his office. Most people therefore take the easiest and quickest route, with no regard to hygienic or psychological factors. A friend of mine, a noted efficiency expert, lives on a block with a subway station on the corner. I asked him what he considered the most approved way to get downtown. He answered, "Here is how I go—judge for yourself. I walk a mile across the city, down a hill and over the Harlem River, to the nearest "L" station. Then I stand on the platform (except in very stormy weather) and breathe good air all the way to my office. The subway trip would save me twenty minutes—and lose me a lot of health, buoyancy, clear-brained action, winning magnetism, and good old-fashioned appetite." Here is a case where the quickest way is not the best. How many people would have sense enough to figure this out? For answer, look at the mobs that regularly pile into the subway. All our daily habits should be scrutinized, analyzed, made to conform to standards of health, economy, productivity.

Our occasional actions may also be reduced to a general system, based on principles of comfort and utility. Every housewife, every professional man or woman, every worker using brains as well as hands, finds it necessary to do certain things on certain days of the week or month. An essential is a memorandum book or calendar pad, covering each day in the year, and made to serve as an automatic memory. One of these belongs in the home, another in the office. When you think of something to be attended to next week or next month, put it on the pad and forget it. Then plan each day to fit the pad.

Every clerk, every housemaid, ev-

A TEST OF THE ORDERLY LIFE

FOR ANY MAN OR WOMAN IN ANY TRADE OR PROFESSION

DIRECTIONS. Write 5 in blank space following each question, where the answer is Yes. Leave space blank where the answer is No, or indeterminate. Add the column of figures thus obtained, for your percentage in efficient system. These questions are only general and preliminary, serving as a pointer not as a complete guide.

Mr. Purinton will be glad to suggest books, magazines, institutions or other aids to better system. He will also answer questions on personal problems relating to systematic life and work. These replies will be given thru the Efficiency Question Box or by personal letter, subject to the nature of the question and the priority of its receipt.

1. Do you keep a daily, weekly, monthly and yearly memorandum pad? . . . . .
2. Have you an outfit of scrap books and files for clippings, notes and new ideas? . . . . .
3. Do you maintain a personal and family budget of current expense? . . .
4. Are your expenses less now than they were last year? . . . . .
5. Do you exercize at least five minutes on rising every morning? . . . . .
6. **Have you standardized breakfast and luncheon in time, quantity and variety?** . . . . .
7. **Are you in bed at ten o'clock, four nights or more in the week?** . . . . .
8. Could you find in the dark every personal and professional article you own?
9. **Do you carry life insurance?** . . . . .
10. **Have you made your will, in proper legal form?** . . . . .
11. **Have you read five standard books on systematizing your work, life and destiny?** . . . . .
12. **Do you plan ahead your day's work, on the basis of a time schedule?** . . . . .
13. Can you finish your day's work in an hour's less time than a year ago?
14. **Have you a clear picture, in your mind and on paper, of your ultimate achievement in life?** . . . . .
15. Are you planning in following a definite, sure system for gaining promotion or advancement in your work? . . .
16. Can you make yourself do things you dislike pleasantly, thoroly, regularly?
17. Can you forget all system and do as you please one or two days a month?
18. **Have you classified the mental and moral faculties and powers needed for great success in your work?** . .
19. Are you developing these in yourself by a regular, scientific method?
20. Do you reserve a little time each week for nature and poetry or philosophy? . . . . .

Total count your approximate grade in a true conception of an efficient system.

Copyright, 1915, by Edward Earle Purinton

ery employee in an ordinary line of business should be given a daily schedule of things to be done, with the time required to do each properly, and a memorandum concerning use of remaining time. If on a bright morning otherwise happy you tell Jane to wash the dishes, polish the silver, blacken the stove, whiten the woodwork, sweep the halls, dust the gimcracks, do the marketing, mind the baby, help with the sewing, bake some pies, and then prepare to get lunch—you will have a mixt-minded, sour-hearted Jane, with bits of undone or ill-done jobs presently scattered all over the place. But if you tell Jane to wash the dishes in 20 minutes and 43 seconds, polish the silver in 8:17, blacken the stove in 5:34, and so on to the end of the list—you should have a clear-headed, whole-souled Jane, working on a scientific plan for a definite purpose. Then if you offer a small bonus for every time she breaks her own record (without breaking the dishes or her reputation for thoroness) you may soon have a paragon of a housemaid.

SYSTEM MEANS COMMONSENSE

Let us take another illustration of the need for system. There are always thousands of unemployed men in New York. I meet probably two a week, on the average. When a man accosts you on the street, says he is out of a job, can't get work, and won't you give him a lift, what do you do? If you are soft-hearted (and soft-headed) you perhaps give him a quarter. If you are hard-hearted (and soft-headed) you give him nothing. If you are soft-hearted and hard-headed you give him the addresses of a number of free employment bureaus that you have looked up before, you put him on a car to go to the nearest, you pay his fare, and you wish him luck. The Bowery Mission, the Salvation Army, the Municipal Employment Agency, make it their business to supply jobs for the jobless. If by searching out all these places—which I can do in a couple of hours—I can start 100 men a year toward the self-support and self-respect of salaried employees, am I not putting my philanthropy where it belongs, on a systematic basis of commonsense?

The only things in our lives that should not, cannot, be reduced to system are the inspirational things. These, of course, are the real things. I would rather starve because inefficient than amass wealth because uninspired. Yet I have seen a case where a poet improved the quality his verse tremendously by forcing himself to go thru a period of business routine, and work, slave, endure, fight, sweat, faint from weariness, be scourged by oppression, and know what the multitudes have to bear. A poet who has never drudged is only half a poet—and the poorer half, made of words; the better half of any man being made of deeds.

Among the scientific systems that the average person needs are the following: A health and longevity system; a buying, spending and saving system; a genius development system; a social sincerity system; a rational reading system; a vital study system; a sure promotion system; a practical, broad-minded, zealous-hearted church system; a childlike play system; a reverential, sympathetic, wise, clear and clean marriage system. How many of these systems do *you* need?

For a concrete example of personal system, let us take a man's cravat. In the view of an inefficient man, all there is to a necktie is buying it, wearing it, wearing it out. In reality there are seven factors in a good cravat system—(1) color, (2) weight, (3) cost, (4) preservation, (5) manner of tying, (6) method of repair, (7) final destiny. The color should match, or harmonize with, the suit of clothes intended to be worn with the tie; and should also blend with the owner's peculiarities—a green tie on a blue suit or a violet tie under red hair being a case of inefficient harmony. The weight should be sufficient to prevent the ruin of the fabric by a scarf-pin, but not sufficient to allow cracking from retained perspiration. The cost should be about half the set retail price; once or twice a year most men's shops have clearing-out sales, when fifty-cent and seventy-five-cent ties go for a quarter; this is when every man should lay in a year's supply. One's common ties should perhaps be kept on a ring or rack near the dresser, and the best ties in a long box or bureau drawer, both being smoothed out and unwrinkled after being worn. The life of a scarf may be doubled by tying it when new with the large end as long as possible, leaving a section under the vest invisible, and protected; as the exposed part gets shabby, draw this under the collar and tie the scarf with the large end short. A cravat kept clean and skilfully mended will last a third as long again. Finally, there are hosts of poor women who would gladly use the unspoiled ends of worn-out silk ties for cushion-pillows, or for doll's dresses the making of which would teach their little girls how to sew. A necktie is a trivial thing, but may become a great example. If by taking a little thought one can purchase all his ties for half the regular price and can double or treble the wearing qualities, may not the principles of economy, efficiency and satisfaction thus learned be an asset thru life?

One more illustration of system needed. Could you, with your eyes closed, lay your hand instantly on every one of your personal belongings—in your home and in your office? Could you, if you were suddenly to go blind, tell a friend where to locate each item pertaining to your work and your daily life? A negative answer means that you need a filing system, to help you bring order out of chaos. Every adult has, or should have, a mass of correspondence, bills, receipts, clippings, book notices, memoranda, notes, plans and ideas for improving work, and so forth, which to be handled properly must depend on a good filing system, dozens of them now being on the market.

IF THERE IS A BETTER SYSTEM THAN YOURS, BORROW IT

We have not touched upon the matter of a modern work system—that would fill a volume in itself. The supreme fact to think over and act upon is this: Great numbers of people in your line of work have been studying out the very problems that baffle you, and somebody, somewhere, has doubtless arrived at the solution. How will you locate the man and learn the solution?

There are in the United States about 120,000 clergymen, 150,000 physicians. 1,200,000 teachers, 6,000,000 farmers, 10,000,000 mechanics and manufacturers. Suppose you are a teacher, then you have one chance in 1,200,000 of knowing and following the best system in this country. Suppose you are a mechanic or manufacturer, then your chance of being the top-notcher dwindles to one in 6,000,000. What methods are you taking to find the most efficient leader of your profession—and equal or surpass him? What newest and best books, magazines, tools, devices, facilities and opportunities have you discovered, are you employing? If the output and corresponding income of a bricklayer can be doubled by use of the right system—a feat accomplished often since the development of scientific management, how much more can *you* achieve with your education, influence, environment?

A dream as huge as a planet, a system as fine as a pin—there you have the secret of the efficient man. What is your great life purpose? How is your system of work speeding it on?

A New Departure in Education

In introducing The Independent into schools throughout the land we have met with only one real difficulty. Teachers generally admit the desirability of some use of current literature and recognize the suitability of The Independent for that purpose, but they do not always know how to go about it. To introduce such an inconvenient method of instruction into an established curriculum is not always easy, so it is no wonder that teachers sometimes prefer to wait until convenient methods for use have been worked out elsewhere.

Pamphlet Number One of our series of aids to the use of periodical literature in the class room gives the experiences of teachers who are using The Independent in College and High School classes in connection with their courses in English, Oral Composition, Public Speaking, Journalism, International Law, Economics, Current History, American Politics and Civil Government.

Pamphlet Number Two is called "How to Use The Independent in the Teaching of Civics," by Simon J. Connolly, A.B., LL.B., of the Jolly Business High School.

Pamphlet Number Three is called "How to Use The Independent in the Teaching of English," by Frederick Hook Law, A.M., Ph.D., of the Stuyvesant High School.

These pamphlets will be mailed free to any teacher.

The New Books

THE PANAMA CANAL

Now that the Panama Canal is completed and running, except for occasional landslides, the question of the proper apportionment of the praise is in order. Some would give the greater glory of the achievement to Roosevelt or to Taft; some to Bunau-Varilla or to De Lesseps; some to Gorgas or to Goethals; some to Shonts or to Stevens. Poor Mr. Wallace seems the only one who has no advocate; but we shall probably get a book some day giving him all the credit for the Canal.

But it is well that we should have these different points of view presented, for there is obviously a popular tendency to make some one man responsible for every great triumph or failure. It is, for instance, quite likely that the success of Colonel Goethals in bringing the Canal to completion has tended to eclipse the pioneer work done by the civilian engineers who preceded him. So the volume by W. Leon Pepperman, Chief of Office of Administration of the Second Isthmian Commission, has good reason for existence. Its title is a rhetorical question, *Who Built the Panama Canal?* but the author leaves no doubt that he intends the answer to be "Theodore P. Shonts." As chairman of the Second Commission, known as "The Railway Men's Commission," in 1905-7, he took charge in a critical time when the force was demoralized and the type of Canal undetermined, and he turned over the undertaking to his successor in good working order. Mr. Pepperman devotes much space to the sensation created by Poultney Bigelow's article in The Independent, but he neglects to note how many of the points criticized have since been quietly corrected. The beautiful drawings of Joseph Pennell are reproduced in this volume.

Colonel Goethals's book on *The Government of the Canal Zone*, in the "Stafford Little Lectures" series, is of more importance than its size indicates, for it brings out many new points of interest, such as the reason why the Zone was allowed to lapse into the jungle instead of being made an American settlement. But if we have abandoned the country the photographs show that we are building a city at Balboa which may well come to be the pride of the tropics.

The Panama Gateway, by Joseph Bucklin Bishop, which has been slightly revised for its sixth printing, is the most complete and authoritative of the many books on Panama. It is based upon the official records and covers all branches of the enterprise. Its only de-

fect in balance is a disposition to minimize the work of Colonel Gorgas.

As a corrective for this one should read *Sanitation in Panama*, in which Colonel Gorgas, without exaggerating his own achievements or finding fault unnecessarily, gives a frank account of the way in which the Isthmus was made habitable. For instance, Mr. Bishop says in regard to the yellow fever outbreak that "in applying the new methods of fighting the disease Colonel Gorgas had the hearty coöperation and earnest support of Charles E. Magoon." On the other hand, Colonel Gorgas states that in June, 1905, Governor Magoon and Chief Engineer Wallace asked the Secretary of War to remove from the Sanitary Department Colonel Gorgas and the other doctors who believed in "the mosquito theory" on the ground that they were "visionary." So they were, but it was due to their vision, based upon the self-sacrificing experimentation of our physicians in Cuba, that the employees on the Canal did not suffer an annual death rate of twenty-five per cent as did the French. But Mr. Pepperman represents his hero, Chairman Shonts, as denouncing Dr. Gorgas "with some heat" for relying upon "the mosquito theory" and ordering him to set his force to cleaning up and getting rid of "filth," altho Dr. Gorgas knew then as everybody knows now that filth has nothing directly to do with the spread of yellow fever.

Who Built the Panama Canal? by W. Leon Pepperman. E. P. Dutton & Co. $2. *Government of the Canal Zone*, by George W. Goethals. Princeton University Press. $1. *The Panama Gateway*, New and Revised Edition, by Joseph Bucklin Bishop. Charles Scribner's Sons. $1.50. *Sanitation in Panama*, by William Crawford Gorgas. D. Appleton & Co. $2.

IRELAND'S PLAYWRIGHT

John Masefield signs a slim book entitled *John M. Synge: A Few Personal Recollections with Biographical Notes.* In Ireland this modest sketch of Ireland's greatest playwright has been issued by the Cuala Press, Dundrum, County Dublin, in one of the beautiful editions of that press; here it is published by the Macmillan Company, with the most hirsute portrait of the playwright we have ever seen. Masefield's word-portrait of Synge is probably the better likeness; also it is the kind of description that would have pleased Synge best—being quite free from sentiment or any kind of heroics. Mr. Masefield's reminiscences agreeably supplement his more formal record of Synge in one of the supplementary volumes of the Dictionary of National Biography. But there is really no need of any one heeding more of the writing about Synge than can be found in M. Bourgeois's study, and this little book by Mr. Masefield. There is so little to tell. The quiet personality, the grave courtesy (characteristic of his stock), the absence of any sort of affectation or pretense, the reticence about self, the habit of silent observation—these and other characteristics are registered by one who knew and liked Synge, with much of that seeming impersonality which distinguished Synge's detached

McCutcheon's Linen Catalogue

Free on Request

EVERY woman who loves fine Linens should write for a copy of our new Fall Catalogue containing 64 pages handsomely illustrated, describing in detail the beautiful goods to be had at "the greatest treasure house of Linens in America".

McCUTCHEON'S is "*The* Linen Store" of America.

It was among the first, if not the first store, in this country to specialize in flaxen products. Today, despite the difficulties of ocean transportation, our assortment of all kinds of Housekeeping Linens is unusually complete and attractive.

Don't fail to write for your copy promptly as the edition is limited.

NEW YORK

The Latest Doran Books

BOON: The Mind of The Race, The Wild Asses of the Devil and the Last Trump *By Reginald Bliss* *With an Ambiguous Introduction by H. G. WELLS*

"Vivid, brilliant, varied, unusual, this book with the paragraph-long title is one to read, to laugh over, to admire—and to think about quite seriously."—*New York Times.* "A literary salad with plenty of red pepper in it; a bookman's holiday, with a few picnics and several visits to battlefields, on which the reader sees literary and political idols slain with shrapnel of satire."—*Philadelphia North American.* 12mo. Net, $1.35

I ACCUSE (J'ACCUSE) *By a German* *Translated by Alexander Gray*

Because a patriotic German, high in his Government's service, loved his Fatherland and hated the madness of militarism, he dared write this indictment of the Imperial hypnotist, this bold declaration that Germany has always had her place in the sun—till in madness she cut off her own light. Not merely a book—but as great an event in the War as any battle. 12mo. Net, $1.50

J'Accuse! (J'ACCUSE!)

THE SOUL OF GERMANY *By Dr. Thomas F. A. Smith*

Whatever the turn of events our relations with Germany will be close for years to come, and will demand a study of this standard book which does for Germany of today what Price Collier did for the peaceful Germany of some years ago—studies intimately from rich personal knowledge her life in home, school, office, government bureau. 12mo. Net, $1.25

PUNCH CARTOONS: The Great War in Pictures Humorous and Symbolic

From the hundreds of pictures regarding the Great War, regarding England, Uncle Sam, the Kaiser, von Tirpitz, sick Turkey and the like, that have been appearing in *Punch* these cartoons and clever little sketches have been selected for America. 4to. Net, $1.50

COLLECTED DIPLOMATIC DOCUMENTS OF THE WAR

Here is given in full the only authoritative information regarding the outbreak of the war—the British, French, Russian, Belgian, Serbian, German and Austrian diplomatic correspondence. 8vo. Net, $1.00

ARE WOMEN PEOPLE? *By Alice Duer Miller*

Humor is nothing but applied common sense. Hence in the splendid humor and melody of these rhymed answers to the pomposities of the anti-suffragists there are sounder suffrage arguments than in pages of statistics. 12mo. Net, $0.60

HAPPY HOLLOW FARM *By William R. Lighton*

Because of the success of his experiment in giving up city newspaper work to develop a run-down mountain farm, and because of the interest and lucidness with which he tells of this venture in freedom, Mr. Lighton may be regarded as leader of the Back to the Soil movement, and this book is the new authority for all who turn longing eyes from city to country. Many illustrations. 12mo. Net $1.25

Fiction of Real Greatness

OF HUMAN BONDAGE *By W. Somerset Maugham*

"A big piece of work; one of those novels which deserve the attention of all who care for what is worth while in contemporary fiction."—*New York Times.* 12mo. Net, $1.50

THE GOLDEN SCARECROW *By Hugh Walpole*

With that rare instinct for pure beauty, which distinguished "Fortitude" and his other novels, developed to the utmost, Mr. Walpole recreates for every grown-up the Golden Age of childhood. 12mo. Net, $1.25

MINNIE'S BISHOP *By George A. Birmingham*

The newest volume of Irish stories by the sympathetic and witty author of "General John Regan," etc. 12mo. Net, $1.20

THE STORY OF JACOB STAHL *By J. D. Beresford*

In three volumes:

THE EARLY HISTORY OF JACOB STAHL

A CANDIDATE FOR TRUTH

and the new volume

THE INVISIBLE EVENT

"They form practically one book. Despite the length of the book, Jacob is a person of whom we never grow weary. Here is the successful presentation of a human being, growing, changing, swiftly reacting to environment, yet retaining his own individuality. Beresford belongs near to Walpole and Bennett."—*New York Times.* 12mo. Each vol., Net, $1.35. The three, boxed, Net, $2.50

THE RAT-PIT *Patrick MacGill*

A story of the Irish peasantry with the beauty of an October sunset—somber, noble, unforgettable. 12mo. Net, $1.25

AT ALL BOOKSELLERS

GEORGE H. DORAN COMPANY 38 W. 32nd St. New York

Publishers in America for HODDER & STOUGHTON

liking for his fellow men. Mr. Masefield is an admirably honest portrait-painter. He shows us the author of "Riders to the Sea" and the tempestuous "Playboy," not as a brilliant conversationalist of the George Moore type (how Moore and Synge did grate on one another!) but only as a rather shrewd man, much more interested in life, *qua* life, than in "movements" or politics or "society." Synge was more concerned with folks than with philosophies. Mr. Masefield's little book is a good one for those to read who have too hotly argued about Synge's plays as dramatizations of Irish manners: it should become obvious enough in the reading that this man was a poet and not a historian of the Irish nation or a generalizer about Irish types. Now that the Irish Theater is an accepted contribution to modern literature and no longer a subject for pungent personalities and politico-religious rows it is good to have some of the unvarnished facts presented by one of Synge's best-known contemporaries.

John M. Synge: A Few Personal Recollections with Biographical Notes, by John Masefield. The Macmillan Co. $1.

ABOUT BELGIUM

It is a safe saying that the American people have heard more about Belgium in the last year than in all the years before, tho it may be questioned whether they know so very much more about Belgium than formerly. But it is to be presumed that they have the desire and certainly they have the opportunity of becoming better acquainted with the people whom they are sympathizing with and helping.

Here as usual the Home University Library comes in handy, for the new volume on *Belgium* by R. C. K. Ensor gives in small compass a readable account of the land and its inhabitants. We learn for instance that Belgium has the densest population of any country in Europe, the cheapest railway and canal rates (we've heard much of the canals lately), the smallest average land-holdings, the largest number of cattle and pigs per square mile, the largest yield per acre of wheat, oats, potatoes and sugar beets. The author is properly appreciative, but does not leave out the darker shades of the picture, the riotous quarrels of Catholics and Socialists over the school question, the futile struggle between the Flemish and the French languages, the appalling illiteracy, over twenty per cent unable to read or write.

Clive Holland's *The Belgians at Home*, is now reprinted in a volume of similar size but given more to the description of the art and architecture and seaside life at Ostend, both, alas! not what they used to be.

The early history of Belgium, told in the modern manner from the social and economic instead of the political standpoint, is given in the Belgian Promenade of Professor Pirenne of Ghent. This also is a reprint.

A Surgeon in Belgium tells the story of three months in the British Field Hospital. How much medical practice

has changed since our civil war appears from the statement that he did not perform a single amputation and never removed a bullet if he could help it.

King Albert's Book will delight those who are interested in autographs and celebrities. Here are two hundred and thirty-nine letters and tributes to Belgium from the leading authors, artists, statesmen, scientists and theologians of England, France and other sympathetic countries and a large number of fine color plates, a lot to get for $1.50, and besides the profits go to the Belgian Fund.

Belgium, by R. C. K. Ensor. Henry Holt & Co. 50 cents. *The Belgians at Home*, by Clive Holland. The Macmillan Co. 40 cents. *Belgian Democracy Its Early History*, by Henri Pirenne. Longmans, Green & Co. $1.50. *A Surgeon in Belgium*, by H. S. Souttar. Longmans, Green & Co. $2.40. *King Albert's Book* New York: Hearst's International Library Co. $1.50.

LIFE'S IRONIES

The State Forbids, a one-act play by Sada Cowan, combines the harrowing theme of "Ghosts" in the first scene with an anti-militaristic plea in the second. Both are strongly handled; voicing the protest of a mother against the tyranny of the state which forbids the destruction of the unfit and demands the life of her best and strongest.

Kennerley. 60 cents.

WAKING UP THE VILLAGE

Herbert Quick, editor of *Farm and Fireside*, an authority on our rural conditions, in *The Brown Mouse* has written the story of a country school that, as a serial, roused active interest among farming communities of the Middle West. The story will give new ideas to those still content with a system warranted to turn boys and girls cityward, and interest those already eager on this problem.

Indianapolis: Bobbs-Merrill. $1.25.

FROM PRAIRIE TO PLATFORM

An unusual autobiography is that of *Tahan*, by Joseph K. Griffis. The Indian name means Texas Man or Fighting Man, and the author saw warfare enough among the Kiowas, as an army scout, and Salvation Army captain before he became a minister and a platform lecturer to justify the cognomen. His story is interesting to the casual reader as well as to the ethnologist.

Doran. $1.25.

COCKNEY LONDON

St. John G. Ervine has already won a place as one of the foremost of present-day novelists. In *Alice and a Family* we have new proof of his skill in character drawing. Alice is a very real and unusual person—a precocious child with quaint wisdom and remarkable ability in managing other people's affairs. Just how she does it is a delightfully entertaining story, full of humor and common-sense philosophy.

Macmillan. $1.25.

ADVERTISING AS A MORAL FORCE

These are the days when publicity counts well nigh as much as inherent worth in securing the effectiveness of religious, moral and social movements. The way to obtain *Publicity and Progress* by "twentieth century methods in religious, educational and social activities" is ably set forth by Herbert Heebner Smith in a volume which may be commended to all who are seeking to promote righteous causes by the aid of printers' ink.

Doran. $1.

A SANE GERMAN ADVOCATE

For those who want to understand *Germany's Point of View* there is no better means than the volume by that name in which Dr. Edmund von Mach has published a second selection of his Boston *Transcript* articles. His fair mindedness, moderation and comprehension of both the German and American mind enable him to

TEACHERS

The Independent is being used in a rapidly increasing number of Schools and Colleges all over the country. More than one hundred schools have ordered copies during the first two weeks of this school year.

It is used by progressive teachers of all grades from the eighth grade of the Grammar School to the University.

Send for free booklet giving letters from some of the Schools where The Independent is being used as a text-book in the study of English, Public Speaking, Oral Composition, Rhetoric and Supplementary Reading.

Salt Mackerel
CODFISH, FRESH LOBSTER

FAMILIES who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.**, by the **FRANK E. DAVIS COMPANY**, with newly caught **KEEPABLE OCEAN FISH** sooner than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT** sending by **EXPRESS RIGHT TO YOUR HOME**. We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT-LINED CANS**. They come to you as the perfect and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get here and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. *Write for it.*

Our list tells how each kind of fish is put up, and the assorted price, so you can choose just what you will enjoy most. Send the coupon for it now.

Let Gloucester supply our Mackerel and Codfish for dinner tomorrow.

Scientific Self-Care

You cannot expect to be always in prime condition—able to do first-class work all the time—unless your health is good. And—you can hardly expect to keep your health unless you have scientific knowledge of modern conditions and their requirements with latest and most up-to-date information of how they may best be met. Such knowledge and information you may get from GOOD HEALTH—the magazine which teaches you how to take care of yourself—how to find a "balanced ration" suited to your needs—how to get rest when you sleep—how to work without overtiring—how to exercise without doing too much. Through reading GOOD HEALTH, you learn to increase your capacity for success and enjoyment. Each month, GOOD HEALTH brings you the latest news of all important scientific methods of upbuilding and preserving health. The teachings of GOOD HEALTH are so clearly stated that you find them always easy to understand and follow. Subscribe today. Only $2 a year. You take no risk. After receiving your first number of GOOD HEALTH, if you are not entirely satisfied write us at once. We will cancel your subscription and refund your money. Subscribe today and learn to care for your health according to the latest dictates of science. Send subscription to GOOD HEALTH PUBLISHING CO., 26 W. Main St., Battle Creek, Michigan.

clear up much of the mutual misunderstanding which now clouds the real differences between the two peoples.

Chicago: McClurg. $1.50.

PLAY AS A TEACHER

Joseph Lee desires that man shall be "a play-built animal," living fully the baby, dramatic, Big Injun, and loyalty stages. He is not bound by the recapitulation theory nor does he believe in shirking responsibility for mastering the disagreeable. Democracy must "reconcile life and civilization," gaining suggestion from the civic and chivalric systems, but, unlike them, it must provide for all. The sections in *Play in Education* on Sunday, War, and Girls are especially helpful.

Macmillan. $1.50.

MUSIC AND THEOLOGY

That "perhaps the truths which science has been sent to give men, blurring traditional faith, denying much of the theology of the priests and doctors, may find their corrective in the truths which music has been sent to teach, reflecting the theology of the mystics," is the thesis worked out ingeniously but not convincingly in a little book, *The Mysticism of Music*, left ready for the press by the Rev. Dr. R. Heber Newton. The attempt to make music "reflect" the Nicene Creed impresses rational readers as crossing the line of absurdity.

Putnam. 75 cents.

FOLK WHO WRITE

Honors fall fast about the author of *K*. Mary Roberts Rinehart. The other day she was the central figure of a pow-wow presided over by the chief of the Blackfeet and his warriors. Here the tribal dances were danced in her honor, and by the name of Pitamakan, Running Eagle, she was formally made a member of the tribe.

The battle over a once popular book, *Cape Cod Folks*, has past, but we may be in for its successor. Here comes a letter to Sara Ware Bassett about the characters in *The Taming of Zenas Henry*. The reader has recognized every one of her Cape Codders which, comments their author, is clever of him since she herself never saw or heard of any of them.

The news that parts of Caroline French Benton's *Little Cook-Book for a Little Girl* have been translated into Chinese and are used in some schools in China is disquieting to the lover of the bamboo sprouts and spiced brown sauces that are served to the trustful in our chop suey eating-houses. Also how will the papas of the little Chinese maidens manage custard with chopsticks?

The author of the *Jacob Stahl* trilogy, J. D. Beresford, was once an enthusiastic chess player. Leaving his club one night after a hardly fought tournament he suddenly found himself unable to cross the street save by a knight's move. He stood on the curb in vain trying to reason himself out of the delusion and when at last he had zigzagged safely across he made up his mind that he had played in enough chess matches.

Dr. Griffis, whose *Taban* is the fruit of many years among the Indians, has come back to civilization. He had a taste of it recently in Chicago, where he was set on by highwaymen, his clothing shot thru and his wallet taken. His own shots did no more than frighten his assailants. The police reached the scene too late to catch the thieves, but at least they let the minister keep his revolver and had enough sense of humor not to reprove him for carrying it!

Gene Stratton Porter, despite *Michael O'Halloran* and its Leerminnie, is first a naturalist, second a novelist. Every three days for weeks she and her husband traversed the wilderness and fragrances miles of the Limberlost swamp to watch the life in the rare black rattlers' nest and long before she was known to the public her wondering neighbors saw her daily behind her little horse packed in with lenses, paper and camera, learning the byways of the Limberlost region for its wild life.

It is the first duty of the educated to be interested in education.

First among magazines devoted to the cause of education is

EDUCATIONAL FOUNDATIONS

Published 10 months in the year. $1.50 a year; 20c a copy.

EDITORS
WILLIAM CHARLES O'DONNELL, Jr.
CLAYTON SEDGWICK COOPER

***Not* a method magazine. A journal for *all* educators and for *everybody* interested in education.**

Vol. XXVII begins with the September number.

The Board of Editorial Counsellors and Contributors consists of eminent educators and publicists.

Note the following:—

"THE WORLD AT SCHOOL"

A notable series of articles by Clayton Sedgwick Cooper. Graphic pen pictures of school life around the world.

Also

A Symposium on American Ideals

A stirring array of comments on American traits and tendencies by one hundred prominent citizens. These opinions, frankly expressed, were gathered by Mr. Cooper during the preparation of his book on American Ideals soon to be published by Doubleday, Page & Co. as one of their American Book series. The symposium will appear in part in the October number.

On the practical side of educational work, Henry Sterling Chapin will continue to elaborate "The Model-Store-Keeping Method of Instruction for Elementary Schools." This plan of instruction has been adopted by thousands of schools with most gratifying results. Parents as well as teachers are enthusiastic in their praise. Mr. Chapin is the organizer and director of the system for the United States.

The value of the magazine this year will be greatly enhanced by the contributions of Elizabeth Cooper, one of the most spontaneous and sympathetic writers of the day.

A due proportion of space is allotted to book reviews, literary discussions, examination questions, etc. Forward subscriptions at once to

Independent Opinions

One of our readers, who from his seven years of close association with the Mexican people as a missionary, has a right to be heard on the question, criticizes us for saying that the United States should have intervened five years ago. We are glad to see that he agrees with us that intervention is now needed and holds out the hope that it will not be altogether resented:

Intervention was not then needed and would have been strongly resented by all Mexicans. Probably it is now needed, and if so, it will be welcomed by a strong party in Mexico, if they can be convinced of our disinterestedness. The Pan-American action now being taken will go a long way toward convincing them of this, and is the most encouraging prospect for the future.

GEORGE C. LEVERING.

Selma, Ohio.

In the article on the "Conquest of Commerce" of September 6 attention was called to the difference in policy between Great Britain and Germany. The British policy is to buy in the cheapest market even tho it means the ruin of a home industry. The Germans believe in protection not merely for the establishment but for the maintenance of home industries. Either theory is logical and consistent, but they do not mix well.

Our American policy has wavered between these two ideals and so has sometimes lost the advantages of either. The sugar business is a striking instance. The English a few years ago were rejoicing that they were getting sugar at less than cost thru the bounty-fed exports of German beet sugar, altho land which might have raised beets in England was going out of cultivation and the British West Indian planters were brought to bankruptcy. The Germans on the other hand were willing to pay a higher price for the sugar they raised than they charged to the English because thereby they were able to use more land and support a larger population at home. The United States started in about twenty-five years ago to develop the beet sugar industry by the aid of protection, local bounties and extensive Government help. Now the tariff duties are being taken off, leaving the beet sugar communities to sink or swim, with considerable probability that they will sink. How it seems to one resident in the sugar section may be seen from the following letter:

The sugar consumed by the American people each year is about 4,000,000 tons, and in round numbers, you will perceive, is worth approximately $400,000,000. The great irrigated West would, in a comparatively few years, be largely the source of our national sugar supply thru the development of the beet sugar industry, just as Germany has made this business the source of her sugar supply.

The irrigated West is peculiarly adapted to sugar beet culture, and if this industry

Few parents realize the constant strain of overstudy

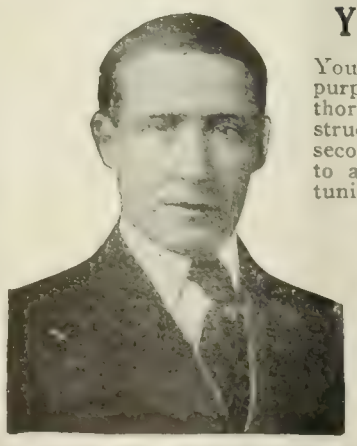
DO *YOU?* Do you—as you watch that youngster of yours studying evening after evening—recall the effort it cost you in your youthful days?

Boys and girls need every energy for proper physical and mental *growth*, yet they often work harder than grown-ups. It is vital for their future well-being that their energies should not be over-drained, and here the kindly help of Sanatogen is indeed most welcome.

Sanatogen is a guardian of good health at the "developing age" just as at all other ages. Containing purest albumen and organic phosphorus, free from any harmful stimulant, it conveys to the growing body the essential elements for cell-growth, and blood and nerve nourishment in the most easily digested form—thus not only re-enforcing the system against breakdown, but building up a new fund of energy which will give greater efficiency with less wear!

And as in the child, so in the adult. On young and old alike Sanatogen exerts reinvigorating influence, enriches the blood, makes keener the appetite and better the digestion, rests the nerves and builds up resistance to disease.

Sanatogen is sold by good druggists everywhere, in three sizes, from $1.00 up.



Dr. Conrad Rehn, physician to Emperor of A[illegible]

were accorded proper "legislative protection," it would be the means of converting a sparsely inhabited country into a populous one, characteristic of an industrially happy community, where a thriving family lives on each eighty or forty acres, instead of one family on six hundred and forty acres. You will observe this means a transition in population from one family to sixteen families on each section or six hundred and forty acres of land—the best sort of sixteen to one doctrine. It means not only this increased population of wage earners, but value producers, which are important considerations in the industrial growth of any country.

The production of beet sugar, speaking broadly, has just started in the West, and if it were not for the fact that the last Congress practically provided for the extermination of this industry in the United States after May, 1916, by declaring that raw sugar shall be admitted free of duty at that time, the present war prices would be an added incentive for millions of new capital to be invested in the irrigated West.

W. D. HOOVER

Denver, Colorado

Let me thank you for the fine article, "The Conquest of Commerce," that appeared in The Independent of September 6. It is just such a shaking-up and waking-up that we need in this country. Will you kindly tell me from what sources you got your information for this article? I am much interested in the subject and would like to read more on it. Am sure that there are thousands of other business men who would be glad to read more on the same order and I hope that you will follow this article with another along the same lines.

C. T. ANDERSON.

Duluth, Minnesota.

The material was collected in the course of many years from various sources, but you will find a good account of the methods by which Germany has attained her commercial supremacy by reference to W. Harbutt Dawson's *Evolution of Modern Germany*, or Frederic C. Howe's *Socialized Germany*. (Scribner, $1.50 each.) A second article on the development of American commerce will soon appear.

Mercantile marine! Nobody's concern! We *have* the goods, but we cannot deliver our orders, *outside* U S A! We freely admit we can and do produce enough for our own home usage, with an enormous surplus for exportation, with increasing production assured, but we lack means to transport abroad! *Nobody's business!*

I am nobody, only a humble Englishman, with eleven years' comfortable and enjoyable residence on this beautiful western Pacific coast and intensely interested in the present and future development and advancement of this vast continent, and am trying to rid myself and environments of apathy. Where can one fix the responsibility of the present crucial conditions? It is not presidential, congressional or individual, but it is a collective silent disinterested daily condition "to let things go their own way."

JAMES EDWARDS

San Francisco, California

We must confess to our energetic friend that the deplorable inactivity in regard to an American merchant marine is not so much apathy as perplexity. As long ago as we can remember—and this in our editorial capacity is some sixty-seven years—people have been urging that something be done about it, but nobody knows just what to do. But the problem is now being solved for us. Since the war American shipping has been growing by leaps and

REPORT OF THE CONDITION OF THE

State of New York, County of New York, ss:

I, F. E. ANDRUSS, Cashier of the above-named bank, do solemnly swear that the above statement is true to the best of my knowledge and belief.

F. E. ANDRUSS, Cashier.

Subscribed and sworn to before me this 7th day of September, 1915.

JOHN P. LAIRD,
Notary Public 2104, N. Y. Co.

Correct—Attest:
W. DEL. KOUNTZE,
A. F. KOUNTZE,
LORENZO BENEDICT,
Directors.

bounds until now it is about up to what it was in 1862, when it was last destroyed by cruisers "built in Britain."

Dear Sir: I am reading in your issue of this day that the Archbishop of Canterbury wants a short prayer as a Christian antidote to "Gott strafe England." If the world is not dead to the spirit of Jesus Christ how would "God forgive Germany" do?

ALFRED B. SPROAT

Taunton, Massachusetts

We are glad to see that the Germans are getting ashamed of their ridiculous outburst of hatred and the "God Punish England!" legend is now less frequently seen stamped on letters, bread and briquettes.

The ideas advanced in your editorial of September 13, "The Educational Reserves," while quite novel and humiliating to the fledgling graduate, appear to be based on false premises. It is quite beside the mark to compare educational reserves to military reserves, the reason being that after a man has completed his allotted period of military training he usually enters into some occupation which has no relation whatever to military life. In other words, military training does not prepare him for his vocation—it is merely a "necessary evil" like tax-paying.

A university graduate, on the other hand, employs as much of his acquired education as possible in his life work and if he be of the proper stamp, will constantly use and add to the learning he has paid money to acquire in college. His education and efficiency constantly increases as he endeavors to place himself in the front rank, or in these days even to earn his bread he must continually improve his mental or mechanical capacities. If he returns to his alma mater every five years, as you suggest, to "brush up" it is quite likely that his former instructors could learn more from him than he could from them in many instances.

It is agreed that a college degree is a fraud upon the public, but this is due to the type of education itself. If a university turns out incompetent and falsely-educated graduates, it would obviously be folly to return to that institution later to refreshen one's "intellect."

There are of course many subjects taken up in college which are valuable chiefly for mental training and preparation and it would be of no advantage to review them. Once a child learns to walk he doesn't go back to his walking-chair every year to practise the first steps—he keeps on walking.

The point is this: let the college give the man the right sort of education and one that is suited to him and he will take care of himself, but as yet most of the colleges fail to do that.

MAX WALDRON

Lake Alfred, Florida

We fear that our correspondent still clings to the exploded theory of generalized mental training and the transference of acquired abilities. How many of the studies which a man has taken at college does his lifework ordinarily impel him to keep up? How many college presidents can pass the entrance examinations with sufficient credits to gain admission to their own institutions? We do not agree that a college degree is a fraud upon the public because it "turns out incompetent and falsely educated graduates." We merely made the modest suggestion that it would be well to put a date limit on the diploma as is done on kodak films. This might read "knowledge not guaranteed unless used and developed within five years from date."

Let me tell—
Independent Readers about Clarkson's Gigantic Book Sale of all New Books

"THE world's vast [illegible] to new and necessary [illegible] are [illegible] at less than [illegible] this sale of Clarkson's [illegible] books for the [illegible] He has [illegible] In the market. [illegible] they need [illegible] at publishers' prices and retails at wholesale prices.

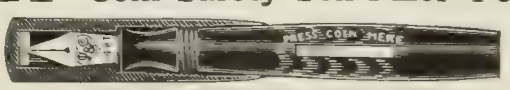
What Clarkson is Doing for the Book Buyer

In several hundred thousand Libraries in the homes of people in every walk of life from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Editions artistically printed and bound—almost every book was bought from me. WHY? Because, I sell you just the books you want—all new—many at a saving of from 5c to 90 per cent—you examine the books in your own home for five days before paying for them. If not satisfied, return them at my expense—and owe me nothing.



Catalog of Bargain Book Free

My new catalog sent free for the asking, gives you a complete list of the books in **This Gigantic Sale** and shows you how to save 50 to 90 per cent on thousands of books. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer. Write at once for the Catalog. Get the books you want at sale prices.

Giant Heater

Will Make a Stove of your round wick lamp, gas-jet or mantle burner. Requires no more gas or oil than for light; does not lessen the volume of light; utilizes the waste heat. Heat and light at one cost.

On Gas-Jet

Will Heat Ordinary Room Comfortably in Zero Weather

A river will run mills by concentrating its power—your lamp or gas jet will heat a room by concentrating, intensifying and radiating the waste heat with a GIANT HEATER. This heater causes a circulation of the air, giving a uniform heat. No odor, dust, ashes or trouble. You can heat any room, office or den; warm baby's food or your shaving water; make tea or coffee, and you **can do these things quickly,** for the heat is intense.

On Round Wick Lamp

Mr. Homer Smith, Wyoming, Del., writes: "We have used your Giant Heater in our house five years, and it certainly saves us a ton of coal a year, besides its convenience."

Price Black Iron - - - $1.00
Polished Brass - - $1.50
Nickel Plated on Brass $2.00

Send today for a heater—we will send it by post mail or express, at charges; repeat. Use it one week, if not satisfied return it in 10 days and **get money back.** Send for free book anyway.

Giant Heater Co., 867 Temple Street Springfield, Mass.

L. A. COOLIDGE, Treasurer.

The Market Place

THE ANGLO-FRENCH LOAN

New York City has been the center of the financial world's interest during the last week, for here are being conducted negotiations unique in some of their phases, looking to the creation of a colossal credit by the United States in favor of two great nations which have long been lenders and not borrowers in the world market. The British and French mission, headed by the Lord Chief Justice of England and Sir E. H. Holden, chairman of the great London City and Midland Bank, was dispatched here to end if possible a situation which had become so difficult and so serious as to threaten the continuance of commercial intercourse between their countries and the United States. Much remains to be done, but such encouraging progress already has been made in the negotiations that the foreign exchange rate has had a sharp advance, and toward the close of the week stood more than twenty cents in the pound above the low record level of 4.50, touched three weeks ago, altho still well below the figures of normal times.

It seems to be now well established that the arrangement likely to be made will not provide for the $1,000,000,000 which the foreign financiers announced that they desired, but that the amount will be at least $500,000,000 and may run as high as $700,000,000 or $800,000,000. The financiers of New York and other cities, who had assembled here on the invitation of the Morgan firm to meet the European commissioners, assumed at first that the loan would be secured by collateral, perhaps American securities, but it was soon made plain to them that the only security which would be offered would be the faith and credit of the borrowing nations, and the negotiations are now proceeding on that understanding. The plan is to issue bonds running from five to ten years, paying five per cent, and offered to investors at par.

The Federal Government is placing no obstacle in the way of the transaction, and the Federal Reserve Board has let it be known that the projected loan is not a matter within its province. Naturally there has been strenuous opposition to the loan on the part of active sympathizers with the German cause, but this antagonism appears to be waning as the vital importance of the arrangement to American agriculture and American industry, altogether

1915

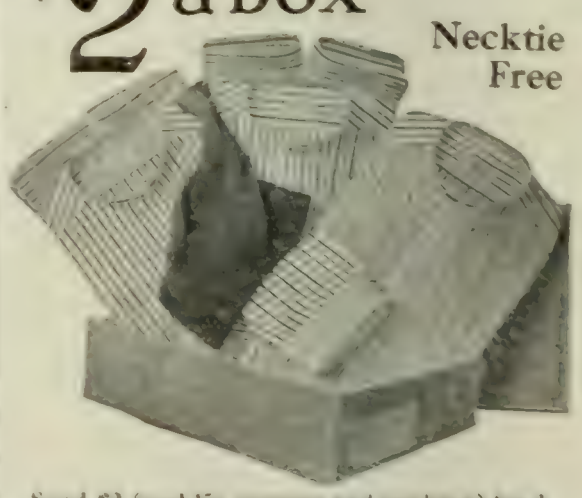
Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	86,811,450.00
Leaving outstanding at present time	3,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46



The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued, subject to divisions of interest and ordered to be redeemed, in accordance with the charter.

WRITING THE PHOTOPLAY

[illegible]

THE HOME CORRESPONDENCE SCHOOL
Department 67, Springfield, Mass.

A SILVER QUARTER sent at our risk, with the name and address of a friend, will secure eight consecutive issues of THE INDEPENDENT for him. Introduce your acquaintances to THE INDEPENDENT at the new form.

Vanity Fair is the new magazine which is being talked about. Its success is increasing like the success of a new play; those who see it like it, and tell their friends about it.

If you fail to secure a copy from your newsdealer (the price is 25 cents) ask him to place an order for the next number. But don't give up; try some other newsdealer. You can hardly afford to miss the October number now on sale.

Tens of thousands of intellectual people pick up Vanity Fair as their first choice when looking for something enlivening. Its originality immediately attracts; its unconventional character, its freshness, its unprecedented variety.

Special Offer

Readers of The Independent using the coupon below can have a six months' "trial" subscription for One Dollar if order is sent promptly.

VANITY FAIR

Bliss Carman—There is something light, entertaining and well-bred about Vanity Fair
George Ade—Let me congratulate Vanity Fair on being so superior and sophisticated
DeWolf Hopper—I, somehow, always think of Vanity Fair as a relative of mine
Ida M. Tarbell—Smart enough to wheedle twenty-five cents a month out of me
Jack London—Vanity Fair keeps me in touch with all the pleasures of life
Arnold Daly—You have published a magazine which tops England's best
Marie Doro—In these hard times it is the only magazine I ever buy
Jeannette L. Gilder—I like its pleasant face and its optimistic pages
Samuel Merwin—Every number I read makes me a year younger
Julian Street—I am always ashamed of myself for liking you so
Douglas Fairbanks—It is just what we needed in this country
Owen Johnson—I am delighted with the accent of originality
Frances Starr—I find that everybody is reading Vanity Fair
Gouverneur Morris—An incomparably attractive magazine
Charles Dana Gibson—Vanity Fair is a friend of mine
Joseph H. Choate—Vanity Fair is a wonderful baby
Irvin S. Cobb—Congratulations—but be careful
John Drew—Your journal is fine

A Recipe

Put together the best pages from your favorite theatre magazine, your favorite sports magazine, your favorite book magazine, your favorite humor magazine, your favorite art magazine, **then add** flavoring from London and sauce from Paris and seasoning from Broadway and Fifth Avenue, add pages of photographs, sketches and portraits, **shake well,** put on a beautiful color cover and you will get a general idea of this most successful of new magazines.

Vanity Fair is for sale by leading newsdealers everywhere: 25 cents a copy.

Readers of The Independent are invited to consider the "trial" offer at the right.

81 CHAPEL STREET, ALBANY, N. Y.

apart from the trade in war munitions, is being more and more clearly emphasized. One of the foreign representatives suggested the other day that if the terms to be exacted by the lenders should prove too onerous, England and France would buy their foodstuffs and cotton and cattle elsewhere than in the United States, but this suggestion is hardly taken seriously by financiers here, who point out that Canada and the Argentine, to which those countries must turn, are not in a position to extend credit on a vast scale, and that only in the United States is the necessary accommodation to be had. On the other hand, it is greatly to the interest of the American growers of grain and other commodities, as Mr. James J. Hill especially has shown, to be able to have an export market for their surplus product, to be very large in this year of excellent crop prospects, a market which will be greatly curtailed if the Allied nations shall be obliged to make their payment in cash for the foodstuffs needed by them.

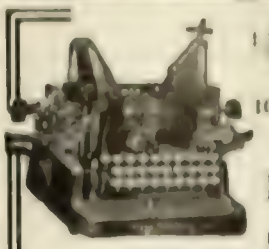
There have been received in this city within the last few weeks three consignments of about $50,000,000 each, consisting in all of about $60,000,000 gold and nearly $100,000,000 in securities, which have been sent here from England with the supposed purpose of meeting the cost of munitions of war, and a fourth instalment of about $20,000,000 gold and $30,000,000 securities is said to be on the way to this center. While no assurances have been made public that no part of the proposed great loan will be used in paying for the manufactures of war material, it is the prevailing impression that an arrangement of that sort will be made, and that the proceeds of the loan will be applied strictly to meeting the cost of agricultural products and general manufactures, leaving the settlement for the war supplies to be made by direct payment.

The loan, it may be assumed, will be taken by the banks and bankers, and the extent of the distribution which they may subsequently be able to make of it cannot yet be estimated with any approach to certainty. American investors are not accustomed to putting their money into foreign loans, and it may be that they will not respond largely to the offering which will probably before long be made to them of the joint obligation of the British and French Governments. Not that the bonds or notes representing the loan will be unattractive, for it is certain that the rate of interest they will bear will be high, probably netting the investor five per cent., and the possibility of loss of the principal thru repudiation, even tho the fortunes of war should finally go against the Allies, may be regarded as negligible.

Insurance

Conducted by

W. E. UNDERWOOD



A. P., Earl, N. D.—Provided he can pass a satisfactory physical examination, the occupations which totally disqualify a man for life insurance under some one of the various policy contracts which the companies issue are few. I would advise you to place your case before the agent of some reputable life company in your neighborhood.

E. A. B., Grand Forks, N. D.—The first company you name is entirely solvent and is being managed with good average efficiency. But I believe it has inherent defects which cannot be eradicated and which may affect its policyholders to a slight extent. The second company named writes only non-participating insurance and as you say you want the participating kind, comment is unnecessary. The third company is a very good one and well managed. Most of its business is on the deferred dividend plan, however, and that plan is objectionable. Investigate some of the companies which are striving to pay the largest annual dividends to policyholders. That is the competitive point.

J. A. S., Poteau, Okla.—Such information as I have at hand bearing on the assessment association you name disposes me to agree with the conclusion you have arrived at respecting its promises. It has nearly $15,000,000 insurance in force superimposed on about $90,000 of net assets. In 1914 its total income was $266,000 against a total outgo of nearly $261,000. I don't see any provision for the future in any of these figures. There are no miracles worked in life insurance. Money in sufficient quantity, collected in advance and put out at compound interest, is the only solvent for the yearly increasing liability incident to carrying each member of an insuring concern. There are no short cuts. Life insurance costs its price; if not now, then later on including heavy penalties.

R. A. S., Tiffin, O.—The casualty company you name enjoys a good reputation, it possesses an efficient management and as per the figures you quote in sound financial condition. I believe you can place confidence in any proposition it will issue its contract on. Note well that the policy you are considering is limited and restricted. Replying to your second question: I believe in endowments for young men because the great majority of the latter will survive to receive the accumulations. The minority who die will have paid more for the protection than it would have cost under an ordinary life policy and it is plain their estates would have been richer if they had been insured under the cheaper form and had invested the difference between the two premiums in some savings fund. But right there is the difficulty and it is one due to an inherent defect in human nature. The number of persons is exceedingly small who will faithfully invest that difference year by year for, say, twenty years. Right or wrong, they are more likely to pay their annual premiums on an endowment policy. The latter also has the advantage of furnishing less temptation to use the accumulation in a financial pinch. You mention Chicago real estate bonds as an investment. Would that not be something of a speculation? That is another feature to be considered in a matter of this kind. I recommend the endowment. If not that, then increase the amount of the ordinary life policy, which is now costing you about $41 a year and put the price of the endowment, about $96, in as much ordinary life insurance as the last named sum will buy—nearly $5000.

Hartford Check was good as gold through Stormy Days of Civil War

The last mail from the North in 1861, brought to James L. Byington of Albany, Ga., a check of the Hartford Fire Insurance Company for $800 in payment of a loss. Received too late to be sent North for collection this check was universally accepted as legal tender and during the Civil War traveled throughout the Southern States, changing hands many times as readily as gold coin, increasing in value as Confederate money depreciated. When it finally reached its home bank in Hartford in 1864 it was literally covered with endorsements. For over a century, through war, panic and conflagration, the "Hartford's" name on a promise to pay has everywhere been as "good as gold."

Practically every form of insurance except life insurance can be secured through the

INSURANCE SERVICE OF THE TWO HARTFORDS

The Hartford Fire Insurance Company has always transacted its fire insurance business honorably. Its reputation and traditions are its most valuable assets and guarantee of the future. It has ample financial resources.

The Hartford Accident and Indemnity Company conducts a general casualty and bonding business along the liberal, yet sound, lines that have characterized the business policy of the parent organization.

Look over the different kinds of protection listed below. Check those you wish to know more about, mail the coupon to us and we will send you full information.

A Number of Things

by

Edwin E. Slosson

THE questions of international ethics involved in the Great War have so often come up before that whenever we discuss them we are reminded that it is a threshing of old straw. Some of our readers, disliking our reprobation of the German passage thru Belgium, have quoted to us Judges xi, 19-22, as proof that Jehovah approved of Israel's violation of the neutrality of Sihon. And where would we find a more competent discussion of the question of neutrality than the following, which dates from the fifth century B. C.? A true translation should be free from any trace of archaicism, since this was written as contemporary, not ancient history. Accordingly I have substituted modern names for those in the original.

Germans. Well, then, we Germans will use no fine words; we will not go out of our way to prove that we have a right to rule . . . or that we attack you now because we are suffering any injury at your hands. . . . But you and we should say what we really think, and aim only at what is possible, for we both alike know that into the discussion of human affairs the question of justice only enters where there is equal power to enforce it, and that the powerful exact what they can, and the weak grant what they must.

Belgians. Well, then, since you set aside justice and invite us to speak of expediency, in our judgment it is certainly expedient that you should respect a principle which is for the common good; that to every man when in peril a reasonable claim should be counted a claim of right. . . . Your interest in this principle is quite as great as ours, inasmuch as you, if you fall, will incur the heaviest vengeance, and will be the most terrible example to mankind.

Germans. The fall of our empire, if it should fall, is not an event to which we look forward with dismay; for ruling states such as Great Britain are not cruel to their vanquished enemies. . . .

Belgians. But do you not recognize another danger? Will you not be making enemies of all who are now neutrals? When they see how you are treating us they will expect you some day to turn against them; and if so, are you not strengthening the enemies whom you already have, and bringing upon you others, who, if they could help, would never dream of being your enemies at all?

Germans. We do not consider our really dangerous enemies to be any of the peoples . . . who, secure in their freedom, may defer indefinitely any measures of precaution which they take against us; but petty states who, like you, happen to be under no control, and all who may be already irritated by the necessity of submission to our empire, these are our real enemies, for they are the most reckless and most likely to bring themselves as well as us into a danger which they cannot but foresee.

Belgians. We know only too well how hard the struggle must be against your power, and against fortune, if she does not mean to be impartial. Nevertheless, we do not despair of fortune; for we hope to stand as high as you in the favor of heaven, because we are righteous, and you against whom we contend are unrighteous, and we are satisfied that our deficiency in power will be compensated by the aid of our allies the British; they cannot refuse to help us, if only . . . for the sake of their own honor. And, therefore, our confidence is not so utterly blind as you suppose.

Germans. As for the Gods, we expect to have quite as much of their favor as you: for we are not doing or claiming anything which goes beyond common opinion about divine or men's desires about human things. For of the Gods we believe, and of men we know, that by a law of their nature wherever they can rule they will. This law was not made by us, and we are not the first who have acted upon it; we did but inherit it, and shall bequeath it to all time, and we know that you and all mankind, if you were as strong as we are, would do as we do. So much for the Gods; we have told you why we expect to stand as high in their good opinion as you. And then as to the British—when you imagine that out of very shame they will assist you, we admire the innocence of your idea, but we do not envy you the folly of it. The British are exceedingly virtuous among themselves, and according to their national standard of morality. But, in respect of their dealings with others, altho many things might be said, they can be described in a few words—of all men whom we know they are the most notorious for identifying what is pleasant with what is honorable and what is expedient with what is just.

Belgians. That is the very reason why we trust them; they will look to their interest, and therefore will not be willing to betray the Belgians . . . lest they should be distrusted by their own friends in continental Europe and play into the hands of their enemies.

Germans. But do you not see that the path of expediency is safe, whereas justice and honor involve danger in practise, and such dangers the British seldom care to face?

Belgians. On the other hand, we think that whatever perils there may be, they will be ready to face them for our sakes, and will consider danger less dangerous where we are concerned. For if they need our aid we are close at hand.

Germans. Yes, but what encourages men who are invited to join a conflict is clearly not the good-will of those who summon them to their side, but a decided superiority in real power. To this no men look more keenly than the British; so little confidence have they in their own resources, that they only attack their neighbors when they have numerous allies.

Belgians. But they may send their allies! The North Sea is a large place, and the masters of the sea will have more difficulty in overtaking vessels which want to escape than the pursued in escaping. If the attempt should fail they may invade Germany itself, and find their way to allies of yours whom Napoleon did not reach; and then you will have to fight, not for the conquest of a land in which you have no concern, but nearer home, for the preservation of your empire and of your own territory.

Germans. Help may come from Great Britain to you as it has come to others, and should you ever have actual experience of it, then you will know that never once have the Germans retired from a siege through fear of a foe elsewhere. . . . The more you cast yourself upon the British and entrust and hope and trust them, the more complete will be your ruin.

The German envoys returned to the army, and the generals, when they found that the Belgians would not yield, immediately commenced hostilities. . . . The Germans thereupon put to death all who were of military age, and made slaves of the women and children. They then colonized the land, sending thither [illegible] settlers of their own.

Those who prefer the unmodernized version may read *Athenians* for "Germans," *Melians* for "Belgians," *Lacedemonians* for "British," *Hellas* for "continental Europe," *Brasidas* for "Napoleon" and *Cretan Sea* for "North Sea." The complete passage may be found in Jowett's *Thucydides*, vol. II, and in Stowell's *Diplomacy of the War of 1914*.

There is a maiden lady in Boston who used to be very fond of Omar Khayyám. She quoted the *Rubáiyát* on all possible and some impossible occasions as tho it were her Bible. But a short time ago she went to the play, "Omar: the Tent-Maker," in order that she might see her favorite hero *in propia persona*. But instead of being pleased with the play she came home disgusted. Her copy of the *Rubáiyát* (limited edition, numbered copy, Holland paper, vellum binding, Vedder illustrations) has been burned or buried. She neither mentions Omar nor allows any one else to quote him in her presence. When asked the reason of her change of taste she replies gently but firmly: "I didn't know he was a drinking man."

I always find something novel and interesting whenever I pick up *The New Republic*. For instance, I find on the cover of the last the following title:

On Acquiring New Ears For a Citizen Army

I have not read the article yet, but assume it refers to the well-known fact that defective hearing is a common disqualification for military service.

A stranger in New York City being a trifle late at an appointment explained to his friend that it was because he had got lost, but, he added, "I met a lady on the street, a teacher, who told me the way."

"How do you know she was a teacher?"

"Because she told me twice."

The world is so full of a number of stings—
These mosquitos are happy and wicked as kings!

—*New York Evening Sun*.

Whenever I hear of a "nut-brown maid" I always wonder whether Brazil nuts, peanuts or grape-nuts are meant. People should be more explicit as to the species.

The "new history" differs greatly from the old in making everybody eat less wicked and more silly.

Leaf and invite your soul. But during my vacation I forgot to put on R S V P and it did not come.

Original sin is the sin that we do not originate.

JIM'S AT THE FRONT

There is a kind of settled gloom—
A sort of all-day valley-mist—
That has a hold, in every room,
Like some unseen antagonist.
And all about the house and farm
The simple joys that were our wont
Have disappeared or lost their charm
Since Jim, our Jim, went to the Front.

I watched the wife a while ago
Setting the table for our tea,
Deep lost in thought, with movements slow,
A place for her, a place for me,
And, as in days that have gone by,
The old accustomed place for Jim;
Then, with a smothered sob and sigh,
She stopped, and tried to joke of him.

Oh, she is brave! I've tried and tried
A hundred times to do the same,
And simulated joy and pride
That Jim, our Jim, had played the game;
And all the while my heart is sore,
And all the while I know that she
Prays for the only child she bore,
And adds a postscript prayer for me.

Last Sunday at the fall of night
Another to our fireside came,
And almost in a manner light
And frivolous she spoke his name.
"It's all right, dear old Mum," she said,
"Old Jimmer knows a thing or two;
Don't you go worrying your head;
I know the old chap will pull thru."

But when I'd taken down the Book,
And read the lesson for the day,
She took in hers old hands that shook,
And knelt between us both to pray.
Then, to my heart of hearts I felt
The strong faith of her youth pass out,
And words forsook me as I knelt,
For I had deadened hope with doubt.

I know that sobs came to me there;
I know I trembled on my knees;
I know I stumbled thru the prayer—
"Do with him, Lord God, as You please;
But keep him worthy of his race
And the traditions made for him."
But she, with love-lights in her face,
Prayed simply—"Make us worthy Jim."

E. S. Emerson, in "Melba's Gift Book."

WISE MEN ON WAR

G. K. CHESTERTON—Bad history is the whole basis of Pacifism.

DAVID LLOYD GEORGE—Nothing but our best can pull us thru.

THOMAS A. EDISON—War today is largely a matter of supplies.

EARL KITCHENER—The Germans appear almost to have shot their bolt.

PREMIER ASQUITH—This is a war of mechanism, organization, endurance.

CROWN PRINCE OF GERMANY—I want to have a smack at those French guns.

GENERAL CARRANZA—My ambition from the beginning was peace for Mexico.

DON MARQUIS—It costs more to live in America than in Europe—and it is worth it, too.

GUSTAVE HERVÉ—The pacifism of Woodrow Wilson is the pacifism of a bleating sheep.

CAPTAIN HUGH L. WILLOUGHBY—Aeroplanes as convoys probably would have saved the "Lusitania."

JAMES WHITCOMB RILEY—I haven't voted in thirty years. I dislike politics as much as I dislike war.

HENRY FORD—I could today make vast sums from warfare if I chose, but it would be better to die a pauper.

CZAR OF RUSSIA—France can count on my immovable will to struggle on until complete victory is achieved.

CHRISTABEL PANKHURST—With snobs of all nations the Kaiser with his upturned mustache has had a huge prestige.

LYMAN ABBOTT—I respect the men and women who are arguing for disarmament, but I do not respect their opinions.

EX-PRESIDENT ELIOT—Peace in Europe would be under present conditions a horrible calamity for the human race.

GENERAL VON BERNHARDI—The American Government endeavors to furnish every possible advantage to England.

W. J. BRYAN—Imagine what our country would be if we had in the White House a jingo with hair-trigger patience.

RUDYARD KIPLING—The trench line in France is a rampart put up by man against the beast precisely as in the stone age.

PAUL BOURGET—This war must be the first of many, since we cannot exterminate sixty-five million Germans in a single campaign.

REV. CHARLES A. EATON—This war is the greatest blessing that has ever fallen on mankind since the German Reformation.

HUDSON MAXIM—Pacifism has ringed the nose of the American people and is leading them blind and unknowing to the slaughter.

COMMISSIONER FREDERICK C. HOWE—Germany is the recrudescence of the Greek idea of the state adjusted to twentieth century conditions.

GERTRUDE ATHERTON—What is the matter with these club women that are hysterically preaching Peace-at-any-Price? Are they old maids or barren widows?

JOHN HAYNES HOLMES—The real tragedy of this hour is to be found in the wreckage of ideals rather than cities, the blasting of the souls rather than the bodies of men.

SENATOR LA FOLLETTE—When you can boom stocks 600 per cent in manufacturing munitions of war to supply the shortage of one side, to the bottomless pit with neutrality.

COLONEL ROBERT M. THOMPSON—The only thing for the United States to do is to issue bonds for at least $500,000,000 and entrust the expenditure to the navy, not to a lot of congressmen.

JAMES J. HILL—If this country is prudent it will not wait till the end of the European war to place itself in a position to realize the maximum amount of advantage from conditions that will then exist.

THE WAR CLOUD OVER THE BALKANS

AS cold weather comes on the war moves south. The storm center now rests over the Balkan mountains and it seems possible that the Great War may be determined in the same place where it began.

If anything more were needed to impress the American people with the peril of kingship, it is the fact that the fate of the Balkans and consequently that of Europe depends now upon the personal caprice of one man, an ex-Austrian officer whom accident has placed upon the throne of Bulgaria. In 1886 a committee of three prominent Bulgarians went hunting thruout Europe for a prince to replace Alexander of Battenberg, who had been kidnapped and conveyed out of the country by the army officers. Since there was great likelihood that his successor would meet the same fate or a worse, the various scions of royalty who had been invited to seat themselves upon the unstable throne at Sofia had declined the honor. The committee, on their way home from their futile quest, were dining with a friend in a Vienna restaurant, so the story goes, when they confided to him their disappointment. "Why not take him?" said the friend, pointing to a tall, handsome young man in the dainty white uniform of the Austrian army, who was sitting, by chance or otherwise, at a neighboring table. So they took him.

It must be said that few rulers, elective or hereditary, have accomplished as much for their country and themselves as Ferdinand of Bulgaria. Altho he was in his youth as tender hearted as Robespierre and could not bear the sight of blood, even of the lower animals, he has involved his country in two terrible wars and has now mobilized his troops with a view to engaging in a third. In 1908, taking advantage of the neglect of the Ottoman Government to invite his envoy to dinner, he threw off the pretense of subordination to the Sultan, and crowned himself Czar of the Bulgars. His kingdom, tho but little larger than the State of Virginia, occupies a central position, so he can throw his troops directly into Serbia, Greece, Rumania or Turkey, with all of whom he has been at war within the last three years. Tho his subjects are fewer than the population of Ohio, he has at his command more trained troops than the President of the United States.

We realize something of the complexity of the Balkan situation when we recall that King Ferdinand's greatest general has been fighting on the Russian side since the beginning of the war. Radko Dmitrieff is known as the "Bulgarian Napoleon," both from his personality and his tactics. He is a dark, stocky man with keen eyes and a lock of hair that tumbles over his forehead after the manner of the Little Corporal. He is beloved of his troops and can lead them where others would fail. It was he who commanded the Third Bulgarian Army in October, 1912, when it defeated the Turks at Lule Burgas and pursued them to the Chatalja Lines. In October, 1914, he led the Russian left wing in the first advance thru Galicia, and his swift sweep along the slope of the Carpathians disconcerted the Austrians and led to the isolation of Przemysl. Since then he has not figured in the despatches, but if he is still in the Russian service he may find himself fighting his own countrymen who are now allied with the Turks, their enemies of three years ago, and are opposed to the Serbs, then their allies against the Turks.

The belligerent powers have been bidding against each other ever since the war began for Bulgaria, as they have for Italy, Greece and Rumania. Italy, after ten months of hesitation and preparation, cast in her lot with the Allies. Greece and Rumania were about to do the same last winter, but hesitated when the tide turned against Russia. Bulgaria has openly announced that her arms or neutrality were for sale to the highest bidder. From each of her four neighbors she claims territory. Turkey has agreed to her terms and has surrendered part of the territory about Adrianople which was taken by the Bulgars in the first Balkan war and regained by the Turks in the second. Rumania and Greece show no disposition to retrocede the territory they took from Bulgaria in the second Balkan war. Serbia, under pressure from the Allied Powers, consented to surrender part but not all of the Macedonian territory which Bulgaria claims. The difference between the Bulgarian claims and the Serbian proffered concession is an area less than Connecticut, and it would be hard for either historian or ethnologist to decide which has the better right to it. But the decision will, it seems, be left to neither, but to the arbitrament of arms.

IT is the impending fall of Constantinople which has precipitated the crisis. The campaign on the Gallipoli Peninsula has been disappointing to the Allies. The British and French troops, even with the backing of their powerful warships, have not been able to do more than hold a strip of the shore, twelve miles long. The Turkish fortifications on the hights are still untaken. But there are increasing rumors that the Turks are getting short of munitions and cannot hold out much longer unless their Teutonic allies can come down the Balkan peninsula to their rescue. An Italian army of 110,000 men is said to be assembled on the Greek islands at the mouth of the Dardanelles, ready to join in the attack upon Constantinople.

The British, who formerly fought the Russians to save

Constantinople for the Turks, are now fighting the Turks to give Constantinople to the Russians. Gladstone in 1876 aroused all England by his pamphlet denouncing the massacre of the Bulgarian people by the Turks, and the Russians came down from the north to rescue the Bulgars from their oppressors. But after their rescue it was England, then under Disraeli, not Gladstone, which took away part of the territory given by Russia to Bulgaria and put it again under Turkish rule.

Bulgaria is the most progressive and liberal of the Balkan states. In matters of education, religious toleration and freedom from racial and linguistic tyranny, the Bulgarian Government has set a good example to its neighbors. But in regard to cruelty in warfare and faithlessness to treaty obligations, there is not much to choose between the Balkan states. The revelations of the Carnegie Peace Endowment Committee of the atrocities and treachery in the Balkan wars seemed to all of us incredibly barbarous, but if half of what we hear be true, a future investigating committee would discover still worse things had been done in Belgium, Serbia and East Prussia.

According to Premier Venizelos, Greece was offered by Sir Edward Grey a long strip of the coastland of Asia Minor if she would enter the war on the side of the Allies. This would have doubled the extent of Greece and given her a hold upon the Asiatic continent such as she never possest except in Alexander's brief reign. But in exchange Greece would be required to cede the recently acquired port of Kavala to Bulgaria. In vain Venizelos argued that the Turkish territory offered by the Allies, extending from Cape Phineka to the Gulf of Adramyti, was sixty times as large as the Kavala district and held twenty-five times as many Greeks. To the King and the people the nearer seemed the larger, and Macedonia appeared more important than Asia Minor. So Venizelos was dismissed in disgrace. Now he is back in power and may be able to accept the offer of the Allies if it still holds. Possibly, however, the territory once proffered to Greece forms part of the price paid to Italy for her intervention.

But the mobilization of Bulgaria, whether it means merely "armed neutrality" like Switzerland and Belgium, or something more, has forced Greece to mobilize also, for Greece is bound by treaty to come to the aid of Serbia against Bulgaria. When 300,000 Bulgarian soldiers confront 300,000 Greek soldiers across the imaginary line marking the boundary, when both are subjected to the external pressure of the belligerent powers and to the internal incitement of hereditary hatred and recent wrongs, it will be a miracle if the guns do not go off.

PACIFISTS AND PREPARATIONISTS

EXCEPT for the extremists in both camps—and they are, after all, few—the pacifists and preparationists are not as far apart as they think. Both want peace. Both believe in adequate defense. Their only difference seems to be this: The pacifists dwell more on the end than the means; the preparationists more on the means than the end.

The pacifists, however, have the broader vision. They are internationalists. They are looking toward universal peace. The preparationists, on the contrary, are nationalists. They concern themselves mostly with the safety of their own country.

How can these two groups be brought together? There is one way. Let them both work for the inauguration of a League to Enforce Peace after the war is over, in which the nations agree to settle their quarrels by courts and councils of conciliation and jointly compel any recalcitrant member to bring its disputes before the courts and councils before engaging in hostilities.

If the nations agree to pool their armaments for concerted action, then there is no need to keep a force much larger than is necessary to coerce an unruly member. If the nations are jointly prepared against the aggression of any one, war will hardly take place, for no nation will dare flaunt a united world.

Thus the scientific basis for international disarmament is laid and at the same time a preparation against war has been made that is sanctioned and guaranteed by the combined forces of the world.

Collective, not competitive, measures for security fulfil the dreams of the pacifists and more than meet all the requirements of the preparationists.

Let us have peace—world peace; and preparedness—world preparedness.

A NURSE'S HEROISM

ONE of the salient bits of relief in the midst of war stories that have become so commonplace in their recital of deaths and wounds as to be almost negligible is the tale of the nurse who, at the American Hospital at Neuilly, inoculated herself with the bacillus of gas gangrene and thus provided a needed subject for the crucial test of a new serum, which has proved successful and probably will bring about the saving of many lives. The result as cabled, if fully confirmed by subsequent control tests, will have all the more interest for Americans because the earliest successful studies by which the bacillus of gas gangrene was discovered were made here in America at Johns Hopkins, by Professor William H. Welch, and the microorganism is perhaps as often referred to by bacteriologists under the name of the *bacillus Welchii* as under the longer scientific designation which he gave it, the *bacillus aerogenes capsulatus*, that is, the rod-like microorganism which grows with a capsule and produces gaseous substances during its growth.

The story from the American Hospital at Neuilly which was cabled over last week is that Miss Mary Davies, a nurse at the hospital, who is the daughter of the Governor General of a British province in India and a former student of bacteriology at the Pasteur Institute, has watched with much interest, while working as the laboratory assistant at the hospital under Dr. Kenneth Taylor, the experiments by which this American doctor has been curing gas gangrene in animals. His remedy had not as yet been employed in human beings, but she was convinced of its efficacy from what she had seen in the laboratory and so she did not hesitate to inoculate herself with the disease in order to provide a human control test that would bring about the introduction of the remedy for wounded soldiers and thus save, as she was persuaded, many lives.

The disease promptly developed after the inoculation and indeed in very virulent form, for Miss Davies deliberately chose cultures of the bacilli that had come from

some of the most serious cases under observation at the hospital, and the amount inoculated would have been sufficient, it is said, to kill at least fifty of the animals used for experimental purposes. She had taken no one into her confidence in the matter, and even hired a room outside of the hospital in order to obviate any risk there might be of the spread of the disease among the wounded soldiers by infection. Fortunately the serum proved efficacious immediately, recovery was prompt and now the voluntary patient is pronounced quite out of danger.

Gas gangrene is one of the very serious complications that proved so discouraging at the beginning of the war. When one of the oldest implements that man invented, the spade, beat that highly complex invention of the most modern times, the repeating rifle, and the opposing armies dug themselves into their trenches in north France, earth dirt could scarcely fail to find its way as a contamination into many wounds. Two very serious forms of bacilli occur in soil, and particularly soil that has been plowed for years. One of these is the dreaded tetanus bacillus and the other the bacillus of gas gangrene. It was not long before hundreds of cases of these two nearly always fatal diseases developed among the wounded soldiers. Precautionary injections of tetanus antitoxin soon lessened the danger from tetanus, tho not before many precious lives had been sacrificed, but gas gangrene, especially during last fall, was one of the terrors that made war, even this war, if possible more awful than the imagination could picture it.

A slight wound of the leg or foot which becomes infected by the gas bacillus, begins to swell, to change its color, first into a dusky red and then into very dark even black or green, while above the dark, dead portion, there is an area covered by blebs filled with air. They herald the gradual advancement of the disease, for they indicate that the gas forming bacillus is at work below in the tissues and that it will not be long before the changes produced by it will shut off the circulation and lead to further death of the limb. The disease is often fatal, it is always very seriously crippling, takes a long time for convalescence, and has been the terror of the military surgeons. If the investigations of Dr. Kenneth Taylor thru Miss Davies's heroism have brought the knowledge of a serum that is curative, one of the great discoveries of modern medicine and surgery has been effected, for the remedies employed so far have been very uncertain and in spite of what seemed to be successes with some of them, none of them have been used with confidence by surgeons generally. As gas gangrene is a disease not seldom fatal in civil life also, the war and its vicissitudes will thus have given opportunity for the development of an important medical advance.

WHAT IS THE BEST THING IN YOUR TOWN?

EVERY town, big or little, has something which gives it distinction, something that no other place has, tho other places might want to have it if they heard about it. Whenever we visit a town we soon find out what this is, for the people are very kind about pointing it out to the stranger. It may be a new skyscraper or an old Colonial mansion; it may be the paving, the park or the pageant; it may be a man, perhaps a woman, whose labors have transformed the community and made it worth living in.

But to visit every town in person in order to discover its peculiar advantage takes too much time. We must do it by proxy. Now in every town of the United States, however small, there is pretty sure to be at least one reader of The Independent. If he or she would take a little time to consider what is regarded as the finest feature of the place and then write us about it we should have a collection which would give an unparalleled view of the sunny side of America. The time spent in thinking about why your own town is the best in the world will not be wasted whether what you write gets into print or not.

For the most interesting article on "What Is the Best Thing in Your Town?" we will give a prize of $100. For any others printed in full we will give $25. If we use quotations from the others we will pay for them according to space. These articles are intended to fill a page, and so should be about 1200 words long. A good photograph may add to the interest, and if the sketch is a biography the portrait of the individual should certainly go with it. There is no restriction as to size of the town; the village of X with its score of houses will stand as good a chance as New York City if it chances to possess some one who knows how to see what is best in it and how to make others see it. Nor do we insist that the author shall have a legal residence in the town he describes; it may be merely an acquaintance of his. But it must be a real town. All manuscripts must be in hand not later than December 1.

THOUGHTS AT THE OPENING OF COLLEGE

THE football coach demands and gets the utmost from every candidate for the team. He drops the duffer and quitter from the squad without a moment's compunction. As a disciplinarian he is the strictest of the strict. But he treats each player as a companion and an equal.

The professor is lenient with the candidate for a degree. He not only tolerates tawdry work, but he sometimes passes the flunker. Probably a third of the college degrees are unearned. But he sits on high and treats the undergraduate as an inferior.

If the spirit of the football coach should be introduced into the classroom, the college graduate would kick more goals in the game of life.

FRIENDLINESS PLUS FAIR PLAY

MR. ROCKEFELLER can swing a pick and eat cook-house beans and dance to "Tipperary" at a miners' party. It is well that he can, and better that he cares to. He has made a good beginning, but the most important step is yet to be taken.

The United Mine Workers, and the thinking public, know that personal friendliness does not take the place of industrial justice, particularly when it has to operate at a distance of some seventeen hundred miles fifty weeks out of the fifty-two.

Mr. Rockefeller has chosen hitherto to put his influence back of a policy which continually opposes the workers' best means of securing industrial justice. He may be able, one or two weeks in the year, to eat and chat and dance with the miners and their folks one by one. But it is quite impossible for him to bargain with them for their labor in the same way. Collective bar-

gaining—thru the union—is the only way out. Mr. Rockefeller can give real significance to his visit by recognizing that union organization is right and necessary, and accepting it as a means toward the harmony which he is so obviously seeking.

MORAL REACTIONS OF THE WAR

FOR many generations it has been a commonplace of popular sociology that religious feeling is quickened by war, and predictions have freely been made that a great revival of religion will bring a measure of spiritual compensation to the human race for the destruction and desolation now going on. Particularly in France and England, it has been said, faith will return. England will again become Puritan, we have been told, and France Catholic. Protestant Germany will once more be devout, and even in the United States the churches again will attract the masses.

We shall not venture to forecast the disappointment of earnest men and women who are finding comfort in these prophesyings, but as a fact of observation there is curiously little evidence, so far, that they are anything more than an assumption that the close association of war and religion in former times still holds good. It is noticeable that we hear almost none of the "improving" discourse that everybody indulged in a hundred or even fifty years ago. We are not day by day reminded that Providence is working out a mysterious design, or that God is punishing the earth for wickedness that could no longer be permitted to flourish unrebuked and unchastised.

But whatever may sooner or later be the effect of the war upon faith in supernatural agency, and upon religious devotion, it is apparent that a purely secular and practical sobriety of mind has already been produced as one immediate reaction, and there is every indication that it will have lasting consequences in popular habits and conditions of well being.

Frivolity and effervescent foolishness have nearly disappeared from France and England, and wherever they survive in a small way, they are severely condemned. Cheerful, wholesome recreation, on the other hand, is encouraged, as of value in maintaining the courage and morale of peoples plunged in sorrow and burdened with crushing costs. Luxuries and even comforts have cheerfully been sacrificed. The oldfashioned virtues of economy and thrift are again insisted on, and everywhere it has become bad form to give way to uncontrolled expressions of grief. Stoicism, courage, frugality, sobriety of mind and behavior, are everywhere socially demanded.

Thruout Europe the liquor traffic and the consumption of spirits have been brought under control. It is safe to say that the control will continue and be developed after peace is established. In other things also state control will, from this time on, diminish the human waste and wreckage that have discredited the long régime of social irresponsibility. Thru experience nations will know, what they have been slow to believe, that by discipline and a firm hand men can be withheld from idleness and worthlessness. Conservation and efficiency will be held obligatory.

And while scientific research in general is put back for a century, in certain fields it is being stimulated to the utmost. In surgery and in the prevention of disease strides have been made that two years ago would have been thought incredible. When the war is over, and economic production begins to get back to normal dimensions, it will be within the power of each civilized nation to stamp out nearly every one of the epidemic diseases which hitherto have ravaged populations more mercilessly than war itself.

It is not unwarranted, we think, to see in these moral reactions of the war evidence that the human race really has made progress in other than material ways. It has at least learned to look upon itself as responsible for conditions, and it sets about its task of improving them in a common sense, scientific and businesslike way. It is not too much to hope that in this way, and under a sense of responsibility, it will resolutely set about the task of preventing the unspeakable calamity of war.

ED HOWE IS INDIGNANT

ED HOWE of Atchison, Kansas, writes and publishes *E. W. Howe's Monthly, Devoted to Indignation and Information.* In the September number of this little sheet—rosy with indignation—he quotes our editorial of a few weeks ago on Dobson and his fellow writers of light verse. Under the heading "Fine Nonsense," he remarks:

> I venture to say the writer in The Independent does not do what he advises his readers to do: he wrote to give the notion of profound literary culture, and nine out of ten persons who read this fine nonsense, instead of having contempt for it, will feel ashamed that they know nothing of Dobson, or Prior, or Locker, or Praed. For we have all been brought up to venerate fine nonsense in every form. . . .
>
> I am sixty-two years old, and have been a busy reader all my life. I am something of a collector of books. And I declare in this public way without a blush that I have never read a line of Dobson, or Prior, or Locker, or Praed. And, what is more, I have never heard of these writers except in fine nonsense such as that quoted above: never have I heard these writers mentioned in conversation. And I confess again that the writer in The Independent has not caused me to wish to read Dobson, or Prior, or Locker, or Praed: on the contrary, I shall avoid them because of the recommendation quoted above. . . .
>
> I say I do not care for Dobson, or Prior, or Locker, or Praed. You may wonder how I know I do not, since I confess I have never read them. If these writers were important, I would have heard them mentioned in the course of my long life; if they were worthy of acquaintance, the people I have known would have mentioned them in my presence.
>
> The people should quit being bluffed by the writers and speakers of fine nonsense: let that which is above our heads, remain there.
>
> I am tired of fine nonsense, and make bold to say so. You are tired of fine nonsense; say so, and assist in starting the world on the right track.
>
> The people appreciate the best in everything, don't let a backroom critic persuade you that they do not.

This is disconcerting. It hardly matters that Ed Howe freely confesses that this is a case of indignation *without* information, for if anybody knows what folks in Kansas like to read and what is good for them to read it is Ed Howe himself.

But perhaps Kansas is too hot in the summertime for the reading of any sort of poetry. For ourselves, we believe that a great many folks who think they ought to like great poetry, and don't, would be happier and more sincere if they took to verse of this more careless sort which anybody with an eye for a whimsy can honestly enjoy—unless, like the sage of Potato Hill, he is interested only in the "important" poets. We also, are not so sage, and we like unimportant ones, too.

THE STORY OF THE WEEK

British Burdens The budget bill presented to the British Parliament on September 21 calls for the largest appropriations made in the history of the world and a heavier burden of taxation than the English people have ever borne. The total expenditure for the current year was estimated by Chancellor of the Exchequer Reginald McKenna at $7,500,000,000. Of this the navy costs $950,000,000, the army costs $3,575,000,000 and the advances to the Allies and dominions amount to $2,115,000,000. The average daily expenditure now amounts to $22,500,000 a day and is expected to rise to $25,000,000 later in the year.

To meet this enormous burden the Chancellor is obliged not only to increase existing taxes but to break with the traditional British policy of free trade. A duty of 33⅓ per cent ad valorem will be imposed upon automobiles, motion picture films, watches, musical instruments, plate glass and hats with the object of restricting imports, reducing consumption and raising revenue. The duty on sugar is increased a penny a pound. Postal and telegraph rates are raised.

But the chief increase is on the income tax. This has been raised 40 per cent and the exemption limit has been lowered from $800 to $650 so that even workingmen earning $13 a week will have to contribute. The tax rate is higher for larger incomes, and income received from invested funds pays nearly fifty per cent more than that received as salaries or wages. The highest grade of incomes, those over $500,000, will have to pay 34 per cent into the national treasury.

The Chancellor concluded his budget speech with the ominous words:

> We have trebled our debt, and doubled our taxes. If the war continues, these proposals cannot be our last word. Our great resource is the continued willingness of the people to bear their share.

The imposition of a tariff, admittedly in part for protection, has shocked the free trade sentiment of the country. Sir Alfred Mond, chairman of the Free Trade Union, has called a meeting to organize opposition on this feature of the budget proposals.

THE GREAT WAR

September 20—Bulgarian army mobilized. British Government asks Parliament for appropriations amounting to $1,500,000,000.

September 21—Heavy and continuous artillery duels in France and Belgium. Representatives of British Government in New York negotiating for a half billion dollar loan.

September 22—French aviators drop bombs on Royal Palace of Wurttemberg at Stuttgart. Russians retreat safely from Vilna.

September 23—Greek army mobilized. Russians regain Lutsk fortress.

September 24—New German internal loan of three billion dollars raised. Reinforcements of 140,000 men brought to Dardanelles.

September 25—British fleet bombards Zeebrugge, Belgium. German artillery shelling Serbian forts across Danube and Save.

September 26—Allied advance begins. French attack German lines in Champagne, taking fifteen miles of trenches and 20,000 prisoners.

The Allies Attack It was officially announced during the winter that the Allied forces would take the offensive in the spring, but the attempts to break thru the German lines made by the British at Neuve Chapelle and by the French at Souchez proved so bloody and fruitless that further efforts were postponed until a larger supply of explosive shells could be prepared. So spring and summer went by while the lines from the sea to Switzerland held almost where they were drawn a year ago.

Now, however, it appears that the Allied forces have undertaken a determined effort to expel the Germans from France and Belgium before the winter is on, or at least to make such a show of force as to compel the transference of a large part of the German troops from the eastern or southern fronts to the western. In anticipation of such an attack the Germans have lately been congregating reserves and forming new lines of trenches in the rear of the threatened sectors. The artillery has been playing almost continuously for days on the German entrenchments at numerous points along the whole front and their outposts have been carried by hand grenade and bayonet. North of Arras the British have taken Loos and the French Souchez. In the Champagne between Rheims and Verdun the French have crushed in the German advance line for fifteen miles, taking more than twenty thousand unwounded prisoners and thirty field guns.

The end of the line where it touches on the North Sea at Zeebrugge has been attacked by the British fleet several times during the week. The German naval base here was bombarded on Sunday morning by a British squadron consisting of five battleships and twenty-five smaller vessels. The German guns replied. Nothing is known of the result on either side.

The Trentino Campaign The efforts of the Italians to invade Austrian Tyrol confirm the lesson taught by the operations in France, Belgium and Gallipoli, that strong natural positions defended by artillery with plenty of ammunition are practically impregnable. At the end of four months of continuous fighting the Italian gains in this district are too slight to be perceptible upon an ordinary map. The Austrians are so strongly entrenched upon the mountains along the border that the Italians, notwithstanding their superiority in numbers and their undoubted courage, have made little impression upon them.

A few weeks ago we reported upon

© *International News*

ADVANCING IN OPEN ORDER OVER THE SALT LAKE

English troops who had just landed at Suvla Bay on the Gallipoli Peninsula marching inland over the dry bed of a salt lake a mile in diameter. They were stopped by the Turks not far from the edge of this lake and intrenched only two and a half miles from the shore

the authority of a Rome cablegram that the Tyrolean city of Rovereto had been evacuated by the Austrians and taken by the Italians. This evidently was a false report originating in the news that the Austrians had notified all civilians to leave the city in order to give the military full power for its defense. The inhabitants are mostly Italians and sympathize with the invaders rather than with the defenders. The Italian forces advancing from Asiago and Arsiero up the river valleys into the mountains have recently gained some hights upon the frontier about five miles southeast of Rovereto.

The Russian Retreat

The evacuation of Vilna was accomplished in time for the army to escape the clutches of the Germans who were advancing on the northern and southern sides to envelop it. The northern force had in fact got down behind the city so the Russians met it as they left the city and a battle was fought with reversed positions, the Germans facing westward and the Russians eastward. According to Petrograd reports the Germans lost 250,000 men in their recent operations in this region, but such estimates of the losses of an enemy are always unreliable and in this case highly improbable. We may, however, believe the statement that at one point the Germans, relying too much upon the Russian deficiency in ammunition, prest too close upon the retreating army and were met by a storm of artillery fire, reserved for the purpose, which mowed them down by thousands. The German reports claim comparatively few prisoners, so it is evident that the most of the Russian forces effected their escape, altho they are not yet out of danger.

In evacuating Vilna the Prince Tumanoff, the commandant, cleared the town of every scrap of valuable metal, not merely copper but lead, zinc, aluminum and brass, even electric wires and kitchen utensils. The announcements that the bells were to be taken away from the Roman Catholic churches aroused great excitement among the people and the women stayed all night praying in the churches as the bells tolled for the last time.

The armies of Field Marshal von Hindenburg are closing in upon the fortress of Dvinsk (Dünaburg) from the south. Field Marshal von Mackensen is continuing his advance in the Pripet marshes and has crost the Oginski Canal north of Pinsk.

Further south near the Galician frontier in the triangle formed by the three fortresses of Lutsk. Dubno and Rovno the Russians have had the best of it in the past week. They have not only defended Rovno but have regained Lutsk, the most westerly, so that only Dubno remains in German hands. These three fortresses defend the road to Kiev, so it is very important that they be held. That the Russians doubt their ability to hold them long is shown by the Petrograd despatches describing the evacuation of Kiev.

The agitation caused by the prorogation of the Duma has not subsided, altho the strikes which broke out in the munition factories have been suppressed. The congress of municipal councils and the congress of zemstvos or provincial assemblies which are meeting in Moscow have both past resolutions in favor of the reopening of the Duma and the appointment of a Government which shall have the confidence of the people.

DALLYING

Bulgaria and Greece Mobilize

The participation of the Balkan States in the Great War seems now imminent. First the Bulgarian and three days later the Greek governments issued decrees of mobilization. The Bulgarian forces called to the colors comprize twenty-six classes, including all men under fifty. This would, it is claimed by the Bulgars, put into the field 750,000 men. But probably no more than a third of that number will be put into the field at present. This is more than were used in the war against Turkey in 1912. They are said to be well equipped and have over a thousand cannon. Sixty thousand Bulgars from Macedonia responded to the order. Even those living in the region annexed by Serbia and Greece left their homes to enter the army which is designed to invade the country where they live. The Bulgarian troops have been massed upon the Serbian frontier where they may be used to strike at Nish, the war capital, or to cut the railroad leading to Saloniki, which would isolate Serbia from Greece and the Allies.

Before taking action King Ferdinand met in conference the leading men of all parties and the proposed policy was discussed with great frankness. It is said that the Opposition warned him that he was making a fatal mistake to take the side of the Central Powers and reminded him of the "criminal folly"

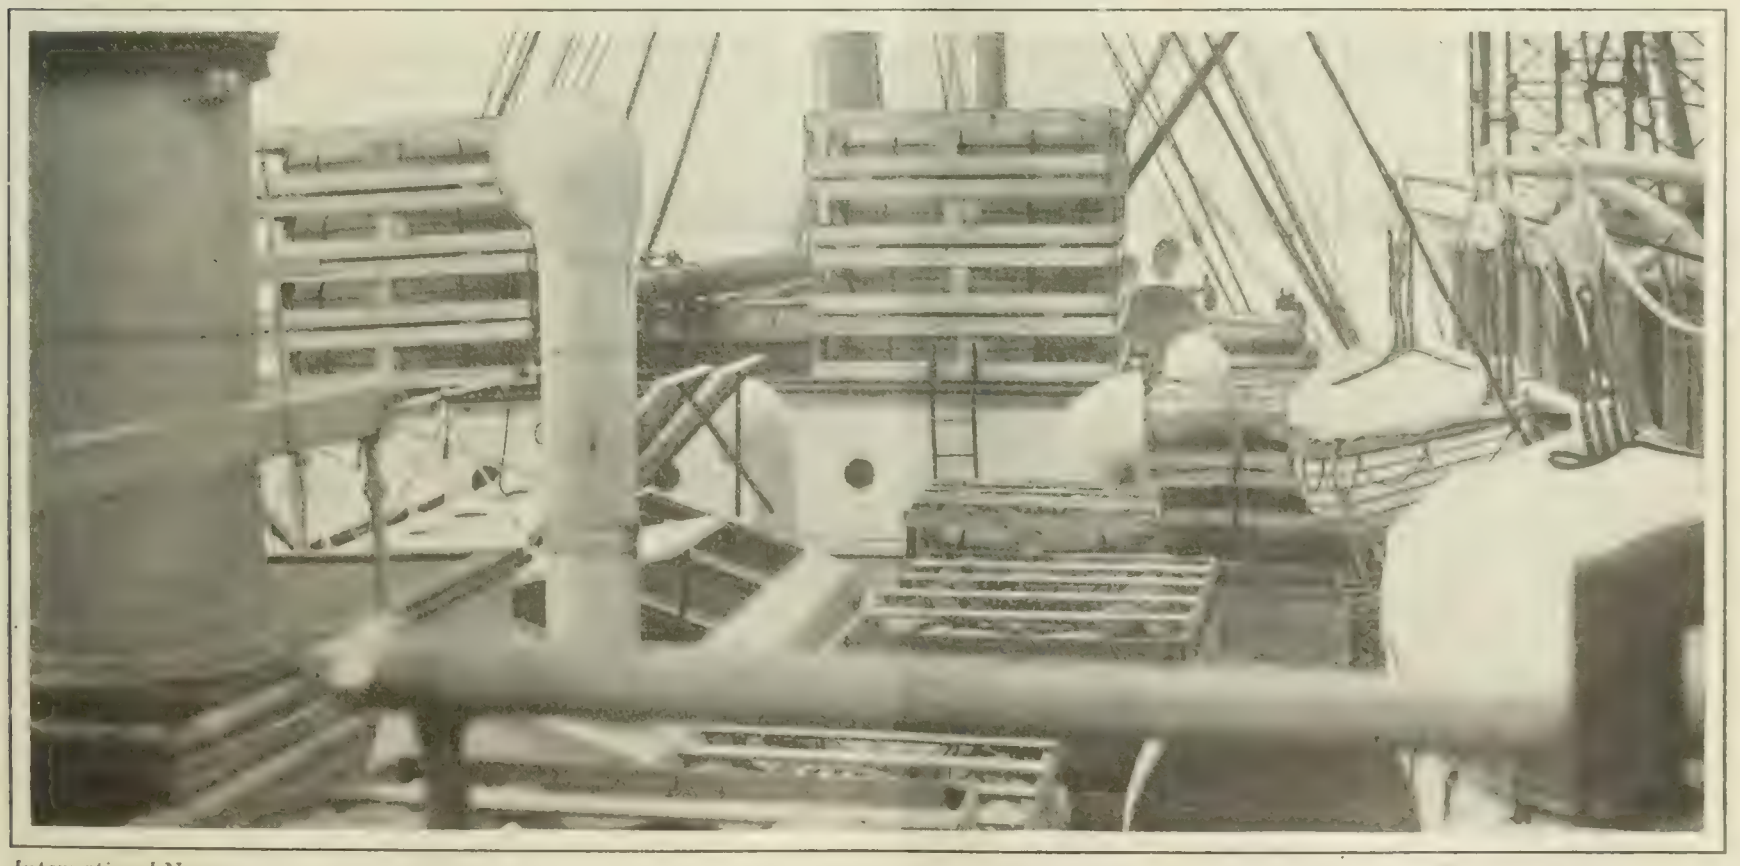
THE PUZZLE MAP OF THE BALKANS

If Bulgaria joins Germany she is likely to cross the western frontier to cut the railroad which connects Belgrade with Saloniki and to occupy the Servian town of Uskub, which the Allies must hold. But this would leave her liable to attack from Rumania on the north or Greece on the south. It was the policy of Premier Venizelos to placate Bulgaria by ceding the port of Kavala

Paul Thompson

A BATTLEFIELD EPITAPH WITH A "PUNCH"

of his treacherous attack on his ally, Serbia, in 1913. They demanded the convocation of parliament and the formation of a coalition cabinet, and threatened a revolution in case he persisted in his war policy. The King is said to have been incensed at their criticism. But since the decree of mobilization has been issued the leaders of the Opposition have declared their acquiescence. The Bulgarian Government announces that the mobilization does not necessarily involve war but is merely putting the country into a state of "armed neutrality" necessitated by the dangers of the situation.



Twenty classes of the Greek army which have been called to the colors should bring out 300,000, in addition to the 60,000 already under arms, if their real strength is up to their paper strength. All the railroads and steamship lines have been taken over by the Government and a moratorium will be declared. The chief strength of the Greek navy lies in the battleships "Idaho" and "Mississippi," now named "Kilkis" and "Lemnos," which were purchased from the United States Government a couple of years ago. It will be remembered that at that time the Turks regarded it as an unfriendly act on the part of our Government to sell its battleships to Greece when that country was practically at war with Turkey.

The Gallipoli Campaign

We have from members of the British Government renewed assurances that the fall of Constantinople is imminent and we hear new rumors that the Turkish defense is about to collapse; but what basis there is for these reports is not known to the public. From such details of the military operations as have been allowed to transpire there is nothing to indicate any change in the situation. The British have been gaining steadily on the Anzac and Anafarta lines, but their gains have to be measured in feet. The peak of Achi Baba, 709 feet high, which dominates the lower end of the peninsula, is still held by the Turks tho the aeroplanes have discovered the location of the batteries on the hight, and these are being bombarded by the British battleships.

A Berlin dispatch says that the Allies have been reinforced by 110,000 troops. These are represumably the Italian contingent which was reported to have been sent off on transports from Brindisi and Taranto for some unknown destination. The new troops have been landed at Mudros, on the Greek island of Lemnos, forty miles from the mouth of the Dardanelles. Altho Greece has been so far a neutral state the Greek islands of the Aegean Sea have been freely used for the past seven months as naval and military bases by the French and British forces.

The recent reinforcements will not do much more than cover the losses of the Allied armies. According to an official statement the British losses at the Dardanelles up to August 21 amounted to 87,630, of whom 17,608 were killed. The Australian losses amount to more than 20,000, and the casualties among the New Zealand, Indian and French are not reported. The total would exceed 110,000, tho no doubt many of the wounded have returned to the front.

A DECKLOAD OF CONTRABAND

A big shipment from Boston of life rafts for British warships

England's Workers The new Ministry of Munitions has control of 715 establishments employing 800,000 men. Twenty new shell factories have been established and eighteen more are under construction. Much of the work could be done by unskilled laborers or by women, but the union men in some cases refuse to allow their employment. Mr. Lloyd George, in the course of an eloquent address before the Trade Union Congress, after quoting from a union circular which counseled the men not to work at their full capacity, said:

> This means that there has been a deliberate attempt to restrict the output in guns, the making of which is vital to the protection of the lives of men at the front. The state has kept its bargain with labor by abolishing war profits in the munitions factories employing no fewer than ninety-five per cent of the workers engaged. Has labor shown equal readiness to fulfil its side of the agreement? The answer is a reluctant no. Unless the unions allow unskilled men and women to do, as far as they are able, work hitherto done by skilled men, unless they allow, in fact, an unqualified relaxation of the union rules, we are making straight for disaster. Every hour counts, every hour means death, every hour takes us further from victory and nearer defeat unless it is an hour spent by the nation in putting its whole strength into this great struggle for victory and freedom for the democracies of Europe.

Dumba's Delay At the end of the week Dr. Constantin Theodor Dumba was still in this country and still accredited to this Government as Ambassador. No reply to the request that he be recalled had been received from Vienna, and since it would be considered discourteous for the Government to act further until Austria-Hungary had sufficient time to make answer, Dr. Dumba's request for passports and a safe-conduct in order that he might sail on the 28th was denied for the time being. Ambassador Penfield, at Vienna, was instructed to make it clear that only a definite recall, and not a mere leave of absence, would satisfy the American Government.

Some of the papers taken from James F. J. Archibald have been published, including the memorandum outlining a plan of press and personal agitation to induce the Austro-Hungarian workers at Bethlehem and elsewhere to walk out, which Dr. Dumba commended to the attention of his superior with the objectionable remark that he thought the manufacture of war material could be strongly disorganized if not entirely prevented. The other published documents do not add materially to the case against the Ambassador, tho offensive references to the President and, inferentially, to Americans in general, in letters signed by Ambassador Dumba and Captain Franz von Papen, military attaché, added to the resentment felt against both for their previous indiscretions. One letter quotes the interesting proposal made by Ambassador von Bernstorff that Germany would be glad to sell to the United States such munitions as she bought in this country to prevent their being shipped to the Allies.

Paul Thompson

THE SERBIAN CROWN PRINCE

Prince Alexander was left in control when his father virtually abdicated, and is now in active command of the threatened army

Mr. Archibald has returned to this country and reiterates his assertion that he acted in entire good faith, since he had no reason to suspect that the letters he carried were in any way objectionable.

The Anglo-French Credit The close of the second week of daily conferences between the Anglo-French commission headed by Baron Reading, Lord Chief Justice of England, and the American financiers with whom they are negotiating for a loan of several hundred millions of dollars, has not brought the announcement of an agreement upon the terms or the size of the loan, but the impression is general in Wall Street that a successful outcome of the negotiations is sure. At the end of last week it was understood that at least two important points had been settled—that the loan would be for not more than $500,000,000, instead of the $1,000,000,000 which the British and French representatives had come prepared to ask; and that the underwriters would receive not more than one per cent commission. One of the vital questions still open is that of conversion of the short-term securities which will be issued to represent the loan, Lord Reading and his associates being unwilling to commit themselves, it is understood, to a statement of the rate of interest likely to be fixed for the long-time bonds for which the original notes may be expected later to be exchanged. The German opposition to the projected financing is active, especially in the West, and it seems altogether probable that the great loan will be taken practically in its entirety by banks and capitalists of the East. Foreign exchange rates fluctuated very little during the week, their steadiness reflecting the confidence that the vast credit would finally be arranged.

KING PETER OF SERBIA

The liberal of Bulgarian and German sympathies has gone, combating for his country, which has been able to hold off Austria and another [illegible]

Prohibition in South Carolina The South Carolina dispensaries have been voted out of existence and after January 1, 1916, the sale of alcoholic beverages in the state will be illegal. Prohibition was carried by a vote of about two to one.

This ends the experiment in control of liquor-selling thru state monopoly which South Carolina entered upon in 1893. The state bought alcoholic beverages at wholesale and sold them under various restrictions. The "dispensaries" were closed at sunset and had no bars, selling only bottled liquors. The profits were divided between the state school fund, the county and the municipality. The "Great Moral Institution" was fathered by Ben Tillman, then governor, and soon became a hotbed of corruption. Thru the appointment of many dispensors, special constables, and the like, the system became the framework of a state-wide machine, and there was unlimited graft in the purchase and handling of the liquors. After a legislative investigation in 1906 the state dispensary was abolished.

A county dispensary system took its place, under which many of the political evils were eliminated. Only twenty-four out of the forty-four counties adopted it, however, and since 1907 the number of "wet" counties had been reduced to fifteen. Most of these voted "dry" at the recent election. Of the large cities, Columbia voted for and Charleston against prohibition.

The state was almost ready for prohibition before the state dispensary was created, the lower house having twice passed such a bill, and the "wet" territory had been curtailed until 43 per cent of the people were living in prohibition areas. South Carolina is the fifteenth "dry" state, Georgia, Mississippi, North Carolina, Oklahoma, Tennessee, Virginia and West Virginia having preceded it in the South.

Rockefeller in Colorado

John D. Rockefeller, Jr., has been inspecting the works of the Colorado Fuel and Iron Company, in which he is heavily interested, in the neighborhood of Trinidad, Colorado, where the bloody labor war of 1913-14 took place.

His first week was spent in intimate investigation of all the activities of the mining camps and shops, the life of the workers, and particularly the working of the conciliation system, under which the men elect a complaint agent who lays their grievances before a representative of the company designated especially to handle these cases. He was told that the plan worked well. He walked thru mine galleries, handled a pick, and danced with miners' daughters.

Meanwhile the officials of the United Mine Workers were talking of securing his arrest, charging him with complicity in the killing of women and children at the Ludlow strikers' camp in April, 1914. A resolution inviting him to address the Colorado Federation of Labor in its annual convention was tabled after disorderly discussion. A committee of the International Board of the United Mine Workers invited him to a conference, and he was expected to meet them. In one conversation he remarked: "The Colorado Fuel and Iron Company doesn't care whether its men belong to the union or not." The union representatives were interested in the bearing of this statement on the company's policy. They claim that eight or nine hundred members have been refused employment and that affiliation with the union is punished by summary discharge.

Renewed Fighting in Mexico

Another serious clash between American soldiers and Mexicans took place at Progreso, Texas, thirty-five miles from Brownsville, on September 24. A band of seventy or eighty Mexicans, some of them in uniform, raided the post-office store and after firing on a squad of American troopers escaped over the river, while several hundred Mexicans intrenched along the bank covered their retreat with a heavy fire. One American was killed and the officer in command wounded. Several of the raiders were shot as they fled. It was reported that a trainload of troops from Matamoras, held by Carranza, had participated in the trench firing.

The situation on the border is thus practically unchanged. It has been established that some of the shootings have been provoked by Americans and petty officials on both sides of the river are suspected of profiting by the disorder thru smuggling and trading in refugees' goods. Carranza has sent General Jacinto Trevino to investigate conditions and probably to consult with General Funston. Meanwhile the 5000 American troops in the Brownsville region, under orders not to cross the river in pursuit of raiding parties, can do no more than check the frequent outrages as they occur. At the other end of the

A GAME TO GROW OLD WITH

Colonel Benjamin Nields, of Wilmington, eighty-four years old and still enthusiastic enough over golf to enter the Seniors' Tournament at Apawamis last week. There were fourteen starters in Class D, limited to men of seventy years and upwards

[illegible] frontier around El Paso, 44,000 men are concentrated, apparently to prevent Villista reprisals if Carranza is recognized.

The opponents of Carranza are renewing their efforts to discredit his claims before the seven diplomats meet again on October 9. In the extreme northern part of Sonora, near Nogales, General Maytorena, Villista, has defeated General Calles, Constitutionalist, and Villa is concentrating troops at Juarez in the hope of crushing the northern Carrancista forces. Torreon, which, according to Carranza reports, Villa has been evacuating almost continuously for two or three weeks, was still uncaptured by the Constitutionalists at last accounts. Altho Carranza has moved his government to Mexico City there has been much fighting in the nearby states, particularly Puebla, and even in the suburbs of the capital. The water supply is irregular, railroad service to Vera Cruz is frequently interrupted, and food is still lacking. Carranza has informed the American Red Cross that its work is no longer necessary, but its officials have issued a fresh plea for needed supplies.

Who Shall Be Recognized?

While the factions are fighting in Mexico a campaign of diplomacy and publicity is being waged in this country against the recognition of Carranza. Roque Gonzales Garza, a Villista who was elected provisional president by the convention in January of this year and had a checkered career of four or five months, came to Washington as a Villa delegate to the proposed peace convention, and made a statement predicting anarchy if Carranza should be recognized and Villa's soldiers (who number 100,000, he said) thrown on the country. He declared that the Constitutionalist forces and their opponents were about equal in military strength, and urged that the proposed conference should be held.

A more significant, because less directly partisan, communication was sent to the six conferring Latin-American diplomats by Manuel Calero, the last regularly accredited ambassador to the United States, and J. Flores Magon, both formerly members of Madero's cabinet. Recalling the "hateful dictatorship" of Huerta and repudiating alike the Constitutionalists, led by "old and corrupt dregs of the Porfirian régime," and the criminal Villa, they rebuked the United States for interfering in Mexico, and insisted that the law-abiding intelligent middle class should be allowed to work out the salvation of Mexico. They shrewdly insinuated that none of the South American nations represented in the conference was so secure that it could afford to set the precedent of foreign intervention in times of domestic disorder, and asserted that the military factions "would cease to be a scourge" if the United States would keep its hands off and prohibit the exportation of munitions of war. This is the program suggested by the "American engineer" in a recent number of The Independent.

FROM STATE TO STATE

CONNECTICUT: After many months of experiment by a group of men without legal organization a million-dollar corporation has been formed at Chester for the manufacture of a recently discovered black dye which, it is claimed, will form the foundation for aniline dyes of various colors and shades. The concern further claims to have turned out the first pure carbolic crystals ever obtained in this country, which is said to be of great importance to the dye and acid trade. It is announced that the banking house of August Belmont & Co. of New York is the fiscal agent of the company. The concern occupies what is known as the "yellow" factory, since the skin of the employees there soon turns to a deep yellow. But the company pays high wages and has an ever-shifting force of workmen.

DELAWARE: Mr. William S. Bond, a young engineer chemist of Wilmington, is experimenting with a new chemical compound for the purpose of absorbing the carbon dioxide in breathed air. He recently sat for nearly eight hours in a small air-tight box immersed in water and experienced no difficulty in breathing. The experiment, which was performed in the hydraulic laboratory of the Drexel Institute, Philadelphia, was witnessed by Captain Lloyd Bankson, United States naval constructor; Lieutenant D. N. F. Feditoff, assistant naval attaché at the Russian Embassy in Washington, and Prof. Abraham Henwood of Drexel Institute. Tho none of these would comment on it, it is said they all wished to investigate the matter further. Captain A. W. Grant, commander of the U. S. submarine flotilla, is said to be greatly interested in Mr. Bond's experiments.

ILLINOIS: President Edmund J. James of the University of Illinois promises that the eight new buildings provided for in the appropriation of $5,000,000 to the university by the Legislature this year will be completed within two years. They are: School of Ceramics, to cost $120,000; School of Education, $120,000; woman's residence hall, $120,00; addition to the natural history building, $75,000; addition to engineering hall, $75,000; addition to chemical laboratory, $150,000; administration building, $50,000, and vivarium, $75,000. After these buildings are paid for $212,000 will remain in the building fund, to be drawn upon as needed.

KENTUCKY: Lexington has been having a spirited contest over the efforts of Commissioner of Public Safety Walter Hunt to abolish the court day sales on Cheapside. These sales have been held on court days for nearly a century and while many merchants and livestock dealers are opposed to them a majority of the people seem to regard the time-honored practise as a good one. At these sales nearly everything from livestock to second-hand clothing, furniture, machinery and general junk is offered at private sale or by public auction. At last accounts it looked as if the Board of City Commissioners would compromise the matter by forbidding some of the least desirable sales.

LOUISIANA: New Orleans is to have a $400,000 two-mile speedway. A tract of 360 acres of ideally located land, fronting on Lake Pontchartrain, has been purchased. Ground will be broken at once, and the track is to be completed early in February. Mr. John A. Prince, originator of the board track speedway, who has built more than a hundred automobile tracks in the United States, will have charge of the construction. He says: "I have wagered $1000 that the track will be the fastest in the world and that Barney Oldfield, in a test to be made in February, will make the two miles in a minute."

MAINE: The packing of sardines, one of the most important industries of this state, is undergoing radical changes as a result of the Government bureau established in Eastport last year. This bureau, in charge of capable chemists from Washington, has done much to aid packers in putting up an improved article of food under sanitary conditions. It has had to contend with long-established bad habits of both fishermen and packers, but it is overcoming them. One of its hardest tasks has been to stop the packing of fish that have eaten "red feed," a floating substance which causes them to break in the packing and makes them unwholesome as food. However, many packers have learned that hard, whole fish bring better prices and aid in the establishment of good reputation. It is hoped that before long the label "Packed in Maine" will be a valuable asset.

MARYLAND: The Baltimore *Sun* recently closed a series of fourteen articles showing how, by discontinuing a large number of public offices, a great deal of money might be saved annually by the state without injury to the public business. From time to time offices have been created for deserving persons, but not discontinued when those persons died. offices created for good purposes have been continued after their usefulness has past, and a large number of offices are in existence the duties of which should be combined with those of other offices. Without political bias or criticism of office holders, the articles were convincing and informing. Not even the *Sun* itself was spared when the matter of public printing and advertising, of which that paper got a share, was considered. It went so far as to say that certain moneys paid to it for public advertising were wasted.

MONTANA: When the question of antiquity is broached Montana can raise her chin and offer an authoritative boast. In the latest of the Smithsonian Institution's reports Secretary Charles D. Walcott tells of a siliceous shale deposit which he found in the lower portion of Deep Creek canyon, southeast of Helena, where there are remains of crab-like animals suggesting in form our ordinary fresh-water crayfishes. "These fossils," says Dr. Walcott, "are the oldest animal remains now known, and the algal deposits which occur at intervals for several thousand feet below the shales containing the crustaceans, are the oldest authentic vegetable remains." It is also interesting that two types of bacteria have been found in a fossil state in the rock in association with the algae remains.

NEBRASKA: About ten years ago Nebraska began in earnest to make good roads. The process was simple. In most cases farmers were induced to make more or less crude drags and crown the roads bounding their farms—that is, build up a central ridge, sloping the sides away. Those who led in this enterprise are now finding much satisfaction in the fact that the roads which have been so treated for years (and most of those in the state have been) are so hard that they have stood the test of this year's extraordinary rains and uncommonly heavy automobile travel. After months during which many inches of rain fell nearly every day, the roads which have been repeatedly crowned are almost as hard and dry as asphalt roads.

NEW JERSEY: Among the notable improvements contemplated in Atlantic City is a deep-water harbor. According to City Solicitor Schimpf, it is proposed to acquire complete control of all property east of Maine avenue on the Inlet front and construct an immense deep-water basin where coasting liners in the passenger trade may enter. A plaza will form the land side of the basin and there will be a concrete sea-wall on the outer side to protect shipping from heavy storms. A sea-gate of imposing construction will be an ornamental feature of the comprehensive plan.

RHODE ISLAND: The Charity Organization Society of Newport is now housed in what has been known for more than a century and a quarter as the Vernon Mansion, tho it was built by Metcalf Bowler in 1758 and occupied by him for many years before it became the property of the Vernon family. Nor was Mr. Bowler of the least importance than any of the Vernons. He was a pronounced protestant against King George's direct taxation and was Speaker of the General Assembly for seventeen years. But it was during his occupation by the Vernons that the mansion became most famous as a social and political center. Here entertaining such people as Washington, Lafayette, De Rochambeau and many others high in Colonial and French circles. The society which now occupies the mansion recently published a history of it written by Mabel Lorain Stevens.

SOUTH CAROLINA: Two champion corn club boys from each of the forty-four counties of South Carolina are taking special courses at Clemson College at the expense of the Government. They will remain there a month, studying various phases of farm management and work under special instructors and demonstrators. Emphasis is being placed on the judging of cattle and other live stock, the pruning and spraying of fruit trees and topics pertaining to dairying. Thru W. W. Long, state agent of the farm demonstration work, a letter is sent twice a week to the parents of every boy, giving full details of his health and progress.

TENNESSEE: Great improvement is said to have been made in conditions at the Tennessee state prison and other correctional institutions under the new system of the Board of Control inaugurated by the present administration. The honor system now prevails at the state prison. For good conduct a prisoner may, on his release, be restored to citizenship by the Governor. There are three grades of prisoners. Every convict, on entering, is put into the second grade, to be promoted or demoted at the end of six months, according to his conduct. First grade prisoners are eligible to a special honor grade. Honor grade prisoners are allowed to work outside the prison without guards. They also get two months additional good time for every year they serve in this grade.

WEST VIRGINIA: The La Belle Iron Company of Steubenville, Ohio, has decided to erect the by-product coking plant which it has long had under consideration. Owing to lack of ground on the Ohio side of the river, the new plant will be located on the West Virginia side directly opposite the present plant. The West Virginia site has been owned by the company for many years. Some time ago oil was found there, and it is said the company has made many millions of dollars from it. The new plant, which will consist of nearly a hundred ovens of the latest type, will cost about $[illegible]. A bridge will be probably be built to connect the two plants.

WISCONSIN: Milwaukee has a new city directory which shows a shortage of about 7000 in the normal increase of her population. The directory contains 484,197 names. By multiplying by 5 the compilers arrive at the conclusion that the city's population is [illegible] an increase of about 60,000 for the year. The vote in 1911, compared to the total vote cast [illegible] Commissioner reports published a vote of [illegible] based on the 1910 census and the vote for general purposes, and [illegible] number should have a population of 470,000. The explanation [illegible] is that the Socialists [illegible] which practically wiped out [illegible] and increased [illegible] in comparison for the [illegible]

THE ARBITER OF BALKAN DESTINY

BY SYDNEY BROOKS

LONDON CORRESPONDENT OF THE INDEPENDENT

The eyes of the world are focused this week upon the man who by a curious chance holds the key to Constantinople and may by his own will thwart or facilitate the long cherished ambitions of four mighty nations. He has the power to precipitate three more countries into the conflict and possibly to determine the outcome of the Great War. The Balkan States have furnished plots for "Zenda" romances and comic operas innumerable, but none is stranger than the career of the princely millionaire and amateur ornithologist who has made himself Czar of the Bulgars and may aspire to the throne of Constantine. In the following article our English correspondent analyzes this enigmatical character and in our editorial pages we discuss his unique position.—THE EDITOR.

WHEN somebody sits down to write the inner history of the Balkan League of 1912, of the war that broke out among its victorious members in 1913, and of the infinitely tangled developments which for the past year and more have kept the Balkan States in an equilibrium of explosive neutrality and agitated inaction on the very edge of the greatest conflict of all time; when we, or our children, or our grandchildren are privileged to walk familiarly behind the scenes of these stupendous dramas, one figure in all probability will stand out supreme—Ferdinand Maximilian Karl Leopold Maria, King of Bulgaria. He was the hero of the great dash upon the Turks by the Balkan Powers; he was both the victim and the villain of its tragic sequel when the allies fell to fighting one another over the very body of their common foe; and on him and his ambitions and his desire for revenge the whole Near Eastern situation, so far as it affects the policies of the Balkan States, has really pivoted during the past fourteen months.

Until Bulgaria is satisfied neither Greece nor Rumania can make a move. If King Ferdinand had thrown in his lot with the Allies both Greece and Rumania would follow suit and Constantinople would be in their possession in a month. If, on the other hand, he joins with Turkey and the Germanic Powers, all the energies of the Balkan States will be consumed in another fratricidal war. He holds the key to the position and his aims are clear enough. He wishes to smash the Treaty of Bucharest, to incorporate the Bulgar-speaking districts of Macedonia that were taken from him after the Balkan war of 1913, to occupy Kavala, now in the hands of the Greeks, to wipe out the memories of the bitter and humiliating peace that his former allies constrained him to sign at the sword's point, and to recover the territories he was obliged to yield in the north to Rumania and in the south to Turkey. Until the fulfilment of those aims is guaranteed not only will he remain passive himself but he will continue to block the road to any action by his immediate neighbors.

I conceive King Ferdinand as by no means displeased with the opportunities thus thrown in his way, with the abnormal prominence and power they have brought him, or with the deferential attentions and solicitations heaped upon him by the Great Powers. It is the sort of game he revels in, not only because it ministers to his importance but because there are very few players more skilled than he. In his passion and aptitude for intrigue he is a true Coburger. He made a prodigious error in 1913 when grasping at too much he all but lost everything. That was the solitary mistake in a career of phenomenal and uninterrupted success. He has no intention of repeating it now. When he makes his decision—and it may be disclosed at any moment—it will only be after having measured all the possibilities and made very sure of his ground.

Thirty-one months ago all Europe was pondering a mystery that at once invited speculation and eluded it. Whose brain conceived the Balkan League? Who was it who saw that the hour had struck, that the general idea of the fighting strength of Turkey was mistaken, and that with a decisive and united push the Ottoman power could be toppled over? Who was the unknown Bismarck of the Balkans? Whose diplomacy was it that composed the inveterate jealousies and feuds that had hitherto kept Bulgaria, Serbia, Montenegro and Greece apart, and had made the very notion of a Balkan Federation for any purpose, warlike or peaceful, seem the idlest of dreams? And whose judgment was it that so nicely and accurately calculated the impotence of the Great Powers in the face of a determined front and the accomplished fact? Possibly the historian of the future may lift the veil and discover the true author and begetter of the Balkan League in some statesman or soldier whose very name is barely known to the Europe of today. If so, those of us who are alive then will smile with senile superiority and mutter the usual epigrams about the credulous fallibility of history. For the opinion has already crystallized into something like a conviction that Ferdinand was the man who spun the webs and that, so far as the four-cornered onslaught on the Turks was conceived, designed, completed and launched by a single mind and a single will, that mind and will are to be looked for under the crown of Bulgaria's King. True, in a moment of madness he so mishandled his triumph that it became his undoing, and seemed only to have created the League in order to be destroyed by it. But nothing can impair the fact that for one brilliant hour he raised Bulgaria by diplomacy and war to the undoubted primacy of the Balkans.

To Ferdinand himself probably no reputation could be more pleasing than that of a successful arch-plotter. His mother, the Princess Clementine, the daughter of Louis Philippe and one of the ablest women of her day, with all her father's shrewdness and a good deal more charm and generosity than he ever possest, dedicated her son almost from boyhood to the study of statecraft. It is said that a gipsy prophesied to her that having come into the world as the daughter of an uncrowned king, she would leave it as the mother of a crowned monarch, and that from the moment of his birth she fixed upon Ferdinand, her youngest son, as the one who would fulfil her hopes. Against all reason and probability she never wavered in her faith that her adored child, tho an insignificant Coburg princeling, would one day be admitted to the company of monarchs. For this future she trained him with inflexible resolution, sending him on persistent tours round the capitals of Europe, having him instructed in a variety of languages, insisting that he should take to soldiering, for which he had no natural inclination, and that he should master some trade or craft—he chose the curious hobby of bird-stuffing—and perpetually currying favor on his behalf with a vast array of exalted relatives.

It was no easy work, even for the cleverest princess of her time. Ferdinand developed early and has never lost a genius for unpopularity. His strongest passion then as now was a cold, malicious relish in the scandal

FERDINAND MAXIMILIAN KARL LEOPOLD MARIA

and tittle-tattle of courts and council-chambers. Perhaps no ruler who has ever lived has made a more careful study of the weak points of the statesmen and officials beneath him. His *dossier* of their frailties and vulnerable points, of their backslidings and personal habits and relations—a *dossier* collected by an indefatigable army of private spies—has been one of the bulwarks of his rule in Sofia. By the time he was twenty Macchiavelli's own "Prince" was nothing to Ferdinand. A thoro training in diplomatic finesse and in the regal art of using words to conceal not merely thoughts but a state of intellectual nudity, formed the basis of his education for kingship.

But for all his mother's assiduity nothing in the early eighties seemed more unlikely than that Ferdinand, who had not the shadow of a claim to any crown whatever, would one day be called upon to show his capacity for rulership. There were no thrones going a-begging; Europe was disappointingly tranquil; and it looked as tho the young Prince had nothing before him but a life of unamiable discontent as an officer in the Austro-Hungarian army and as one of the hapless group of unemployed Highnesses. Then suddenly Alexander, Prince of Bulgaria, was kidnapped, the principality was left without a ruler, and Ferdinand's chance had come. The Bulgarian emissaries who promptly set forth to scour Europe for an occupant of their vacant throne had not thought of Ferdinand as a possible candidate. He had to suggest himself. Nobody else would take the job. Bulgaria at the time was like a red-hot iron which was hurriedly dropt by every aspirant for a throne. The principality was in a state of chaos; the army was honeycombed with conspiracies; and any ruler who stepped into the absent Alexander's shoes except under the auspices of Russia could be fairly certain that he would have all the Great Powers arrayed against his government, and that in all human probability he would be quickly assassinated. Ferdinand stipulated that the consent of all the powers should be forthcoming before he entered Bulgaria as its ruler. Not a power, however, would move in the matter; and after waiting three weeks Ferdinand waived the condition he had imposed, took his courage in both hands, left Austria secretly, sailed down the Danube, and in his twenty-sixth year (August, 1887) reached Sofia.

His position seemed an impossible one. He had all Europe against him. Russia contested the legality of his election and declared that he was merely Prince Ferdinand of Coburg, *de facto* but not *de jure* ruling the Bulgarians. Turkey insisted that his accession was contrary to the provisions of the Berlin Treaty. France, Germany and Austria all stood aside. One power and one only, Great Britain, looked favorably on the Prince. Lord Salisbury upheld the right of the Bulgarians to choose their own ruler and warned both Russia and the Porte that any foreign occupation of Bulgaria would lead to the gravest complications. England's solitary voice saved the Prince, and possibly also the peace of Europe.

But even so Ferdinand found himself little more than a figure-head. The real ruler of Bulgaria was Stambouloff, the inkeeper's son; and he and Ferdinand, the rough, curt, remorseless Slav and the vain, cultured, half-French, half-Austrian aristocrat, represented the opposite poles of humanity. It looked for a while as tho Ferdinand had only left his old life and incurred the displeasure of all Europe to serve as Stambouloff's puppet. All the arduous training in statecraft was brushed aside as of no account; he was not consulted; Stambouloff decided everything. And while the statesman thought only of Bulgaria and of how to protect her against Russia and the Porte, the prince thought only of how to secure the formal recognition of the powers and above all of Russia. While Stambouloff was reorganizing the army, conciliating Rumania, meeting and foiling an endless succession of plots and intrigues, and trampling out the embers of sedition, Ferdinand was building up a court with a ceremony even stiffer and more punctilious than that of Vienna, was wheedling every power in turn for recognition, and was forming that private information bureau which has since developed into the right arm of his Government. A breach between the two men was sooner or later inevitable. His marriage with the Princess Marie Louise and the birth of a son strengthened Ferdinand's position, and in 1894 he felt able to dismiss his rugged and domineering minister. A few months later Stambouloff was murdered in the streets of Sofia, and, rightly or wrongly, Europe has never quite acquitted Ferdinand of complicity in the crime.

For the past twenty-one years Ferdinand has been the absolute ruler of the state. At the moment of his accession no one would have given him six months' purchase of his throne. Yet today his throne is as secure (tho that, I agree, is not saying much) as any in the Near East or in other parts of Europe. In the face of incredible obstacles he has achieved everything on which his heart was set. He began as an unrecognized prince; he is today a fully-fledged king. He found a hostile Russia and he has forced its appreciation. When he came to the throne Bulgaria was the shuttlecock of Near Eastern politics; she is *now*, as I have said, the pivot of the whole Balkan situation. He found her a vassal and tributary principality; he has raised her to the dignity of a sovereign and independent state. He found her in a condition of partial subjection to the Turks; he not only liberated her, but has completely thrashed the Turks on the battlefield. Under his auspices, and very largely owing to his inspiration and his power of hard and intelligent work, railways and schools have covered the country, bringing with them a vast influx of prosperity, and the army has been raised to a state which in 1912 won the admiration of the whole world. No Balkan state has more fully justified the wisdom of the policy of freedom from Turkish rule. Her people have become penetrated with a glowing pride and consciousness of nationality and in all the elements of national well-being are today incomparably better off than when Ferdinand began to reign.

A sovereign who has accomplished all this is no comedy king. He has the real stuff of leadership in him. And Ferdinand, remember, is still under fifty-five. High as he has climbed, he may climb higher yet. As a ruler and a statesman, indeed, he appears capable of anything except of the art of making himself liked. The simple and democratic peasants over whom he rules feel his strength, acknowledge his intellectual quickness, are grateful for what he has achieved, and submit themselves to his guidance; but they are very far from loving him. Cold, cunning, secretive, the author of many deeds that do not bear looking into, a ruthless exploiter of the worst parts of human nature, a man of bitter, brutal, scoffing temper and equally disfigured by venom and vanity—there are those who declare the keynote of his whole character to be an utter lack of honor and principle. And there are those, too, who declare that at bottom he is an artist even more than he is a statesman and who praise his ready sensibilities, his vivacious talk, and his elaborate, perfumed manners. But no one has ever pretended that he is liked. He stands alone, a gifted, sinister, enigmatical figure. Yet, such as he is, he more than any man at this moment is the arbiter of the destinies of the Balkans.

London

THE WORLD OVER

Hello in Chinese

A telephone exchange in nine dialects, which serves about 10,000 subscribers, eighty per cent of whom can neither read nor write; it sounds like a Chinese puzzle—and it is.

Loo Kum Shu manages the exchange, which does business in an old quarter of San Francisco, near Portsmouth Square. He employs four Chinese girls, who combine Chinese costume with English speech and Oriental patience with Yankee ingenuity. Part of their job is to remember the names and numbers of all the subscribers, since many of them cannot read a directory, and to be able to connect at once when their countrymen call up and ask for Wing Loo, the one-eyed washerman, or Hop Shu, the rat-catcher, or Sam Kee, the samshu merchant. They do it, too, without a mistake.

Good Hotels Cheap

The demand for hotels that will furnish clean and decent lodgings at the cheapest possible price is an ever-growing one in the big cities. And the possibility of meeting it on a purely business basis, without charity or philanthropy, is just beginning to be tested.

Chicago led the movement by building the first Dawes Hotel, a memorial by Charles G. Dawes for his son, Rufus Fearing Dawes. The idea proved thoroly practicable. During the first year of its operation 180,000 guests were entertained and 60,000 meals served. The cost of a bed, including a shower bath, clean night-gown and slippers, and the use of shaving and other toilet essentials was ten cents. A nutritious, well-cooked meal could be gotten for five cents.

Now Boston is to follow Chicago's good example and has already begun to build a Dawes hotel to be run on a similar plan. A four per cent return on the money invested is guaranteed and profits are limited to that amount by the charter of the association. Prices for food and lodgings will be kept to the minimum—as some quotations from the bill of fare will show:

"Meat hash and beans, 3 cents.

"Coffee, with milk and sugar, 2 cents.

"Roll, 1 cent.

"Macaroni and bread, 3 cents.

"Mutton stew and bread, 3 cents.

"Soup, with bread, 2 cents.

"Doughnut, 1 cent.

"Baked beans and bread, 3 cents.

"Pie, all varieties, 3 cents."

But there is no suggestion of charity about the enterprise. Prices are high enough to make the hotel pay.

As soon as the Boston hotel is opened it is expected that arrangements will be made for the erection of another similar building in some other large city, so that ultimately there will be a series of Dawes hotels in all the big cities of the United States. It is hoped that a development of the plan may be the building of hotels of the same kind offering good beds and meals to women at a similar scale of prices.

Backing a Train

Why is it harder to back than to pull a train? This question can be answered by analogy. It is a difficult feat to balance a walking-stick on the end of the finger for the reason that the base of support has to be constantly shifted in order to keep it approximately under the shifting center of gravity.

THE RUFUS DAWES HOTEL

This illustration serves to indicate what an engine has to do when it backs a train of cars along the track. If one tries to push a cart along the roadway he will find that it takes a lot of steering to do it. In the case of the railway cars there can be no such intelligent steering, and since the push is delivered only thru the coupling, which cannot be moved to the right or left, it happens that the necessary steering has to be done by the rails, with additional flange friction.

If the balancing of one stick on the finger be a difficult task, the balancing of a second on top of the first would be still more difficult, and when the analogy is applied to the case of a long train it is easy to see that in order to keep the backing train straight without the aid of the track and flange friction the engine would have to do such an amount of steering as would be quite out of keeping with its dignity as a steady-going locomotive.

A City's Birthday Party

In planning to celebrate in 1916 the 250th anniversary of her founding, Newark is graphically illustrating her "different way." For Newark's festival will be first and foremost for herself. Not a world's fair, not a tourist-baiting enterprise is this; but a real family function to which the goodly folk of the neighborhood will also be bidden. Possibly it is this very feature which will make the celebration doubly interesting to the visitor.

A score of years ago Newark was content to plod along in purely material prosperity, careless of the rather uncouth view she presented to the world. But suddenly, as it would seem, she awakened to a realization of her shortcomings. The great group of Prudential Insurance Company buildings, the splendid new City Hall and the beautiful new Court House have doubtless furnished incentives for the improvements in other directions. The streets have been paved and many other municipal betterments accomplished. So the celebration will come at a fitting time to signalize the new order.

It is appropriate that Newark should exhibit particular concern about the religious features of her celebration, and there will be most elaborate exercises centering largely around the old First Church, which was the seat of government in the old days. Of course

FREE MEALS FOR THE MIND

the schools are busy with programs which include extensive historical studies, the staging of important events in municipal life, the showing of past and present educational methods and a multitude of other details. One of the chief features of artistic interest will be a large historical pageant which will be presented in a great amphitheater. There will be much other pageantry—parades in the public streets, games and folk dancing in the public parks, calculated to display the native characteristics of Newark's polyglot population.

The industrial exposition which is planned to give a hint of Newark's business activities will be unique in several respects. For one thing, it will be a comprehensive affair, arranged to display all the multitudinous products turned out by the city. There are over 250 distinct lines of manufacture in Newark. Special automobile tours have been arranged, so as to show to convention delegates and other visitors the many interesting features of the city and the rare beauties of its residence sections.

The celebration, however, is not to be merely transitory and ephemeral. Newark is to have a permanent memorial in the form of a great building, calculated to cost $1,500,000, centrally located, architecturally beautiful, with a spacious auditorium for music festivals and other great gatherings and with rooms for the Newark Museum of Arts and Sciences and other educational institutions. It will be the city's birthday gift to itself and a center for the years to come of social, artistic and community activities.

Safe and Sane Fun

Swings, slides, teeter boards, wading pools, sand boxes and a merry-go-round—all used to their utmost capacity in the children's playground—are part of the equipment of one large Detroit factory. The streets in its vicinity are filled with traffic and the ordinarily harmless games of tag and "my ol' cat" when played under these conditions were turned into games of chance, with the odds decidedly against the children.

So Mr. J. Walter Drake decided to utilize the vacant lots of his factory for a neighborhood playground and give the children a chance to have their fun and at the same time substitute instructive good times for the dangers of the street games.

The playground is under the supervision of the city recreation committee, which furnishes a man and a woman director. They organize and guide the play and also give special instruction in all kinds of safety first methods.

Two or three hundred children have the time of their lives there every day and the traffic officers estimate that accidents have decreased at least one half since the playground was opened.

ALL ON THE MERRY GO-ROUND

THE HOME OF A QUARTER OF A MILLION BATS

Municipal Bats

Mosquitos take warning! For one city at least is mobilizing an army of defense to put the whole mosquito horde out of existence and has erected a Municipal Bat Roost as headquarters for its guard.

That bats will rid a whole community of mosquitos—thereby eradicating malaria, joss sticks and a large amount of bad temper—is the discovery of Dr. C. A. R. Campbell. Both Italy and Austria have put his theory into practise and Japan is studying it further.

But San Antonio is the only American city to recognize officially the value of bats. It has even past an ordinance which forbids any one to kill them; and it provides them with a home maintained at the city's expense.

The bat roost is sixteen feet square and will house about a quarter of a million bats.

It is placarded with an announcement that "This structure is a bat roost, a home for bats, and belongs to the City of San Antonio. Bats are one of man's best friends, because they eat mosquitos, and mosquitos cause chills, fevers and other diseases. By protecting bats you protect your fellowman. All persons are warned not to in any manner disturb this roost, under penalty of the law."

A Submarine Transport

One of the most peculiar vessels ever designed recently entered the port of New York coming from Bordeaux, France. It was built for the special purpose of rapidly transporting an entire submarine boat long distances. The submarine enters an opening in the bow of the transport large enough to enclose it with its crew. This opening is then closed much as a dry dock is shut.

With the submarine thus safely ensconced the transport makes a quick run to her destination. The opening is uncovered, the water rushing in enables the submarine to back out under its own power and it slips into the sea again ready for its mission of destruction miles from its former station. This steam transport is the first of three vessels of this type to be constructed for the French nation and is aptly named the "Kangaroo."

Rats

No less an expert than *The Journal of the American Medical Association* estimates that there are 300,000,000 rats in the United States, whose total annual cost to the people is $360,000,000. Of this sum $100,000,000 measures the amount of grain consumed, which is enough to feed one hen for every man, woman and child in the nation. And all this does not include the death and destruction caused by bubonic plague, of which the rats are known to be the chief disseminators.

MOLOCH: A PLAY OF PURPOSEFUL HORROR

AT last a great peace play has been written. A woman did it. It was a woman also who wrote *Lay Down Your Arms*, the greatest of all peace novels.

The author of the play is Beulah Marie Dix of Brookline, Massachusetts. She has called it "Moloch." The title suggests something monstrous, appalling, insatiable. It is no "ripping good" melodrama of heroism, bugle calls and brass buttons. It is too real for that. Rather it is a transcript of war void of sunshine, humor or optimism. It proceeds relentlessly to its grim and grewsome end. No Greek tragedy ever more inevitably demonstrated the nemesis of Fate. It is the story of misery unrelieved, of the blasting of all moral and physical life thru war.

Nevertheless the play is written with such rare sincerity, it is so restrained and unhysterical, so modern, so human, that it makes other peace plays seem unreal and amateurish and turns Hudson Maxim's much advertised moving picture thriller, "The Battle Cry of Peace," into an absurdity. No lesson is obtruded. It is simply a photograph of hell on earth.

The play is impersonal. Are the warring nations England and Germany? We are not told. "The foreigners" fight "our men."

The characters are: "A Man"—the ideal husband and exemplary peace-loving citizen. Later as an officer he tortures his prisoner, shoots one of his men who refuses to charge and becomes a drunkard. "His Wife"—the typification of all that is womanly and Christian. Later she aids and abets suicide. "His Brother"—a fine young soldier. Tho crippled for life, the war teaches him no lesson. "His Uncle"—a professor of international law who holds till the end that scraps of paper will be held inviolable. "His Mother"—a dear old lady who has been thru two wars and cannot face a third. "His Dear Friend"—a young foreign physician engaged to his sister, whom he comes to hate and finally tortures. "His Faithful Servant"—who later murders the officer quartered in his house.

THE AUTHOR, MRS. BEULAH MARIE DIX-FLEBBE

After the war is over he returns to his ruined home a mental and physical wreck. And yet all the strife, all the misery and all the suffering have gone for naught, for in the epilog two years later the former enemies and his country are now friends and both nations are allied to fight his country's former allies. Just as the curtain goes down the bugle is heard summoning his people to arms for the new war.

And then "The Man" says to his weeping women folks:

> Stop crying! There's an ocean of tears been shed already—an ocean of blood. Doesn't make any difference. We're fighting still. No end to it. God's a joke. Got any brandy, Kate? I'm dead tired. Down and out.

In times of peace and plenty an agonizing play of this kind could not be recommended to healthy-minded people. Audiences would not stand it. But now the Great War is upon us. Twenty-five thousand men a day are dying. Millions of women are numb with weeping. It is no time for the people of a great neutral nation to shrug their shoulders or dance while Rome burns. It is good for the people of the United States to suffer vicariously with their stricken brothers and sisters of Europe. Thus and thus only can a loathing of all war be engendered that will prove potent enough to rouse our people to help destroy "the greatest scourge of mankind."

Beulah Marie Dix has called to her aid the most vital and persuasive of all the arts. She has shown her countrymen the Moloch monster as he is, naked and hideous.

THE PASTORAL PRAYER

BY JAMES CHURCH ALVORD

I stood behind my pulpit yestermorn
And gazed upon the faces gathered there,
Stretching my hands to bid those souls to prayer
By dread of death, by doubts and passion torn,
Whose fears and falterings thru my heart had gone—
Fair girls sin-smutched, lads tangled in the snare
Of gold, sad fathers over-worn with care,
Wan mothers drooping empty arms, forlorn
And wizened failures on the road of life,
Men sheatheless, songless at the close of day.
I lifted tragic arms above the strife
I cried to Him who is the Truth, the Way:
"I cannot bear their burdens—I am man!"
From Heaven the words came dropping, "Lo, I can."

A WAR TIME MIRACLE AT EDDYSTONE

THE STORY OF A MUNITIONS PLANT THAT BREAKS ALL RECORDS FOR EFFICIENT CONSTRUCTION

BY DONALD WILHELM

FIFTEEN miles from the City Hall, Philadelphia, four months ago, at North Eddystone, there was a tract of fifteen acres of land. On that tract there were a row of locust trees and three houses and barns—stone houses and barns with wide, old, old chimneys and plastered sides.

On May 8 a field general there on those fifteen acres received word: "Go ahead." This field general, the plant engineer of the Baldwin Locomotive Works, and three assistant engineers, ran a line to the middle of those acres and drove a stake. They ran other lines, drove other stakes.

And then things began to happen.

A company of sappers arrived and blew the locust trees and the houses and the barns clear off the map. Almost miraculously an army of workmen had thrown up trenches, in a day or two an army vastly bigger was occupying that field and there were steam shovels puffing, pile drivers thumping, donkey engines wheezing, long armed cranes snatching huge burdens from loaded cars. The word went round that the Baldwin Company was after the world's record for fast building.

Three months went by, plus a month of rain, and now there is a building—the Remington Arms building — covering those fifteen acres. It is as high as a six or seven-story office building. It is the hugest thing of its kind, it is said, under roof—a glistening mountain range of glass and tile and steel massed in a heap that hides the town beyond.

Gary, the city by the lake, rose up from the lake almost in a night. But a half dozen of Gary's biggest buildings—if memory serves aright—could be packed into this building. One unit of this huge structure is big enough in floor space for a world's series game—big enough for a national G. O. P. convention—and there are thirteen such units massed against one another under one roof that sparkles like a sea beneath the sky.

And this mountain range of a building is only one that is springing up at Eddystone. This is for rifles. There is another—to make shrapnel. Rumor has it there is to be a third.

The other—the plant of the Eddystone Ammunition Company, a Baldwin corporation, is like a huge sea monster climbing up from the Delaware to try its legs. It is getting its footing on swamp land that nothing except drainage and concrete piles ever could steady. It will be like the Remington building in construction, and the same as the other Baldwin buildings at Eddystone—with hollow tile sides, reinforced concrete tile roof, glass everywhere to the limit of practicability. It is different in shape. It has merely three units. And it will cover not 15.03 acres, like the Remington building, but instead 14.8 acres. Instead of having 37.72 acres of floor space throbbing with relatively small machines, it will have merely 1,296,250 square feet, which is space enough, by the way, for just about all the voters of the Progressive ticket in 1912 to assemble.

Samuel Vauclain is the Gary of Philadelphia. He is the master builder. He has broken ground for a new epoch in the history of building, shown the East a thing or two and shown the South a great deal more. He is the maker of Eddystone; that is why he wins the pseudonym of "the Gary of Philadelphia."

Yet Mr. Vauclain's office is not at all like Judge Gary's. It is a yellow, inconspicuous little corner of the Baldwin offices in Philadelphia. In it one can hear the dull throbbing of not very distant pneumatic hammers in the boiler shops a few hundred feet away. But he is vice-president and general manager of the Baldwin Company, which has a capital of forty millions of dollars. He is gray, but vigorously gray.

By dint of his business acumen, for the most part, an army of skilled American workmen numbering between thirty-five thousand and forty thousand—and that means a city of a couple of hundred thousand souls—will gradually be poured into all the empty spaces all the way from Chester to City Hall. They will go to Eddystone on a special line of swift company boats and on special trains routed over three major lines. Part of this army of workmen are already in the Baldwin shops at Eddystone—which shops, by the way, have for months been making shells. But even in booming times the company hires at most only 19,000 in all its plants East and West. And hard times hit railway building operations hard and meant the discharge of thousands of Baldwin employees. And industrial conditions in all Philadelphia, after a fashion, can be gaged by Baldwin conditions because the Baldwin Company is the biggest in Philadelphia. All this is why Philadelphia would like a week-end off in which to immortalize Mr. Vauclain and his engineers.

Mr. Vauclain had built enough locomotives for the Russian Government in years bygone to think, when the war broke out, that the Russians might permit him to make a few shells. He struck out for Europe; he went to Russia once, then a second time. He came back and set out to build the phenomenal Remington building. Out of sheer business strategy, in other words, he got, thru Morgan & Company, contracts that warranted both new buildings at Eddystone. The Remington Company needed room; it did not wish to duplicate its plant at Ilion, New York, or at Bridgeport, Connecticut; and it could not build in half the time the Baldwin Company could, anyway. In their building the Remingtons will make, when going full-tilt, a million and a half rifles a year, and they are installing well ahead of schedule time machines for making the first lot of two million. For at least two years they are to occupy their building and for every rifle they make they are to pay the Baldwin Locomotive Works a premium in addition to their rental.

In the second building, on the banks of the Delaware, the Eddystone Ammunition Company will make shrapnel at the rate of twenty thousand rounds a day and the United States army officer in charge will test all that goes to make up the two and a half million rounds in the first lot on a military reserve five miles long already engaged down the river.

When the war is over and Mr. Vauclain will have proved himself perhaps one of the national heroes who will have stocked United States magazines that are not altogether yet built, the Baldwin Company will take those two huge buildings and leave the very heart of Philadelphia. The company will, in short, not only have supplied magnificent plants for two huge ammunition concerns, but it will find itself possessor, not only of a great cash profit accruing from ammunition business and from rental, but also of the largest and most complete locomotive plant in the world—and this without cost.

WHERE THE EDDYSTONE AMMUNITION COMPANY TURNED A CAT-TAIL SWAMP INTO A

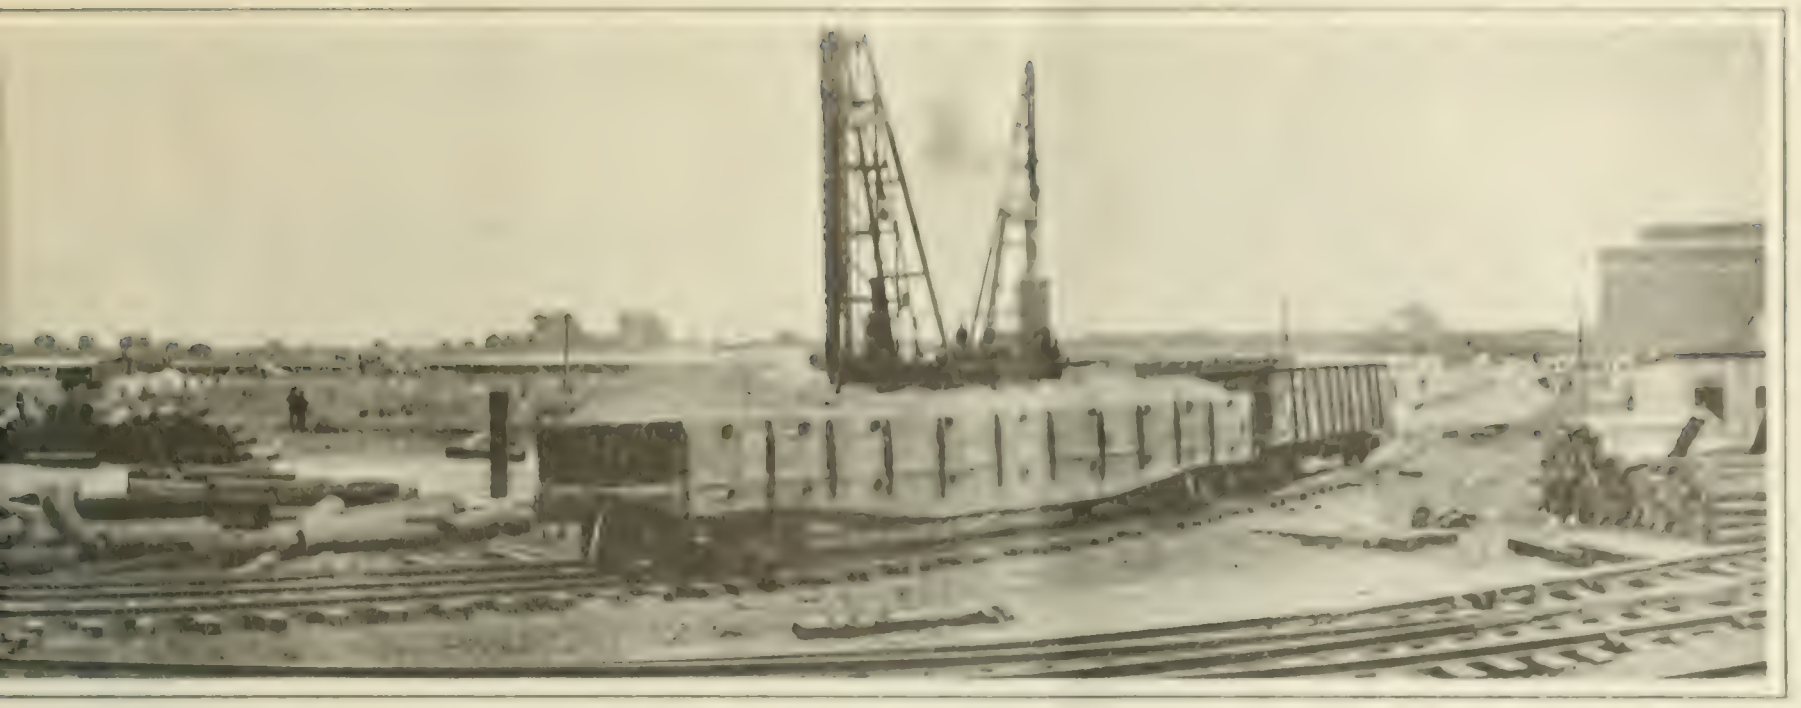
"We will, in fact," Mr. Vauclain says, "be making ammunition in those plants at least for five years." This is taken to mean, not that the Great War will last five years, but rather that this nation and the other nations will manage between them to keep these plants going thru all that time. This may be taken as the opinion of one very keen judge of business affairs that the tide against armament in this country has turned, and is running like a torrent in a direction quite new.

And there are other considerations brought to mind by this, the miracle city. Some of these are of interest to business men, some are of interest to the nation at large, and some are full of the magic of speed.

Ordinarily, in the usual course of things without the war, these buildings at Eddystone, like many others that have sprung into existence for the making of ammunition, would hardly have been built within ten years or so, and even tho they were started probably a year or two would have elapsed had the most energetic of contractors been building them. And yet, in spite of the phenomenal record the Baldwin Company has thus far made as builders, tho the Remington plant is in part operating this month, it will not reach maximum efficiency for fully a year.

There is a very patent lesson here for the nation. Standing there in the shadow of that mountainous roof of the Remington building, one is brought to the question, with memory of things congressional in mind: "If it takes a year and three months for an organized concern in a new shop to reach highest efficiency in the making of rifles; if it takes three months of actual building time for miracle makers like those at Eddystone to build a plant in which such a rifle company could set to work, how long would it take this Government, tho an enemy were hammering at the gates, to get appropriations, to get bids and grant contracts, to build and set going such a plant as either of these?"

There is an answer perhaps to this question, there is a lesson perhaps for all future builders, in these buildings. When the verbal order "All right—go ahead!" was past from Mr. Vauclain to Mr. Converse, not a single contract had been signed, not a single bid had been asked. It was not till three days later that contracts were signed. And then they were signed in revolutionary—and certainly not in Washington—fashion. "Time," said Mr. Vauclain, "is the essence of this operation. We haven't time to fiddle with bids."



And then Mr. Converse opened fire on a dozen great manufacturing concerns: "You will furnish us steel—10,263 tons of it, say,—at this figure."

The figure was worth while, and that is why the McClintic-Marshall Company turned its whole plant facilities—at Pittsburgh, Pottstown, Rankin and Carnegie—to making steel for this one building, and then—to continue this illustration—not satisfied with that, sublet part of their task to another company.

"You will furnish tiling," Mr. Converse told another firm, and it could not furnish enough fast enough, so there

FOURTEEN WEEKS AFTER WORK HAD BEGUN ON THE

NDOUS FACTORY THAT WILL MAKE LOCOMOTIVES WHEN THE WAR ORDERS STOP

re now four kinds of tiling in each of the thirteen units f the Remington building, and thru all the weeks that ne four contractors have been supplying it each one of nem has crowded the other, till all four, starting simulaneously with the unit whose completion was desired rst, fairly raced down those fifteen acres, from one unit another.

It was the same with the mile of cornice used on this ne building, the same with the huge down-spouts a foot nd a half by two feet in size, the same with the 8555 indow frames four by six feet in size, "Time," Mr. auclain and his assistant reiterated over and over, "is ne essence of things—what you can't buy immediately, on't buy. We'll make it!"

But there were complexities that in measure offset nese advantages. The Baldwin Company was building uge structures for twofold use. The Remington building ad to have place in its plants for four bull towers, illustrate, each ultimately to have three electric anes, for use in hydraulic boiler riveting. And all oors, or nearly all, that the Remington Company were to se had to be installed with eye to the ultimate aim of aking these buildings into boiler, machine and other nds of Baldwin shops. Builders know what such dual anning entails. As an illustration of it one needs but rn to the vital question of lighting all those intermeiate floors that were to be installed for the first tenant. his question was solved by the use of huge bays and by ne arrangement of having two or three floors alternate with but one floor. From the builder's point of view these are big questions in themselves. And of course there were other questions—thousands of them—how the huge chimney towering high in air over the heating plant, a building in itself, by the way, 600 by 80 feet, could be got up in three months' time; what electric current should be employed. And there were other buildings, too, outside the fifteen acres—a dry kiln, for instance, 532 by 94 feet, which was a snug little problem.

There have been a great many illustrations of the mobilization of American constructive genius come as the result of the Great War, but there is none like that at Eddystone. Where there was a futile, fifteen-acre field there is now a mountain range of a building. Where there was a cat-tail swamp there is another building climbing up and up. Beside the first is the erecting shop of the Baldwin Locomotive Works with a hundred powerful engines or so, both Russian and American, in all stages of completion, waiting, it seems, for the trainloads of ammunition they will in a little while be ready to haul away. Beside the second, up or down the river goes a destroyer or a freighter loitering, as it were, within call, where soon there will be a huge ocean steamship pier, just across from the Dupont Powder Works, with liners waiting till their hatches are jammed down upon their brimming cargoes. And it is the same river, by the way, that Washington crost not much less than a century and a half ago.

New York City

ARMS PLANT AT EDDYSTONE. IT COVERS OVER FIFTEEN ACRES

ARE WE MAKING GOOD?

BY MRS. BOOKER T. WASHINGTON

A FEW weeks ago, I was returning from a country school, where I had gone to help the teacher raise money to finish the schoolhouse, which had been begun some two or three years ago. It was a cold, dark afternoon and one would have expected every woman, at least every country woman, to be close up to the fireside. Country people love to stay near their hearthstones, at least my country folks do. But as I drove on slowly, Topsy, my little black horse, who takes me all about among my country friends, pricked up her ears. I listened a moment and in the distance I heard the soft, plaintive tones of a dozen or more women, as they sang, as no other women can sing:

Don't call the roll till I get there,
Don't call the roll till I get there.
Oh Mary, Oh Martha, don't call the roll till I get there.
I want to answer to my name,
I want to answer to my name.
Oh Mary, Oh Martha, I want to answer to my name.

The country woman expresses herself generally in song, whether she is sad or happy. This afternoon these women were—shall I say happy?—well, they were content. Once inside the building, I was not long in finding out that I was in a woman's club, a real club, where subjects of vital interest to a community were being discussed, not something these women had read about, for not a single one of them could read an ordinary book or newspaper, not a subject that some lecturer had discussed in their church, for lecturers do not usually spend their time with this sort of people, in this sort of a community—if they only would!—but these women, some young, more older, had for that meeting the subject: "How to make hard water soft." This is a limestone district. These women work in the fields until Friday night or Saturday noon, when they go down to the creek to do their week's washing, and the hardness of the water is of the greatest interest to them. It had set them to thinking, and where a community of women begin to think there is sure to be action, the result of which will be their general intellectual development.

On a great Southern cotton plantation there lives a family consisting of a mother, father and four children, the oldest a woman nearly thirty and the youngest fourteen or fifteen. The father is a hard taskmaster unable himself to read and naturally not at all interested in the education of these daughters of his. These young women, who had worked in the fields for years with the promise of going off to school, at last, seeing that the father had no thought of keeping his word, as far as sending them to school, crept out stealthily one night as the old people slept and made their way to the little station, purchased their tickets to a far-famed university and turned their backs for years upon all they had known and held dear. These girls scarcely knew their letters. They did not know even in what direction they were to travel. They belonged to a class which some people call ignorant, but they had begun to think and their thinking made them act. They are now all four at this famous school and are doing their best. They will come out all right. These women represent a large class of colored women everywhere, who are thinking, who are studying, who are interested thoroly in their own salvation, morally as well as intellectually, and who realize that it must be bought by their own strength and blood.

There are five hundred or more mothers in the little town where I live who hold four meetings a month, at which any one who feels like it sings and any one who is moved by the spirit prays; any one speaks upon the subject given. It is a free speech meeting. At one of the recent meetings the question was thrown out, "How many little babies have been born in my community in the last twelve months and where are they?" Another was "How shall I keep the affection of my husband?" One woman laughed good-naturedly and said: "We women ought to go to all the conventions and things where our husbands go. They travel, they read, they study and we should do this, too, or fall behind them." Another one spoke up and said: "Don't let us be so tired all of the time when he comes home." One of these women has bought a nice four-room cottage, painted it, has a good cow, a good horse and buggy, always makes her own garden, and more than all, has remade her husband from a cobbler into a real respectable carpenter. Others of this organization are following her example. Where will it all end? No one can tell, except to see that the revolution has begun, regeneration has set in and these women who have gone thru trials and tribulations are going to take their stand at no distant day with the great American Womanhood, and share their part of the responsibility in increasing the nation's efficiency.

There are more than two million negro women in this country, on the plantations, in small towns, and in the cities. We are seldom heard from, and not always considered as a factor in the solution of the great problem in which our husbands and brothers figure so largely. Yet twenty thousand of us are banded together with small material resources, with but one national paper, the monthly called the *National Notes*, for our children, our homes, our people. Today the people of this country are asking, What can we do to solve the negro problem? Over and over again scholars have told us that no people can rise above their source—the mothers of the land—and there at the fountain head must the work begin. The home and the family is the starting point. Since the spirit of the age demands that the mother should have a wide knowledge of all matters pertaining to the moral, spiritual and intellectual training of her children, we women must meet the demands by making our organizations avenues of help to the better way.

We club women have made a beginning in laying a foundation as a means to an end. The work of such organizations as I have described influences not only the women directly connected with them, but reaches out to the homes that are not represented in clubs. The incidents given above are typical of the awakening and growing activities of our women all over this country—for our National Association is made up of women from every state in the Union. The women of each state direct their energies toward some particular local need. Indiana women have for some time been maintaining a tuberculosis camp; New York women, an old folks' home. The colored women of Alabama, some years ago, founded at Mt. Meigs a boys' reformatory for which they raised out of their meager stores $2000 each year until, thru the energetic lobbying of the three women's clubs that had worked hardest for it, the state was persuaded to take it over.

We can make no proposition which will hold absolutely good for these and many essentially different groups of colored women. It is a task which I shall not undertake. We can not find the average colored woman any more than we can find the average woman in other races.

But I wonder if there are still those who ask "Are negro women making good?"

The New Books

REVOLUTION AND YOUNG LOVE

When Mr. Galsworthy wrote *The Country House* he sketched the type of landowner who prates of individualism and at the same time imposes a petty paternalism on his tenants, but then he was too much interested in the personal aspects of this temperament to do more than touch lightly on its social effect. But in *The Freelands* he returns to the subject and with an irony which is faintly foreshadowed in the title pictures the whole muddle of selfishness and intolerance in which the movement for agricultural reform in England finds itself.

Those who had satisfactorily ticketed Mr. Galsworthy as a social satirist with a deeply democratic message were forced to make some change in their classification when *The Dark Flower* exhibited him as a student of the erotic. In this new book Mr. Galsworthy seems to be trying to combine the social-revolution theme with an idyl of young love, and there is more than a hint of mismating in the result. The love story is charming because of the exquisite character of Nedda; the abortive strike, with the hot-headed young radical studied against the background of a landed family portrayed with that finesse which is one of Mr. Galsworthy's most fascinating qualities, is a brilliant episode. But at the end of the book one is left with an uneasy question. The radical is beaten and takes refuge in love and exile. Does Mr. Galsworthy intend the profound irony of wrecking the boy's soul in order to bring to fruition the love-story which is so caressingly built up thruout the whole book, or is the dénouement simply a faulty piece of artistry which brings about a forced match between the two themes—a short-cut to a conclusion?

The author has carried his originality of metaphor to such extremes that he commits phrases once or twice that would be really funny if separated from their context. But his people have never been more carefully analyzed. The grandmother of the Freelands, in spite of a touch of caricature, is a new and delightful proof of the fact that he likes to picture old ladies almost as well as dogs. By way of incidental satire—and how could any one pack more of that into a single novel than Mr. Galsworthy?—here is a sample:

> Whence she got this belief in the legalizing power of the press it is difficult to say, unless that, reading newspapers but seldom, she still took them at their own valuation, and thought that when they said: "We shall do this," or "We must do that," they really were speaking for the country, and that forty-five millions of people were deliberately going to do something, whereas in truth, as was known to

Col. McCormick's New Book

With the Russian Army

The Experience of a National Guardsman at the Front

By Robert R. McCormick

The author has had opportunities such as have been given to no other man, and the story of his experiences in the trenches and his stay with the Czar and the royal family makes highly interesting reading.

Illustrated. *$2.00*

Jack London's New Novel

The Star Rover

By the author of "The Sea Wolf," "The Call of the Wild," etc.

The remarkable story of how Darrell Standing freed his spirit from his body in San Quentin jail and how it went star-roving beyond the prison walls. A work of daring imaginative power, perhaps the most original and successful novel Jack London has written. *Ready October 6.* *$1.50*

Published at 64-66 5th Ave., N. Y. **THE MACMILLAN COMPANY** On sale at all bookstores

those older than Nedda, they were speaking, and not too conclusively at that, for single anonymous gentlemen in a hurry who were not going to do anything.

Refreshingly different, this, from the cheap reporter-baiting which Shaw permits himself.

The irony in this book outweighs the poetry. Mr. Galsworthy, we know, is a radical. It is more and more apparent that he is a discouraged radical.

The Freelands, by John Galsworthy. Scribner's. $1.35.

RURAL CREDITS

The question of financing the farmer is becoming more insistent each year. A resolution was introduced in the last session of Congress for a special session to discuss the matter. James B. Morman, a Maryland farmer, in *The Principles of Rural Credits*, advances a plan for giving the farmer just interest rates without federal intervention. He advocates the formation of coöperative societies among the farmers which will gradually lead to financial assistance; the stringent regulation of usury thru "commissions" on loans which amount to more than the interest in many cases; the Torrens system of land titles; and state assistance to farmers until coöperation can be successfully started. The first part of the book is an excellent exposition of how the problem has been handled abroad. In *Agricultural Credit* Edna D. Bullock has compiled a useful little volume on the subject comprizing reprints of various articles and addresses which have appeared recently. This book presents all sides of the problem in a compact and readable form.

The Principles of Rural Credits, by James B. Morman. New York: Macmillan. $1.25. *Agricultural Credit*, by Edna D. Bullock. New York: H. W. Wilson Co. $1.

IMPERIALISM AND INDUSTRY VS. PEOPLE AND PROSPERITY

Thorstein Veblen's latest book, *Imperial Germany and the Industrial Revolution*, attempts to explain Germany's economic advance and high efficiency in terms of mechanistic or natural causes, "without drawing on the logic of manifest destiny, national genius and the like." Any question of race or heredity is at once eliminated thru an analysis of the populations inhabiting the littoral of the Baltic-North Sea region, to the end that we find the peoples of German-speaking lands substantially the same as those of the British Islands, of northern France and of western Russia.

A sketch of the "Old Order" is meant to furnish a basis for contrasting the new order and further to show the fundamental unity of temper of the various peoples discussed. The English were the first to elaborate a dynastic state with its personal servants, the first to pass from hand labor to machine labor, commonly known as the "industrial revolution" of the eighteenth century. Prussia, on the other hand, was the last (the Russian section of the hybrid race is systematically ignored in this discussion) to take over the modern industrial technology.

Prussia, moreover, having taken the industrial system ready made, tho able to apply it to purposes dominant in her civilization, has not, in the relatively short period since the adoption, displaced the traditional thought forms with those implied by modern machine production. The result is that the economic advantages of the industrial system have been utilized to strengthen the dynastic state. But the new structure lacks stability because of the incongruousness of its elements. The dynastic state must build for war and domination, and Prussia has by its social legislation advanced not the interests of the people but of special classes identified with "the state." Industrial civilization, however, implies a community in which technological improvements advantage directly the general welfare.

The fallacy of imperialism and the self-sufficient nation is pointed out so shrewdly and subtly, that the reader is left in doubt as to whether Dr. Veblen points his finger at Germany or at the United States. As a scientist he is not concerned with praise or blame; but his study is nevertheless of importance thru its applicability to the near future. The Prussian-Imperial system, altho the type-form of the reaction against the current of modern civilization, is not "the sole advocate of medievalism among the nations, nor is it a wholehearted advocate." We should do well to consider our own tendencies in the light of the movements leading up to the present catastrophe, and ask, "What of Russia, and of Japan, and of the United States of America?"

Imperial Germany and the Industrial Revolution, by Thorstein B. Veblen. The Macmillan Co. $1.50.

THE AGE OF REVOLUTION

The years from the close of the contest between Great Britain and France for the supremacy of North America in 1763 to the crushing of French imperialism by a united Europe fifty-two years later have attracted perhaps more attention on the part of popularizers of history than any other half century. This emphasis has not been undeserved, for within these years were crowded the great Liberal movement which reorganized first France and then all Europe; the vast cycle of wars, never rivaled till the present, associated with Napoleon; and the revolution in industry, the most important and far-reaching of human revolutions. *The Revolutionary Period in Europe*, by Professor Henry Eldridge Bourne, does not suffer by comparison with its numerous competitors in this field. On the contrary, it gives a better because a fuller picture of the times than the student is likely to find in any equally accessible form elsewhere. Thus the book describes not only the old régime in France but in Germany and Great Britain as well; it narrates not only the battles of Napoleon but the revival of national life in Germany with the reforms of Stein and Hardenberg. The French Revolution is treated after the modern fashion as a great constructive

IT HAS BEEN ASKED

Where is the novelist who will write the Tolstoi's "War and Peace," the Zola's "La Debacle" of the titanic struggle we are now witnessing.

HALL CAINE

not with a novel, but with words that seem new-fitted and stir to new sensations has reached prophetic heights in

The Drama of Three Hundred and Sixty-Five Days

He presents the great actors; King Edward, the Kaiser, the Crown Prince, the prime others, the force of evil against good, tyranny against freedom, the militarist current, the spiritual object of sacrifice, labor, etc., the city's mass happenings, the atrocities, the assassination, life in the trenches, the soul heroisms of the men who stand the hardships, women's part, America's part—all at first hand, all fresh and blinding in its intensity. The drama of history has never had such an interpreter.

movement and the Reign of Terror, once considered as *the* Revolution, is almost dropt out of sight.

The Revolutionary Period in Europe (1763-1815), by Henry Eldridge Bourne. New York: The Century Co. $2.50.

THE SHORT STORY

How to make short stories is the query of many a young writer, who has an idea that he does not know how to present and wishes that he might learn definite rules for the writing game. In *The Elements of the Short Story*, Edward Everett Hale, Jr., and Frederick T. Dawson, have utilized their experience in English instruction at Union College to make out a set of exercizes requiring the student's analysis of several examples of the famous short stories, with a view to teaching him how to imitate them. Stuart P. Sherman, Professor of English in the University of Illinois, has made an entirely different collection of well-known short stories in *A Book of Short Stories*, which is thoroly annotated and edited for the use of students. Kipling, Hawthorne, Washington Irving, Poe, Bret Harte, Edward Everett Hale, Stevenson, Dickens, O. Henry, Hardy, Stockton, and Barrie make up the teaching force of these two books.

Short Stories in the Making, by Robert Wilson Neal, written from the practising author's point of view, is a discussion of the principles and technic of short story writing, with answers to specific problems and general good advice to the budding genius. It gives no examples and comes nearer to being an actual set of rules than either of the other volumes.

The Elements of the Short Story, by Edward Everett Hale, Jr., and Frederick T. Dawson. Henry Holt & Co. 50 cents. *A Book of Short Stories*, by Stuart P. Sherman. Henry Holt & Co. 35 cents. *Short Stories in the Making*, by Robert Wilson Neal. Oxford University Press. 60 cents.

A PROMOTER OF FEMINISM

Years ago Robert Grant, in *Unleavened Bread*, drew an unforgettable picture of Selma White, the socially ambitious American woman, who "looked like a worried archangel," and acted according to the mandates of a cold and selfish heart. The heroine of the latest novel from the same pen, *The High Priestess*, is of different quality. Mary Randall is the efficient, rather than the self sufficient, type of modern woman. Her belief in the high destiny of the able and educated woman verges upon the absurd at times; but Mary is successful in her career of architect and one of the most capable of business women. What she fails to enlist upon is the persistent restlessness of the old type in men and women. She trusts her husband as she would trust herself during her absence from home on business, leaving the house in the care of her friend Sybil, and her confidence equals that of her husband.

Another home in which the wife is a "successful poet" (an improbable kind of success), is managed by the husband, who acts as domestic engineer while books are brewing, an experiment in feminism that works rather better

as both remain in the home Mary's success as a business woman costs her happiness as a wife. What would Robert Grant have? The old regime on any terms? Or some unheard-of compromise? "The men must change. They insist upon being sure of us," cries one feminist. And it may be the lesson of this unusual, in many respects noble novel, is just that; men must abide by the same standards of conduct and of inner emotion that now govern decent women who have no struggle to be true wives. The way up from polygamy is a long, hard road but not impossible of ascent to an American husband even with a New Woman as his wife.

The High Priestess, by Robert Grant. Charles Scribner's Sons. $1.35.

FARMING A SUCCESSFUL BUSINESS

How Farmers Coöperate and Double Profits in France, Ireland, Denmark, and in some places in the United States, is Clarence Poe's valuable and timely contribution to the study of our rural problem.

Orange Judd. $1.50.

THE SOUL OF RELIGION

Many will find devotional stimulus and a solution for some real religious difficulties in the little volume by Professor Harry Emerson Fosdick on *The Meaning of Prayer*. It is arranged as a course of daily readings with prayers and discussions.

Ass'n Press. 50 cents.

THE SUNDAY SCHOOL AIM

Mr. G. H. Trull and Mr. J. S. Stowell have arranged a half-dozen studies on *The Sunday School Teacher and the Program of Jesus*, that are well calculated to awaken in the reader a definite ideal of Sunday school work as related to the mission of Christianity.

Westminster Press. 50 cents.

SERVANTS OF HUMANITY

Wide as the world is the field of social service, and Margaret E. Burton shows in her *Comrades in Service* how varied may be the talents engaged in such work. From Jacob Riis to Bishop Crowther and Syngman Rhee the spirit of faithful devotion to humanity's uplift is revealed as the motive in the heroic lives portrayed.

Missionary Education Movement. 40 cents.

POEMS OF WAR

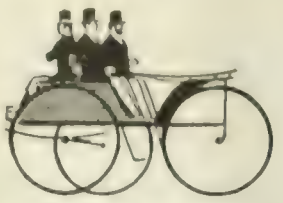
The terrible year of 1914: "Year that suddenly sang by the mouths of round-lipped cannon, hurrying, crashing, sad, distracted year," has inspired several war anthologies, among them *Battle Poems and Patriotic Verses*, by George Goodchild. Of the poems directly inspired by the present war, "The Hour," by James Bernard Fagan, is the least inadequate.

Hearst's. $1.

THE MAN BEHIND THE MAKE-UP

In public *Edgar Chirrup* was a comedian, in private he played tragedy for the most part. No off-stage existence could be more utterly devoid of humor than that of this childlike and bland soul. Reading Peggy Webling's life of him is like turning the leaves of an old family album. One passes idly from one likeness to another—interested—but with a feeling that after all, it is only an album.

Putnam. $1.35.



PREACHER AND PRESIDENT

President Gates was during twenty-five years at the head of three essentially American colleges: Grinnell, Pomona and Fisk. In two of these he did pioneer work, and he brought to the peculiar problems of Fisk University zeal, enthusiasm and a missionary spirit. *George Augustus Gates, a Brief Biography*, by Isabel Smith Gates, is the record of an unusual life. He left uncompleted the effective work he had begun at Fisk; but, in the words of his farewell

STEINWAY

THE purchase of a Steinway for the home means the selection of the ideal piano, tone and workmanship being of first importance.

It is the price of the Steinway which makes possible its supreme musical qualities, but you will find that the Steinway costs only a trifle more than many so-called "good" pianos.

Style V, the new Upright, and Style M, the smallest Steinway Grand, offer a special advantage in price. They embody all the distinct Steinway features, but, being of reduced size to meet the requirements of the modern home or apartment, are offered at very moderate prices.

We shall be glad to send you, free, illustrated literature, with the name of the Steinway dealer nearest you.

address to the graduating class of 1909 at Pomona College. "We go out hence, into an even larger life, always and everywhere at home in our Father's house."

Boston: Pilgrim Press.

MARTYRDOM OF HUSS COMMEMORATED

Prof. David S. Schaff, the author of the recent life of John Huss, has commemorated further the five hundredth anniversary of the martyrdom of his hero by the translation, the first into English, of Huss's treatise on *The Church*. The book is the most important of the great Bohemian's works, and from it were drawn the charges on which he was condemned to be burned at the stake.

Scribner. $2.50.

GO WEST, YOUNG MAN!

A story to tell—not such a bad story either, and no trace of the knack of story telling! Might the characters in *The Treasure of Hidden Valley* serve as dummies, perhaps the wheels of Willis George Emerson's tale would drag less heavily. Not every hero can become a renowned cowboy, discover a gold mine and The Girl, and come out a quarter of a million to the good—but, conversationally, it's a long, long way.

Chicago: Forbes. $1.25.

FLOWERS FROM FROST TO FALL

Like the good newspaper, Louise Shelton's *Continuous Bloom in America* tells its story in three different ways. Descriptions, tables and diagrams make it progressively clearer how to plant for continuous flowering in the Middle Atlantic States, till even a woman or a poet could hardly make a mistake. There are useful odds-and-ends of gardening wisdom beside. But why recommend the tawdry petunia—ever?

Scribner. $2.

THE MANHATTANES

The customs, beliefs, legends and history of the *Indians of Greater New York* make a vivid story. From scanty materials, one-sided reports of settlers, rare accounts by natives, and the relics they have left us, Alanson Skinner has wrought a study at once thoro and picturesque. We find here the belief in the west as the land of the departed which the phrase of the soldiers on European battlefields has just now brought to notice.

Cedar Rapids, Ia.: Torch Press. $1.

THE STRATEGY OF THE WAR

Hilliaire Belloc has the rare qualifications of military training, historical knowledge and journalistic experience. He served in the French army as a driver after leaving school, he has written many historical works and he knows how to put things simply and clearly so that the ordinary reader can grasp the essentials of a military movement. His volume on "The First Phase" of *The Elements of the Great War* is probably the best popular study of the early campaigns.

Harper's. $1.

"ARTFUL CUPIDIN'"

If one be not utterly out of patience with Laura Dalrymple for producing a book at once worthy its forerunner, the prize story, *Diane of the Green Van*, one may be mildly amused at the spectacle of seven able-bodied, capable girls resolutely keeping their backs on Romance, rejecting the wiles of cavalier suitors and by *The Lassie Builders* to storm their castle. But they may devote themselves to one would-be-genius father. There is one superfluous character, the Scotch doctor.

Chicago: Reilly and Britton. $1.50.

POPULAR PSYCHOLOGY

In his *Psychology and Personality* H. A. Bruce's main line of argument is the tremendous influence of the unconscious in moulding the habits of the child. Mr. Bruce accepts somewhat too uncritically the theories of training. There is no doubt that our present-day education (like the education of yesterday and the day before) calls far short of realizing the

potentialities born into the world, but we are not yet warranted in assuming that improvement in methods will enable us to manufacture genius at will.

Dodd, Mead. $1.75

SOCIAL TASKS OF THE CHURCH

Mr. Charles L. White gives a very instructive popular survey of the social tasks now performed by religious organizations in his *Churches at Work*. The outline of services rendered only reveals the expanding opportunities and needs.

Missionary Education Movement. 60 cents.

THE STORM CENTER

Just at the time when an "Austrian army awfully arrayed" is again preparing to bombard Belgrade we have a handy volume on the history and people of *Serbia*, by W. M. Petrovitch, of the Serbian Legation at London. He brings his history up to the end of the first Austrian invasion and explains the aspirations of the Serbs for the united kingdom of all the Jugoslavs.

Stokes. $1.50

RAIN AND POCKETBOOKS

The cyclical relation between general trade conditions, movements of prices, crop yields and weather conditions, is presented in *Economic Cycles: Their Law and Cause*, by Professor H. L. Moore. The rainfall in the upper Mississippi valley and the crop yield of corn, hay, oats and potatoes were carefully investigated. The rainfall statistics show a compound cycle of thirty-three and eight years, and the crop and price curves follow the rainfall graph closely.

Macmillan. $2.

CORNWALL

Mrs. Havelock Ellis gives us three Cornish plays in *Love in Danger*. These are curtain raisers and all turn upon trouble between husband and wife. The heavy and yet tragic temperament that writers find among the Cornish folk does not greatly lend itself to humor, but there is a gleam of this in the "Subjection of Keziah" and a delicacy and idealism altogether lovely in "The Pixy" that make these good reading whether they are dramatic enough to carry over the footlights or not.

Houghton. 75 cents.

A GREAT LIBRARIAN

Dr. John Shaw Billings was that not common combination, a scholar and a man of great constructive ability. Turned by his years in the army during the Civil War from a surgeon's career, he spent his life in setting various affairs in order for us—Johns Hopkins Hospital, the Surgeon General's Library and the New York Public Library. Fielding H. Garrison's memoir deals with all these varied activities, but emphasizes the medical interests of this useful and brilliant life.

Putnam. $2.50

A HERITAGE FROM ROME

Prof. J. Brissaud's *History of French Public Law* is the latest volume of the *Continental Legal History Series* of studies of the development of public law from its Roman origin to the diverse European systems of today. Accepted in France as the standard authority on the evolution of the nation's legal institutions, it is of value on this side the water for its parallels or contrasts with the English and American systems. The able translation is by Prof. James W. Garner.

Boston: Little, Brown. $4.50.

AN INDUSTRIAL SKIRMISH

E. Charles Vivian has fused a good story and a lucid, clear-cut statement of the struggle of labor and capital, and colored it all with intensity of sympathy and conviction, without once forsaking his story-telling to mount the stump in the cause of the down-trodden proletariat. But he vitiates the force of *The Young Man Absalom* by choosing to settle a big strike by a mere flip of Fate that dodges the real issue—and that when the solution of simple justice was not only possible, but logical.

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

155. Mr. G. E., Ohio. "Your articles on Efficiency have been more valuable to me than anything that I have ever read. I am a college graduate, but have always had a hesitancy in applying for a job. I do not lack confidence in my ability, as my record has been a good one, but for some reason I dread to apply for a position. What is the cause of this hesitancy, and how can I overcome it?"

The cause may be a natural modesty and timidity, often accompanying a gifted personality and fine, sensitive character. An expert in cranial diagnosis would probably say you were born with a weak faculty of self-approbation. But don't let this worry you.

In seeking a position, get an advance appointment by letter. Use the best stationery, an official letter-head if possible. Have your letter typewritten. State your record briefly, with noted men as references, if your acquaintance includes them. Study the problems and needs of the business in view. Write the employing official how you plan to serve him peculiarly well. Ask to present your ideas, in six minutes, say. Wear your best clothes. Outline your plan clearly on paper, and leave it with him.

---

156. Mr. L. A. B., California. "I have been appointed Vocational Advisor for the schools in a town of 15,000, where most of the graduates go to college or to normal. Should the most emphasis be placed on vocational subjects, or our efforts be directed toward aiding the pupils in self analysis, and acquainting them with the industrial and social world of which they are to be a factor? I incline to the latter course. There is a great lack of the life motive among both pupils and faculty members, with accompanying waste and development of scattering habits. Few of the pupils have chosen their life work, tho many wish to know how to go about it. Our school system needs a new viewpoint and a more purposeful direction. How can we improve our opportunities?"

Congratulations on your wisdom and enterprise. Would that every school in America had a vocational director as earnest and progressive!

A good vocational test for high schools is the new shop-study plan, whereby pupils work half time and study half time. This plan is being tried in large cities, with good results. The secretary of the New York City Board of Education, or City Chamberlain Henry Bruère, might give you data as to methods employed here.

Two books of interest—Professor Hugo Muensterberg's on *Psychology and Industrial Efficiency*, Professor Frank Parsons's on *Choosing a Career*. Write for suggestions to the Vocational Guidance Association, Professor Benjamin Greenberg, secretary, at Julia Richman High School, New York. Why not distribute, and discuss, The Independent Efficiency Booklet in your higher grades? Send ten cents for specimen copy.

---

157. Mr. R. S. H., Illinois. "Please inform me if the profession of Chemical Engineering is considered a good paying profession. What is the average salary? Is this field crowded as much as that of Architecture? Which would be preferable for a young man to study?"

You need another viewpoint. The first thing to consider is not the crowd at top in a business, but the crowd of ideas, talents and resolutions in your own head. There is always room at the top of any profession, and not much room anywhere else. Quite apart from the matter which line of work appeals to you most

It is the first duty of the educated to be interested in education.

First among magazines devoted to the cause of education is

EDUCATIONAL FOUNDATIONS

Published 10 months in the year. $1.50 a year; 20c a copy.

EDITORS

WILLIAM CHARLES O'DONNELL, Jr.
CLAYTON SEDGWICK COOPER

***Not* a method magazine. A journal for *all* educators and for *everybody* interested in education.**

Vol. XXVII begins with the September number.

The Board of Editorial Counsellors and Contributors consists of eminent educators and publicists.

Note the following:—

"THE WORLD AT SCHOOL"

A notable series of articles by Clayton Sedgwick Cooper. Graphic pen pictures of school life around the world.

Also

A Symposium on American Ideals

A stirring array of comments on American traits and tendencies by one hundred prominent citizens. These opinions, frankly expressed, were gathered by Mr. Cooper during the preparation of his book on American Ideals soon to be published by Doubleday, Page & Co. as one of their American Book series. The symposium will appear in part in the October number.

On the practical side of educational work, Henry Sterling Chapin will continue to elaborate "The Model-Store-Keeping Method of Instruction for Elementary Schools." This plan of instruction has been adopted by thousands of schools with most gratifying results. Parents as well as teachers are enthusiastic in their praise. Mr. Chapin is the organizer and director of the system for the United States.

The value of the magazine this year will be greatly enhanced by the contributions of Elizabeth Cooper, one of the most spontaneous and sympathetic writers of the day.

A due proportion of space is allotted to book reviews, literary discussions, examination questions, etc. Forward subscriptions at once to

Educational Foundations
31-33 East 27th Street, N. Y. City

Romeike's Press Clippings

are used regularly by every member of the business men, they bring you to position touch with all public and private affairs and supply you with news bearing upon any line of business. We read for us subscribers all the important papers published in the United States and Canada. If you have never used press clippings drop us a postal and we will show how very useful they are to you. Write for booklet and terms.

ROMEIKE, INC. 106-110 Seventh Ave. New York City

An ordinary chemical engineer makes $100 a month, an extraordinary one $100 a day, when he has a job. But we caution you against visions of the latter sum—day dreams too often end in nightmares. The Engineering Societies, 29 West Thirty-ninth street, New York, have a library containing valuable information. Ask how to secure the facts you desire.

158. Miss R., Ohio. "(a) I am in search of information concerning schools where a thoro course in banking and finance may be obtained. A very earnest and capable young man desires such a course and is willing to take any steps to secure it. (b) Please advise me as to a general course of *culture* reading for a business man whose education has of necessity been limited, but who desires to improve and cultivate his tastes for better books and better things."

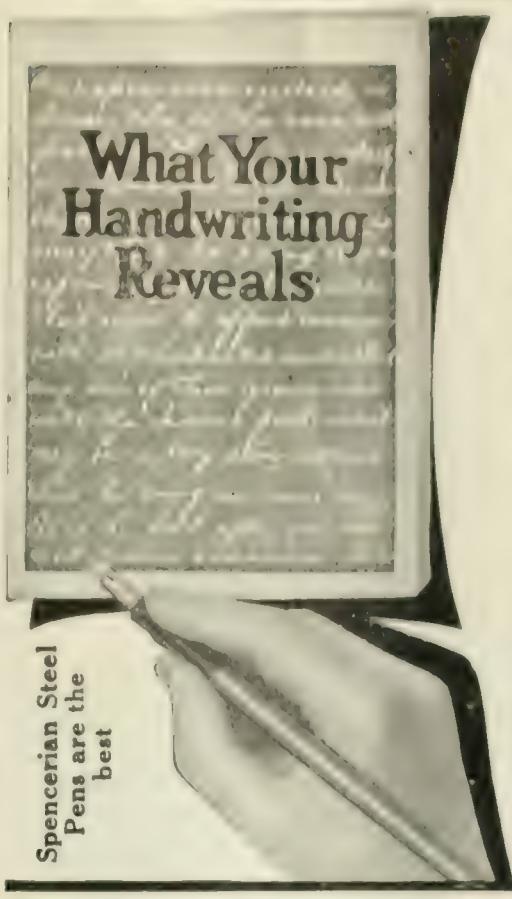
(a) Consult the Wharton School of Finance and Commerce, Philadelphia, New York University School of Commerce and Accounts, New York, and the American Bankers' Association, 5 Nassau street, New York. Also look up the facts available thru the *Bankers' Magazine*, 253 Broadway, New York. A general idea of the whole subject may be had from Barrett's book, *Modern Banking Methods*.

(b) Apply to the Chautauqua Editor of The Independent for particulars of the various Chautauqua Reading Courses.

159. Mr. J. H. S., New Jersey. "I desire to complete my college education, but would not be able to earn all the necessary expenses. I could earn some of the money, but it would take too long to save all. Do you know of any methods, persons, or institutions, whereby money for education may be loaned? After graduation I would repay the loan with reasonable interest."

We do not know of the existence of any such loan companies. Without collateral equal to the full value of your note, a reputable financial institution would not accept your note. But almost any bank would take your paper if endorsed by a friend whose credit is good. And you should be able to find such an endorser, if your character, ability and purpose warrant financial faith in you.

Some colleges provide means for self-supporting students to pay their way, at least in part. And a large number of college branches of the Y. M. C. A. will gladly coöperate in such a worthy endeavor. Write the secretary of the Y. M. C. A. in the college of your choice. Many publication houses, such as the Curtis Publishing Company, Philadelphia, make special tuition offers to college students. Ask for particulars.



160. X. Y. Z., Brooklyn. "As a private secretary, I believe my efficiency would be increased by an understanding of simple cataloguing and filing. Can a general idea of either or both be reached by anything less than a course at some school. If you can direct me, I should be very glad to study at home."

We would refer you to companies that manufacture and sell filing systems and devices; their literature often contains valuable hints along this line. Among these concerns are the Shaw-Walker Company, 60 Franklin street; Yawman & Erbe Manufacturing Company, 360 Broadway; Weis Manufacturing Company, 75 John street; Meilink Manufacturing Company, 395 Broadway; Hull Indexing Bureau, 220 Broadway; all of New York City.

Get a copy of *System* magazine, Chicago, and see advertising pages. Write for prospectus of the Fifth Avenue Secretarial School, 509 Fifth avenue, of the Knickerbocker School of Secretaries, 16 West Forty-fifth street, of the New York School of Secretaries, 35 West Forty-second street, New York. You might also be interested in the Permanent Educational Exhibit Company, 70 Fifth avenue, New York.

161. Mrs. L. E. G., Illinois. "I have been in the millinery business a little more than a year, and I realize that I have much to learn in both buying and selling. Could you refer me to a course in efficiency that I could take, which would benefit me along those lines?"

To our knowledge, there is no correspondence course in the technical side of millinery. But you should find a great deal of practical information in books and

Know a man by his "hand"

This book gives the clues to character revealed by every person's penmanship as described by William Leslie French, the celebrated Graphologist. It is illustrated with fifty specimens of handwriting. You will probably recognize yours among them.

A new edition is now being printed to supply the great demand. If you desire a copy, it will be sent with twelve different patterns of Spencerian Steel Pens on receipt of ten cents.

SPENCERIAN PEN COMPANY
349 Broadway, New York

SPENCERIAN PEN COMPANY

TEACHERS

From an article by Frederick Houk Law, A.M., Ph.D., head of the English Department of the Stuyvesant High School, New York City, with an attendance of nearly 5000 students.

"Since all teaching must have some definite relationship to life and since it is evident that a good weekly periodical will be a most valuable aid in transferring the interests awakened in the teaching of English to the interests of mature life, it is necessary to consider what periodical shall be used.

"The daily paper, however excellent it may be, includes a mass of hastily prepared material, much of which is purely ephemeral and much of which is all too often undesirable for consideration in the school classroom. It contains little or nothing of purely literary value. The smallness of type, the quality of paper used, and the necessary economy of space, forbidding much artistic effect, do not make the reading attractive to the eye.

"Many excellent magazines deal largely with fiction, and thus fail to connect with the broad currents of present-day creative thought.

"Other publications deal with specific fields of work—with distinct occupations, with religion, philosophy, literature or politics.

"Others give news and comment on current topics of interest, but omit articles of genuine literary value.

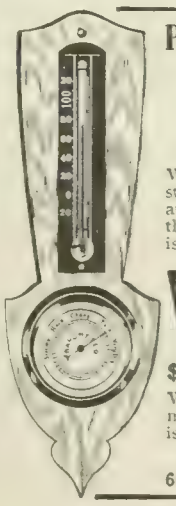
"The best publication for correlation with all the work of the teacher of English will be inclusive of many lines of interest. It will include fiction, poetry, general articles of various kinds, the most important news of deep significance, and such calm and thoughtful comment, given in a spirit of optimistic good will toward all mankind, as will most interest and stimulate the adolescent.

"Many teachers testify that The Independent is a paper of this high type. That it meets with the approval of students is shown by its wide circulation in schools and colleges thruout the country. In the Stuyvesant High School, where the purchase of any periodical is purely optional on the part of every student, The Independent is bought weekly by a great number of students, who say that they prefer it to other publications of somewhat similar character.

"A class section of the senior class, on being asked recently if it wished to change from The Independent to another periodical, stated emphatically that it preferred to continue the use of The Independent."

"How to Use The Independent in the Teaching of English," by Dr. F. H. Law. Sent free on application to W. W. FERRIN, The Independent, 119 W. 40th Street, New York.

You Can Weigh Exactly What You Should



You can—*I know* it, because I have *reduced* 32,000 women and have *built up* as many more—scientifically, naturally, without drugs in the privacy of their own rooms; I can build up your vitality—at the same time I strengthen your heart action; can teach you to breathe, to stand, to walk and to correct such ailments as nervousness, torpid liver, constipation, indigestion, etc.

One pupil writes: "I weigh [illegible] lbs. less and I have gained [illegible] in strength." "Last May I weighed [illegible] lbs., this May I weigh [illegible] lbs., and oh! I feel *so well*."

trade journals devoted to your work. Obtain a copy of the magazine published by the Milliner Company, 239 West Thirty-ninth street, New York, also of that published by the Millinery Trade Publishing Company, 1182 Broadway, New York. It is possible that some such educational institution as the Alexander Hamilton Institute, New York, might teach you general principles of buying and selling which you could beneficially adapt to the millinery business.

---

162. Prof. J. W. G., Pennsylvania. "In your issue of June 7th, answer No. 83, you advised the purchase of 'one of the books recently published, suggesting the hundreds of vocations and occupations now available to ambitious girls.' I am very frequently consulted in reference to possible occupations for girl graduates of our high school, and the books referred to may be of considerable assistance to me. Can you give me the names of the publishers?"

We understand that books bearing on the subject have been issued by Houghton Mifflin Company, 4 Park street, Boston, by F. A. Stokes Company, 443 Fourth avenue, New York, and by A. S. Barnes Company, 381 Fourth avenue, New York. The reports of the Intercollegiate Bureau of Occupations for Women, 130 East Twenty-second street, New York, might be suggestive. We would suggest that before any pupil of yours attempts to follow the advice or appeal in a general book on vocational opportunities, a consultation with an expert on vocational guidance be arranged, to pass on the probabilities of success in the trade or profession that the girl thinks she likes. Otherwise, failure, disappointment, and a vast deal of heartache may ensue.

---

163. Mr. S. H., Oklahoma. "I am a letter carrier, thirty-three years old, with family of six, salary $1200, been ten years in civil service. I see no chance for promotion and would enter another line of work. Have studied Agriculture, Political Economy and Spanish. Can speak and write Spanish fluently. Would like a position where Spanish is required. Please advise."

For the sake of your family, we would caution you against leaving your present position before another is absolutely certain. Your ambition is rare, and splendid. But safety is the duty of a man with a large family.

Why not take a business course by mail, to combine with your knowledge of Spanish, and thus make you more valuable to any prospective employer? If you knew bookkeeping, or accounting, or advertising or business letter-writing, another job would be much easier to secure.

The Spanish American Directory, 2 Rector street, New York, gives the names of export houses likely to want your services. Write for particulars.

---

164. Mr. M. T. B., New York. "I have read with much interest your articles on [illegible] and would like very much to have you give me a list of books that I should read on the subject. Also, can you tell me how I can obtain a collection showing the development and progress of the [illegible] from its beginning to the present time? I have made search in bookstores and [illegible] but have been unable to find anything of the kind. Any information you can give me will be appreciated."

We are unable to find any work on the subject. We would suggest that you write to the Secretary of the Interior, Washington, D. C., asking for information. We have no [illegible] Bureau of Education, Washington, D. C., and to the Librarian of Congress, Washington, D. C. We have also written to the Librarian of the Astor Library, New York, and to the Librarian of the Lenox Library, New York. We have not received any answer from any of these sources, but we think that they will be able to help you. We would suggest that you write to the Secretary of the Interior, Washington, D. C., asking for information. We have no [illegible] Bureau of Education, Washington, D. C., and to the Librarian of Congress, Washington, D. C. A NATIONAL BUSINESS FORUM

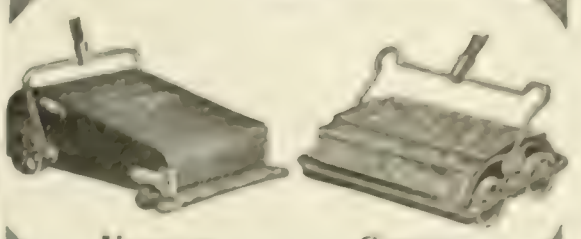
BY JOHN H. FAHEY

President of the Chamber of Commerce of the United States



Mr. Fahey is now serving his second term as the head of the National Chamber. He has been actively identified with the great organization since its beginning and under his own guidance there have been many developments of importance to business men. Mr. Fahey, formerly the superintendent of the New England division of the Associated Press, was for many years the editor and publisher of the Boston "Traveler." He is the present owner of the Worcester "Post" and is active in the world of finance and business. THE EDITOR.

IN the amazingly short space of three years the National Chamber of Commerce has grown until today it includes in its membership nearly 700 organizations in every state in the Union. Not only is our insular territory represented, but included in the impressive union are the American Chambers of Commerce in such widely separated centers as Paris, Berlin, Milan and Constantinople. Its membership, all told, now represents about 350 [illegible]0 firms, corporations and business men, and it has become the largest association of its kind perhaps in the world, as well as the most democratic and most representative.

Its first duty is to crystallize the sentiment of the business men of this country on great national questions. It does this without bias or partizanship and only after a thoro investigation and the most careful consideration. In determining these issues, in fixing the policies of the National Chamber, every organization, large and small, has its voice thru a referendum which is submitted to each affiliated body to be voted upon.

A concrete example of how such a countrywide canvass of business sentiment is made may be seen in a recent referendum ordered to secure an expression of opinion on the much discussed Seamen's Act. Up to the time the National Chamber decided to ascertain exactly how those engaged in business felt upon the subject, the discussion had centered, for the most part, in coastwise cities. But now, thanks to the existence of the National Chamber, the question will be taken into every state in the Union to be voted upon by national trade bodies, state organizations and local chambers of commerce. Thus business men, not only where shipping is heaviest, but thruout the entire United States, will be given an opportunity to express themselves. The various organizations will be allowed forty-five days in which to cast their votes. After the final count the general result will be communicated to the President of the United States, to the Speaker of the House, and the Vice-President of the Senate. Later a notification of the result will be presented to each individual member of the House

BISSELL'S

Vacuum Cleaner Carpet Sweeper

The Efficient Cleaning Combination

To the tired woman, wearied with the constant fight against dirt and dust, these two Bissell machines are indeed a boon. Use of the *Bissell Carpet Sweeper* for *daily sweeping*, with *BISSELL'S VACUUM CLEANER*, a powerful suction machine, for general cleaning days, is the scientific, work-saving way which gives you a beautifully clean house.

BISSELL'S VACUUM SWEEPER is a very popular model, being a combination cleaner and sweeper.

In a test against various standard power machines, the Bissell proved to have even *greater suction power* and consequent cleaning efficiency.

The rear opening *one-piece nozzle and dust bag* is a source of wonderful convenience. Our booklet describes this and other important features.

Prices are $7.50 for the Vacuum Cleaner (without brush) and $9.00 for the Vacuum Sweeper (with brush). Slightly higher in the West, South and in Canada. Carpet Sweepers $2.75 to $5.75. Sold by dealers everywhere. Booklet on request.

and Senate, and, if practicable, a committee from the National Chamber will appear before the committee in Congress directly interested in the subject, explaining how the Seaman's Act vote was arrived at. It is hoped that the result may be known in advance of the date set for the convening of Congress.

In these three years the Chamber, obedient to its referenda, has suggested and obtained seven vital amendments to the Federal Reserve Act; has suggested and obtained the adoption of the Federal Advisory Council to assist the Federal Reserve Board; at the instance of Secretary Redfield has assisted in the readjustment of the Department of Commerce, including the collation and distribution of consular reports, and helped to secure the appointment of an increased number of commercial attachés.

The Chamber has influenced exceedingly important modifications that appear in the final form of the trust bills, has received at its recent third annual convention the unqualified, outspoken approval of President Wilson and a frank appeal for support on certain measures from five members of the Cabinet. With the approval of the Administration and of party leaders generally the Chamber has just appointed a permanent Advisory Committee to confer with the new Federal Trade Commission.

Everything the National Chamber does is in the open, available for criticism by all men. There can be nothing concealed. It cannot be used by any clique or group. It must be thoroly American and broadly patriotic in everything that it does. There can be nothing narrow or little about it. Aside from bringing the business viewpoint to bear upon great public questions, it must work with the Government in extending the use of the facilities which the Government now provides for the promotion of business. Until now, the business men of this country have had little knowledge of the things being done by the Government which would be of value to business if they were only utilized. It is an important responsibility of this organization to bring that fact home to business men and to aid the Government in the betterment of existing machinery.

The science of commercial organization is only beginning to be understood in the United States. It is one of the great tasks of the National Chamber to assist all organizations of business men in its membership in attaining greater efficiency. Their individual experiences are thus brought to a common clearing house. Imagine therefore—especially in such a time as this when there is a world business crisis—what can be done with the commerce of this country if every community in it of substantial size builds an organization of business men which, while working for that one community, is just as thoughtful of the nation as a whole. It is along these lines that we are so successfully building the Chamber of Commerce of the United States.

Boston, Massachusetts

SILHOUETTES

Gold was sometimes laid on the black outline, and it gave the portrait vitality, as well as form.

The silhouette has been well termed the poor relation of the miniature, and the forerunner of the daguerreotype.

Silhouettes have been variously designated as shadowgraphs, profiles, skiagraphs, shades, Decoupures, scissagraphs, scissartypes, and papyrographs.

Thanks to the silhouette, Goethe, Wagner, Liszt, Napoleon and various English kings, queens and princesses have been preserved to us in unique portraiture.

Silhouette pictures were once popular in the porcelain factories of England and Germany. They were used in particular in the ornamentation of souvenir and gift pieces.

Some of the earliest of the paper silhouettes were cut by Mrs. Pyburg in 1699. She has been credited with the cutting of the portraits of William and Mary about that time.

The Egyptians found a place for the silhouette on their mummy cases 3000 years before the Christian era, and pageants of profile portraiture are in the frescoed tombs of old Egypt.

The silhouette has a story to tell us along historical lines, in comedy and in tragedy. The little bits of black paper show us men armed cap-a-pie, women weaving and grinding corn, children at their games of ball playing, and knucklebones, rolling hoops, and playing battledore and shuttlecocks.

Perhaps the best known silhouette artist was August Edouart, the Frenchman, who visited the United States in 1839 and made many cuttings of well known men, women and children, here. His output has been estimated at more than 100,000. An exhibition of his silhouettes was held in New York City by A. S. Verney in 1913.

The ordinary method of cutting silhouettes was to clip the portrait in black and superimpose it upon a white background. This was sometimes varied, however, and certain silhouettes appear in museums and in private collections in which the portrait is cut as a hole in a sheet of paper which is backed with paper, silk or velvet. The Congressional Library, at Washington, has several of this kind.

THE BACKERS OF THE HUNS

"German papers are jubilant over the Welsh strike."

The British ships in Swansea Bay
Lie up—they're short o' coal;
And France's vessels crippled wait
Until you've taken toll;
In ev'ry trench there's blood a-flow
By Flemish dyke and down,
But ne'er a man would shame his breed
And throw his rifle down.

From far Australia's grassy plains
The long, lean bushmen come;
The sturdy sons of Maoriland
They heed the battle-drum;
How will they look askance and stare
What time their blood is shed
To hear that *you*, for whom they fight,
Have calmly gone to bed!

It isn't that we grudge you, mate,
Your extra pence per ton;
It's seeing Welshmen with a pick
Hit Welshmen with a gun;
It's hearing rise from oversea
Applauses fit to stun,
And knowing that you well deserve
A cheering from the Hun.

We hung our heads in bitter shame
That once were hung in pride
To hear the alien cheer for *you*,
Whose brothers bled and died;
And when in Freedom's holy cause
They battled, high and low,
Their kinsmen caught their fighting hand,
And paralyzed the blow!

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent inaugurates this week a Service for Investors which will give personal attention to the desires of its subscribers for information in regard to investments of all kinds. The Independent has always given more space to financial affairs than any other popular weekly. It maintains departments of finance and insurance and carries an exceptional amount of financial advertising. Now "The Market Place" is to be expanded so as to meet the needs of the average investor. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them either by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves on this important question. Our aim, in brief, is to aid our readers to invest with full knowledge, to help them select investments wisely, to help them distinguish the best investments and know what is back of them, to make them familiar with these four cardinal requirements of sound investment: security of principal, ready convertibility, fair interest rate, steadiness of income.

A TALK WITH INVESTORS

THE average investor cannot afford in these times to take any chances with his money even tho the bait offered by the war-stock dealer may be very tempting as compared with the paltry four per cent the savings bank pays. When the war began the timid investor would not purchase because he had no reliable information for his guidance. Now that these stocks have largely discounted the future profits of the munitions concerns, he cannot take the risk of a possible precipitous market.

Of course, any one could have gone into the market blindly at any time within the past year and perhaps have made considerable profit, but the great majority of people with savings did not want to gamble away their hard-earned money on uncertainties.

To the investor who is not sure of his ground, one phrase can serve in the way of advice: "Buy only the best." We have seen how some railroad securities have recently been tried and found wanting, how industrial concerns have been affected by the business depression and how even a few public service corporations have reported decreased earnings for a while. A little discretion in the purchase of securities would have saved many an investor from losses.

Some of the so-called *underlying bonds* of railroad systems which have recently been adversely affected by reorganizations cover properties which are not now self-supporting and have not been for some years. In the case of the Missouri Pacific readjustment, we see cash provided for junior securities because their lien is superior to that of some divisional bonds, altho the junior securities are far from the rails and the divisional bonds are first mortgages. The question of priority of lien is important, but that of earnings becomes the deciding factor in many reorganizations. Investment bankers desire to uphold the principle that bonds are valid obligations and should be paid in cash at maturity, but when they have to deal with an insolvent concern which is financially helpless, no criticism can reasonably be advanced if a concession is requested of security-holders. The element of risk exists in all classes of securities, *risk increasing as the rate of interest increases and vice versa.*

We have seen many corporations doing a phenomenal business in munitions, armor plate, guns and foodstuffs because of the war. The stocks of such concerns have risen to the skies and it has been figured that the market values of the shares of forty American corporations has increased *one billion dollars* since the outbreak of hostilities. Speculators have made hundreds of thousands on small initial investments and the fever still rages. We saw Bethlehem Steel at 35 last year with no particular demand, while now it is around 350 and considered a good purchase in some quarters; Electric Boat went begging at 2, while it has been in demand at 500; and so it runs with many similar stocks.

In the midst of so much excitement over war stocks, shaken confidence about some bonds, doubt as to general business conditions and the uncertainties as to the outcome of the Anglo French loan, the standard railroad bond has suffered, but in most cases only as a result of liquidation and competition, rather than from the lack of intrinsic value. Still, when it is realized that bonds as a class are selling at average prices below those of the 1907 depression with no immediate prospect of an advance, we wonder whether it is wise to buy them or speculate in stocks.

It would be folly to make predictions, because no one knows just where we are at. If the war loan is successful the usual amount of crops will be shipped to Europe, the American people will own Anglo-French bonds and the farmer and manufacturer will have plenty of cash to spend or invest. That much is good, inasmuch as the exchange situation will have been relieved and no money will have left the country. But if the credit we now give does not result in a speedy end to the war—and there is no reason why it necessarily should—we may have to provide more funds in three months, or six or a year. The question is this: if the war does not end in, say, a year and the Allies want more credit, can we let them have it?

We are therefore in a period of easy money with impending uncertainties, when sound judgment should be exercized in making investments. Only the best should be purchased, especially in view of the fact that even these are selling at low prices. The general or refunding mortgage bonds of great railroad systems like the Atchison, Pennsylvania, Baltimore & Ohio, Great Northern, Northern Pacific, St. Paul, Chicago & North Western, Southern Pacific, Union Pacific, Louisville & Nashville, Illinois Central, and others of like class, are as safe investments as it is possible to obtain. The prime bonds of all these systems are legal investments for savings banks in New York and other states, and sell on an investment basis of from 4.50 per cent to 4.75 per cent, while in normal times the return is about 4.30 per cent.

Many issues of municipal bonds should commend themselves to investors who have saved with a view to conserving principal rather than gaining a large income. Such issues are general credit obligations of states, counties, cities, towns, etc.; interest is guaranteed by the taxing power of the community given to it by law; they are legal investments for savings banks in many states, eligible as security for postal savings deposits and are exempt from all federal income taxes. Current offerings of these bonds include those of Newark and Jersey City, New Jersey, Toledo, Ohio; Dallas, Texas, New Haven, Connecticut, Portland, Oregon, King County, Washington, State of Tennessee, Mt Vernon, New York, Minneapolis, and many others, the yield ranging from 4 per cent to 4.70 per cent.

Bonds of established public service corporations have a record for stability of earnings, with normal increases yearly, that even many railroads cannot surpass. As these companies supply communities with necessities such as transportation, light, heat, power, water and gas, there is always a demand for practically all of the commodities. This

demand increases with the growth in population of the section served and is not materially lessened even during periods of depression, excepting in cases of concerns which supply only transportation or power. Reputable investment houses have marketed large amounts of such securities, after making exhaustive investigations as to security, earning power, franchises, public relations, etc. The yield on this class of bonds varies from five to six per cent, and first mortgage bonds on which the interest is earned twice over or better are regarded as absolutely conservative investments. They are rapidly gaining favor among banks and insurance companies as well as private investors.

It is natural that, with the increasing demand for funds from European governments willing to pay from four and a half per cent to six per cent, our bonds which yielded from four per cent to five per cent should have found that sort of competition injurious, particularly when accompanied by liquidation. But, with the credit of the belligerents strained to the utmost, there will certainly be a limit to their securing credit or selling securities, and it may be possible for our own bonds to rank on a higher plane than government issues in the near future.

So long as this country is fairly prosperous, interest will be earned and paid on sound securities. The private investor buys bonds to keep, he desires primarily safety of principal and a good yield rather than superior marketability. So, even if a bond declines five points, nothing is to be feared so long as a sale is not necessary. The American people have begun to acquire the saving habit which has long been attributed to the French. This is best shown by the increases in deposits of all banks, particularly postal savings banks, and by the demand for odd-lots of stocks of prominent corporations and bonds in denominations of $100, $500 and $1000. Investors should realize that present conditions afford opportunities in the field of investments which may be the corner-stone of many a fortune, and they should acquire the saving and investing habit.

The reports heard from time to time in the past of a combination of several of the large steel companies, which have so often been denied, were current again last week, in a more positive form than heretofore, and were partly responsible for the advance in Bethlehem Steel, which is mentioned as the probable head of the amalgamation. The Cambria and Midvale Steel Companies, it is said, have gone into new hands, altho not identical, and according to the reports these companies will be among those which will make up a new corporation which will in strength and size be a rival to the United States Steel Corporation. The steel market is distinctly strong, with advancing prices chiefly due to the extremely heavy export demand and partly also to the active inquiry which is beginning to come from the railways of the United States, which have long been purchasers on a very small scale.

The following dividends are announced:

United Shoe Machinery Corporation, preferred, quarterly, 1½ per cent; common, 2 per cent; both payable October 5.

High Return—
High Risk

You can obtain a high return on your investment *but* you sacrifice safety in proportion. It is wiser in the end to invest in *good bonds* returning from 4½% to 6% with safety of principal.

How the French Invest

The French have long been known as the shrewdest investors in the world. In France people of small income buy a few shares of stock, or small bonds, and pay for them in easy monthly installments.

Some time ago this plan was introduced in America and already over 30% of the Stock Exchange transactions are in "odd lots." This shows how safe and profitable people of small income find this method of saving and investment.

You may buy one share or more, and terms of payment may be arranged according to your income. Reliable information about any security provided by our Statistical Department.

WOMEN AND ENDOWMENT INSURANCE

Self-supporting young women, in greater numbers each year, are turning to endowment insurance as a depositary for a portion of their savings. In choosing this form of investment they are, as it seems to me, exercizing that faculty so highly developed in their sex: instinct. It is the experience of insurance solicitors that when a woman who has no dependents to protect has examined all the different plans offered by life insurance companies, and come to a good understanding of them, she will generally look with favor on the endowment forms. This choice is only modified when a part of her earnings are necessary to the support or comfort of some less independent member of her family whose condition would be unfavorably affected by her death, in which case she considers a greater amount of insurance protection, for the premium an endowment costs, more judicious. Whether founded on reason or instinct, the conclusions are sound.

About one-third of the inquiries which come to this department seeking advice on insurance matters are from women who earn their own living and I find, when a choice is indicated, that most of them incline to the 20-year endowment policy. Another noticeable and remarkable fact is that not one woman who has consulted me on the subject during nearly three years has indicated a disposition to consider any but the oldest and best established companies. Fully one-half, perhaps a larger proportion, of the inquiries received from men show that they are "flirting" with institutions of various kinds which claim to furnish protection under conditions more favorable or at a net cost lower than those which I will here call the veterans of the life insurance business. From which I conclude that women are more disposed towards absolute security; and that men are inclined to "take a chance" on the future if they can, in doing so, make a present saving on costs. In this the judgment of the former is the sounder; for, as I have observed on many occasions, there are no bargains in life insurance.

The self supporting young woman whose family relations are such as will permit her to invest her surplus earnings, acts wisely when she places a part of them in the purchase of an endowment policy; and, I will add, she will emphasize the wisdom of the act if, instead of using the annual dividends, she will permit them to remain for accumulation with the company and become payable with the endowment at maturity, or at death if it occurs prior

DIVIDENDS

American Telephone and Telegraph Company

A dividend of Two Dollars per share will be paid on Friday, October 15, 1915, to stockholders of record at the close of business on Thursday, September 30, 1915.

G. D. MILNE, Treasurer.

Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

HOME LIFE INSURANCE COMPANY

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

to that date. As compared with the principal sum, the yearly dividends are small amounts and if withdrawn are easily wasted. When allowed to remain for twenty years or more, they become substantial additions.

J. V. T., Glencoe, N. M.—The company about which you make inquiry was organized in 1910 with an authorized capital of $125,000, of which $107,840 is paid up. It has met with average success, its assets on December 31, 1914 being $266,863, of which $23,417 is net surplus. It seems to be properly managed and is making fair progress. Its total insurance in force on date mentioned was slightly in excess of $5,000,000.

G. E. M., Pineville, N. C.—All the companies you mention are good—solvent financially and prompt and just in the payment of claims. (1) Is well managed and pays fair dividends, but not nearly as large as those made and paid by (2) which stands in the front rank in every particular and is the best of the three from the viewpoint of the policyholder. (3) This company will, I fear, eventually prove to be a disappointment, particularly in the matter of net cost to policyholders. It is steadily losing ground in several directions.

A. M. F., Lebanon, Mo.—If you are not yet fifty I would advise you to drop all the assessment insurance you are carrying and secure what you can for the money in a good legal reserve company. You ask me to name the best of the three institutions in which you are carrying assessment insurance, and I answer: the Bankers Life of Des Moines, Iowa. You also say you are contemplating replacing some of this insurance by getting a policy in the Mutual Life. You will never regret it; the Mutual is a most excellent policyholders' company.

A. H. C., Olcott, N. Y.—You are correct: rates of premium per $1000, per year, vary with the different kinds of policies issued. To illustrate: (I am quoting the rates of the Mutual Benefit Life Insurance Company of Newark, New Jersey, at your age on several kinds of policies). Ordinary life (which means premiums thruout the period of life), $22.26; 10-premium life (which means that all premiums are paid up in ten years), $52.61; 15-payment life, $38.94; 20-payment life, $32.28; 10-year endowment, $102.25; 15-year endowment, $66.24; 20-year endowment, $48.67. I would advise you, for the purposes you have in mind, to take a 35-year endowment, the annual premium for which is $28, leaving the dividends with the company to shorten the term of maturity. You have in this the protection against death you want at a moderate cost and a savings medium.

F. D. V., Fitchville, Conn.—Confidence in one's self is indispensable to success as a salesman of life insurance. One should be able to *feel* that one can burn the bridges behind, and win thru. We sometimes lose what might be gained by fearing to attempt. Much is said and written about the "art" of salesmanship, and there are numerous experts teaching it; but none of the methods will equal in results the effort made by an honest, truthful and intelligent man or woman who in a natural, straightforward manner presents an article on its naked merits. If the salesman sincerely believes in his own goods, he cannot fail to impress his auditor. Cannot you, for a time, combine your present occupation with life insurance? You may have a couple of hours in the evening you could devote to the work. You would learn much that way in three or four months; and in any event, you could determine your chances of success or failure as a solicitor.

What your 72-year-old friend with the A. O. U. W. certificate should do is a poser. Any way you look at it causes it to appear a speculation. I am inclined to the opinion I would hold on to the full amount and take the chances on a raise of rates.

Are You Going Deaf?

Deaf people hear clearly. Write at once for particulars of the latest wonder of science, the improved

NEW 1915 Thin Receiver Model

Mears Ear Phone

Thousands of sufferers from deafness have recovered their hearing with this perfected instrument. It has 96 sounds covering 4 entire octaves of 12 tones each. In this instrument you get, at last, the perfection of the hearing device. All changes in sound adjustment are made by a touch of the finger to suit any condition of the hearing organs or to register either loud or ordinary sounds.

Free Trial Prove its powers with liberal terms. Will you try a Mears Ear Phone for 15 days in your own home, absolutely free? Will you believe the evidence of your own ears? That is all we ask. Send for free trial offer.

96 Degrees of Sound Positively the very newest, latest invention for the deaf. You get the real tones of the natural voice—the finest qualities in music. In this latest perfected ear phone we have striven to give to all deaf persons sound responses as nearly like those of the normal ear as possible. You will be truly amazed when you put this thin receiver phone to your ear for the first time. Write for the free book on deafness. Get our direct-to-you-from-our-laboratory offer.

Valuable Book FREE

The Mears Ear Phone book — mailed free—explains all the causes of deafness; tells how to stop the progress of the malady and how to treat it. Write at once—now—for this Free Book and our Special Introductory Offer. Send a postal today.

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

YOU SHOULD HAVE A "Standard" BUILT-IN BATH IN YOUR BATHROOM

The "Standard" Built-in Bath ("Conred" pattern shown above) is made complete in one piece, builds into the walls and floor with no hidden places to lodge dirt and moisture, is five inches lower than the ordinary bath on feet, and is enameled all over, combining the beauty and cleanliness of china with the strength of iron. It is easy to clean and is made for building into either right or left corner, in a recess or wall at back only.

LIST PRICES FIXTURES IN ABOVE BATHROOM

"Conred" Bath, 5-ft. size, enameled all over as shown, $68.00. "Laton" Lavatory, size 20x24, complete as shown, $38.00. "Expulso" Closet $30.00. Total list price $136.00, (fixtures only), not including freight, piping and labor installing.

Ask your Architect or Plumber about these fixtures or see them in all "Standard" Showrooms. Illustrated literature on request. Look for the "Standard" Green and Gold Guarantee Label.

"Well, Dinah, I hear you are married."

"Yassum," said the former cook, "I'se done got me a man now."

"Is he a good provider?"

"Yassum. He's a mighty good pervider, but I'se powerful skeered he's gwine ter git kotched at it."—*Birmingham Age Herald.*

An elderly German and his wife were much given to quarreling. One day, after a particularly unpleasant scene, the old woman remarked with a sigh: "Vell, I vish I vas in heafen."

"I vish I vas in a beer garden!" shouted her husband.

"Ach, *ja!*" cried the old wife, "always you try to pick out the best for yourself!"—*Exchange.*

The hotel was not a very good one and the traveling men knew it. Nevertheless they were obliged to go there when they came late at night to the little town. In the middle of the night one of them was dimly conscious that something was wrong. Suddenly he realized that the trouble came from a leaking gas jet.

"Wake up, Bill!" he shouted, shaking his friend violently, "the gas is escaping."

"Well," growled Bill, "can you blame it?"—*Exchange.*

Sir Walter Raleigh, professor of English Literature at Oxford, recently arrived in New York.

An American colleague, in London, wrote to a friend in the United States to meet Sir Walter, but supplied only the description of him that he was "a very tall man." The friend has just written to London:

"I watched several tall men come down the gangplank, and when I saw one who I thought might be Raleigh I walked up to him and said, 'I suppose you are one of the Sir Walter Raleighs.' He happened to be a typical Westerner and not the professor of English Literature at Oxford, and he replied:

"No, sir, I'm a Christian Scientist."—*Exchange.*

SERBIA'S REFUGEES

The Serbian Agricultural Relief Committee has decided this year to take up a new form of relief in addition to its agricultural work, namely, the care of the orphans whose fathers were killed in battle or died of disease, and whose mothers died of typhus.

In September some 5000 of these children were living in the woods and fields, in groups of eight or ten, where the older cared for the younger. At nightfall they would go into the villages and huddle in the shelter of some house-wall. In the morning the older children stood in the bread line and got bread for themselves and the little ones, and all day they "played" in the woods, as letters report.

Children of the refugees from Austria are in the worst situation, for they had first to make long hurried marches with their families, which taxed their strength, and then went thru the horrors of the typhus epidemic.

A strong committee has been formed in Serbia, consisting of American, Serbian, English and French relief workers, to take charge of the disbursement of such funds as can be sent for the support of the orphans. Their idea is to obtain a grant of the buildings of a monastery, and to house as many children as possible there.

Money will be received by the Serbian Agricultural Relief Committee, 70 Fifth avenue, or its bankers, Messrs. J. P. Morgan & Company. Donations of clothing are also needed, and full directions for making kits will be sent on application to the committee.

REMARKABLE REMARKS

JAMES D. HAMILTON, JR.—I am not fighting the enemy.

DR. EUCENE ——: All I have to say is that I have nothing to say.

SARAH BERNHARDT: Only art does not depend on mere global justice.

ED HOWE: I do not believe there is any such disease as the heebie-jeebies.

BARON ROSEN: I smoke and trust to luck to get rid of my half of thoughts.

PROFESSOR CYRUS C. TAIT: Being an American is a fearful responsibility.

WOODROW WILSON: This nation from the beginning was a spiritual enterprise.

JOSEPH H. CHOATE: I am in constant, daily, nightly sympathy with the Allies.

ARTHUR WILSON OF HARVARD: Her squiggles [illegible] are decidedly grotesque.

GERTRUDE ATHERTON: I alienate the old religious pictures by great masters.

BISHOP OF LONDON: The one thing most to be dreaded just now is an inconclusive peace.

JAMES J. HILL: American interests will be better served if our people cease speculating.

EMPEROR WILLIAM: I will not make peace until the sword is snatched out of my hand.

ELIZABETH HAMILTON MUNCIE, M.D.: A eugenic marriage is a foretaste of heaven.

PRESIDENT YUAN SHI K'AI: The biggest fool in the world is he who desires to be emperor.

WARDEN TOM OSBORNE: Sing Sing could stand my death, but Sing Sing could not stand my removal.

CHANCELLOR DAY: The Hohenzollern dynasty should be annihilated, exterminated root and branch.

HUGO MUNSTERBERG: A republic for Germany would be as ridiculous as a monarchy for the United States.

COUNT OKUMA: Territorial expansion is not only politically, but also economically a policy behind the age.

COUNT VON BERNSTORFF: The alleged atrocities committed in the Ottoman Empire appear to be pure invention.

ALICE NIELSEN: I don't believe a woman can become a true artist until she has experienced the joys of motherhood.

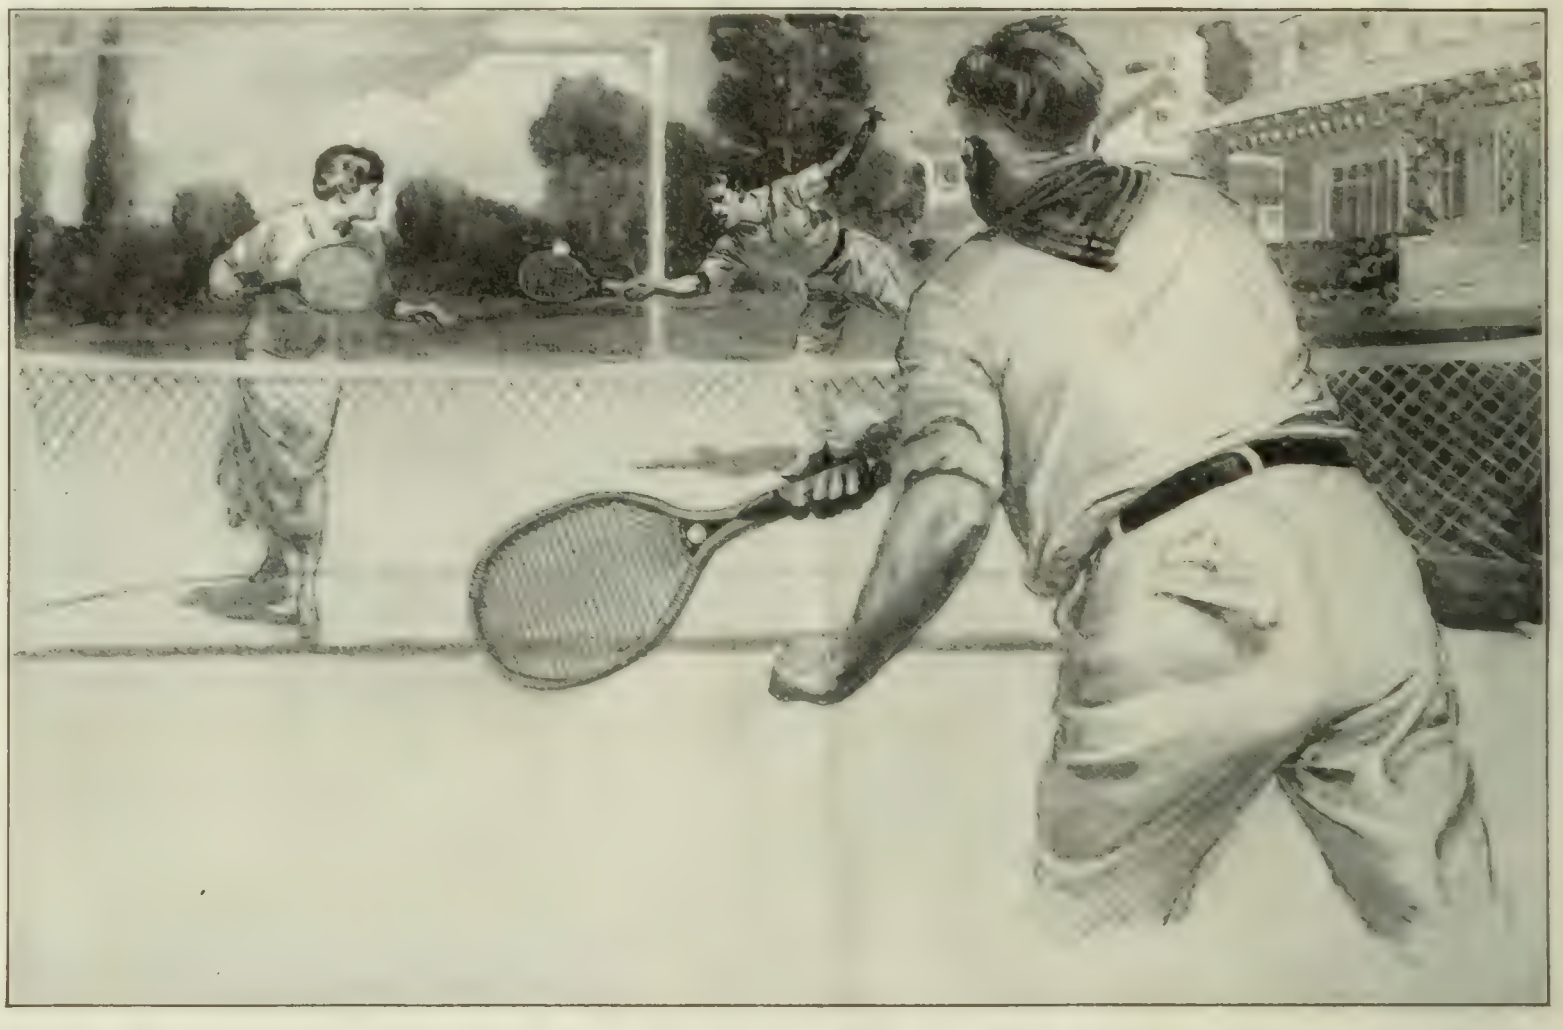
WILLIAM H. TAFT: I said I was out of politics, but that does not mean I am not going to take an interest in politics.

LINA CAVALIERI: If it is raining dress for the walk in the coquettish little rubber boots that are now so fashionable.

VILHJALMUR STEFANSSON: Bears used to come right into camp undisturbed by the barking of dogs or the shouting of men.

ADMIRAL FISKE, U. S. N.: The Christian religion is at this moment being made to exert a powerful influence, not towards peace, but towards war.

THEODORE ROOSEVELT: As to the hyphenated American, he endeavors to serve his foreign fatherland, without exposing his own wretched carcass.

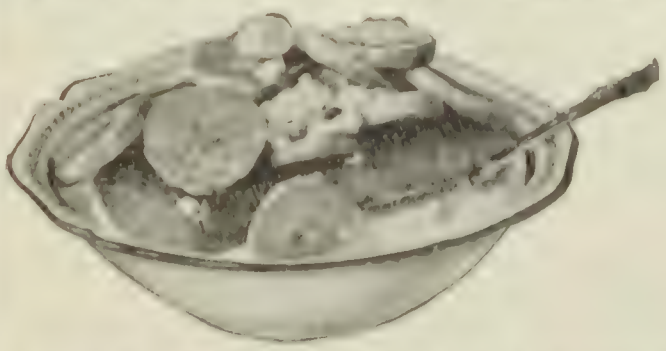


K. S. INUI: Japanese children born in this country are proving to be as much American as those of any other nation in their manners, customs and ideas.

REV. CHARLES M. SHELDON: I cut out of two Sunday papers, a few weeks ago, printed in one of our large cities, twenty-seven columns of what seemed to me indecent matter.

MISS EDYTHE M. JONES, OF DAVIDSONVILLE, MD.: I am twenty-three years old, have blue eyes, light hair, etc., and will send my picture to anyone having good recommendations and position.

WILLIAM T. FOSTER, PRESIDENT REED COLLEGE: Intercollegiate athletics is an American institution which provides a costly, injurious, and excessive regime of physical training for a few students, especially those who need it least.



A Youngster at Fifty

A man is as old as he feels—and whether he feels old at fifty or young at sixty depends upon the food he eats, the exercise he takes and the habits that govern his social intercourse and business activity. To keep the body young and active and the mind alert and buoyant, cut out heavy, high proteid foods and eat Shredded Wheat with fruits and vegetables.

Shredded Wheat

contains all the body-building material in the whole wheat grain made digestible by steam-cooking, shredding and baking. It represents the last word in scientific preparation of the whole wheat grain for the human stomach. It contains everything needed for the building of the perfect human body—a food for youngsters and grown-ups.

Shredded Wheat is ready-cooked and ready-to-serve. Try one or more of the delicious little loaves of baked wheat for breakfast with milk or cream. Serve for lunch or supper with sliced bananas, peaches, berries or other fruits.

The Shredded Wheat Company, Niagara Falls, N. Y.

FIFTY YEARS AGONE

FIFTY years ago this week the soldiers of the Civil War, returning victorious to their homes in the soiled and faded blue of service, but happy and triumphant, marched thru Washington 170,000 strong, and were reviewed and gratefully dismissed by President Johnson. A half century has past and they are in their graves, all but a scattered few who survive to rejoice that toil and suffering and death were not in vain, and to behold the unimagined strength and glory of their native land. Those of them who could, gathered last week in Washington once more, and for the last time, to tread the old march and to be reviewed by the Southern-born President of a hundred million citizens.

This is no occasion for us to tell the story of our expanded nation during these fifty years. The day belongs not to us or our pride, but to them whose sufferings assured to us one country, united, indivisible and free. But for them ours would not have been the banner nation of the world. It is a time to rejoice with them for what they did. It is a time to forget the differences which seemed for a while malignly to be separating North from South. Because they fought a good fight, and on the right side, we are one people, and not dismembered fragments powerless in peace or war. Because of their good fight one civilization covers the land, and the states to whose fields they returned rejoice in the prosperity and growth which never would have been achieved under the patriarchal system now happily perished forever. We give honor to the courage and devotion of those who wore the gray and dutifully accepted the arbitrament of war and the will of God. But peculiar and undiminished luster emblazons them who this week are able to gather in this glorious and pathetic spectacle.

They gather in Washington, but scattered here and there, remnants in every city and town, are the few who are too old or too feeble to join in that memorial parade. How shall we give them honor? They must not be forgotten. It is not enough that they shall gather in their camp fires and tell over the old story; we should bid them tell it to our children. We should point them out to our boys and girls as the heroes of American history. We should have a day every year in which they should be bidden to sit in some public hall where the children of the public schools should look upon them with veneration and should ask them to tell something of those experiences of suffering and danger which they recall when they meet one with another. What better Sabbath day in the year could be spent than that in which they are mustered at church, four or five, perhaps only one or two of them in the town or village, that the children of the Sabbath school may hear them repeat the grand story how they gave liberty and union to the generations that should come. Then when these children are as old they will be proud to tell their children's children how they saw and heard the heroes of a hundred years before.

W. H. W.

HELLO! ALOHA!

THE Genius of Science more than keeps her word. Three years ago a surprized and somewhat incredulous world was told that by the time the Pan-Pacific Exposition was open, human speech would be transmitted by wire from New York to San Francisco. This was done ahead of time, and now we read that men have conversed between these cities 2500 miles without the use of wire, and that what was spoken in New York was heard in Hawaii, nearly twice that distance away. If Honolulu had had a transmitter New York would have heard in response to its "Hello!" hail the musical salutation of the islanders, "Aloha!" If London had possest ears to hear and an electric tongue to speak we should have heard the characteristic "Are you there?" If Berlin had been in tune we might have got the guttural greeting, "Gott strafe England!" If Petrograd had been prepared we should have received in response—but let us not exaggerate the power of the new invention. Possibly the ether waves might have broken down under the pressure of Slavic consonants. It is enough to say that when Mr. Vail said "Hello!" in his office at No. 15 Dey street his voice was audible in every continent, except, perhaps, the Australian. It seems that the time may come when a man, by turning his ears backward, can hear himself talk around the world.

Wireless telephony means that the billion and a half people living on this planet have been virtually gathered into one room where they can listen to one man's voice. The human race has snuggled together like a family about a fireside on a cold evening and can chat comfortably with one another. When print became popular it was said that the human voice had lost its power. But we see, on the contrary, that its range has been extended indefinitely. The vibrations of the air expelled from the mouth, too faint to be felt and speedily quenched, can be magnified and borne by the waves of the frictionless ether to the ends of the earth, there to be reconverted into audibility. The sound passes thru

the silence as the rays of the sun can pass thru a lens of ice and set a piece of wood on fire.

Civilization is held steady, like the world in its orbit, by the balance of centrifugal and centripetal forces. The railroad and the steamship gave to man the power to fly from home to any part of the planet whither his inclination called him. But lest man should become a wanderer upon the face of the earth and the language lose the sweetest of its words, modern invention called into play a counter influence, and the motion picture and the telephone have made it possible to enjoy the delights and advantages of travel without leaving home. Thanks to the first he may see with his own eyes the slaughter upon European battlefields, or, if he averts his gaze from the horrid sight, he may watch the crowds stream by the Tower of Jewels or the bathers on the surf boards at Waikiki Beach. And if he would speak with those he sees in California or Hawaii the telephone makes, or soon will make, this also possible to him.

Hawaii once seemed far away to those who dwelt upon the Atlantic edge of our country. We can all remember the time when it was gravely argued by them whether Hawaii were not too remote to be incorporated into our country, just as in 1776 it was doubted—and with much more reason—whether Massachusetts and Virginia were not too far apart to form one nation, and in 1847 California was thought inaccessible and undesirable. But when a Boston man can talk with his friend in Honolulu or San Francisco, when he finds upon his breakfast table the pineapples of Hawaii and the pears of California and sprinkles them with sugar from Hawaiian cane or California beets, then he can realize that expansion means, not dissipation and weakness, but consolidation and strength, and that the old New England town meeting system of government is not limited to those who can be gathered into one room, but may be extended to include those who can talk together in a common tongue and work together under a common flag. Human thought has power to pierce the mountains and to span the widest ocean.

THE POLITICAL EFFICIENCY TWINS

THE other day, in an address before the Chamber of Commerce of Seattle, Mr. Taft is reported to have said that the advocates of the initiative and referendum propose "to dispense with legislative agents and let the people legislate directly."

Mr. Taft must be mistaken. No advocate of the initiative and referendum proposes to do away with representative government. Representative government is, as Mr. Taft well says, "an institution hammered out in the struggle for liberty by our Anglo-Saxon ancestors for eight hundred years." It ought not and cannot be dispensed with.

What the initiative and referendum really aim to do is to make representative government more representative. If an executive or legislator knows that the people can act in their own interest whenever they are misrepresented, he will hew much closer to the line of popular will. The usefulness therefore of the initiative and referendum lies almost entirely in their potentiality. The less they are employed, the better they work. The fact that they are not abused is indicated by a report in the *National Municipal Review* for October, 1914, which states that out of 261 municipalities known to have the power to use the initiative and referendum, only thirty-one have used the initiative and twenty-six the referendum.

These twin measures, like most reforms in politics, neither do all their sponsors claim nor all their detractors fear, but they have worked acceptably wherever they have been tried, and, unless all signs fail, they are destined to spread in democratic countries.

A LEGAL SEPARATION

HARVARD UNIVERSITY in spite of—or rather because of—its opposition to women law students, is responsible for the first graduate law school in America devoted exclusively to women.

For when the Harvard authorities firmly refused women permission to take the regular courses in the Harvard Law School, Miss Elizabeth C. Beale, a Radcliffe senior, put the feminine arts of ingenuity and persuasiveness to use and induced her father, Professor Joseph H. Beale, of Harvard, to organize the Cambridge law school for women. The school will open this fall. Harvard professors will lecture, Harvard methods of teaching and case books will be used, Harvard requirements of scholarship will be maintained. Only the stimulus of individual competition with Harvard men will be lacking. And when the graduates of the two schools meet in the courtroom it may be the Harvard men who will regret the loss of that wit-sharpening opportunity.

THE PARTIALITY OF THE PRESS

THE complaint which Miss Addams has to make about the misrepresentation of the news applies especially to wartime and chiefly, tho not altogether, to the European press. Nobody could get a correct idea of the progress of the war or of the arguments by which each party to the conflict supports its actions from any journal of a belligerent country. This is partly due to the stringency of the censorship and partly to a natural bias. But one could get an adequate knowledge of events and acquaintance with both sides of the case from almost any American newspaper. We have heard of only one case of a leading paper refusing to publish the reports from Berlin, and that paper has not been able to keep them out altogether. Most of the war news published in America comes from or thru London, and is of course controlled by the British censor and colored by British sentiment. But most of our journals have printed all the German news they could get, and, however strongly anti-German their editorials may be, have given space to the views of German advocates in the form of letters, articles or interviews.

It must be acknowledged, however, that the superficial reader of a newspaper—and that means nearly every reader—does not get a just and well balanced idea of the course of events. That is due to the fact that each journal "plays up" the news to suit itself and in some cases this is done in a way to convey an altogether erroneous impression of what has been done or said. This may be seen by comparing the accounts of the same event in two opposing newspapers. The body of the "story" may be much the same or even identical in language, but by arrangement and headlines it is made to convey very different impressions. It has been found

by experiment that headlines announcing a victory of the Allies will sell much better on the street than when they announce a German victory, and since the news from the various battlefields is never altogether one-sided it is possible to present it in either fashion. This has been carried to such an extreme by some of our pronounced pro-Ally journals that one who reads the headlines only would get the idea that the Allies had pursued an almost uninterrupted career of conquest thruout the year. But even in such flagrant cases of partiality in presentation it is possible, with the aid of a map, to ascertain from the data given that the Allies had in some instances been advancing backward.

It is then chiefly in misproportion rather than by falsification or exclusion that our papers sin against the truth. Misproportion may, indeed, be called a form of misrepresentation, and hence to be avoided, but editors differ naturally as to what part of the news they consider most important, significant or interesting, and journalism would be pretty dull if every paper gave the same space and prominence to each piece of news.

SPECIALIZING IN BRAWN

PRESIDENT ELIOT talked. But President Butler acted. Football was banished from Columbia.

Now after ten years it is restored. This is not so bad as it seems. A university maintaining a band of highly trained gladiators provides a vent for the superabundant athletic spirit of the undergraduate to work itself off. The real students are left free to pursue their studies—which, after all, is one of the purposes of a university.

NAMED IN THE DISPATCHES

ONE might think from the official reports of the campaign that France and Germany had exchanged psychologies. On the French side this is an anonymous war. In the land where Napoleon and Boulanger rose to fame the news remains persistently impersonal. We rarely hear the name of a general unless Joffre discharges him for incompetency. We do not know whom to credit with the staunch holding of the three hundred mile line for thirteen months without a break or whom to praise for the *élan* now displayed in the Champagne sector.

On the other hand it used to be a fundamental principle of the Germans to repress rather than to encourage the tendency to hero-worship to which they as much as any people are prone. For the Germans pride themselves chiefly upon their training, system and organization, upon the unified and coördinated action of the whole people, and they boast that if any soldier drops out, whether it be a private or a field marshal, another man will step into his place and carry out the plan without a break. It is the "American system" of machine construction applied to the political mechanism.

But the popular mind everywhere is ineradicably disposed to make some one individual responsible for anything that happens, right or wrong, and resolutely refuses to direct its admiration or indignation toward a "system" or an abstraction. Every invention must have an inventor; every accident must be somebody's fault; every case of poverty must be due to some thief; every campaign accredited to a particular general. It was, perhaps, in consequence of this popular demand for personalities that the policy of the German Government has gradually changed in the course of the war. First, the curtain was raised so we could discover the figure of General von Hindenburg, heroic size; later General von Mackensen was allowed to come before the limelight, and now the Berlin dispatches are full of the names of all the army leaders, altho it is still uncertain as to what part each plays in the great drama that is displayed to our gaze.

THE MYTH OF "WAR BABIES"

LAST winter there was great excitement in England over the question of war babies. It was reported that in the neighborhood of the concentration camps and recruiting stations there were thousands of unmarried prospective mothers and the papers were filled with rash suggestions and heated arguments. Some demanded the abolition of the illegitimacy laws. Some foresaw the breakdown of the marriage system. Some said that the girls should receive the same honor as the recruits for "giving themselves to the country." Some preached to the charitable to contribute to the support of these children of the "absent-minded beggars" at the front. Some wanted them adopted as the nation's wards.

Now we know that this was much ado about nothing. The report of the Registrar General gives the number of illegitimate births in England and Wales for the months of April, May and June as 9644. This is a deplorably large number, but it is 333 *less* than for the corresponding period of 1914. This is to say the call to arms has reduced the evil instead of increasing it. The same result is observed in France.

The improvement shown in both countries is in part due to the "war brides" movement, which encouraged the soldiers to marry before going to the front and removed the legal obstacles to such marriages. This movement was generally misunderstood and unjustly criticized in the United States at the time, but as we showed in our editorial of February 22 on "The Women Who Save the Race," it was dictated by sound morality and the vital interests of the countries concerned. The statistics now appearing prove that the view we took was the right one. As the war goes on into its second year and the death list piles up, the importance of war babies of honorable parentage becomes evident. Whatever the outcome of the war, the regeneration of Europe depends upon its women.

1620-1920

HOW shall we celebrate the tercentenary of the landing of the Pilgrims at Plymouth? It is the birthday of the nation in truer sense than Independence Day, for 1776 was but the natural outgrowth of 1620. The Mayflower Covenant was the origin of constitutional government, the first instance in history of Rousseau's "social compact" theory. The millions of alien races and religions which have followed in their train have adopted the language and institutions, and, to a larger extent than they realize, the ideals and moral standards of the men and women who landed at Plymouth Rock.

An exposition at Plymouth is proposed, but we hope something better will be thought of. The exposition

commemorating the landing at Jamestown was a dismal and expensive failure. The Panama-Pacific has had the unique satisfaction of burning its mortgage in midseason, but its success is due largely to the fact that there is less of the "exposition" about it than any of its predecessors.

A pageant is proposed, but before going too far the committee on arrangements should call up the shade of Elder Brewster, with the aid of Mrs. Piper, and find out whether such a festivity would meet with the approval of those whom we are to honor. If it is like some pageants we have seen, we fear that it would fall under the same ban as mummery and maypoling. The real Pageant of the Pilgrims is that endless procession of emigrant wagons which, starting from Plymouth nearly three hundred years ago, has been traveling ever since until it has penetrated to every corner of our continent.

Doubtless some form of local exhibition and ceremonies will be held, for there will be pilgrimages to the Pilgrim Shrine thruout the year. We would suggest holding a reunion of all the furniture which came over in the "Mayflower" if a building of sufficient size is constructed. But this is not a local affair. The schools of Oregon will be as much concerned in it as those of Massachusetts. The children of Slovaks and Syrians are as much entitled to celebrate as those who are eligible to the Society of Mayflower Descendants. It must be as wide in its scope as the influence of the event commemorated. It must—unless it is to be a farce—be a real commemoration; that is, it must have for its aim the revivifying of those principles and ideals for which the Pilgrim Fathers left their homes and which they established in these western wilds three centuries ago.

ENGLAND, GERMANY AND THE UNITED STATES

THE Associate Editor of The Independent, Mr. Harold J. Howland, as our readers know, is now in the war zone. Two of his articles have already appeared in The Independent. Others will follow. Our readers will be interested, we are sure, in the following communication from his pen printed on the editorial page of the *London Express* of September 6. Tho it is addrest primarily to the British public, it should be of equal interest to the people of Germany and the United States. It is as follows:

It is a little difficult for me to be amiable just now. The London press seems determined gratuitously to assume, first, that not only is the United States being bamboozled by Germany, but the American people are grateful for it, and second, that because we are gratified at Germany's assurance that there shall be no more "Lusitania" and "Arabic" cases, we are quite cheerfully prepared to swallow any "Gulflight" and "Falaba" cases that Germany may choose to have appear in the future. Germany may be trying to bamboozle us. She will not succeed. The purpose and temper of the American people have been, are, and will be, inflexible.

But the point I wish especially to consider is the British interference with American trade with neutral countries. And, first, I want to make one point perfectly clear. There are plenty in America who are ready to fight, if necessary, to put a stop to such infamies as the sinking of the "Lusitania." There is no one, I believe, who wants to fight to stop the illegal confiscation of American cargoes. Goods can be paid for. Life cannot be restored.

Nevertheless, we should be derelict in our sacred duty to the American people if we did not protest with determination against interference with American trade committed, in our judgment, contrary to sound principles of international law. The rights of neutrals on the high seas are too important and valuable to the world to go unchampioned.

There are several reasons why we look upon Great Britain's interference with our trade as unjustified.

England has no binding and effective blockade of Germany. By the very geography of the case, she cannot have. It is sound international law that a blockade in order to be binding must be both effective and impartial as between the neutral nations.

The British navy can stop direct American trade with Germany. It cannot stop direct Swedish, or Norwegian, or Danish trade with Germany. The British blockade must therefore in the very nature of the case be both ineffective and discriminatory.

It is only in the case of a binding blockade that a belligerent is warranted under the principles of international law and equity in interfering with the non-contraband trade of a neutral carried on in neutral bottoms.

But in the present case appeal is made by England to the doctrine of "continuous voyage" as developed by the United States in the Civil War. Such an appeal might conceivably be upheld in either one of two cases—in the case of a breach of blockade, and in the case of contraband of war. But it is clear, at least to the American mind, that England is maintaining no legal blockade of German ports, for the reasons given above. And the British contention, if I understand it rightly, is for the right to prevent all trade, in so far as she can get at it, between Germany and the outside world, regardless of its contraband or non-contraband nature. Such a contention is not good international law or equity.

There is a further weakness in the English case, it seems to me, as set forth by Sir Edward Grey. In his note of July 23 he dwelt upon the justification for the British course of action afforded by the "shocking violation of the recognized rules and principles of civilized warfare" of which Germany has been guilty in the present war. I yield to no one in my detestation of exactly those assaults upon international decency and civilization. And I know that the great majority of the American people have the same feeling about them. But two wrongs do not make a right, even when one of them is of the utmost heinousness. The fact that Germany outraged humanity in her treatment of Belgium and in the killing of men, women, and children by the wanton sinking of passenger vessels, does not warrant England in invading the rights of neutral nations upon the high seas.

Germany tried to use a similar argument in justification of the sinking of the "Lusitania"; and the United States would have none of it. The relations of a neutral nation with opposing belligerents must be carried on in watertight compartments. Each belligerent is responsible to the neutral nation for the observance of the rights of the neutral's citizens. And the neutral nation must hold each belligerent responsible for its own acts regardless of anything that the belligerents may do as among themselves.

To this the *Express* replies:

In an article on this page the well known American publicist, Mr. Harold J. Howland, explains his country's attitude both to Germany and Great Britain. Mr. Howland vigorously denounces the submarine crimes, but he complains that Great Britain is interfering, unjustifiably, with American exports to Germany. We cannot, he says, maintain an effective legal blockade of Germany, and without such a blockade we are not justified by international law in preventing the passage of any goods that are not contraband of war. In reply to this, we appeal, as Sir Edward Grey has already appealed, to the doctrine of "the continuous voyage" set up by the United States Government during the Civil War. The British navy is besieging Germany, and it is its duty to prevent supplies reaching the garrison. Mr. Howland admits that Germany has violated the rules of civilized warfare, but he contends that we must obey every subsection of these rules. We do not admit that we have broken any international law, but we claim that, since the British navy, now as in the past, is fighting—to quote Mr. Balfour—for "the freedom of the land," we should be sure of sympathetic judgment from neutral democratic countries. Suppose a mad dog, whose existence threatened the lives of our children, were biting in our neighbor's tumble-down cowshed, would Mr. Howland find us guilty of a serious crime against property if we burned the cowshed down?

We shall not here discuss the reply of the *Express* except to say that it seems to us a bit unbecoming to allude to the American merchant marine as "a tumble-down cowshed." We are, indeed, ashamed of our shipping, but we have not forgotten that it was "tumbled down" by British-built cruisers at a time when we had our hands full fighting an enemy which was determined to maintain human slavery.

THE STORY OF THE WEEK

THE GREAT WAR

September 27—British take Loos, north of Lens. British transport carrying Indians sunk by submarine in Mediterranean.

September 28—French take Hill 140, southwest of Lens. Italian battleship "Benedetto Brin" wrecked by internal explosion.

September 29—British defeat Turks ninety miles from Bagdad. Kitchener complains that recruiting is falling off.

September 30—Greek Chamber endorses Venizelos's war policy. House of Commons approves tariff on automobiles by 171 to 8.

October 1—French repulse German counter attacks in Champagne. German officers assisting in Bulgarian army.

October 2—Hindenburg striving to reach Dvinsk and Minsk. Sixty-five French aeroplanes bombard railroads in rear of German line.

October 3—Russia sends ultimatum to Bulgaria demanding dismissal of German officers within twenty-four hours. French pierce third German line near Lens.

The Battle of the Artois Hills

The entrenched line which has grown so familiar to us during the past year makes almost a right angle pointed at Paris where the line running south from Belgium meets the line running west from Lorraine. The attack of the Allies is directed at the middle of both sides of this angle; against the southern side between Rheims and Verdun in the Champagne district and against the western side between Lille and Arras in the Artois district. If the Allies break thru the lines in either of these sectors it will enable them to outflank the other and render it untenable. This would compel the Germans to withdraw from the angle above Paris and straighten their lines, if not to evacuate France altogether.

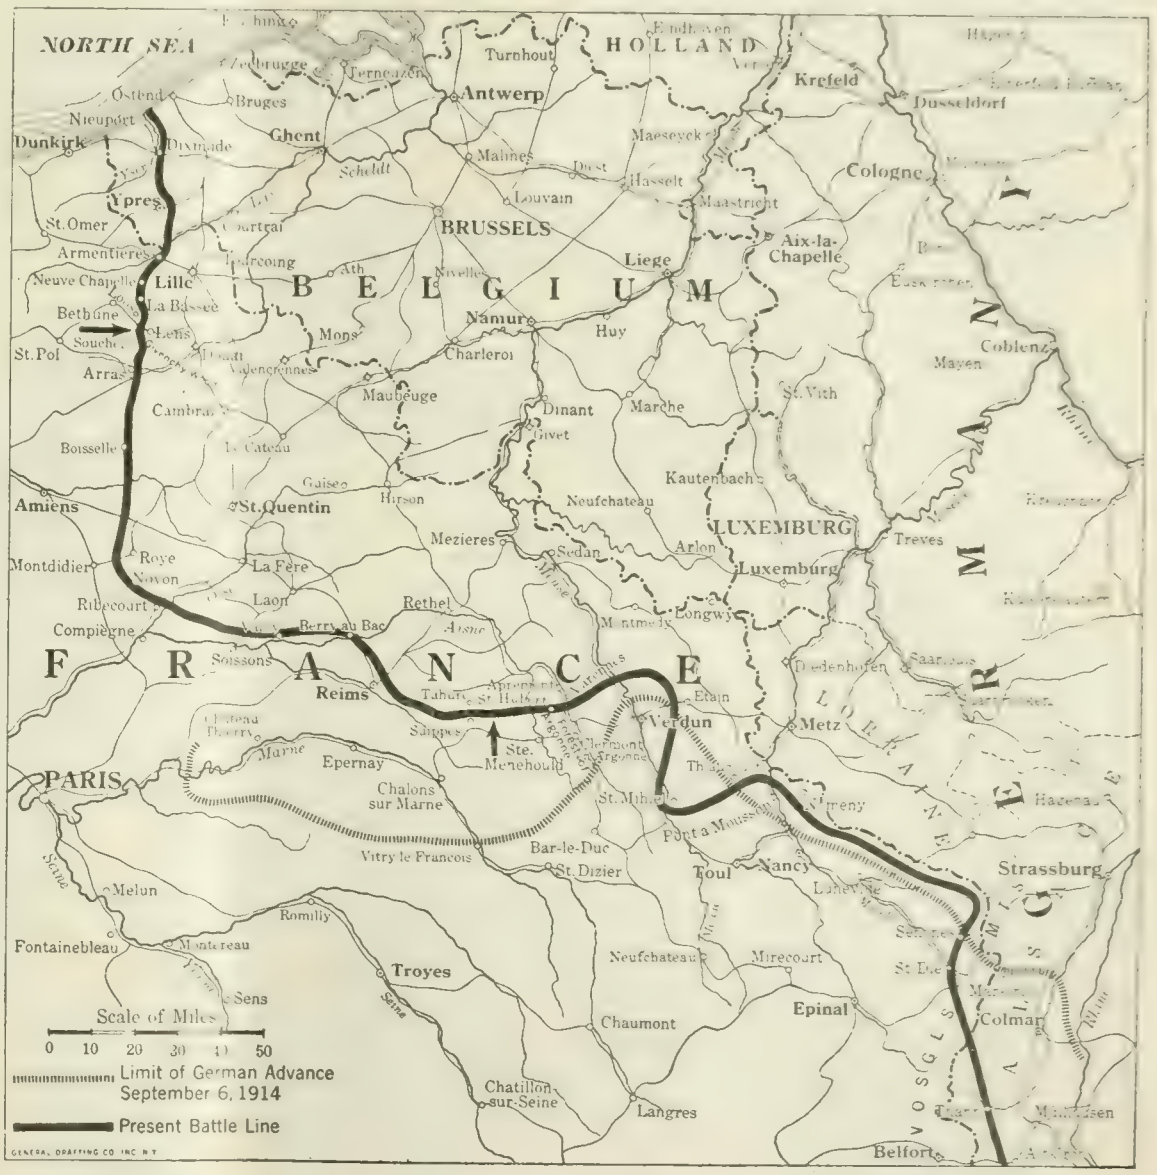
The campaign in the Artois or western region is being carried on in cooperation by the British and French, the former to the north and the latter to the south of the objective, which is the railroad center and coal mining town of Lens. This has been the chief point of attack for many months. The British made desperate efforts to push thru the line at Neuve Chapelle and the French have kept hammering away at Souchez, about twelve miles south of Neuve Chapelle. Now the British line has been extended and the Allied forces have come closer together.

The advance which was begun on September 25, simultaneous with that in the Champagne, has brought the British to Hill 70, near Loos, a mile northwest of Lens, and the French to Hill 140, near Givenchy, a mile southwest of Lens. From these points their guns command the town and the railroads connections there. The gain is no more than a mile or two but it is nevertheless important because it proves the possibility of breaking thru the best entrenchments which the Germans could construct, provided they use enough ammunition. The Germans have made repeated counter attacks but so far have not dislodged the Anglo-French troops from their new positions except on the left where they recaptured 150 yards of trenches from the British. Further to the north the British also took the offensive and gained ground at Hooge, in front of Ypres, most of which they held.

For six days before the assault the British bombarded the German defenses with high explosives and shrapnel. During the night before the machine guns played continuously on the trenches and entanglements so as to prevent the Germans from repairing, and early in the morning began the heaviest cannonading in the history of the world. The ranges had been carefully studied and four shells were dropt upon each yard of the trenches every five minutes. The Germans were insufficiently supplied with ammunition and were greatly outnumbered, five to one, the Germans claim.

As It Looked to a Private

Neither the official communiqués nor the comments of the strategists give one any idea of what such fighting as took place in Loos seems like to one in the thick of it. We therefore quote from the London *Daily Mail* and New York *World* the story of a wounded soldier:



At 4 a. m. the British heavy guns opened a furious bombardment, and the British small quick-firing guns [illegible] the infantry opened a point-blank fusillade against the trenches opposite, fifty yards away. It literally swept away the German parapet.

This lasted fifteen minutes. The [illegible] fierce barking of the quick-firers blazing away just a foot or two above our heads as we crouched down right into the [illegible] trenches seemed to drive us mad. I can hardly tell what it felt like, it seems now like a nightmare. I suppose I was half mad.

It was about 4:20 when "Stand to" was past along. You just pass it along and the order flies down the line of trenches in a few seconds. I felt all stiff and rigid; I remember fixing my bayonet, then some one said, "Prepare to charge."

I repeated it to the next chap in a funny, squeaking voice. It didn't seem like me talking.

Then there seemed a pause. I sort of prayed that something would stop the next order. You can't think properly; you just

THE RECONQUEST OF FRANCE

The long awaited drive of the Allies has at last begun in earnest. At the two points indicated on the map by arrows definite progress has been made. The German line has been pierced on the western and southern sides. The British are attacking Lens from the north and the French from the south. In the Champagne region west of the Argonne Forest the French have dislodged the invaders along a front of fifteen miles

try to pull yourself together and call yourself a fool.

Then, suddenly, when I thought it would not happen, every one was shouting "Go!" and we were all climbing over the trench sandbags. I rushed forward a few yards and fell down in the slushy mire when I saw the others dropping—then forward again until we got within ten yards of the trenches.

"Charge!" shouted the officers all along the line, and we all yelled. It was an awful din, everybody yelling themselves hoarse. I remember standing on top of a tumble-down parapet. It was a mess of earth, torn sandbags and pieces of barbed wire.

I saw two Germans. They seemed hesitating whether to throw up their hands or shoot. Then I just wanted to kill a man. A chap does see red. I remember vividly that impelling desire to slay. One I stuck with my bayonet and pulled the trigger at the same time, and the other fellow—I just bayoneted him, too.

We took that first trench without a casualty. There wasn't any fight left in the poor beggars; they were all doddering. I began to cool down a bit then, and the order came along to build head cover and to hold a trench. We did this by humping a sandbag across the trench and putting it up on the other side.

The Germans were now opening fire upon us from their second line with rapid rifle fire and machine guns. We stuck it for ten minutes and then were scrambling forward again. Meanwhile, during the wait, bombing parties had crept forward and were giving the Germans beans.

We took all the cover we could, crept along the traverses and up the communicating trenches, and then, when we got within a dozen yards, we did all over again that yelling, ear-splitting charge.

I saw three snipers huddled around a Maxim gun. They were shouting something. I put it across the three of them, and just then I got hit with a piece of shrapnel. I went down and did not get up again till I was helped back to the first aid some hours later, but I heard that our chaps who had again gone forward had captured the third line of trenches.

They say the fighting there was worse than ever, because the Germans had managed to get up some reinforcements, but I shall never forget the effect of the "Lloyd George specials" upon the first German trenches. We had to stand on dead Germans while we rested there, and trample over them on our charge for the second line.

Victory in Twenty Minutes

The battle in Champagne, the greatest victory achieved by the French since the battle of the Marne a year ago, was practically accomplished in twenty minutes. At 9:15 on the morning of Saturday, September 25, the French and African troops leaped from their trenches along a front of fifteen miles and captured the first line of the German defenses. The Germans lost more men that day than the entire American army contains.

But to make that charge possible months of preparation were necessary. A bombardment of sixty hours preceded the attack, in which the long range guns searched the roads communicating with the front so as to cut off the supplies. Aeroplanes sailing over the German lines in flocks of sixty at a time dropt bombs on the railroad stations and trains. This so demoralized the commissary that some of the German soldiers at the front had been two days without food when they were attacked. It is estimated that the French have been expending half a million shells a day at a cost of more than $5,000,000.

The French attack was directed against that part of the line lying west of the Argonne forest between Suippes and Ste. Menehould. About five miles behind the German front runs the railroad which enters the Argonne, and if this is cut the army of the Crown Prince, which has been for almost a year attacking the Verdun fortress from this side, will be forced to take a new position. The French continued their advance during the week and have gained from one to three miles along the fifteen mile front. Their attack is now directed toward the hill of Tahure. The French official estimate puts the German losses at three army corps. Some thirty thousand prisoners were taken and over a hundred cannon. The Germans do not attempt to deny the seriousness of the Allied offensive, but claim that their lines are holding well. They report the capture of 10,922 men and thirty-five machine guns in Champagne and Artois.

The Prussian lists of killed, wounded and missing up to September 28 sum up 1,916,148 names. This does not include the other German losses.

The Russian Campaign

It was expected that when the French and English began their attack upon the German lines in the west the pressure upon the Russians would be relieved because of the necessity of withdrawing troops from the eastern front. So far, however, no such effect is discernible. On the contrary the Germans and Austrians in Russia have shown increased activity and have made gains on both the left and right wings. They seem to be determined to establish a line as far east as possible before the arrival of winter or the new Russian armies check their movements. They are now in possession of a north

THE WAR NEWS IN TWO WORDS

and south line extending about a thousand miles from the Gulf of Riga to the frontier of Rumania and about two hundred miles east of Warsaw. According to the estimates of Russian military experts the Austro-German forces on this front comprize some 2,600,000 men. The line has recently been strengthened in the northern sector for the purpose of taking the fortress of Dvinsk and breaking the Russian lines east of Vilna. But Dvinsk is protected on the south by river, swamps and lakes and the Russians, knowing the country, have trapped and severely punished the German advance guard in their endeavor to approach the city from this quarter.

There are three lines of railroad running parallel about fifty miles from Petrograd southwest to Warsaw. Field Marshal von Hindenburg cut the first of these a month ago at Vilna. He has now broken thru the Russian line at Smorgon, which gives him access to the second, and he seems determined to press on to the third at Minsk. The Russians, however, are making a stout defense in the lake region east of Vilna.

On the southern end of the line the Russian army which recently took the offensive seems now to have been checked and turned back. The Austro-German forces have regained the fortress of Lutsk and driven the Russians from the Styr River.

The German War Office reports the capture on the Russian front during the month of September of 421 officers, 95,464 men, 37 cannon, 298 machine guns and one aeroplane. Evidently then the Petrograd claim that the Russian armies have retired intact cannot be taken literally. The removal of the Grand Duke Nicholas as commander-in-chief is evidently to be followed by an overhauling of army administration. General d'Amade and other French officers have gone to Russia from the Dardanelles to assist in the reorganization or perhaps to take command. General Alexis Kuropatkin, who commanded the Russian armies in the Japanese war, has been appointed chief of the Russian Grenadier Corps. Kuropatkin was dismissed from the army in disgrace at that time on account of the failure of his Manchurian campaign, but foreign authorities have been disposed to believe that he was unjustly held responsible for the Russian defeat. He entered the army at the age of sixteen and is now sixty-seven.

LAYING PLANS FOR THE "GREAT DRIVE"

French officers studying a section of the maps used by the headquarters staff in preparation for the movement of troops

The Balkans in Arms

The mobilization of Bulgaria was promptly met by the mobilization of Greece, but so far no outbreak of hostilities has occurred. The Bulgarian Government states that its position of "armed neutrality" is warranted by Bulgaria's propinquity to the theater of war and is not intended as a menace to any of her neighbors. Premier Venizelos replies that the mobilization of Greece has the same justification. The opposition to the war policy of Premier Venizelos has disappeared with the arming of Bulgaria. When the Greek Chamber of Deputies assembled on September 30 the Premier was received with enthusiasm by all parties and the leaders of the Opposition exprest their approval of his intention to go to the defense of Serbia against Bulgaria. The Government bills providing for a grant of $30,000,000 and applying martial law to the border districts and Athens were promptly passed.

It is announced that the Allied Powers will defend Serbia in case of attack. There have been some Russian and British forces in Serbia for a long time and it is said that an Allied army has been disembarked near Salonika ready to be sent into Serbia by the railroad which runs from that port to Belgrade.

The troops called to the colors in Bulgaria are said to number 250,000 and about a third of them have been massed along the Serbian and Greek frontiers ready for an immediate invasion. German officers are in Bulgaria assisting in the organization of the army and the preparation of the fortifications. A force of Austrian and German troops, variously estimated from 60,000 to 600,000, has been concentrated on the Hungarian side of the Danube, but has yet shown no signs of undertaking an invasion of Serbian territory.

Rumania has so far mobilized no more troops than she has had under arms before.

Premier Radoslavoff, of Bulgaria, still declares that he is free to take either side which will offer most to his country. It is said that Sir Edward Grey offered Bulgaria that part of Macedonia which she claimed under the agreement of the Balkan League before the war on Turkey as well as the Turkish territory as far as the Enos-Midia line which Bulgaria gained by conquest in the first Balkan war but lost in the second. He also promised all necessary financial support. In return for this Bulgaria was to attack Constantinople from the land side with her whole army.

The Germans on the other hand did not ask for the active aid of Bulgaria but merely a favorable neutrality which would permit them to send troops and munitions thru Bulgaria to Constantinople. For this privilege they would assist Bulgaria to take from Serbia and Greece the desired Macedonian territory and would induce Turkey to cede Kirk Kilisse and the railroad to the port of Dedeagatch. It is apparently this offer which Bulgaria has accepted since Turkey has already yielded the railroad to the Aegean.

On October 3 it was announced that the Russian Minister at Sofia had been instructed to present the following ultimatum:

> The representatives of Russia, which is bound to Bulgaria by the imperishable memory of her liberation from the Turkish yoke, cannot sanction by his presence preparations for fratricidal aggression against a Slav and allied people.
>
> The Russian Minister, therefore, has received orders to leave Bulgaria with all the staffs of the Legation and Consulates if the Bulgarian Government does not within twenty-four hours break with the enemies of the Slav cause and of Russia, and does not at once proceed to send away officers belonging to armies of states which are at war with the powers of the Entente.

Armenian Atrocities

When the first news of the outrages inflicted upon the Christians of Asia Minor was received it was thought by many that the reports must be exaggerated. But later advices from various sources make it evident that the Turkish Government is bent upon the destruction of the Armenian race and that their present sufferings are greater than they

ever were under the rule of Sultan Abdul Hamid. A Committee on Armenian Atrocities has been formed with headquarters at 70 Fifth Avenue, New York, for the purpose of sifting the evidence and collecting funds for the relief of the sufferers. It is composed of Charles R. Crane, Samuel T. Dutton, John R. Mott, Oscar S. Straus, Frederick Lynch, William Sloane and others interested in Turkish affairs, and it has issued a report giving some of the letters from eye-witnesses of the atrocities. The committee reports in part as follows:

The statements examined cover hundreds of towns and cities in which in many instances all of the Armenians have been killed outright, often after horrible torture, or sent to the desert to die of starvation, and that, too, with diabolical cruelty. The ostensible deportation of men, women and children toward Mesopotamia is usually but a form of marching those starving, helpless and frequently naked refugees out into the mountains to be outraged and butchered, sometimes by their guards, and sometimes by the Kurds, who gladly cooperate in the work of destruction.

Included among these refugees and victims are pupils and graduates from the American schools and colleges, teachers and professional men who have taken degrees in American and European universities, men and women who have represented the brains and enterprise of the country for a generation or more.

Evidence seems to prove that probably 500,000 Armenians have already been murdered or forced to the desert, where only death awaits them unless relief is secured at once. And all this has taken place since March, and is now at the hight of its gruesome fury.

Trust Cases

In the suit of the Government against what has been called the Moving Picture Trust, begun three years ago, under the Sherman Anti-Trust law, a decision against the defendants was announced in the Federal District Court, at Philadelphia, last week. The defendants were the Moving Picture Patents Company, the General Film Company, eight other associated or subsidiary corporations, and eleven individuals. While dissolution appears to be required by the decision, the court did not suggest how it should be accomplished. Suit was brought as the result of a complaint made by a film company in New York, which alleged that it had been oppress by the combination. The Moving Picture Patents Company is a holding corporation organized by nearly all the manufacturers of films, who transferred to it their patents. Uniform prices were made, and any exhibitor of moving pictures who did not obey the rules was deprived of his supply. Exhibitors who bought any part of their supplies from producers outside of the combination were punished in the same way. It was claimed that ownership of patents gave the combination a right so to act. But the court says that while patentees may control the trade in the patented article so far as exclusive sale of it is concerned, the grant of a patent does not give a license for doing that which the law condemns, and that the defendants "went far beyond what was necessary to protect the use of the patents or the monopoly which went with them." Counsel for the Government says that "the decision in effect holds that the owners of a few patents useful in any art or industry may not by combination acquire a monopolistic power which would enable them, if they should see fit to do so, to exclude from the art or industry the owners of other patents also useful in the same field."

In the Federal Court at Detroit, last week, a permanent injunction was issued, forbidding the Kellogg Toasted Corn Flake Company to fix the price at which its products must be sold by retailers. Suit was brought by the Government three years ago. This injunction is issued with the consent of the defendant company. Testimony has recently been taken in the Government's suit against the Corn Products Refining Company, which is accused of violating the Sherman act by its contro' of trade in glucose and starch.

Along the Mexican Border

It has not been conclusively shown that Carranza officers and soldiers are not taking part in the raids of Mexicans across the border along the Texas boundary. General Navarrete, the local Carranza commander, insists that his followers are not guilty, but Colonel Blocksom, commanding the American troops near Progreso, the scene of a recent raid, says in his official report that Navarrete is in sympathy with the raiders or afraid of them. On the Mexican side, in the vicinity of Progreso, he adds, there are about 500 of the bandits. They have a military organization and many wear khaki uniforms. Colonel Beltram, the Carranza consul at San Antonio, has started for Washington with what he regards as evidence that the raiders are Magonistas, or members of the Mexican branch of the Industrial Workers of the World, fanatical men who believe that by their action they can cause intervention, which, they think, would be followed by a distribution of Mexican land. Mexican residents of Progreso have been told, it is said, by messengers from the raiders' camp that there is to be an invasion of Texas. A Mexican prisoner held by our forces has made a sworn statement or confession in which he asserts that the Progreso raiders captured Richard J. Johnson, an American cavalryman, cut off his head and exhibited it on a pole as a trophy. Johnson has been missing since the raid. There is evidence that forty Mexicans were killed. An American ranchman named Fuller was captured and held for ransom. The payment of $5000 caused his release. Another ranchman, named Mangrum, was killed and his horses were taken.

In Sonora, where Maytorena, the Villa commander, recently won a victory, the Yaqui Indians, formerly associated with Villa, are looting, burning and killing. Those who fought under Maytorena put thirty wounded prisoners to death because their leader lost a leg in the battle. Another party, which had deserted, captured a train on the Southern Pacific road near Torres, seventy miles from Guayamas, placed eighty passengers in a car and burned sixty to death there. Among the victims were many women and children, but no Americans. Luis Terrazas, son of the man formerly regarded as the richest resident of Mexico, has escaped from the prison in Chihuahua, where he had been held for eighteen months. A ransom of $500,000 was demanded by Villa, and it is said that nearly $1,000,000 was paid. But it was not sufficient to procure his release.

Carranza and Villa

Carranza has transferred the executive offices of his Government to the capital, but he remains with his staff at Vera Cruz. Zapata menaces the capital. He has fought with Carranza's men in the suburbs and has repeatedly wrecked trains on the road to the coast. It is said that he hopes to drive the Carranza forces from the city before the next meeting of the conferrees in this country, because they are inclined to recognize Carranza's Government. Apparently

WHERE THE NEXT TEUTONIC THRUST IS EXPECTED

Thru Belgrade, capital of Serbia, which lies just over the Save and Danube rivers, the only railroad from Austria-Hungary into Serbia. The railroad bridge is seen at the left of the photograph

he does not take into account the recent failures and growing weakness of his ally, Villa. The condition of the capital has been improved by Carranza's capture, on September 27, of Necaxa, 110 miles from the city, where is situated the great power plant on which the capital depends for street lights and the moving of street cars. The capture was made at the end of a five hours' battle, and the power plant was found intact.

Villa evacuated Torreon and it was occupied by the Carranza army under Obregon. Many of the residents were on the verge of starvation. Villa, retreating, had a part of his army in the vicinity of Casas Grandes. The Mormon colonists there, fearing a repetition of the harsh treatment to which they were subjected last year, have been fleeing to Texas. Villa's army is now a small one, having been greatly reduced by desertions. But he is sending delegates to represent him at the international conference in Washington. One of these is General Maytorena, who was arrested when he crost the border. Another is General Raoul Madero, brother of the late President. Defeat in battle forced him to cross the border. He also was arrested, but both of these delegates have been set at liberty. General Angeles, now in Washington, is another representative of Villa. It was recently reported that Angeles had deserted this leader. He asserts that he is still loyal.

Harris & Ewing

THE NEW RED CROSS MANAGER

Brigadier-General Carroll A. Devol is general manager of the American Red Cross, which, with the relief work in troubled Mexico added to its other service, is now particularly active. He has had much experience in relief work in connection with his office in the quartermaster corps of the Army, and was in charge of relief at San Francisco after the great calamity

A Gulf Coast Hurricane

A tropical hurricans of great severity swept over New Orleans and the adjacent coast in the evening on September 29, causing the loss of many lives and the destruction of much property. The storm continued for seven hours. For a short time the velocity of the wind was 120 miles an hour, but the sustained rate was 86 miles. The latest reports show that 300 persons lost their lives, 24 of them in New Orleans, but this number will be increased when news is received from several places which were isolated by the storm.

Along the coast east of New Orleans about 100 lives were lost. Many were drowned at Rigoleta, where the tide rose sixteen feet. Only two houses there, it is said, were left standing. More than 150 schooners were wrecked. At several places large schooners can be seen on the mainland, ten or fifteen feet above mean tide level. A British steamship lies high and dry at Gulfport. Barges carrying $1,500,000 worth of coal were sunk in the Mississippi. Eight persons were drowned when the packet "Hazel" went down. There was but little loss in Mobile, and the Texas coast escaped.

Hayti

The American forces stationed in Hayti were attacked last week by rebels who had refused to lay down their arms. Sergeant John Platt and Sergeant Edward C. Thompson, of the marines, were killed, and ten of their companions were wounded. The marines were guarding food supplies on the way to Cape Haytien, and there were two engagements. Fifty of the Haytians lost their lives. Sergeant Thompson was leading a small force sent out from Port au Prince, the capital, to recover the body of a comrade who had been accidentally drowned. He was shot within a few miles of the city. On the 30th, two or three days after these losses, the rebels agreed to disarm. This decision was reached at a conference held near Cape Haytien. But there are parties of bandits in the country not under control.

It is now known that the treaty or convention with Hayti was modified before the signatures of Haytian Government officers were attached. The original agreement provided for a financial adviser of broad powers, to be named by the President of the United States. He was to devise a system of accounting, inquire as to the validity of all foreign and domestic debts of the Government, and in other ways to exercize so much authority that Haytian critics said their President would practically be displaced. In the treaty that was signed the powers given to this adviser are transferred to the National Bank of Hayti. The bank is controlled by United States capital.

Hayti is greatly in need of a loan, and one will be negotiated after the treaty is finally approved. The country is bankrupt. With the help of a loan the currency system can be reorganized, new schools established, agriculture promoted, coastwise shipping developed, and the custom houses and lighthouses improved. At the same time the foreign debt can be reduced.

ARCHDUKE FERDINAND EUGENE

Commanding the Austro-Hungarian forces on the Italian front

FROM STATE TO STATE

ALABAMA: Mr. John S. Laverty, the blind member of the Alabama Legislature from Talladega, who is working for the establishment of a state industrial school for the blind, has had a remarkable and an inspiring career. After losing his sight at the age of twelve, he studied music and became an excellent performer on many instruments. Since then he has taught this art to hundreds of other blind persons, many of whom are supporting themselves as teachers, tuners and repairers. Meantime he has established prosperous music stores in three Alabama cities. In one of these he employs a blind young man to whom he has taught both music and typewriting, for Mr. Laverty is also an exceptionally expert typist. He says the blind do not need pity so much as opportunity to study those vocations in which they can succeed.

ARIZONA: Preliminary steps have been taken for the establishment of six dams, reservoirs and power sites in the Grand Canyon of Arizona by which it is planned to develop at least 400,000 horsepower of hydro-electric energy from the waters of the Colorado River. Mr. James B. Girard, formerly State Engineer, says that besides the furnishing of power for railroads in the mountains and mines of the state, the plan includes a scheme for the electrical extraction of atmospheric nitrogen for the manufacture of fertilizer.

FLORIDA: Mrs. Minnie Moore Wilson of Kissimee is making an earnest effort to arouse nation-wide interest in the case of the Seminole Indians of Florida, who, she says, are being literally pushed off the land which became theirs by treaty rights seventy-five years ago. "There are only 600 Seminoles left," she says, "and those who are working to have justice done to them want an answer to the question why they have been denied the Everglades and other land which is rightfully theirs. We want to arouse the country so that those who have been holding land for speculative purposes will have to restore it to the Indians."

GEORGIA: The Atlantic Deeper Waterways Association is to holds its next convention at Savannah November 9-12. President J. Hampton Moore, in a letter urging the several Atlantic states to send delegates, describes the proposed waterway as extending from Bar Harbor, Maine, to Key West, Florida, and calls attention to its uses in both peace and war. One of its great advantages in times of war, he says, would be the opportunity it would give for the speedy and safe concentration of underwater craft and destroyers to defend any threatened spot on the coast.

MICHIGAN: Many prominent men are interested in the construction of "The Wolverine Freeway," a road of crushed rock and asphalt, which will connect Detroit with Grand Rapids 154 miles distant. The cost is estimated at $9500 a mile, of which the state contributes $3400. The remaining $6100 a mile, or about $1,000,000, is to be raised by private contribution, or perhaps has been so raised, for at last accounts enthusiasm along the line of the proposed road was running high.

MISSOURI: Diamond-toothed circular saws—real diamonds from Brazil—which cut thru the hardest limestone at the rate of three inches a minute, are whirring day and night at the Carthage quarries, cutting and shaping the 50,000 blocks of stone needed to build Missouri's new capitol in Jefferson City. It will take 300 men a year to do this part of the work at the quarries. The stone is Burlington limestone, which is as lasting as granite. Stone experts say it is really a species of marble, superior to Tennessee marble, dark in color and capable of taking a high polish. The exterior of the capitol, to the top of the dome, will be of this stone, much of which will also be polished and used for interior finish.

NEVADA: Dr. J. E. Church, Jr., and Professor S. P. Ferguson, both of the University of Nevada, with assistants, form the staff of the observatory on the summit of Mt. Rose, 10,800 feet high, about halfway between Reno and Lake Tahoe. It is said to be the highest meteorological station in the United States. It does not maintain an observer continuously, the instruments having been constructed to work without attention for long periods of time. The investigations of topography and temperatures carried on by this staff at different levels have been of great value to fruit raisers and agriculturists, and now a plan has been devised for dealing with the relation of mountains and forests to the conservation of water supply.

NEW HAMPSHIRE: The heirs of the late Joseph B. Walker, who in his lifetime was an earnest exponent of forestry and at one time a member of the New Hampshire State Forestry Commission, recently donated a large tract of land on the Long Pond road at Concord to the state for the demonstrations of forest growth which State Forester Hirst is making. The land is admirably adapted to the purpose and the work of preparing it for tree culture has begun. The tract had been in the possession of the Walker family since the town of Concord, or Rumford, was laid out.

NORTH DAKOTA: The open-air school inaugurated last fall in Bismarck by the North Dakota Anti-Tuberculosis Association was so successful that it is to be reopened this fall. The school was maintained last winter on the porch of a private residence, sessions being held from 9 a. m. to 4 p. m., and all the only one of the pupils was in good physical condition at the beginning of the term. November 1 all were said to be well at the close. May 15. Many times during the term the thermometer registered from twenty-eight to thirty-six degrees below zero, yet the children attended regularly and were delighted with the experience. Two years of school work was accomplished in the six and a half months.

OKLAHOMA: Mr. Joseph B. Thoburn of the department of history and Dr. Irving Perrine of the department of geology of the University of Oklahoma, after two years of investigation of the so-called "natural mounds" so plentifully found in Oklahoma and neighboring states, have reached the conclusion that the mounds are the ruins of timber-framed, dome-shaped, turf-covered habitations of a prehistoric race. Since there are countless thousands of these mounds, some in colonies of 2000 to a square mile, it is believed this race far outnumbered the Osage and Quapaw Indians who came later; and tho these Indians are believed to have occupied this territory for at least 600 years, they have no traditions concerning the former inhabitants. Implements of tillage, household utensils and beautifully decorated pottery found in the mounds show skill exceeding that of any of the known aboriginal tribes of the United States.

PENNSYLVANIA: The Octavia Hill Association, which for a score of years has been working to provide the poor of Philadelphia with comfortable and sanitary homes at the lowest possible prices, has cleaned up many unwholesome quarters. Its latest venture is that of providing well-built apartments in Kensington for workmen whose wages are so small that heretofore they have had to live in crowded, ill-ventilated rooms. The association is not a rival of the building operators, nor are its beneficiaries objects of special charity.

TEXAS: In the city of Sweetwater a large number of old-time cattlemen of the Southwest recently called a meeting which well-nigh filled the county courthouse. There they formed a permanent organization to commemorate and celebrate annually the days of free grass on the open range. No man was eligible who had not lived in the cow country prior to 1885. At midday a recess was taken and the entire convention repaired to a grove of pecan trees out on Sweetwater Creek where an old-fashioned chuck-wagon dinner was spread.

UTAH: The view from the summit of Mt. Timpanogos is one of the finest in Utah, but the ascent has always been so difficult that comparatively few tourists have taken advantage of it. That difficulty is now being removed by the citizens of Pleasant Grove, which lies in the morning shadows of the great mountain. Mayor Harvey recently proclaimed a holiday and called upon every able-bodied man in the city to turn out and help construct a trail by which steed may be used on horseback to within a quarter of a mile of the top. Others have also set an iron flagstaff on the summit with a large metal flag which can be seen from the city with the aid of glasses.

VERMONT: The Vermont Forestry Department plans to coöperate with the private forest owners of the state to a greater extent than heretofore. Upon request, an expert will not only supervise the marking on private lands of all trees which should be cut, but will keep account of their number and at the conclusion of the marking be able to inform the owner as to the total number to be cut. This information will be of value in enabling owners to dispose of the timber before cutting. In young forests the aim of the forester will be to increase the rate of growth of the most valuable trees, while in old stands the principal object will be to secure a second crop of the best varieties.

VIRGINIA: The new South Richmond public school, which has just been completed at a cost of about $100,000, is one of the handsomest buildings in the Southside. One of its notable features is a large central auditorium for the use of public gatherings. Professor E. E. Smith, superintendent of Southside schools, is to be principal of this one, and in addition to the primary and elementary grades, will carry his pupils thru two grades of high school work, thus relieving the severe pressure upon the John Marshall High School. It is hoped that the adoption of this plan here and in other schools of the city will permit the central institution to give the final two high school grades to all pupils who may come.

WASHINGTON: Governor Lister is planning to have the next Legislature wipe out the entire bonded debt of the state. In a recent letter to the State Board of Equalization he asks that body to bear this plan in mind when fixing the state tax levy. There are only $281,000 outstanding bonds, some of which are not due, but Governor Lister favors buying and retiring them all. Fourteen states in the Union are now free from bonded debt.

WYOMING: For what it believed to be economical reasons the Wyoming Legislature of 1915 provided for the taking of the state census by county assessors and their deputies. Many citizens claim that as a result the returns show a large falling off in population, especially in the larger cities since the United States census of 1910, the first is generally believed the population has increased at least twenty-five per cent. The explanation may be found in the fact that the assessors are expected to collect a poll tax of $2 from each person in the state between the ages of twenty-one and fifty years. It is supposed a large number of persons have "understated" the census enumerators so as to escape [illegible] which might be used for collecting the poll tax.

THE GREATEST TELEPHONE TRIUMPH

BANCROFT GHERARDI
Engineer of Plant, American Telephone and Telegraph Company

J. J. CARTY
Chief Engineer of the American Telephone and Telegraph Company

F. B. JEWETT
Assistant Chief Engineer of the Western Electric Company

C. E. SCRIBNER
Chief Engineer of the Western Electric Company

A WEEK ago last Tuesday the president of the American Telephone and Telegraph Company in his New York office picked up his desk telephone and said:

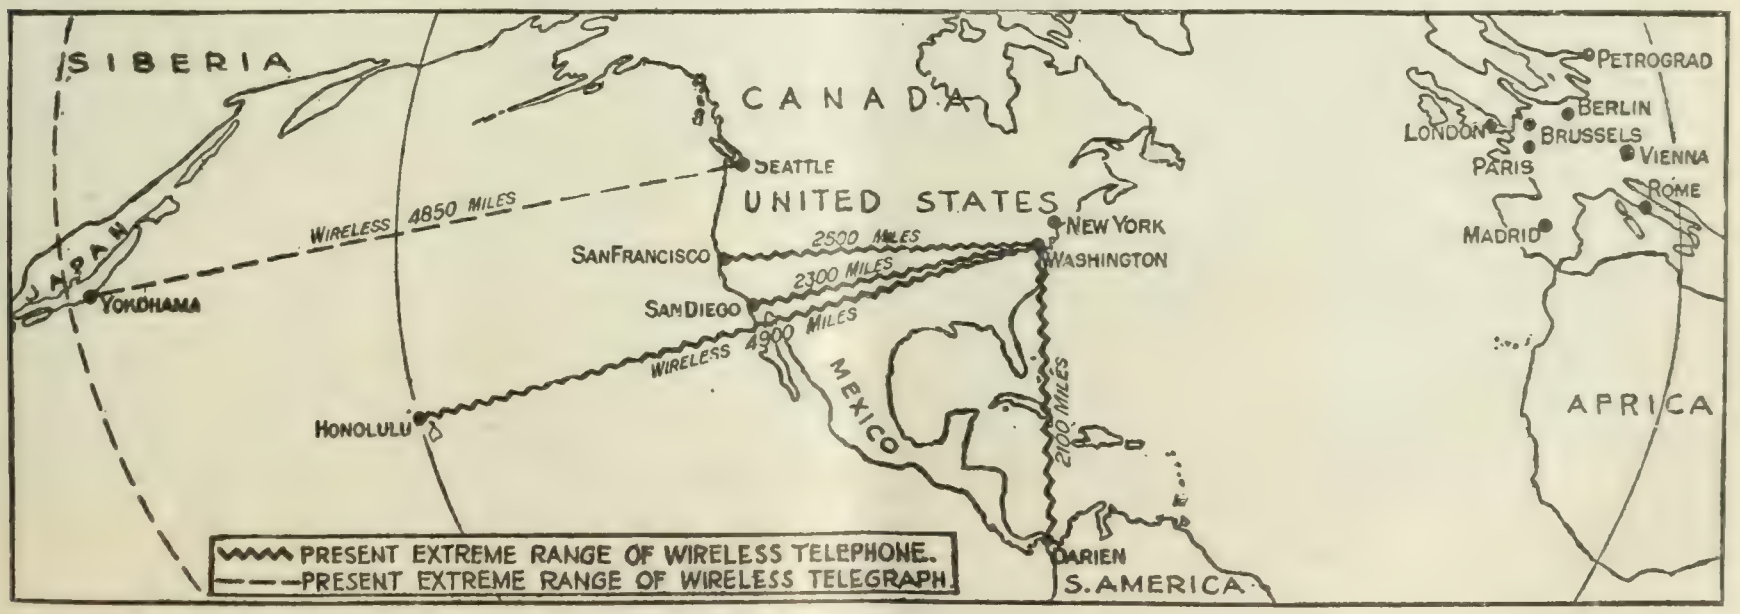
"Hello, Carty. This is Mr. Vail." And a voice came back to him by ether wave from San Francisco:

"This is fine. This is wonderful."

Not quite so stately a ceremonial as that of August 17, 1858, when under the Atlantic went the message: "Europe and America are united by telegraph. Glory to God in the highest; on earth peace and good-will toward men."

But the miracles of science have become commonplace. In the morning we read that New York and San Francisco had spoken across the continent, and in the afternoon of the same day we learned that one Lloyd Espenchied, eavesdropping at the foot of a tall mast at Pearl Harbor, Hawaii, had overheard the same conversation. The human voice, hardly audible a hundred yards away, had been carried over 4800 miles.

But what really happened was much more remarkable than that.



© *Harris & Ewing*
THEODORE N. VAIL
President of the American Telephone and Telegraph Company

For the voice was not sent along a single line. It was sent out in all directions for a distance of over 4800 miles. If there had been a listener with suitable apparatus at Petrograd, Timbuktu, Rio de Janeiro or the North Pole he would have heard what was said in New York as well as did the man in Hawaii.

The mechanism of the process is kept secret, but the fundamental principle is easily understood. The air set into vibration by the vocal cords strikes against the diaphragm of the telephone receiver. This disk being a part of an electric circuit, its vibration causes a fluctuation of the current. This current may be used to send out waves of the ether in all directions over the surface of the earth and these may be picked up by a sensitive receiving circuit which sets in vibration another diaphragm and so regenerates the original sound.

For the successful accomplishment of this epoch-making feat the honor should go chiefly to four men: John J. Carty, chief engineer of the American Telephone and Telegraph Company; Bancroft Gherardi, engineer of plant of the American Telephone and Telegraph Company; C. E. Scribner, chief engineer of the Western Electric Company, and F. B. Jewett, assistant chief engineer of the Western Electric Company.

PEACE AND THE PRESS

BY JANE ADDAMS

This is the first of two articles by Miss Addams on her impressions gained in Europe as a delegate from America to the Woman's International Peace Conference. We have already characterized that Conference as an event without parallel in history. Never before have representatives from belligerent and neutral nations met in the hight of war to discuss ways of bringing about peace. Miss Addams's next article is entitled "The Food of War."—THE EDITOR.

ANY one who has been interested in a huge strike, or a similar social upheaval upon which public opinion naturally divides, must have been impressed with the ability of the press, whether "capitalistic" or "labor," to select the occurrences which it wishes to record or headline and to ignore or suppress others. During such an experience one is inevitably filled with speculation: public opinion must of course depend upon the data which are provided, it can be formed in no other way, and the power of the press to determine these data gives it ultimate control over the minds of the multitude who read but one type of journal.

Occasionally a situation exhibits even more than this power of selection. The International Congress of Women held at The Hague last April gave evidence of a spirit of journalism which is ready to create the desired news, that it is unable to procure in any other way, quite in the spirit of the *agent provocateur* who himself manufactures the conspiracy he later discovers. The journalists of many nationalities who attended the Congress were united in the belief that a "row" was inevitable, both because it was a woman's congress and because of the strained international situation. They therefore waited for "the story," ill concealing their boredom during the unemotional business meeting which considered the somewhat technical resolutions.

When the last day of the congress arrived and nothing sensational had developed—altho of course the greatest "story" of all was implicit in that very fact—the journalists became both restive and inventive. Two Frenchmen succeeded in creating and reporting an insult to their absent countrywomen which was retold the length and breadth of France; the British correspondent, availing himself of the incident that as the congress was closing at midday the committee rooms were being cleared for afternoon use, cabled that the congress had broken up in confusion and disorder, a statement which received wide credence: the Frenchman thus justified the absence of French women from the congress and the Englishman pleased a large section of the British public who had rejoiced in the fact that the twenty-four English women who held passports issued by the Home Office had been unable to cross the North Sea because a military order prohibiting all shipping had been issued two days before the congress opened. In fact, the attitude taken by the press toward The Hague meeting was to a degree a reflection of what was conceived to be the governmental attitude; in Germany, as the passports were not issued by the Imperial Government but by each municipality, some cities granting them and others not, the papers in each city reflected this in their reports of the congress.

As the delegation of which I was a member went from one country to another we everywhere met men who felt tied hand and foot by their inability to receive any information or to express any opinion contrary to that which the press had decided to foster as in the interest of patriotism and a speedy victory. Such men were the victims of the mental and moral limitations of that war patriotism which is concerned to increase only the emotions which contribute to the relentless prosecution of war.

Everywhere we found evidence of a group of men and women—how large we were of course unable to determine—who, altho they are not opposed to the war and regard their own countries as sinned against and not as sinning, still feel that their respective countries ought to be content with a limited program of victory. Yet "even in England a man who says that peace ought to be made with Germany on any other terms than dictation by the Allies is attacked by the newspapers as pro-German, without any reference as to whether those terms are favorable or not to this country." A good patriot of differing opinion finds it almost impossible to reach his fellow countrymen with that opinion and would not for the world print anything which might confuse the popular mind, war belonging to that state of society in which right and wrong are absolute. In addition to his inner scruple lest he may in the hour of his country's danger print that which would lessen the patriotic fervor so necessary for carrying on the war, the differing individual, if he succeeds in getting a hearing for his views, exposes himself to the most violent abuse. In London last June a paper called *John Bull* placarded the streets with huge yellow posters upon which in black letters were the words: "To the Tower with Ramsay MacDonald!" It was a striking incident in a campaign of persecution of a member of Parliament who had ventured to challenge the official point of view on the war. His speech in the House of Commons had been printed as a pamphlet and sent to the families whose sons had been lost in the war, in order that he might be accused of having himself done it and thus committed the cruelty of taking away from the parents the comfort that their sons had died in a righteous cause.

I remember a conversation with a mid-European statesman of large influence and service to the country, who bitterly resented the fact that at this time of stress his only knowledge of what was happening hung on the decision of a few men at the capital who practically decided what they wanted the people to know. He had been appointed on a commission to investigate the conditions in the prison camps, and everywhere found that the government's statements to the public had been misleading. Such men say that under the censorship of the press one man cannot tell how many men are feeling as he does. Altho a man reaching similar conclusions may be living in the next street or town, he cannot be found.

The huge agglomerations of human beings of which modern society is composed communicate with each other largely thru the printed word, and, poor method as it is, apparently public opinion cannot be quickly discovered thru any other agency. Certainly the most touching interview we had on the Continent was with a man who had been in a responsible position in England when war was declared and who was overburdened equally with the sense that he had failed to convince his countrymen that the war was unnecessary and with the futility of making any further effort. This lack of mobilization of public opinion in so many of the countries of Europe is at present a serious aspect of the war. Even in the most autocratic countries, governments respond to public opinion and governmental policies are modified as men of similar opinion gather into small groups, make a clear statement of that opinion and promote larger groups. At the present moment this entire process in the modi-

fication of governmental policies is brought to a standstill among the warring nations—even in England, where the very method of governmental change depends upon the registry of public opinion.

But if likeminded people within the borders of a warring nation cannot find each other, much less easily can the search be conducted beyond the lines of battle. As we went from one country to another people would say: "Did you find any one taking our line, thinking as we do?" The people as a whole do not know the terms of settlement, and could only learn them thru a free and courageous press, as the governmental officials themselves could only thus obtain a full knowledge of public opinion concerning the continuance of the war. Every public man in Europe realizes that before the rulers will think of peace they must know that behind them, if they advocate peace, there will be a grateful and passionate opinion which will be ready to support them against the militarists. Even pacifically inclined ministers in the government itself dare not talk of treating with the enemy while the only vocal opinion in newspapers and speeches is in favor of fighting till the enemy surrenders unconditionally. Preëminently in Great Britain and Germany any peace negotiations can be stopped by the militarist elements, which predominate, during war, in Government circles. But how can this process be begun if none of the leading journals dare call upon "the various governments to declare what to each nation is the essential and indispensable condition for ceasing the conflict"—which would of course be but a preliminary to negotiations and the final terms of peace?

If in the end adjustment must be reached through the coming together of likeminded people in the contending nations, it is a thousand pities that it should fail thru lack of a mechanism whereby they might find each other. An Englishman who is far from a pacifist has recently written in the New York *Nation:* "Our dearest hope is for revolution in German thought—or, as I should prefer to put it—for a domestic triumph of the best elements of the German people," but he makes no suggestion as to how such men may be discovered or communicated with. In the meantime the very foundations of a noble national life are being everywhere undermined by the constant disparagement of other nations, and, as each fears nothing more than an appearance of weariness of the war, the desire for peace filling many hearts is denied all journalistic expression, while the war spirit is continually fed by the outrages of war.

At moments I found myself filled with a conviction that the next revolution against tyranny would have to be a revolution against the unscrupulous power of the press. A distinguished European, accustomed to addressing the civilized world thru the printed page, finding himself unable to reach even his own countrymen, suggested to us the plight of a caged lion as he vehemently walked up and down a little alcove in a hotel parlor expressing his exasperation and despair. To my mind the message he was not permitted to give was the one which Europe needed above all others, and the self-exiled pacifists, French, German, Austrian, English and Belgian, whom we met in Switzerland, were a curious comment upon the freedom of the press.

The press in the smaller neutral countries is of necessity timid, and many of the pacifist and Socialist journals whose basis is fundamentally international, were either under governmental control or had been suppressed. The striking feature of the press of Holland was the character of the cartoons, which exposed the hideousness of war in all its brutality, quite as the cartoons, early and late, have done in the American papers. It may be that the license granted to the king's fool, surviving in the modern humorist, accords him the privilege of uttering his shrewd wisdom without offense; or it may be, as Professor Giddings pointed out in the early days of the war, that the more primitive graphic art in this moment of strain has been instinctively utilized to express the horror which holds us all in its grip but which we shrink from formulating in words.

Two conclusions were inevitably forced upon us, the first, that the people of the different countries could not secure the material upon which they might form a sound judgment of the situation because the press, with its opportunity of determining opinion, by selecting data had assumed the power once exercized by the Church when it gave to the people only such knowledge as it deemed fit for them to have. Second, that in each country the leading minds were not bent upon a solution nor to the great task that would bring international order out of the present anarchy, because they were absorbed in preconceived judgments and had become confused thru the limitations imposed upon the sources of information.

Hull House, Chicago

THE PAVILIONS OF PEACE

BY GRACE RHYS

Within the circle of His peace
The Lord of life abides and is.

Out of His peace I cannot go
Now that its still delight I know.

Clad in its beam I spend the day,
A poor weed drest in a silver ray.

Earth's fields at evening mourn the light;
In His pavilions there is no night.

Peace holds the darkness, till it seems
His hand upon me in my dreams.

Tho strange the land, more wild than fair,
The vision of peace is also there.

And when I wake, in light it falls,—
His window set in my chamber walls.

Drest in His peace the hills arise
And shine like towers of Paradise.

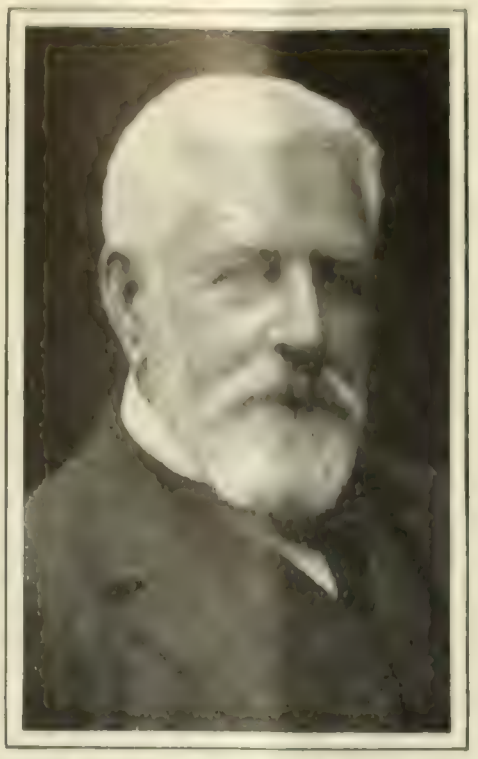
The green trees standing in the sun
Are flames of His brightness every one.

Flowers, blown in a secret place,
In their day of beauty desire His face.

Lit by His thought, His children's eyes
Are lamps before His mysteries.

Within the peace of His great halls,
Where moon and star ingem the walls,

Gifts I have gained at His hand of light
That make one treasure of day and night.



Chrism of the eyes, a seal on the mouth,
A harp at the ear set, a sun in the south.

Thru His pavilion flows white peace,
The fountain of my felicities.

Out of His peace I shall never go;
My feet are set by that stream's white flow.

R. A. FALCONER
President of the University of Toronto

SIR WILLIAM MEREDITH
Chancellor of the University, Chief Justice of Ontario

SIR EDMUND WALKER
President of the Canadian Peace Centenary Association

RECOGNIZING AN INTERNATIONAL FRIENDSHIP

CANADA, earnestly at work to hold up her end in the Great War, finds time to think of the long peace with the United States which has left her energies free for a century for her own problems and those of the Empire. The University of Toronto, in a Special Convocation attended by a great audience of distinguished citizens, last week conferred the honorary degree of Doctor of Laws on six Americans whose labors for five years on the American Peace Centenary Committee have strengthened the friendship between Canada and the United States.

Joseph H. Choate, former Ambassador to Great Britain, and honorary vice-chairman of the committee, was introduced by Sir Edmund Walker, chairman of the Board of Governors of the university.

Mr. Justice Riddell presented John A. Stewart, chairman of the Executive Committee; I. B. Lucas presented William Church Osborn, vice-chairman of the Executive Committee; and N. W. Rowell, K.C., presented William B. Howland, chairman of the Committee on International Organization. Nicholas Murray Butler and Alton B. Parker received their degrees *in absentia*.

Sir Edmund Walker, in his address at the convocation, spoke thus:

Arrangements were made looking to many most interesting functions in celebration of the peace, to the erection of monuments of a national character in London, Washington and Ottawa and of numerous Peace monuments in various cities, at many points along the forty-ninth parallel and at certain historical sites, etc., all carrying a tablet on which a joint message from the King of England and the President of the United States would urge the continuance forever of peace between the peoples who speak English. Many of the functions I have mentioned may never take place, but the monuments will I hope arise after the terrible war has passed, and they will doubtless seem to be grander tokens of what is possible between two ambitious but right-minded nations than they would have seemed but for the war.

The hospitalities extended to the Americans were concluded by a formal dinner at the York Club, attended by a hundred men eminent in the Dominion.

THE MAIN HALL OF THE UNIVERSITY OF TORONTO

WOMAN SUFFRAGE MUST WIN

BY CARRIE CHAPMAN CATT

Four of the largest eastern states must soon vote either for or against woman suffrage—New Jersey on October 19 and Massachusetts, New York and Pennsylvania on November 2. Within a year Iowa, West Virginia, Tennessee and Louisiana are also to decide the question. The speaker here for the affirmative is Mrs. Carrie Chapman Catt, president of the International Woman Suffrage Alliance, whose active work for Votes for Women covers a period of over twenty-five years and has resulted in many successful campaigns.—THE EDITOR.

THE woman suffrage amendments which will soon be voted on in New York, Pennsylvania, Massachusetts and New Jersey bring two questions prominently to the front. 1. For what reasons was the vote extended to the men of this country? 2. Do those reasons apply to women?

Governments have been instituted among men to serve the common welfare of the people. It follows therefore that he who pays a tax to support that welfare is given a ballot's share in the disbursement of the money he pays, and he who obeys the laws which regulate that welfare is given a ballot's share in the making of those laws. For these reasons and for no other the vote has been given to men.

These reasons assuredly apply to women. They are not only taxpayers but they pay enormous taxes. They are also affected as closely as men by the nature of the government under which they live. No one will deny these facts. The opponents of woman suffrage for three generations have evaded the fundamental reasons for extending the vote to women and have attempted to discover some cause which would place them outside the pale of these reasons.

They have so far failed that constitutions have been amended in eleven states to grant complete suffrage to women. In Illinois the municipal and presidential franchise has been conferred, and full suffrage in Alaska. Suffragists hold that they have a demonstration complete and overwhelming in behalf of their cause in the following facts: Woman suffrage has spread from state to neighboring state where people know best what woman suffrage means. No anti-suffrage movement exists in any suffrage state. No person who advocated the enfranchisement of women before its adoption has changed his mind, while the number of those who did oppose it and who are now enthusiastic supporters is legion.

Yet despite logic that no one attempts to deny, and the practically unanimous approval of the great West, a struggle to obtain woman suffrage is now in progress in four states of the East which finds no equal in world campaigns. In the center of the stage where the limelight is most brilliant stand women, respectable and doubtless conscientious women, who to the superficial observer seem to be the chief opponents.

These women have two lines of appeal. They eloquently plead: "Do not thrust the ballot upon us; we do not want it," and there are those who believe this to be a valid excuse for withholding it from the entire sex. There are two classes of men who vote in the United States; those who have been born here and those who have been naturalized here. Is any boy of twenty-one or any man who steps forth from a naturalization court ever asked whether he wants to vote? Has the vote been given to any man because he wanted it? Never. The vote is given to use or not to use as the individual chooses. It is permissive, never compulsory. It can be no burden to those to whom it is extended, for such persons as possess no patriotic desire to serve in this manner the country under which they live are free to remain away from the ballot box.

The other appeal put forth by women anti-suffragists is one to the world not to trust their sex. Men were a thousand years in reaching the ballot. The cause of delay was on the one hand the distrust which governing classes had of those whom they governed and on the other the distrust which the disfranchised men had of members of their own class. So it is not strange perhaps that women plead with men not to trust women. Anti-suffragists appeal to the distrust which those who govern have always shown to the governed and try to strengthen it. It is their claim that women are so lacking in patriotism that they do not want to vote and will not vote when the opportunity is given. They claim that women care so little for the moral development of society that they will not trouble to vote even for good causes. It is their plea that women are so deficient in intelligent understanding of public measures that their votes will weaken any government which admits them.

As men have ever been their own worst enemies, so women have been a potent power to retard the advancement of their own sex. It was women as well as men who were scandalized at the idea of taxing the public to maintain public schools for the education of "shes." It was women who regarded the high school, the college and the university education as indelicate for women. It was women who refused to speak to Dr. Elizabeth Blackwell, the first woman physician. It was women who cried "shame" at Susan B. Anthony when she arose to address a teachers' convention in the State of New York. It was women who cried "served them right" when several of the leading newspapers of this country editorially stigmatized the first women who attempted to speak in public as "she hyenas." It was wives, when the first petition to the legislature for property rights for women was circulated, who refused to sign it upon the ground that the control of property was the just privilege of husbands.

Yet, tho women opposed each step of the progress of their sex in turn, they have not failed to avail themselves of every privilege when it has been won, and no man or woman would now claim that the gain of any of them was a mistake. So it happens that in the year 1915 all women have practically complete emancipation from the old traditions and occupy their present advanced position because some women were willing to demand each right when all the world was against them and to stand by that demand until the world caught up with them. The same type of women who opposed education, property rights, public speech, organization, accept all the privileges won for them by the struggle of other women and from that position of vantage turn to oppose as best they can the logical, inevitable next step in the evolution of women.

The number of women who are demanding the vote grows enormously year by year. I cannot speak with authority as to the number of the disfranchised women in the United States who want to vote, but in the State of New York, where I am familiar with conditions and can so speak, 1,000,000 women—a big majority of those who would be eligible to vote—is a conservative estimate.

The handwriting on the wall of human destiny announces the inevitable coming of woman suffrage. All signs point in that direction and none points the other way.

New York City

WOMAN SUFFRAGE MUST FAIL

BY ALICE N. GEORGE

In accordance with its usual policy The Independent presents both sides of this question. Our own attitude has often been expressed editorially, as on October 5, 1914. We have asked Mrs. Alice N. George, president of the Massachusetts Association Opposed to the Further Extension of Suffrage to Women, to take up the argument for the negative.—THE EDITOR.

WOMAN suffrage must ultimately fail. It is based upon a fallacy, and no fallacy has ever made a permanent conquest over mankind.

The fallacy of woman suffrage lies in the belief that there is in our social order a definite sex division of interests, and that the security of woman's interests depends upon her possession of the elective franchise.

"The history of mankind," declared the founders of the movement, "is a history of repeated injuries and usurpations on the part of man toward woman, having as the indirect object the establishment of an absolute tyranny over her. Man has endeavored in every way he could," continues this arraignment of the fathers, husbands and sons of these self-styled *mothers of the revolution*, "to destroy her confidence in her own powers, to lessen her self-respect and to make her willing to lead a dependent and abject life."

In a healthy state of society there is no rivalry between men and women; in the economy of life they have different duties, but their interests are the common interests of humanity. Women are not a class, they are a sex whose interests in a well-ordered government are represented, automatically and inevitably, by the men of their social group. It would be a fatal day for the race when women could obtain their rights only by a victory wrested at the polls from reluctant men. These truths are elementary and self-evident, yet all are negatived by the votes-for-women movement.

That the vote is not an inalienable right is affirmed by Supreme Court decisions, the practise of nations and the dictates of common sense. No state can ever enfranchise all its citizens, and, since the stability of government rests ultimately upon a relentless enforcement of law, the maintenance of a sound fiscal policy and such adjustment of the delicate interweaving of international relations as makes for peace and prosperity, it is right that the state should place the responsibility of government upon those best equipped to perform its manifold duties.

Women's citizenship is as real as man's, and no reflection upon her abilities is involved in the assertion that woman is not fitted for government either by nature or by the contact of daily experience. The casting of a ballot is the last step in a long process of political organization; it is the signing of a contract to undertake vast responsibilities, for the following of the ballot to its conclusion alone makes the body politic sound. Otherwise political power without its political responsibility threatens disaster to all.

We have made a few crude experiments in double suffrage, but nowhere has *equal* suffrage been tried. If the average woman is to be a voter, she must accept jury service and aid in the protection of life and property. When the mob threatens, she must not shield herself behind her equal in government. She must relinquish her rights and exemptions under the law and in civil life if she is to take her place as a responsible elector and compete with man as the governor of the race. Such equality would be a brutal and retrogressive view of woman's "rights." It is impossible—and here we have the unanswerable answer to woman suffrage theories.

No question of superiority or equality is involved in the opposition to votes for women. The test of woman's worth is her ability to solve the problems she must face as a woman if the race is not to deteriorate and civilization perish. The woman suffrage movement is an imitation-of-man movement, and as such merits the condemnation of every normal man and woman.

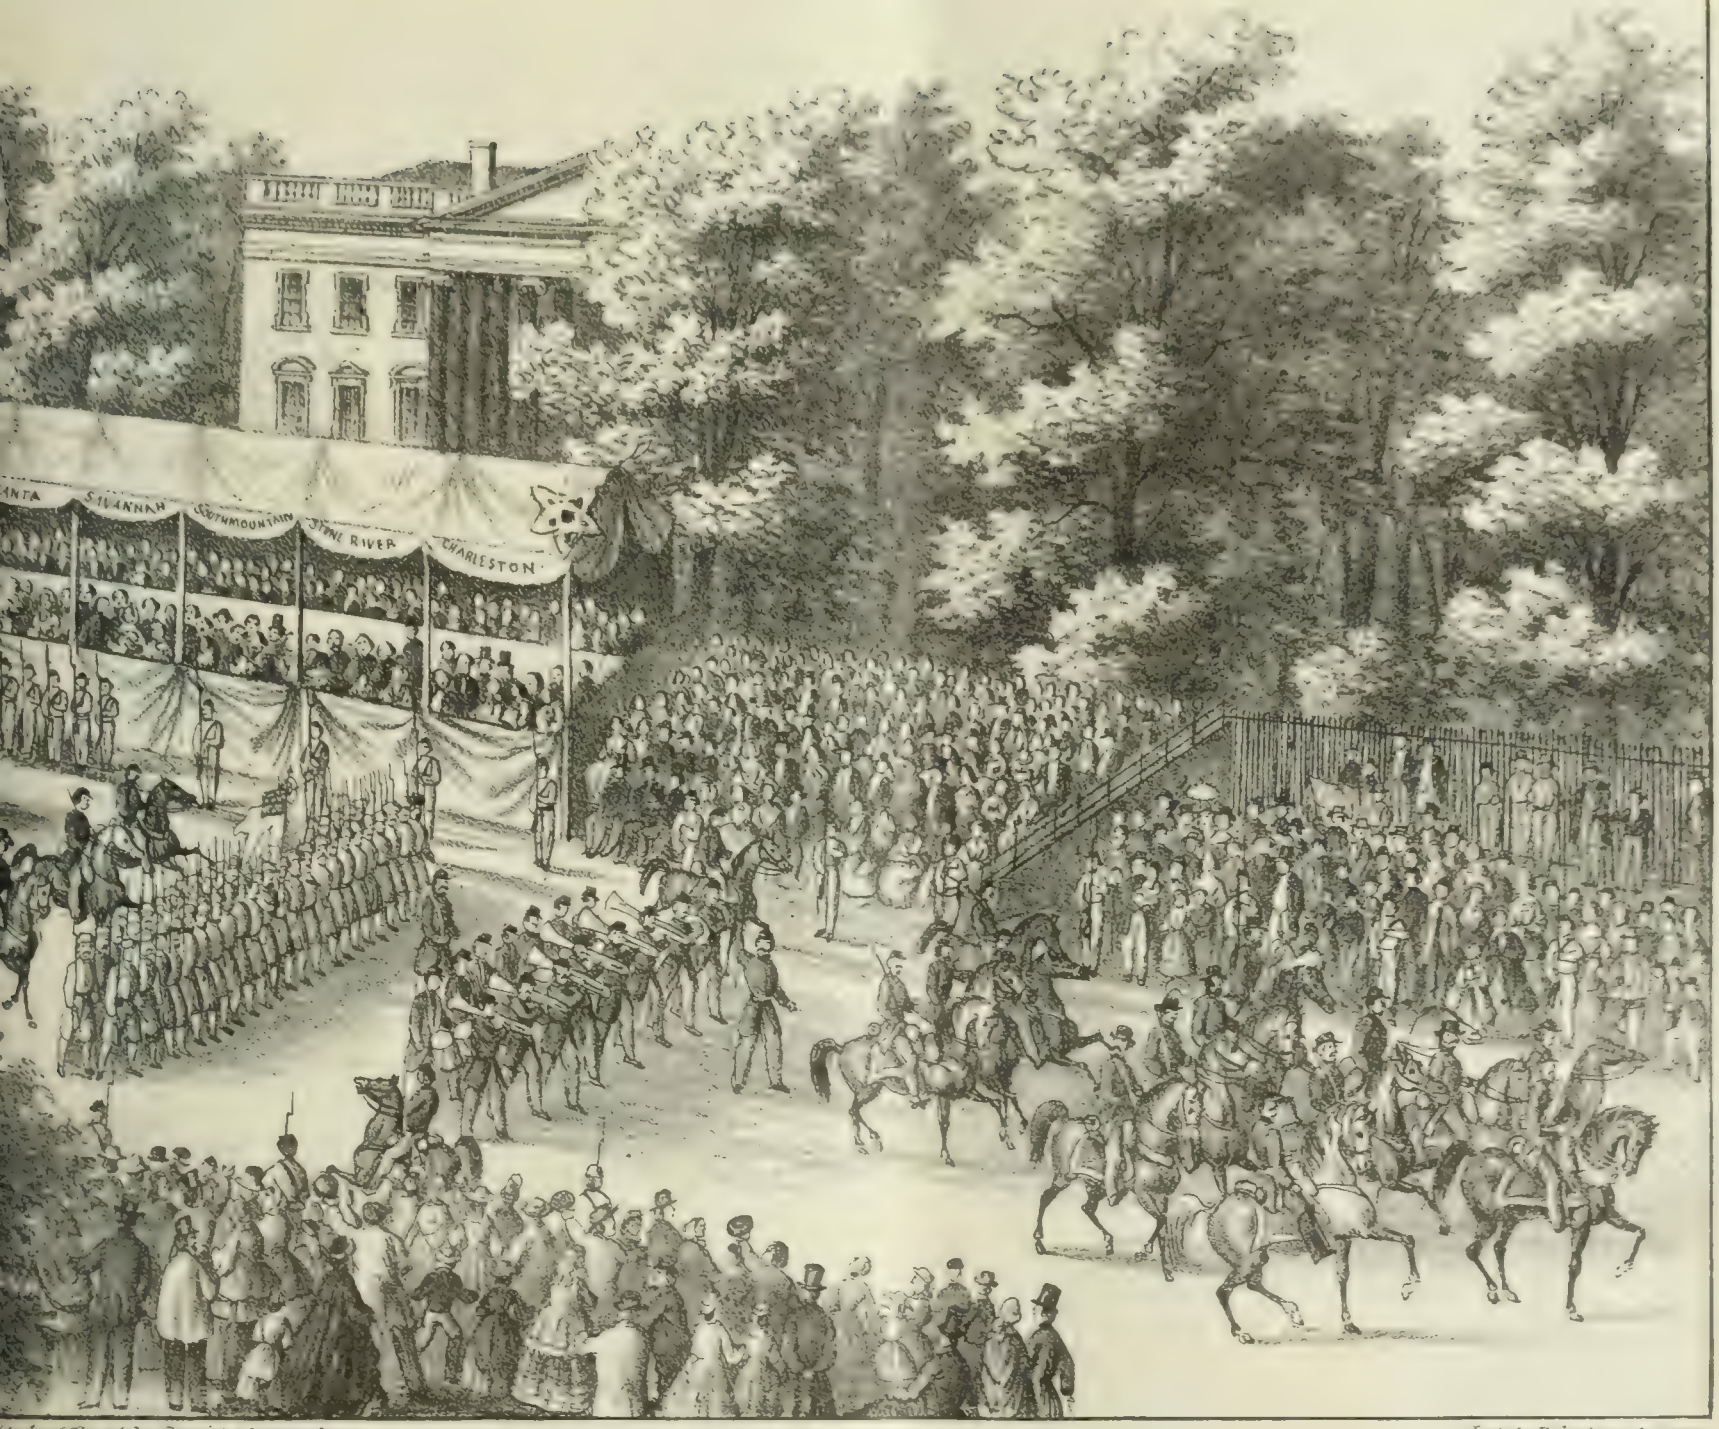
The attempt to interpret woman's service to the state in terms of political activity is a false appraisal of the contribution she has always made to the general welfare. Doubtless we can live thru a good deal of confusion, but it is not on any lines of functional unfitness that life is to be fulfilled. Woman must choose with discrimination those channels of activity wherein "what she most highly values may be won." Are these values in the department of government or in the equally essential departments of education, society and religion? It is thru physical, intellectual and moral education that our citizenship is gradually improved, and here woman's opportunities are supreme. If women are not efficient in their own dominion, then, in the name of common sense, let them be trained for efficiency in that dominion and not diffuse their energies by dragging them thru the devious paths of political activities.

Equal suffrage is clearly impossible; double suffrage, tried under most favorable conditions, in sparsely settled western states, has made no original contribution to the problem of sound government. On the other side of the ledger we find that the enfranchisement of women has increased taxes, magnified the menace of an indifferent electorate, and swelled the body of unenforceable laws.

The confusion of social and personal rights with political, the substitution of emotionalism for investigation and knowledge, the mania for uplift by legislation, have widely advertised the suffrage propaganda, while the reforms for which the founders of the suffrage movement declared women needed the vote have all been accomplished by the votes of men. The vote has been withheld thru the indifference and opposition of women, for this is the only woman's movement which has been met by the organized opposition of women.

Woman suffrage is the political phase of feminism; the whole sweep of the relation of the sexes must be revised if the woman's vote is to mean anything more than two people doing what one does now. Merely to duplicate the present vote is unsound economy. To reinforce those who clamor for individual rights is to strike at the family as the self-governing unit upon which the state is built.

This is not a question of what some women want or do not want—it is solely a question of how woman shall best contribute her part to the g e n e r a l welfare. Anti-suffragists contend that woman serves best by remaining non-partizan and working for the common good outside the realms of political strife. To prove this they point to what women have done without the ballot and what they have failed to do with it.



Anti-suffragists a r e optimists. They are concerned at the attempt of an organized, aggressive, well-financed minority to force its will upon the majority of women thru a false interpretation of representative democracy, but they know that a movement so false in its conception, so false in its economy, so false in its reflections upon men and its estimate of women, so entirely unnecessary and unnatural, cannot achieve a permanent success.

THE GRAND REVIEW AT

GEN! SHERMAN! GLORIOUS

Clerks Office of the District of Columbia

Lith by E Sachse & Co Balto

HINGTON, MAY 24TH 1865.

ASSING THE HEAD STAND.

FIFTY YEARS OF THE GRAND ARMY

THE GREAT REVIEW OF '65

BY THE REV. H. M. GALLAHER

THE march of the armies of Meade and Sherman through Washington on the 23rd and 24th of May, was, doubtless, the greatest military parade ever witnessed on this continent. One hundred and fifty thousand stalwart soldiers poured through Pennsylvania Avenue, and occupied twelve hours in hurrying past the pavilion where sat the President and other dignitaries. Twenty men abreast, and as close as only soldiers know how to march, did the boys in blue advance. . . .

The solid blue masses rose and fell like sea waves —as regularly and as grandly. Muskets at right-shoulder-shift, with that slant to the bayonets which turned their surface sunward and brightened up the avenue with reflected light till it looked as if a river of burnished silver were flowing unceasingly from the Capitol to the Treasury building . . .

I have read of the pride, pomp, and circumstance of glorious war; but I never knew what it meant till then, and no longer wondered at the proverbial vanity of military chieftains; for sure the proudest place on earth was to ride commander of these plumed troops, to have sonorous metal blowing martial sounds for you, and to feel that you have directed "the big wars that make ambition virtue." . . .

You felt, in looking at these regiments, that it was not at all like a militia review in New York, where the soldiers had nothing to do but look neat and keep the step. Every brigade made you think of Atlanta, Savannah, the Wilderness and Richmond. Their banners bore these and a score of other blood-bought names; their faces looked as if the sun of every state had helped to bronze them, and the unkempt hair, dusty shoes, and faded uniforms told of far other marches than a jubilant parade down Broadway.

The Western army was more worn and threadbare in appearance, and had soft slouched hats in the last stages of shabbiness. They moved, however, with a more springy and independent step, swung themselves along in an easy, rollicking way, as if each were out a soldiering for himself, and only agreed to march with the rest for the glory of the thing. They were taller and stouter, and more intelligent-looking than their Eastern brethren, but did not step as quickly, or with the same machine-like regularity, and had very many less foreigners in their ranks. . . .

Each brigade of the Western army had about two hundred very black negroes, with pick and shovel on their backs; and every regiment had its pet: one a goat, another a coon or a dog, and still another a rooster.

Looking at these returning braves, one was glad to see how difficult it would be for any traitor to destroy a Union held together by so many and such fearless defenders; and I, as well as thousands of others on that great day, was proud at being able to say, "I too, am an American citizen."

From The Independent of June 1, 1865

The Return of the Veterans

By Richard Burton

Beneath gray gloom they tramp along: their tread
Lacks rhythm; faded, soiled and torn their dress;
They wot of storm and peril, wounds that bled,
And pains beyond imagination's guess.
The lookers on, struck mute by tenderness,
Hardly huzza: it is as if the dead
Walked with the quick. Beneath a brooding sky
The bronzed and battered veterans limp by.

THE SEMI-CENTENNIAL REVIEW

BY CARTER FIELD

TWENTY thousand men, the remnant of the mighty armies that saved the Union, trudged slowly last Wednesday over the very route along which the victorious hosts of Grant and Sherman so proudly marched in the great parade that followed Appomattox, just fifty years before. Bent, gray-haired, broken, many almost tottering, they showed still the fire which had carried them up Missionary Ridge, through the Wilderness and into Petersburg—showed it by the efforts to stride with the old vigor, by the painfully straightened shoulders, and more than all else by the determination that carried them along the weary road till they dropt by scores, utterly exhausted. Before them marched their "field music" — gray-bearded drummer boys and age-bent fifers, the last of the men and the echo of the music that had led them over a hundred bloody fields. Over their heads were the ghosts of battle flags—worn shreds of silk and bunting, with hardly a touch of color in their tattered folds, but still bearing faintly the names of the stricken fields where these men had won undying honor. Closely packed along the miles of their march were a quarter of a million citizens of the nation they saved.

On precisely the spot where President Johnson and the War Cabinet of Lincoln reviewed the triumphant Union army, stood President Wilson, the first Southern-born President since those days that tried men's souls, and the first descendant of Confederate soldiers to sit in the White House.

Frantic cheers and waving of handkerchiefs and tiny flags greeted the marchers from the almost continuous stands which margined the route from the Peace Monument, at the foot of the Capitol grounds, where the parade formed, to beyond the White House, more than a mile and a half away. Millions of the flags for which the veterans had fought decorated the way. The entire city was *en fête* for the Forty-ninth Annual Encampment of the Grand Army, believed by many to be the last which will ever be held in the capital of the nation this army saved.

At the head of the parade, their youth and spick and span appearance bringing into strong relief the change which had come over the veterans, marched regulars from Fort Myer, bluejackets from the squadron of ships ordered here that the veterans might see them, and District national guardsmen. There was a long gap between the young soldiers and the slowly marching veterans. So slowly did the Marine Band, which came at the head of the veterans, play, that it sounded like a dirge. And in a way it was a dirge—for the members of this army who have answered the final roll call. For there were about 200,000 men in the monster review which past before President Johnson, as compared with a scant twenty thousand who wearily followed the same path on Wednesday.

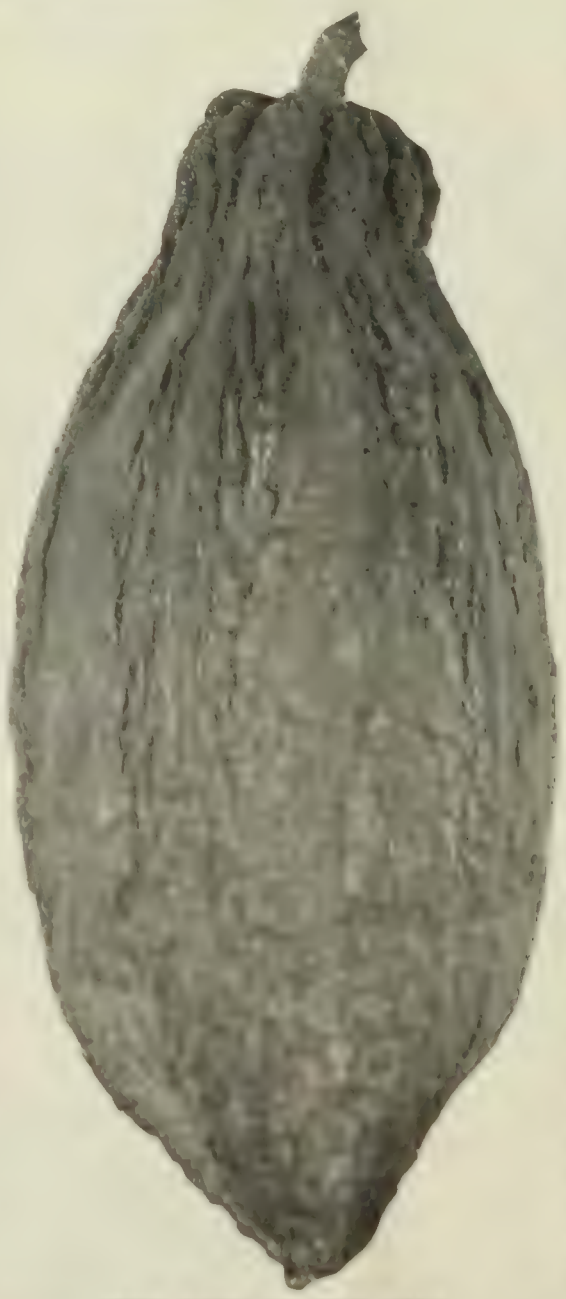
DRUMMER "BOYS" FIFTY YEARS AGO

AMERICAN MADE



ECONOMIC INDEPENDENCE AND HOW WE CAN ACHIEVE IT

BY EDWIN E. SLOSSON

In an article entitled "The Conquest of Commerce," published in our issue of September 6, the author discussed the methods by which Germany had made her rapid advancement in domestic industry and foreign commerce. In the following he considers what opportunities there will be open to American commerce after the war and what is necessary for their utilization. One of the factors on which he lays stress, the growing dependence of northern lands upon tropical products and the consequent necessity of tropical possessions, is more fully realized by the English, Germans, French, Belgians and Dutch than it has been so far by the American people.—THE EDITOR.

WHENEVER and however the Great War ends, the international trade rivalry which it has temporarily and partially interrupted will begin again with greater energy than before because of the necessity of repairing damages and regaining lost ground. Those Americans who have tried to find some selfish consolation in the thought that the United States would benefit by the disaster which has befallen all the other great powers are doomed to disappointment. The money we have received from the sale of food products and munitions will by no means compensate for the present loss of our normal trade with the outside world. Cotton has been left on Southern fields because it would not pay to pick, and Northern factories of export articles have been obliged to shut down.

Nor is there any prospect of advantage to us in the future. In the first place the purchasing power of all the belligerent nations will be reduced for many years to come. In the second place the war has inflamed local patriotism and revived national jealousies, and this feeling will interfere with the revival of international commerce. Our attitude of neutrality has offended both sides. It is particularly distressing to note the growing hostility which is manifested toward the United States in the British press all over the world. Before the war the relations between English speaking countries were becoming increasingly friendly and they were beginning to realize how much they had in common and how much mutual benefit they might derive by closer intercourse. Our traditional animosity toward England dating from the Revolutionary and the Civil War had died down and the British Government had since the time of the Spanish War treated the United States with great consideration. But now a decided change of disposition is manifested toward us. We gather from reading the papers of England and still more of the dominions that the sympathy with the Allied cause shown by the great majority of the American people, the generosity of America in relieving distress in Belgium, France and Serbia, the favor shown to the Allies in supplying them with unlimited munitions of war and our toleration of British interference with neutral commerce without regard to international law, all this, it appears, counts for nothing as against the fact that the usual perfunctory note of congratulation was sent to the Kaiser on his birthday and that we failed to issue a paper protest against the violation of Belgian neutrality.

THE FOOD OF THE GODS

Dendrocnya was the name which the Turkish peasant bestowed upon the cocoa bean. He used to compare the seeds from which are made cocoa and chocolate, a delicacy which has become a necessity to northern races.

But however unjust we may think the British feeling we have to recognize its existence and the fact that it will have an effect on future trade relations. The war has accomplished a miracle in the unification of the British Empire and will compel its reorganization upon new lines. The oversea dominions have this time generously sent their sons to France and Turkey to die in a quarrel about which they were never consulted, but they will not consent to be so ignored in the future. They will insist upon their right to be heard hereafter on questions affecting the whole empire and the mother country on her part must make some concessions to their opinions and desires. Up to the war England had stuck to her traditional faith in free trade in spite of the fact that her industries were suffering from the invasion of goods made in protected Germany. The self-governing dominions, Canada, Australia and New Zealand, had, out of loyalty to the Mother Country, granted differential duties in favor of British products; still, the importations from Germany were before the war increasing more rapidly than from the United Kingdom, in spite of this handicap.

The war, however, has at last given the distrest British manufacturer the chance he has been longing for, and he is certainly making the most of it. He realizes that he can do more than the British soldier to destroy the power of Germany, and his patriotism inspires him to greater exertions than he has hitherto made at the instigation of self-interest alone. To kill off a half a million of her soldiers will not permanently disable Germany because her natural increase in population is nearly a million a year. But to destroy her foreign commerce will deprive twenty millions of their living. The Krupp machinery is more dreaded in England than the Krupp guns. As long as the war lasts and Britannia rules the waves German competition can be eliminated, but peace must come some time, and unless the British manufacturer can by then get a firm hold of the markets of the empire and of the outside world the competition will begin again, and perhaps with the same result. To forestall this, twenty-two organizations have been formed in England for the purpose of promoting British commerce and boycotting German goods. The names of some of them will indicate their objects

"Union Jack Industries League," "All British Trades Association," "The Entente Trade League," "The Anti-German Trading League," "British Eggs, Ltd.," "Anti-German League, Ltd.," "Patriotic Cinema Lectures Association." The Anti-German League hopes soon to have a million members who have signed the following pledge:

I hereby sincerely and conscientiously promise: (a) Not to purchase, use, or consume German or Austrian goods of any kind whatever. (b) Not to employ a German for either domestic or commercial purposes. (c) Not to place contracts with any German owned or controlled company, trust, or corporation, or to send goods by or travel in German ships. (d) To boycott and assist in the boycotting of any trader who persists in stocking German or Austrian goods while British goods of equal quality and price are available. (e) To hold no intercourse socially or commercially with Germans, and to ostracise from all respectable society every British-born woman who marries a German subject.

The members of the Australian parliament have all taken a vow never to buy any goods of German origin. The Russian *Novoe Vremya* advocates a permanent anti-German boycott league of all the Allies and the United States. French and Italian papers are urging a Quadruple Customs Union.

But in spite of the efforts of press and societies to create a public sentiment opposed to trade with Germany, it has been found impossible to prevent it even in time of war, when patriotic feeling is most intense. Coal has been shipped from England to Krupp since the war began, and British copper, tea, coffee and cocoa have continued to get into Germany by way of Sweden or Holland in spite of the prohibition.

The determination of the English to take advantage of this opportunity to recover their commercial prestige and to develop their manufactories so as to be independent of any other nation is shown by the following passage, which I quote from W. H. Dawson's article, "The Campaign Against German Trade," in the November number of the *Fortnightly Review:*

Now, in a most unexpected way, the chance of a century has come to us, for whatever the political results of the war may be the economic results for ourselves may prove immensely advantageous. For the country which has so long been menacing our industry and commerce has suddenly become a country with which for the time being we may not trade, even if we would; its industries are paralysed; its argosies have been swept from the seas; and most of the markets in which its greatest conquests had been achieved are open to us as never before. To improve the opportunities thus offered is the great task and duty of the hour, and upon the vigour, intelligence, and foresight shown by our manufacturers and traders at the time of supreme test will the future course of our economic development and prosperity for generations depend.

THE NECESSARY BANANA

The banana is one of the cheapest ways in which the energy of tropical sunshine can be put in packages for the consumption of colder countries. The banana business is an American industry

Of course, the English have no desire to profit by the misfortunes of their allies, but nevertheless it adds to their present advantage that the region now devastated by the German arms, Belgium, Luxemburg and northern France, is, next to Germany, the strongest competitor of Great Britain on the continent, in agriculture and manufacture.

It is evident that the enmity which has been aroused by the present war will be carried over to the trade war which will follow it, and that in this commercial conflict, which will be longer and much more serious in its effect upon the fate of nations, it will be still more difficult, perhaps impossible, for us to maintain our neutrality.

Whether Germany will be permanently crippled by the war and be forced to retire from the markets of the world cannot be known for some years yet. But it is certain, unless the Allies suffer a severe defeat, that England will come out of it with her commercial power immensely increased. The British Empire has been enlarged during the year of war by the acquisition of territory amounting to nearly twenty times the area of the United Kingdom. This might be regarded as a gain to American commercial opportunities if England continues her former policy of opening her Crown colonies on equal terms to the trade of the world, but it is not probable that this liberal policy will be maintained much longer. In fact, the Government has definitely broken with the free trade doctrine, for last month the ministry of all parties asked Parliament to pass a tariff law for the avowed purpose of restricting imports. The self-governing dominions of the British Empire are not likely longer to continue acquiescent to an arrangement which permits, for example, England to buy her wheat from the United States whenever it is cheaper than in Canada, while Canada bars out American machinery by a tariff wall in order to protect the British manufacturer.

We may then expect to see, as a result of the war, the formation of some sort of a customs union comprizing the whole British Empire, and perhaps also including its present Allies. In that case the United States would have to decide the momentous question of whether we should go into it or stay out. If we decided not to go into the union, or if England refused to admit us, we would be shut out of most of the markets of the world or enter them only under the handicap of differential duties. Such a customs union—it would be offensive to use in this connection the customary term *Zollverein*—would control all of Africa and Australasia, most of Asia and a large part of Europe and North America. The only undeveloped countries that would be open to our trade on equal terms would be Latin-America and for the present China minus Manchuria, Mongolia and Shantung, which are already under the sway of the Allied Powers.

But it would be borrowing trouble from the indefinite future to worry now lest the present military alliance should develop later into a customs union of such a form and extent as to be inimical to American

COPRA IN THE PHILIPPINES

Chemists have discovered a way of preparing from the coconut meat a fat that is displacing butter in dairy countries. We could supply the world from the Philippines

interests. The "All Red" movement is, as I say, directed primarily against Germany, not against the United States. But of course the systematic cultivation of a popular preference in favor of "home-made" products must, to some extent, interfere with the introduction of foreign goods whatever their source, and it would be a mistake for us to assume that, because the people of the British Empire have conceived a prejudice against Germany, they would be glad to see the United States take her place. Just now they doubtless would buy American goods in preference to German, but they are hoping soon to get along without either. We must understand that the "war on German trade" is not being waged for the benefit of American trade, and any attempt on our part to take advantage of the prevalent anti-German feeling is apt to be resented. How some of the Australians regard our timid efforts in this direction may be seen by the following quotation from the Sydney *Bulletin*, which, after complaining of the United States for sending tea, copper and oil to Germany thru neutral ports, goes on to say:

> The same obliging country is anxious to supply Australia with any goods it may require, and in an endeavor to secure the old time business of Germany is even sending to this country an exhibition ship, loaded with every sort of article judged to be saleable hereabouts. Meanwhile, presumably to help on the sales, and with the object generally of obscuring the issues, the United States puts up from time to time some dreary bore to say that blood is thicker than water, and that the United States should join in as a belligerent on the side of Britain. Thus Dr. Eliot, an ex-University Professor, lately reiterated the proposition about blood and water, and wound up with the customary tiring statement that his folk should "join in." As a matter of blunt fact, the United States can't join in, because it has nothing to join in with. Its army consists of a mere rag-tag crowd of 84,000 volunteers, partly white. Its navy is indifferent in ships, and in any case is unnecessary to Britain. Indeed, as Jellicoe would have to leave off work now and again to dine with the American Admiral and waste valuable time listening to long, wordy orations about blood and water, it would be a nuisance. The only way in which the United States are capable of effectively "joining in" is by refraining from selling war material to our enemies. Until they do this, every good Australian will regard the blood-and-water talk as merely the hot-air of a Yankee salesman, whose business principles, so far from having any preferent claim on us, are supplying us with very excellent reasons why they should be cut out altogether.

In order to replace German goods the British manufacturer needs first to know what they are. Accordingly British agents all over the world have been requested to send in the articles "made in Germany" which have the greatest sale in their respective localities. These are put on exhibition in the cities of the United Kingdom so that the manufacturers may examine and imitate them as nearly as possible.

An invaluable aid to British industry in capturing foreign trade is the act of Parliament passed soon after the declaration of war, authorizing English firms to take over German patents and trademarks. The *Scientific American* of November 14 says of this:

> At least one hundred of the more valuable patented products which Germans have developed only after the most painstaking research and the expenditure of vast sums are likely to be made by British firms who have contributed in their development not one whit of intellectual effort or a single penny in money.
>
> The situation in trademarks is equally serious. Thus the valuable trademark "Pebeco" for a tooth paste manufactured by Beiersdorf & Co. of Hamburg; the mark "Aspirin," the name of a well-known drug manufactured by Bayer & Co. of Germany; the trade name "Formamint," owned by von Wulfing of Berlin, and other marks, made priceless by sound business methods, are likely to appear upon British equivalents.

This raises some perplexing ethical questions. The objection has been made that the assumption of a patent or trademark is the same thing as the confiscation of private property and so contrary to the rules of civilized warfare, but this argument is not likely to have much weight in view of the disregard shown by the Germans for the rules of civilized warfare. It is probably impossible to lay down any general rule to cover all the cases. Everybody would agree that it would be contrary to public interest that the manufacture of such a medicine as salvarsan should be stopped because it is controlled by a German patent, but, on the other hand, the assumption of a trade name which owes its value solely to advertising and business enterprise and is not necessary for the preparation of the article seems very much like what our cousins oversea are fond of calling a "Yankee trick." But we do not have to decide upon the justice of the practise, since our American manufacturers are removed from temptation. The privilege of using German patents is confined to countries at war with Germany.

The war disclosed the fact that we were as dependent upon England for rubber as England upon Germany for chemicals. Our newspapers raised a howl against Great Britain for putting an embargo on the exportation of crude rubber from her colonies and our State Department was beseeched to remonstrate. It is hard to see what grounds we have for a protest. The British Government has a perfect right to keep its own rubber now when it is badly needed at home, and any criticism should be directed at those who have failed to see to it that we had a supply of our own to fall back upon. It is the old story of the ant and the butterfly of

the wise and foolish virgins. The lesson is costly; let's hope we profit by it. According to the Rubber Club of America we lost about $250,000 a day because we have been content to buy instead of raise our rubber. The price of caout-chouc went up from forty-five to ninety cents a pound and the industry in which we take our greatest pride, the automobile business, which amounts to $450,000,000 a year, was seriously threatened when for two months last fall not a pound of crude rubber came forward to the United States. Finally the British Government consented to allow its importation on the guarantee of American rubber manufacturers that none of it should reach Germany.

In 1914 the rubber raised on plantations, chiefly British, furnished more than half the world's supply and was worth about $65,000,000. Next year will be more profitable, for the price is higher, the crop is greater and the acquisition of Togo, Kamerun and Kaiser Wilhelm's Land gives Great Britain command of the German sources of supply. But the rubber tree is on trial, for synthetic caöut-chouc has been made both in England and Germany, and it only remains to be seen whether a raw material can be found cheap enough to compete with the cultivated product. But whether the rubber of the future be natural or artificial, America is equally "out of it," for we have neither the plantations or the laboratories capable of producing it, and so have to pay tribute to those countries which have had more forethought. It has long been evident that the wild trees of the African and South American forests could never meet the new and enormous demand for rubber. The lash fell more heavily on the backs of the natives of Belgian Kongo and Putumayo, but it only drew forth blood instead of the desired increase in the flow of the latex. So the English and Germans, foreseeing the famine, began to prepare for it by planting rubber trees in their tropical possessions. This was some fifteen years ago, and now Great Britain has 600,000 acres of rubber plantations and Germany 50,000. The United States, which uses half the world's output of rubber, is practically producing none, altho we have good land for it in the Philippines, Hawaii and Porto Rico. Besides our own colonies, Mexico, Central America and the West Indies would have welcomed the American planter. But the policy of the present Administration in Mexico has not been such as to encourage Americans to attempt the development of the resources of the countries south of us. "You go at your own risk and if you get into trouble don't expect any help from us," has been virtually what our Government has said to Americans who would look beyond the borders of the United States for business opportunities. Needless to say, our competitor countries, Great Britain and Germany, take quite the opposite view of the duty of a government to its commercial pioneers.

One other tropical product must be mentioned in this connection, and that is the meat of the coconut, known in commerce as copra. This was once thought only fit for soap fat, but the chemist with the aid of a catalytic agent succeeded in transforming the evil-smelling oil into a solid white and wholesome fat, and it has become one of the chief ingredients in margarine and other substitutes for butter and lard in cooking and table use. This simple chemical reaction which any schoolboy—of the Macaulay caliber—could write upon the blackboard, has been worth hundreds of millions to Europe. Germany has been paying out forty million dollars a year for copra and it was sold for a great deal more. The margarine industry has developed to immense proportions in Great Britain, but still it does not suffice for the needs of the people of these islands, and they had to import 150,000,000 pounds of margarine a year, chiefly from Germany and Denmark. This amounts to more than a third of her butter imports.

The coconut grows close to the seashore and here is where the tropical archipelagoes have the advantage, for the smaller the islands the greater the coast line. The sixteen hundred islands of the Philippines with the help

A FIELD OF TROPICAL CANE

The people of the United States eat more than half their weight of sugar every year. The sugar cane of the tropics has a competitor in the sugar beet of the temperate zone. Both sources should be developed to insure economic independence

of Guam, Samoa, Hawaii and Porto Rico, might be made to supply us with all the vegetable fats we need within ten years if we start in now with the systematic planting of coconut groves as the Germans and English have done. The Philippines, even with their present inefficient methods, provide one-fourth of the world's supply of copra, worth $12,000,000 a year.

As civilization advances and population become more dense, the inhabitants of temperate zones become necessarily more dependent on the tropics. Where the sunshine falls straightest and the rain falls heaviest there the food of the future will be produced. In the various lists that have been prepared to show the increase in the cost of living, two items stand out conspicuously, for they are usually the only foods which have not risen in price. These are sugar and bananas, both tropical carbohydrates. No nation can call itself independent unless it has command of the seven C's: coffee, cacao, copra, cotton, cane and caöut-chouc. Of cotton we have enough and to spare. Our sugar supply under the Stars and Stripes is less than half of what we need, and less than half of this is grown on the continent in either beets or cane. For the other C's we must depend upon our outlying possessions or foreign countries.

Germany, France and the United Kingdom are destitute of all these requisites of modern civilization and it is their struggle for territories where tropical and semi-tropical products could be grown that has involved them in war. First France and England came into conflict over the cotton land of Egypt, but war was avoided by a compromise between them which gave Egypt to England and Morocco to France. Germany, angered at being shut out of northern Africa, threatened war, but thought better of it and sought compensation in Anatolia. Here she was again checkmated thru a combination of Russia and Great Britain, who divided up Persia between them and so shut off from its outlet the German Bagdad railroad. Consequently the German Government has been teaching the natives of its African possessions how to grow cotton, copra and coffee.

The history of the sugar industry is especially interesting in this connection, for it illustrates both the points under consideration, first, the importance of tropical dependencies and second the possibility of developing other sources of food supply thru applied botany and chemistry. The beet sugar business, like many another advance in civilization, owes its origin to war. Napoleon, finding that Great Britain as mistress of the seas had shut off the sugar supply of Europe, instigated an inquiry to ascertain if there were not some possible source at home. Such a source was found in the beet, but it seemed absurd to suppose that a root with a slightly sweetish taste could ever be a rival of the rich and luxuriant cane of the tropics. But the beet was put thru a course of eugenics with the result that in the course of a hundred years its sugar content was raised from six per cent to sixteen or even twenty, and today the world gets 6,300,000 tons of sugar from beets in comparison with 8,400,000 from cane. The American farmer who buys a sack of sugar beet seed marked "Made in Germany" knows that every one of the little brown seeds has a certified pedigree of a hundred generations in which not one ancestor has fallen below the high standard of quality. This is more than can be claimed by the House of Lords. Napoleon's spirit, if it continues to take an interest in mundane politics and retains its former prejudices, must have rejoiced to see the British West Indies ruined by the sugar beet and the United Kingdom made dependent upon the continent for its sugar supply. In 1908, Germany exported to England beet sugar to the value of more than $60,000,000. This was intolerable to British pride, so by means of duties and international agreements this had been cut down before the war by half, and now the United Kingdom refuses to buy any sugar from neutral nations unless assured that it is not "made in Germany." Efforts are being made to utilize the waste land of the United Kingdom for the cultivation of sugar beets. It will, however, take time for the development of the industry in England, and for the present our sugar planters in Hawaii, Porto Rico and Cuba should find a good market in England, France and Russia. Germany and Austria-Hungary, anticipating a long war, soon shut off the exportation of sugar. This left them with a stock on hand sufficient to last two years, and in the meantime the fields formerly used for beets were put to growing cereals for the army. This and similar shifts will make these countries practically self-sustaining in the matter of food in spite of their large population and poor land. England, having stuck to her free trade principle of buying and selling in the best market without regard to the effect on home industries, is now absolutely dependent on foreign commerce and would be starved out in a few months if she should lose command of the sea.

One other instance of the achievement of economic independence thru applied science is the production of alcohol for manufacturing and fuel. We have been fighting the Standard Oil Company with legislation; the Germans have been fighting it with potatoes, and these have proved the better weapons. Germany, like the United Kingdom, is destitute of petroleum, and she cannot now import the gasoline necessary to keep her army automobiles running. But this possibility has been foreseen, and the Government has for several years required that the motor vehicles which might be taken over for military purposes in time of war should be provided with interchangeable carburetors so that either gasoline or alcohol could be used. A hundred million gallons of fuel alcohol were on hand when the war began and more is made from potatoes and sugar beets. In the United States one of the chief difficulties in the way of developing the chemical industries has been the lack of cheap alcohol and the passage of the denatured alcohol bill by Congress a few years ago has not done what was expected of it in the way of remedying this deficiency. Possibly we will find in the infra palm, which grows abundantly in the Philippines and Central America, a future source of the cheap alcohol necessary for many industries. We will naturally draw upon the tropics for fuel and food as the years go by. The increased importation of fruits such as pineapples and dates gives a hint of future conditions.

The war has taught the world by the worst of object lessons that economic independence is not less important than political independence, in fact that the two go together. If for instance Germany thru her systematic agriculture and synthetic chemistry had not been largely self-supporting she could not have endured for a year the cutting off of her commerce by enemies on every side. It will never happen again, we hope, that the existence of a nation will depend upon its self-sufficiency, but its prosperity will always depend upon it. In order to become as free as possible from dependence upon other countries for the necessities of life we must first develop our internal resources with the help of applied science and, second, make use of such tropical possessions as we now hold or can acquire. Then with this firm basis of self-support we can cultivate trade with other commercial countries by reciprocity and can compete with them on equal terms in the open markets of the world.

Reduced One Half

In Thickness and Weight—The India-Paper Edition

WEBSTER'S NEW INTERNATIONAL DICTIONARY—*The Merriam Webster*

Has nearly 3,000 pages, with type matter equivalent to a 15-Volume Encyclopedia, all in a single volume! Only 2¾ inches thick, in Rich, Full Red Leather Binding, with Gilt Top.

The Only Grand Prize (Highest Award) given to dictionaries at the **Panama-Pacific International Exposition** was granted to Webster's New International and the ***Merriam*** Series for Superiority of Educational Merit.

1915 ATLAS (WITH WAR MAPS) FREE

to the readers of THE INDEPENDENT who take advantage of the offer here made to

Deliver for $1.00

and easy payments thereafter of only a few cents a week, either the India-Paper or Regular Edition in Full Red Leather Binding.

The Atlas Is the *1915* "New Reference Atlas of the World," containing nearly *200* pages, with *128* pages of maps, beautifully printed in colors, with marginal reference indexes, besides illustrated description of *Panama Canal*, all handsomely bound in Red Cloth, size 10¼ x 13⅝.

India-Paper Edition.

Printed on ***thin, opaque, strong,*** superior India Paper. It has an excellent printing surface, resulting in remarkably clear impressions of type and illustrations. What a satisfaction to own the ***New Merriam-Webster*** in a form so light and convenient to use! This edition is ***one half*** the thickness and weight of regular edition. Size 12⅜ in. x 9¾ in. x 2¾ in. ***Weight*** 7½ lbs.

Regular-Paper Edition.

Printed on strong book paper of the highest quality. Size 12⅜ in. x 9¾ in. x 5½ in. Weight 16 lbs. Both Editions are printed from the same plates and indexed.

THIS NEW CREATION CONTAINS OVER

400,000 Vocabulary Terms.
12,000 Biographical Names.
30,000 Geographical Subjects.
Thousands of other References.

Over 6,000 Illustrations.
Nearly 3,000 Pages.

The only dictionary with the ***new divided page,*** characterized as "A Stroke of Genius."

"To have this work in the home is like sending the whole family to college."

To those who respond at once we will send a copy of "Dictionary Wrinkles," containing an amusing "Test in Pronunciation" (with key) entitled "The Americanization of Carver," also a "Red Facsimile Booklet" of interesting questions with reference to their answers.

THE NEW BOOKS

THE SUPERMAN AND WELLS

THE unresting energy of invention which has enabled H. G. Wells to conquer the successive fields of the scientific romance, the novel of middle class life, the society novel, the sociological essay, and the treatise which is disguised as a novel, has not been dimmed or thwarted by the Great War. Since the conflict began we have had from his pen many brilliant war manifestos, a confused jungle of literary fragments foisted on the reputation of a nonexistent author named Bliss, editor of the papers of an equally imaginary *Boon*, a farce comedy, *Bealby*, and the latest of his novels, *The Research Magnificent*. William Porphyry Benham, the son of a wealthy society woman totally without scruples and of a village schoolmaster weighted with perhaps too many, sets out to conquer the world by the aid of his mother's wealth and his father's conscience. To make himself master of the world he finds he must first control his own soul and he spends his life cutting himself free from the temptations of fear and self-indulgence which are natural to him, and from the efforts of his mother, his wife and his friends to direct the course of his life into orthodox channels. He resolves to understand the modern world in every part, that when the time for action comes he may be sure that his activities in politics will help and not hurt. By the irony of fate he dies before he has completed his travels and leaves nothing to the world but a desk full of unedited manuscript.

Benham, like Ibsen's *Brand*, holds that nothing justifies life but its absolute domination by the individual will, and, again like the Scandinavian hero, he forces the tension of his will beyond the limits possible to human nature and involves himself, his plans and all who have come within the stormy scope of his influence in a common ruin. But Wells has not chosen as the background for Benham's fine fanaticism the respectable if uninspiring mediocrity of rural England as Ibsen chose that of rural Norway. *The Research Magnificent*, like many other researches, leads the investigator to far countries. We have lightning snapshots of primitive or retrograde parts of the earth; the sickening atrocities of Albania and Macedonia, the sinister back streets of Chinese towns, the heaving unrest of Russia, the racial and religious hostilities of India, the barbaric cruelties of Hayti, the fiercely unintelligent labor struggles in South Africa and, by no means least, the methodical preparations of the European states for a world wide war. These evils, says Wells thru the mouth of Benham, can be solved only by the organization of the world into one great republic ruled by an aristocracy schooled to fine living and utter devotion to their task of directing the energies of mankind to the highest ends. It is for the author's discussion of the meaning of aristocracy that the book is chiefly notable. To him the aristocracy, the worth-while part of humanity, consists of those only who can resist the four chief enemies of man: Fear, Indulgence, Jealousy and Prejudice. A curiously uneven book, containing some of the best and some of the worst things Wells has written. Such illuminating chapters as that on the significance of fear are a contribution to ethics and psychology, none the less valuable for being sandwiched in with details of degrading love affairs.

The Research Magnificent, by Herbert George Wells. The Macmillan Co. $1.50.

TREITSCHKE'S MASTERPIECE

It was the misfortune of Heinrich von Treitschke to have become infamous before he became famous in the English-reading world. The apostle of Prussianism suffered from the fact that until the opening of the Great War his works were practically unknown except to Germans, but even more because the translations which have since been brought out were selected from fugitive and polemical writings which did not represent him at his best. The first volume of his *History of Germany in the Nineteenth Century*, carrying the history to the Congress of Vienna, has now appeared in an English translation and for the first time English and American readers are enabled to comprehend why Treitschke ever became a name to conjure with among his fellow countrymen. By confining himself strictly to German (in fact practically to Prussian) affairs, Treitschke succeeded in writing a scholarly history, for his ignorance of foreign peoples was only equalled by his knowledge of the Prussians. The work from a literary standpoint is admirable. Free, flowing and vibrant with enthusiasm, Treitschke's style is as far as possible removed from the heaviness of the average German scholar. There is no attempt at impartiality; every statement is paired with its appropriate epithet and no event is allowed to escape without the judge's sentence. The bias of the work is so obvious, however, and so easily allowed for, as hardly to interfere with the value of the history. A more important defect is the author's utter blindness to all human interests except international politics and war. Religious and literary movements are mentioned, it is true, but only as manifestations of the Teutonic soul; economic conditions are forgotten, and the issues raised by the French Revolution are to Treitschke as if they had never been. The author's sole purpose was to make a worthy prose epic of the rise of Prussia and this task he greatly achieved.

History of Germany in the Nineteenth Century. By Heinrich von Treitschke. Translated by Eden and Cedar Paul. McBride, Nast & Co. $4.75.

SOCIAL LEGISLATION IN IOWA

The State of Iowa is a typical American commonwealth in which the labor problem is at a minimum; the urban population small; the immigration problem negligible. It is therefore highly significant that Iowa should be making a special study of social legislation in all its aspects. The Iowa legislature has assisted the State Historical Society in the publication of a series of scholarly volumes which condense a great amount of information primarily for the benefit of legislators, but of interest to everyone in the country. The second volume of the *Applied History Series* deals with constitutional revisions, home rule, direct legislation, suffrage, the short ballot, the recall, the merit system, etc. It gives a brief but comprehensive history of the subject, discusses present tendencies in other states and countries, and explains the application in Iowa. Chapters in this volume on social legislation, poor relief, and child labor, are condensations of more extensive reports which are published separately. The two volumes on *The History of Education in Iowa* are the first of six, and deal exclusively with the secondary schools. *Poor Relief Legislation in Iowa* considers all the phases of the problem and presents an advanced and constructive solution for bad conditions. It is particularly strong in the chapters concerning the care of delinquents, defectives, and dependents, but does not consider the pension system for mothers as fully as might be desirable.

Iowa Applied History Series, Vol. II edited by B. F. Shambaugh. *History of Social Legislation in Iowa*, by John E. Briggs. *History of Poor Relief Legislation in Iowa*, by John L. Gillin. *History of Education in Iowa*, by Clarence Ray Aurner. 2 Vols. All published by the State Historical Society of Iowa, Iowa City, Ia.

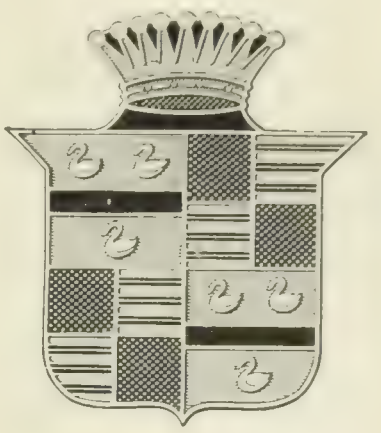
COLLEGE STUDY OF MUSIC

An able and a valuable plea for the study of musical history and appreciation in American universities and higher schools is made by Professor Dykinson, of Oberlin College, in an interesting and stimulating book which he calls *Music and the Higher Education*. He holds, and rightly, that music, because of its esthetic value as an art of form, its significance as an interpretation of life, its refining touch upon the emotional nature, and the means it affords for the culture of important elements of character, must not be permitted longer to suffer the old neglect by American colleges, and that the leadership in musical education on the interpretative and appreciative side must be assumed by those institutions whose circumstances and prestige enable them to place such education upon solid intellectual foundations. His exposition of what is to be sought and gained in this field, only just beginning to receive broad educational recognition, is presented under three headings: "The Cul-

CADILLAC DAY AT THE PANAMA-PACIFIC INTERNATIONAL EXPOSITION, SAN FRANCISCO, AUG. 20, 1915.

A SIGNAL HONOR, the first time ever conferred upon a motor car, reflected the esteem in which the Cadillac is held as an exponent of the highest American manufacturing ideals.

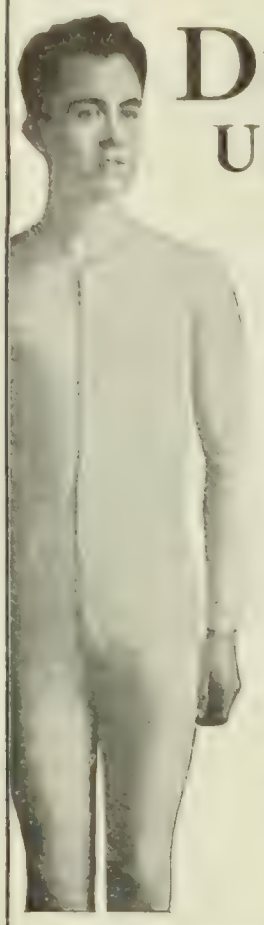
August 20th was designated as Cadillac Day by the officials of the Panama-Pacific International Exposition at San Francisco.



In the presence of an immense throng the new Type 53 Eight-Cylinder Cadillac was unveiled.

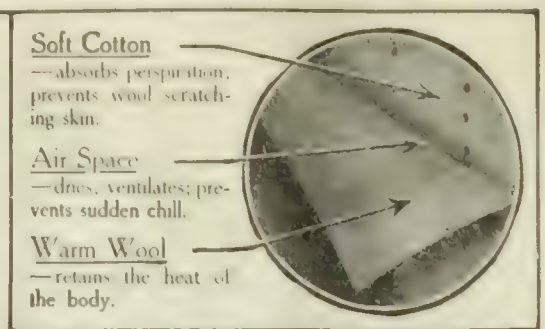
The climax of an elaborate and impressive ceremonial was the presentation of the Certificate of the MEDAL OF HONOR awarded to the Cadillac by the International Jury of Awards.

The presentation was made by Captain A. C. Baker, Director of Exhibits and was accepted for the Cadillac Company by Mr. Don Lee the Company's representative in California.



The Cadillac was the only motor car with a V-type Engine exhibited at the Exposition.

The tribute paid is unique in the annals of the industry.



THE COAT OF ARMS OF ANTOINE DE LA MOTHE CADILLAC, WHO FOUNDED IN 1701, UNDER COMMISSION FROM LOUIS XIV, THE COLONY ON THE SITE WHERE NOW STANDS THE CITY OF DETROIT.

THE TYPE 53 CADILLAC CAR IS DISTINGUISHED BY THIS COAT OF ARMS MOUNTED UPON ITS RADIATOR.

Duofold Underwear

maintains the natural heat of the body, giving perfect ventilation and comfort under all conditions.

Most colds come from getting overheated, underwear damp; then getting a chill.

The way to avoid such colds is to get underwear that doesn't overheat, doesn't get damp, but cools off and dries as fast as excessive heat and moisture are created.

Dr. Alfred Walton, the eminent physician and surgeon says:

"The ideal garment would be a thin absorbent fabric next to the skin, then a layer of air, and then a woolen fabric to take the cold—a thin fabric drying quickly, with the heat of the body, driving the moisture into the wool

That underwear is Duofold—a garment of two separate fabrics knitted together with air-space between. The inside fabric (soft light-weight knitted cotton) is comfortable to the skin and absorbs the moisture. The heat of the body drives this moisture through the air-space, partially drying it at the same time, into the wool, from which it gradually evaporates. The light-weight knitted wool keeps out the cold and keeps in the natural heat of the body. Both layers together—wool and cotton—are about half the weight of ordinary underwear.

All-cotton garments don't keep you warm, cool off too quickly, and produce sudden chills. All-wool garments irritate the skin, don't let the perspiration evaporate, are close and unwholesome.

Duofold gives you all the advantages of both cotton and wool, puts each where it belongs and does the most good.

No matter how sudden the change in temperature, Duofold keeps the skin dry and the body at its healthy, natural heat—comfortable and safe. There is no other underwear like Duofold.

Duofold is made in union and two-piece suits, in several weights for men, women and children.

Duofold does not shrink.

Get Duofold for the whole family. Write us for Free Sample of Duofold fabric, Book on Comfort and Health in Underwear, and the name of a Duofold dealer.

Duofold Health Underwear Company 61 Elizabeth Street Mohawk, N. Y.

INSTRUCTORS

One important reason why The Independent is being elected as THE periodical for use in schools is because of the clear explanation of current events in its EDITORIALS. On this point a teacher wrote H. W. Martin, Head of History Department of the Horace Mann School for Boys, says positive: The Independent because "It does not confuse the pupils by giving a great many rules to each question, but clearly states the correct rule and the students can easily learn this rule. We have been very well pleased with the results of our work this year and we plan to use The Independent again next year."

cism, physiological space and Euclidian space, and other problems that interest those who care to think thru past the surface of things. Dr. Mach has been one of the most stimulating and suggestive thinkers of the past generation, and his leads have not yet been worked out.

Chicago: Open Court. $1.50

SONGS OF A SPANISH MOOR

The latest addition to the Wisdom of the East series is devoted to *The Poems of Mu'tamid, King of Seville*, who lived and wrote during the eleventh century. The delightful introduction and the English verse forms of the translations are by Dulcie Lawrence Smith.

Dutton. 40 cents.

R. L. S.

The author of *Treasure Island* was a very interesting person and in the *Late of Robert Louis Stevenson for Boys and Girls*, Jacqueline Overton has made much of the romance and adventure with which the plucky invalid managed to fill his years. From the tales of his grandfather's lighthouse building to the life of the Samoan household the book is full of stories that young folk will like.

Scribner. $1.

WHAT IS A CRITIC?

If at this date a volume seems a good deal to spend in proving the worthlessness of *James Russell Lowell as a Critic*, Joseph J. Reilly does more than pass destructive judgment on a once favorite essayist. He makes unmistakably plain, with Lowell for text, the immense and essential difference between the appreciator and the true critic, and this is matter of importance.

Putnam. $1.25.

WHAT HOLLAND GAVE US

H. A. Van Coenen Torchiana's historical essay on *Holland* is a record of that doughty little land's achievements up to the sailing of the "Mayflower," and a brief for her preponderating influence on the new nation. It is an influence we are proud to acknowledge. But so overwhelming a case is made out that the reader wonders if the peculiarities of our New England and Mountain White speech be not Dutch instead of Shakespearean!

San Francisco: Elder. $1.25.

OUR PART IN CHINA'S TOMORROW

Here is a plum to be had for the plucking, if America will only stretch forth her hand at this psychological moment when the other great nations are preoccupied with their war game, and grasp the prize —Chinese trade—so says Paul Myron. In his enthusiasm he has incorporated in *Our Chinese Chances Thru Europe's War*, some material that we learned in our big geographies, but he is obviously a man not only of conviction, but of more than casual acquaintance with the Chinese.

Milwaukee: Linebarger Bros. $1.25.

DANTE'S INFERNO

It is difficult to get a new angle on the Divine Comedy, but Marion S. Bainbridge has written with such enthusiasm and his work is so thoroly impregnated with his love for the great poet that his endeavor to bring some of the delicate shades of meaning within the grasp of the average reader is highly successful. *A Walk in Other Worlds with Dante* should be sincerely appreciated by the many who have found the Italian poet too subtle for their thoro understanding.

Dutton. $2.

THE MAGIC OF BANKING

To explain the magic of finance, which to the layman resembles some occult science, is the purpose of Ralph S. Harris's *Practical Banking*. With a brief history of the growth of the money-lenders, it deals also with the more modern problems of foreign exchange and the Federal Reserve Act, besides outlining the functions of familiar officials like the cashier and the teller. It is a clear and precise primer of the structure and mechanism of this mainspring of the business world.

Houghton, Mifflin. $1.75.

AMERICANISM

When this Nation declared itself independent 139 years ago, it practically declared its ability to live without foreign aid. This declaration has been fully justified in subsequent American history. Americanism has set the world many important examples in material, intellectual and diplomatic progress.

The New International Encyclopædia is not the least product of Americanism. Conceived and published by an American firm, edited by foremost American scholars, it has been declared by eminent authorities "the best and fullest encyclopædia in existence" for American readers and American interests.

The Second Edition of the
New International Encyclopædia

24 Volumes — is now in course of publication by DODD, MEAD & CO., New York City — **80,000 Subjects**

This revision—a matter of enormous expense and work—could not have been undertaken at a more opportune time. Recent advances in science, arts, engineering, manufactures, research, invention, discovery, etc., have left existing reference works wholly inadequate. Important history is in the making, great political and social changes are progressing. These matters receive full, authoritative, impartial treatment in the Second Edition. It will contain about

80,000 Articles—30,000 more than any other standard encyclopædia—due largely to the great amount of matter incorporated

It thus becomes the only encyclopædia of the *present*. It covers, with equal thoroughness, all knowledge from earliest times. This knowledge has been made easily and quickly accessible by means of the alphabetical arrangement of subjects.

Its practical illustrations and maps are models of accuracy and fine workmanship.

Printed on thin paper, the volumes are as easy to handle as a monthly magazine. The paper was made especially for the Second Edition and is opaque, tough and durable.

The Special Library Edition is printed on regular book paper and bound in Library Buckram.

An Illustrated 80-Page Book Free

He fought with Joffre and with French,
Endured the horrors of the trench,
But to the woods he straightway took
When mobilized to fire the cook.
—John Kendrick Bangs.

The famous detective gasped as he arrived at the scene of the crime.

"Heavens," said he, as he looked at the window thru which the thief had escaped, "this is more serious than I had expected! It's broken on both sides!"—*Philadelphia Ledger.*

He was wandering aimlessly around in a department store when the floorwalker approached him.

"Looking for something?" he asked.

"Yes, my wife," replied the man.

"Describe her."

"Well, she's a sort of limousine with heavy tread and usually runs on low."—*Ohio Motorist.*

"I want to see your beauty editor," said the caller at the sanctum of a popular magazine.

"Are you following her advice?"

"I am."

"Got confidence in it?"

"I have."

"Then you don't want to see her."—*Louisville Courier-Journal.*

A chairman who poses as a humorist was having his shoes shined at a railway station.

"And is your father a bootblack, too?" he asked the boy at his feet.

"No," said the bootblack. "My father is a farmer up the state."

"Ah," said the humorist, as he started for his multitude to make an entry, "he believes in making boys toe the mark."—*Exchange.*

"Ain't you rather young to be left in charge of a drug store?"

"Perhaps; what can I do for you?"

"Do your employers know it's dangerous to leave a mere boy like you in charge of such a place?"

"I am competent to serve you, madam."

"Don't you know you might poison your customers?"

"There is no danger of that, madam; what can I do for you?"

"Think I had better go to the soda down the street."

"I can serve you just as well as they can and as cheaply."

"Well, you may give me a package of Uneeda Biscuit, but I don't like your looks."—*Puck.*

The Market Place

THE GREAT WAR LOAN

It was known at the end of last week that the complete success of the Anglo-French loan was assured. A definite agreement as to the terms had been reached on the 28th, and applications from subscribers in the first twenty-four hours after the announcement amounted to $480,000,000. It had been determined that the loan should be $500,000,000, with an understanding that the money should be used exclusively in the United States; that the bonds—a joint obligation of Great Britain and France—should bear interest at the rate of five per cent; that principal and interest should be payable in dollars on a gold basis; that the term should be five years, and that at maturity the holders should have the option of redemption at par or exchange for 4½ per cent bonds to run fifteen or twenty years. While the price to the public is 98, subscribers—even those who take small amounts—can get the bonds, it is understood, at 96¼ by giving their subscriptions to syndicate banks. At 98 the net yield, for the full term, is 5½ per cent; at 96¼ it is about 5.85. The syndicate pays 96 to Great Britain and France. The first instalment of 25 per cent will be called on the 15th inst., the second one month later, and the last in December. New York members of the syndicate are fifteen banks, twelve trust companies and thirty-two banking firms. The list of these firms includes J. & W. Seligman; Heidelbach, Ickelheimer & Co.; Hallgarten & Co.; Kountze Brothers, and Ladenburg, Thalmann & Co.

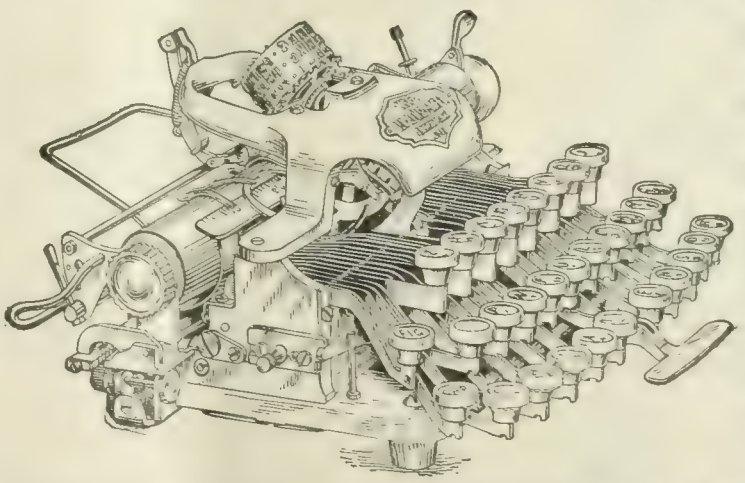
The amounts of several individual subscriptions were published, in most cases without names. One is for $30,000,000. Gossip connected with it the names of Mr. Rockefeller and Mr. Frick. Mr. Schwab takes $25,000,000 for the Bethlehem Steel Company. There is one for $5,000,000, another for $3,000,000. M. Guggenheim Sons have agreed to take $5,000,000. It was estimated that Philadelphia's subscriptions would be at least $20,000,000, Pittsburgh's $20,000,000, and Baltimore's $5,000,000. Many Western banks will take no bonds, or only a small amount, owing, it is said, to the attitude of German depositors and stockholders, but there are large individual subscriptions from men connected with the banks. Two incidents show the opposition which is taken into account. There was a run last week on a national bank in Racine, Wisconsin, caused by depos-

Housekeeping Linens *at* McCutcheon's

McCutcheon's is everywhere recognized as "The greatest treasure house of Linens in America"—and this was never more true than today, notwithstanding all the difficulties surrounding ocean transportation.

Even at this between season period we offer an unusually attractive collection in all the following lines:

Table Cloths—$2.50 to 50.00 each.
Napkins—$2.25 to 75.00 per dozen.
Linen Sheets—$5.50 to 32.50 per pair.
Linen Pillow Cases—$1.25 to 7.50 per pair.
Towels—$2.75 to 39.00 per dozen.
Bed Spreads—$1.50 to 50.00 each.
Blankets—$4.00 to 38.00 per pair.
Comfortables—$1.50 to 45.00 each.



We extend a cordial invitation to visitors from out of town to inspect this wonderful collection and to carefully note the very attractive values.

Mail orders receive our prompt attention.

The Truth About Poultry

Get the Facts by Reading **The One-Man Poultry Plant**

Successful Methods of Men on Farms or Small Acreage.
Complete in twelve parts; printed in one volume.

By **DR. N. W. SANBORN**

REAL work, with real poultry, on a real New England Farm. This is a simple story of what has been done by a man, at forty-five years of age, town bred and city educated, getting out of practice of medicine, buying a small farm in the hill country, and making a success of the venture. Not only is the raising of chicks and the management of adult fowl completely covered, but the interesting side issues of fruit growing, grain raising and the production of milk, that cannot be escaped on a real farm. You get rugged facts—rarely found in print. The truth about poultry as found in actual life on a one-man poultry farm.

You Can Do the Same, Book Tells How

OUR SPECIAL OFFER—The One-Man Poultry Plant, in twelve parts (book form), and the American Poultry Advocate, one year for only 50 cts., book and Advocate, three years, for only $1.00, if order is sent at once.

Our paper is handsomely illustrated, practical, progressive, and up-to-date on poultry matters. Established 1892. 44 to 132 pages monthly. 50 cts. a year. 3 months' trial 10 cts. Sample copy free. Catalogue of poultry literature free. Address

itors of foreign birth. Chicago banks sent $500,000 as a relief fund, and the bank gave notice that it would have nothing to do with the loan. In Chicago, Charles G. Dawes, president of the Central Trust Company, who had announced his intention to subscribe, received letters whose writers threatened to kill him. He and his residence are protected by guards.

Applications for substantial amounts have been received by the syndicate managers, J. P. Morgan & Co., from England, but such investments are discouraged and opposed by the English press. They tend to defeat the object of the loan. Subscribers in England must pay the income tax, but there is no such burden upon subscribers in this country. The interest charge is regarded there as a high one, and the Manchester *Guardian* says the British Government has blundered. The comment in Germany is that Great Britain and France show their sore need by paying so much, and that the loan indicates a strange kind of neutrality. But Germany borrowed $10,000,000 here a few months ago on 5 per cent notes of the Government. The French press sees in the loan evidence of the solidity of British and French credit and of our belief that the Allies will be victorious.

A VERY ACTIVE STOCK MARKET

An almost unprecedented volume of business on the New York Stock Exchange has so taxed the resources and strength of brokerage houses and subjected employes to so great a strain that some have proposed suspension for a day or two. The clerks have been working night and day, and the commission firms' offices are full of cots on which they may occasionally get a little sleep. The average daily business for the five full days of last week exceeded 1,500,000 shares, and something should be added for the odd lots (less than 100 shares) which in times of such pressure are not recorded. On Tuesday the total was 1,678,652 shares, the largest number for a day since 1904.

This activity has been accompanied by advancing prices for the war order stocks, which have dominated the market. On two or three days trading in railroad shares was almost eliminated. At the opening on Monday morning, the war order stocks (which had shown large gains in the preceding week) were higher than they had been at the close on Saturday, and the gains steadily increased. The taking of profits on Tuesday prevented any large net advances, except for Baldwin Locomotive, which rose from 119 to 150, receding to 128. Thruout the week the shares of this company were leaders in activity, owing to reports about purchases by the Du Pont powder interests for control and concerning the company's connection with a new combination of the independent steel factories. Wednesday saw a reaction, but the upward march was resumed on Thursday. It reached, however, at midday by a sharp break due to a rumor that an American ship had been sunk by a German submarine. For several stocks there

81 CHAPEL STREET ALBANY, N. Y.

were advances on Friday, when a new record was made for Steel common, owing to general expectation that the approaching statement of net earnings would be highly favorable. The price rose to 81¾, the best in four years, closing at 81. An addition of 25 to the price of General Motors made a net gain of 15 for the five days. Baldwin Locomotive's gain for the same days was 21½.

From the beginning of the week the strength of the market was due largely to the successes of the Allies along the war front in France and to the favorable condition of the war loan project. Many saw danger in the large transactions, sharp fluctuations, and advances not clearly warranted by facts. An official report showing that the net earnings, for the eleven months ending with July, of a company whose shares have risen from 18 to 101, were sufficient for only 1 per cent on the stock (after payment of 7 per cent on the preferred) appeared to exert no restraining influence.

RAILROAD RATES

The forty-one railroads west of the Mississippi have asked for a rehearing of the rate case in which a decision was made by the Commission about three months ago. They had applied for increases which would have added to their revenue only $7,604,000 a year, and the Commission, two members dissenting, granted changes which add $1,632,000. When the mileage and number of the roads is borne in mind, the increase sought appears to have been small, and the amount granted, averaging less than $40,000 for a road (if the roads were of equal length and service), can scarcely be seen in the revenue totals. One of the Commissioners, who held that all of the desired increases should be made, Mr. Daniels, asserted that his associates in the majority had avoided the fundamental question, which was whether the roads' revenue was or was not sufficient for the public interest. A rehearing is sought now in order that this question may be considered.

Annual reports recently published by several companies show the marked decline of revenue, both gross and net. On the Stock Exchange, where great activity prevails so far as shares of manufacturing companies are concerned, railroad securities are neglected or avoided. They are not attractive to investors. In answer to the request for a rehearing, the Commission should thoroly consider the question of the adequacy of revenue and set forth clearly its conclusions.

The following dividends are announced:
American Telephone and Telegraph Company, $2 per share, payable October 15.
The New York Central Railroad Company, capital stock, 1½ per cent, payable November 1.
United Fruit Company, quarterly, 2 per cent, payable October 15.
La Rose Consolidated Mines Company, quarterly, 1 per cent, payable October 20.
Niagara Falls Power Company, $2 per share, payable on and after October 15.
Standard Milling Company, preferred, 2½ per cent, payable October 30.
Westinghouse Electric and Manufacturing Company, quarterly, preferred, 1¾ per cent, payable October 15, and common, 1½ per cent, payable October 30.

The Man in the Multitude

That the human voice may be transmitted across our continent by telephone is the marvel of this age of wonders. Yet the full significance of the achievement is not realized if it is considered strictly as a coast-to-coast connection.

The Transcontinental Line not only bridges the country from east to west, but, by having finally overcome the great barrier of distance, it has removed the last limitation of telephone communication between all the people of the nation.

This means that the voice can be sent not only from New York to San Francisco, but from *anywhere* to *anywhere*—even from *any one* to *any one*—in the United States.

Wherever you are, it is possible to reach any one of our hundred million population. You can single out from this vast throng any particular individual with whom you desire to speak.

To bring this about, the Bell System has spent years and millions, extending its lines everywhere, anticipating the ultimate triumph. It has had the foresight and the courage to unite this great country, community by community, into one telephone neighborhood.

With success achieved by the Transcontinental Line, the established Bell highways make you, wherever you are, the near neighbor of your farthest-away fellow citizen.

Scientific Exercise for Health

You can rid yourself of the tendency to tire easily. You can build your body into a splendid fortress of health and strength. You can develop every muscle fully through correct scientific exercise. But—to be effective, exercise must be *both* correct and scientific for—too much exercise is as dangerous as not enough. And—you are always in danger of over-doing, unless you have scientific instruction.

"Winjum's Manual of Physical Exercises" teaches you how to develop even, well-balanced strength throughout your whole body. After years as Director of Physical Training at the Battle Creek Sanitarium, Professor Winjum is well equipped to teach you how to exercise for developing health and strength scientifically. You can easily follow the teachings of his book right in your own home, without any expensive apparatus. Send for this book now. Over 350 pages, with nearly 400 illustrations, showing every muscle, movement and position of the human body. Price only $2. Order today. You take no risks. Book may be returned at once for prompt refund, if you are not more than pleased. Send order to—

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

TWO SORTS OF POLICIES

Some of the letters received by this department lead me to conclude that not all my correspondents clearly understand the difference between what is commonly called a "deferred dividend" policy and policies under which the holders voluntarily leave the annual dividends to accumulate. I have always advised inquirers against the inequities—I might say iniquities—of deferred dividend policies; at the same time commending the wisdom of permitting annual dividends to accumulate, using them either in the purchase of insurance additional to the face of the policy, or to shorten the premium-payment term. To those unfamiliar with the contractual differences between these propositions, my advice may seem inconsistent. However, it is not, as I will show.

Under the contract which the policyholder enters into when he accepts a deferred dividend policy, he agrees to accept as his share such sum in dividends as the board of directors, at the end of the dividend-accumulating term (ten, fifteen or twenty years), declares is fair and equitable. Further, he agrees that in the event of his death before the accumulating term is complete, or in the event that he permits his policy to lapse thru non-payment of premium during the term, he will receive no dividends whatever. This means that there will be no annual accounting of dividends to him; that he has ratified in advance any methods of computing dividends the company may choose to adopt, however obviously unjust the results may be; and that if he is unfortunate and cannot continue paying premiums, or dies, he forfeits all earned dividends—that is to say, he has paid a heavier price than the benefits received are worth, because dividends are nothing less than excess premiums.

Under the other plan, that of leaving declared annual dividends to accumulate to enhance the value of his insurance or shorten the premium-paying term, the policyholder can lose nothing. If he must discontinue the policy, or wishes to, he can demand and will receive all the accumulated dividends. If he dies, they are paid to his beneficiaries in such form as he had previously directed. In short, dividends held in that shape are always convertible at will, in whole or in part. To illustrate the value of the dividend that has no "string on it," I cite briefly a case which occurred in June under a Mutual Benefit policy. The assured held a policy for $10,000, issued in 1910, on which he had borrowed $142.55 which, with interest on May 2, the day another an-

The Brookfield School

An open-air school for a small group of girls

Directors: Miss Helen Fairman Cooke, A B Wellesley College
Miss Marion F. E. Cooke, A B Wellesley College

AIM

To develop a sound mind and heart in a sound body.
To make the girl capable, alert and womanly.
To make her thorough.
To make her reliable and resourceful.
To make her likable and sincere.
To teach her to think and act with intelligence.
To teach her how to study.
To teach her how to use her mother tongue.
To help her to find herself, and therefore
To make her happy and useful.

EQUIPMENT

Colonial house—atmosphere of simplicity—open-air sleeping and dining porches—open-air school-room—unstinted sunshine—gardens for all—space for play—woods and fields—experienced understanding, motherly teachers.

METHODS

Individual and class instruction—close supervision of work—careful study of each girl's nature—work made a joy—power of concentration developed—intimate association with teachers—sports made a means of education—teaching by example rather than precept.

COURSE OF STUDY

An enriched high school course—general, special, and college preparatory—modern languages a part of daily life—Domestic Arts—Music—Gymnastics—foundations laid for culture.

PLAY

Tennis—basket-ball—tramping—coasting—skating—snow-shoeing—dancing—singing—games—story-telling—play-acting.

References given and required.

Conference with the Directors by appointment only.

SCHOOLS

During six days recently over One Hundred schools ordered copies of The Independent. At that time we had received orders from schools for about Four times as many copies as were ordered last year at the same time. Try The Independent in your Class Room.

nual premium [illegible] due, amounted to $1111.86. This [illegible] the limit of the cash equity. The policyholder did not pay the premium and it had virtually lapsed. But there remained in the hand of the company a fractional dividend of $44.54, which [illegible] applied under the equity provisions of the policy to keep it in force for [illegible] days. The assured was killed on June 15, and the company paid his widow $1607.68, the difference between the face of the policy and the amount of the loan. This assured used his dividends as they were declared, and it was the undeclared dividend, due upon his death, that saved the policy. Had he held a deferred dividend policy he not only would have received no dividends at all, but his insurance would have completely lapsed when, after exhausting the cash equity, he failed to pay the next premium.

W. W. W., Buffalo, N. Y.—Judging by the statements you make and the sentiments you express you should be a successful life insurance salesman. You have taken the right course by studying the subject to do efficient work from the beginning. If you have not read "Educational Leaflets," by J. A. Jackson, manager of the Literary Department of the Mutual Life Insurance Company, 34 Nassau street, New York, you should. He would probably send you a copy if you requested it. Answering your main inquiry, my advice is that you write for the literature of the following companies: Connecticut Mutual, Hartford, Conn.; Mutual Benefit, Newark, N. J.; Mutual Life, New York; New York Life, New York; Northwestern Mutual, Milwaukee, Wis.

M. E. A., Boston, Mass.—There are no facts in my possession which would cause me to conclude that you should surrender your policy before its maturity date in 1918. I have gone over the company's statistical history and I find its business and finances in about the same shape they have been for a decade or more. I can discover nothing that should make a policyholder apprehensive. The company is not aggressive, I might even say it is non-progressive, but I believe it to be sound and I know it has a good reputation. You probably have a "deferred dividend" policy. If that is so, and you surrender prior to the maturity date, you will forfeit such share in the dividend accumulation as may at that time be divided among existing policies of that class. As you have no more premiums to pay, my advice is that you wait.

I. E. K., Carnegie, Pa.—After considering all the facts you have put before me, without disturbing your present policy, which is in a good company and should be kept, I would advise you to put one-half of the $20 a month in a long-term endowment policy in one of the companies with a good dividend record. You are twenty-two. Take a thirty-year endowment. A company, the rates of which are before me, charges $30.97 per $1000. You can get $4,000 for slightly more than $120 a year. At the end of thirty years you will be but fifty-two and will have $4000 cash certain and, if you leave your dividends to accumulate, nearly $1000 additional, if the company's saving power continues as good as it is now. None of the leading life companies write life and accident insurance in combination in the same policy, and until they do it would be well to carry your accident insurance separately. Get your life insurance, preferably, in a mutual company; your accident insurance in a strong stock company. Your present policy is in a stock company that has a good reputation and is well managed, and you have an equity there you should cultivate. It is a mistake to lapse a policy issued by a good company after carrying it a few years as you have done in this instance.

What are you kicking about?

—You men who think you're underpaid

The men who get big pay are those who are ***trained*** to earn it. Your pay is small because you have no special training—***and you only are to blame.***

THE MOVING WORLD

A REVIEW OF NEW AND IMPORTANT MOTION PICTURES

GERMAN WAR PICTURES

None of the plays or romances now being produced to show the evil of war are half so impressive as the photographs of *The German Side of the War*, taken by E. F. Weigle of the Chicago *Tribune*. To see these hosts of able and active young men marching to the front and then to see them as they are afterward, hobbling about on wooden legs or led about blind, is a vivid lesson on what war means.

Mr. Weigle first visited the French front, then he followed the Austro-German army in its triumphant progress to Przemysl and lastly he visited the Trentino, which the Italians are invading. Accordingly this series of five reels affords an exceptional opportunity to get acquainted with the lay of the land in these fields and to understand the methods of modern warfare. Here we have a chance to observe in action the Austrian 30-centimeter howitzers which routed the Russians in Galicia. First we see the guns walking to the front on their caterpillar feet, then we watch the firing and see the recoil cylinders taking up the kick, and finally by means of a telephoto lens we have a close-up view of the volcanic eruption caused by the explosion of the gigantic shell in the ground.

IBSEN IN THE MOVIES

Peer Gynt, presented by the Oliver Morosco Photoplay Company, is a credit to the daring of the American producer and equally to the adaptability of the Norwegian dramatist. The peculiar blending of the symbolic and supernatural with the directest realism which was Ibsen's specialty is exactly the sort of thing which can be much better done with the resources of the camera than by actors on the stage. It was only because the invention of the cinematograph was so delayed that Ibsen was compelled to turn from his poetic allegories to realistic social dramas with five or six actors and no cost worth mentioning for scenery. But Cyril Maude in the title rôle has contributed even more than the new art form to make the difficult play a possibility. He has caught the exact blend of the eternal boyishness of Peter Pan and the too cautious half-heartedness of Kipling's Tomlinson which are the ingredients of Peer. The supporting cast is a good one; Myrtle Stedman as the beautiful Solveig and Charles Ruggles as the Button Molder being the most noteworthy.

In spite of the charm of the peasant scenes, the splendor of Grieg's music and the uniform excellence of the acting, the performance was very far from perfect; it sinned both by omission and commission. Such scenes as the encounter with the Boyg, just the scenes where the possibilities of the photodrama far outrange those of the "legitimate" stage, were ruthlessly cut from the acting version and their place filled by an elaborate string of adventures in America which were wholly aside from the plan of the poem. That this timid dilution of Ibsen was unnecessary is proved by the fact that where the play kept closest to the original the audience was most interested. But while we cannot be certain that the severe and captious ghost of Ibsen would have been pleased with the new art, of one thing we may be sure: Peer Gynt himself would have been delighted!

A PREPAREDNESS PLAY

The Battle Cry of Peace is nothing but a Security League lecture set to the movies with an accompaniment of horrendous stage thunder, bugle calls and waving of "Old Glory." The patriotism of the groundlings is manifestly quickened. The mollycoddles are undoubtedly frightened. Even the man in the street is awestruck by the idea of charging $2 for admission. He stands in a long line before the box office. But he who thinks with his brain comes away unconvinced. The whole thing is overdone. The remedy for everything is preparedness and still more preparedness. Only by the immediate upbuilding of a colossal army and navy can we be saved from the fate of Belgium.

There is no plot. Three-quarters of the pictures could be used as well for a pacifist as a preparedness argument. The horrors of war argue as much the grounding as the shouldering of arms. Yet *The Battle Cry of Peace* is interesting if one can forget its spectacular demagogery. As a feat in photography it is amazingly good. It is worth an evening off to see the battleships battling, the submarines subbing, the aeroplanes planing and Mr. Hudson Maxim firing off militarist maxims.

A MORALITY ON THE FILMS

Destiny, or "The Soul of a Woman," is a happy blend of the conventional melodrama with its neatly dovetailed plot and the symbolic morality play of the *Everywoman* type. An artist has just completed a relief of the Madonna and Child, using his wife and baby as the models, and wealthy parishioners come to buy it for the Roman Catholic Chapel. One of the buyers on seeing the sculptured group exclaims that the model had once been his mistress. Explanations follow, the home is broken up, the wife and her baby cast adrift. Unable to make an honest living, the wife leaves her baby at the gate of a monastery and returns to her old life.

The boy grows up in the monastery, but leaves it "to see life" before entering the order. He is lured to a "palace of sin" by the three demons of Avarice, Lust and Drink, whose spirits visibly leave their bodies to tempt him. At last he is rescued by his mother who, not knowing him, takes pity upon his youth. He returns to the monastery and in time is appointed to the "Chapel of the Madonna." Any theatergoer of experience can guess the ending. His mother, driven in her old age out of the palace of sin and into a convenient and very realistic snowstorm, wanders by chance into the Chapel of the Madonna and dies happy in the young priest's arms.

The obviousness of the plot is obscured by the excellence of its presentation. At each crisis in the play the movement is interrupted by a picture of the three Fates spinning the destinies of the characters and, at the last, Atropos alone is shown severing the thread of the woman's life with her shears. The finest screen effect is the transition, in which the performance for one overstep the limits of the screen and the landscape setting of the stage is illuminated by flashes of lightning. The cast is generally good, but the honors of the performance must go first of all to the director and in the second place to the baby.

It is curious to see how the modern film refuses to be the earnest form of the drama the morality

PEER GYNT IN THE MOVIES

Cyril Maude lends his considerable reputation to "legitimate" heights in the daring experiment

JUST A WORD

Men and women of distinction in every field have written for The Independent. They continue to do so. In the next few months we shall publish articles by Margaret Deland, Gutzon Borglum, William Allen White, Prof. Liberty H. Bailey, Melvil Dewey, and George E. Vincent, President of the University of Minnesota.

Here is a letter that is gratifying not only for the broad comparison of Mr. Purinton's articles with other writing of like purpose, but also for the straightforward statement that our reader in Amarillo, Texas, has gotten substantial help from the study in question:

I have just read "The Orderly Life" by Edward Earle Purinton. May I say that nothing of similar character has ever taken hold of me with such force? Somehow I could wish such a study in the hands of every aspiring boy and girl. I have re-read Benjamin Franklin's rules of life. The helpful books by Orison Swett Marsden have appealed to me in a remarkable way. But for two decades Samuel Smiles' series of practical books have furnished food for renewed purposes and unrelenting energies. Perhaps no American writer cast such a compelling spell over the minds and lives of our young as did Ralph Waldo Emerson. His inspirational essays were like still small voices speaking to the higher reaches of our souls. Arnold Bennett in his unusual studies brings life to broader plains of travel. His practical booklet on *How to Live on Twenty-four Hours a Day* should be on the reading table in every home. But still Mr. Purinton comes in a more practical and concrete way to an inspiring outline for a successful life. I wish to thank Mr. Purinton and The Independent for the personal help received from this one study.

Visitor—What's that new structure on the hill there?

Farmer—Well, if I find a tenant for it, it's a bungalow; if I don't, it's a barn.—*Passing Show.*

In the pursuit of neutrality-preservation—pardon the hyphen—we glean and print a staggering statistic. Of all the butchers in Germany, 84.2 per cent are in the army.—*New York Tribune.*

This morning thousands of persons drove 10,000 nails into the wooden statue of Field Marshal von Hindenburg in the Koenigplatz.—Berlin cable.

To be included, we presume, among the "great German drives."—*New York Sun.*

A CONFIDING APPEAL.

Wanted—The person who hit my cow on the state highway with their auto about seven miles out from Vicksburg to write me as the cow is badly injured. Miss Josephine Keller, R. F. D. No. 2, Bovina, Miss.—*Vicksburg Herald.*

Niece—I do think you are clever, aunt, to be able to argue with the professor about sociology.

Aunt—I've only been concealing my ignorance, dear.

Professor Bilks (gallantly)—Oh, no, Miss Knowles. Quite the contrary, I assure you.—*Boston Transcript.*

Earnest Sunday School Teacher (leading up skilfully to the temperance lesson)—What would you do if you had a great deal of money and wished to spend it on something that would do your town the most good?

Eager Pupil—I should buy votes for the Prohibition party.—*Exchange.*

"It is true," severely said the lady of the high ideals to the successful writer, "that you have gained much prosperity by your writings, but you have written nothing that will live."

"Perhaps not," returned the author; "but when it comes to a question of which shall live, myself or my writings, I never hesitate."—*Ladies' Home Journal.*

"Don't yez know yit how t' drive a nail widout mashin' yer t'umb?" gleefully inquired the hod carrier of the injured carpenter.

"No," retorted the carpenter hotly, "an' neither do you."

"Shure Oi do," returned the hod carrier. "Hould th' hammer wid both hands."—*Ladies' Home Journal.*

The centenarian was being eagerly interviewed by reporters and was asked to what he attributed his long life and good health.

"Wall," the old man replied slowly, "I'm not in any position to say right now. You see, I've been bargaining with two or three of them patent medicine concerns for a couple of weeks, but I ain't quite decided yet."—*Argonaut.*

THE NAME

Packard

conveys a definite measure of

Quality

in a motor car

THIS is no chance condition. It has been planned from the first, and striven for. It is the foundation of Packard supremacy. Packard standards of material, manufacture and design are permanently authoritative, and have become a basis for judging motor car values. It is only natural that the most significant contribution to current motor car progress — the Packard "Twin-Six" — should have been produced by a company whose immense resources and facilities are focused in a steady effort toward improvement.

ASK THE MAN WHO OWNS ONE

Since the announcement of the PACKARD TWIN-SIX there has been a tremendous advance in the cost of most of our raw materials, especially leather, aluminum, high grades of steel, etc. We cannot continue present prices except at a loss.

It is, of course, out of the question to compromise Packard quality — which has been maintained steadfastly for sixteen years. Consequently we have adopted the only alternative and advanced the prices by the amount of the increase in the cost of material.

These new prices for Packard Twin-Six cars cannot and will not be reduced during the current season. They are as follows:

The 1-35 — *Wheelbase 135 inches. Thirteen styles of open and enclosed bodies. Price, with any open body, f. o. b. Detroit,* - - - - - - $5,150

The 1-25 — *Wheelbase 125 inches. Nine styles of open and enclosed bodies. Price, with any open body, f. o. b. Detroit,* - - - - - - $2,750

VOLUME 84 OCTOBER 18, 1915 NUMBER 3429

THE GREATEST OF RELIGIOUS MASSACRES

THE most extensive, the most atrocious of religious massacres which the world has seen for centuries is now being perpetrated in Turkey. It had seemed that the measure of her iniquity was full. Almost before she had had time to get over the first intoxication of her revolution which promised liberty, equality and fraternity to Moslem, Christian and Jew alike, the massacres of Adana and the vicinity occurred. But now the fury of slaughter has spread from the Mediterranean to the Caucasus. This is no frenzied dream, but the authenticated fact. We have it from many sources which must be credited. Our mission boards are receiving the story. Very slow were they to publish the facts, for missionaries must not be involved in political affairs, and massacre is political. Our old friend, Ambassador Bryce, confirms the unmentionable details and calls on America to do anything she can to save those who remain. This is no local affair; it is so general that it is intended, planned and ordered, thru the opportunity of war, to exterminate the Christians, Greek and Armenian, Protestant and Catholic. The tale comes from Marash and Ruitab on the west, from Trebizond on the north, from Bitlis and Van on the east, of men slaughtered by the tens of thousands, of women and girls buried in Moslem harems to bear future soldiers for the Turkish Government and the Moslem faith. Others are driven in herds from their homes, families separated, to go they know not where and to perish by hunger on the road—first deprived of property and then of life. No massacre of modern times compares with this.

What can we of the United States who have given so much money and so many devoted lives for the regeneration of Turkey do in this fearful emergency? Indeed, what! Turkey is in the throes of the great world-war. We cannot reach Turkey with army or navy. Mightier armies than ours are now attacking and defending her. Indeed, Turkey is not her own. The munitions defending Constantinople come from Germany. The Turkish army is led by German officers. Germany's will rules at the Porte. Are we then to say that Germany is responsible for these massacres? Surely, surely, not directly. She could not have desired them. But she has been busy in the war, and it has not occurred to the War Office to forbid or prevent them. The Armenians do not love Turkey, doubtless they would help the Allies if they could. Many thousands have fled and are fleeing over the line to meet the Russian army in the Caucasus. The Armenians hate the Turks, and no wonder, and the Turks are taking the opportunity to give the old alternative of death or the Koran. But the one and only power that can stop these massacres is Germany. We are powerless, the allied nations are powerless, the neutral states are all powerless. Only Germany can do it.

We appeal to Christian Germany to forbid Turkey utterly to exterminate Christianity in her empire. We call upon every organ of public opinion in this country to join in this appeal. The public conscience of the world may not be listened to in Constantinople, but it must be heard at Berlin.

But the doom of Turkey must be near at hand. The world has endured the intolerable Turk to the end. Her crime cries to Heaven for punishment. Avenge, O Lord, thy slaughtered saints!

FROM HAMBURG TO BAGDAD

ANOTHER invasion of Serbia has begun. For the third time in this war the Austrian armies are crossing the three moat rivers that protect the northern border of the peasant kingdom, the Danube, the Save and the Drina.

But this new campaign differs from the former attempts at conquest in that it has German coöperation and control. This not only increases its effectiveness, but gives it another aspect. For Germans and Austrians, for all their alliance, look at the world thru different eyes. The Austrians called their invasion of August, 1914, a *Strafexpedition*, a mere punitive campaign to avenge the murder of their Archduke. But the cold commercial eyes of the Germans see in the present movement the completion of one of their fondest dreams of railroad extension. The conquest of Serbia means to them the filling in of a missing link in the system of German railroads which shall eventually connect the North Sea with the Persian Gulf, Hamburg with Bagdad.

When the Germans captured the capital of Poland did they celebrate the victory with a triumphal procession thru the streets of Warsaw and a coronation in the cathedral? No, they proclaimed their achievement in a simpler and, to American taste, more impressive style, by putting up on the station bulletin board in far-away France a notice to the effect that "Beginning today express trains on the German state railroads will be thru from Lille to Warsaw."

So now the German papers are not talking about the prospective punishment of naughty little Serbia, but are congratulating themselves on the probable completion

of the Hamburg-Bagdad Railroad. The *Hamburger Fremdenblatt* says:

When the road to Constantinople has been won, connection will have been established between us and our allies on the Bosporus. A single line of rails will stretch from Hamburg to Bagdad, and the road will be free for the passage of German products to Turkey and of Turkish products to Germany. Then an united commercial sphere will stretch from the North Sea to the Persian Gulf, and as far as the frontiers of India, and the rich products of the soil of Asia Minor—especially corn and cotton—can find their way to the Central Powers without England's fleet being able to prevent it. This, however, means the final collapse of the English scheme of shutting Germany and Austria-Hungary off from all the raw products of the world, and it means for us the possibility of continuing this war for an unlimited time without our having to impose upon ourselves the slightest restrictions.

But there is more than this. The possibility of the transit of the products of our highly developed war industry will enable Turkey in increased degree to strike a blow at the heart of English world supremacy—against Egypt. Thus it is in truth for the supremacy of Great Britain that the fight is being fought when shells fall upon Serbian regiments.

For this reason one can say that the world-war has entered today upon a decisive stage. Whether it will be its last stage will depend upon whether our enemies resolve to draw the inferences from the results of the coming time, and to acknowledge openly that the last possibility of victory for the Quadruple Entente disappears on the day upon which Germans and Turks join hands.

It is evident that England realizes the importance of the issue, for before the Teutonic forces had crost the three rivers to enter Serbia from the north, British and French troops were crossing Greece to enter Serbia from the south. No attention was paid to the protest of the Greek Government against the landing of Allied troops at Salonica, for the need was urgent and the eager soldier could not afford to wait upon the dilatory diplomatist. This is technically as much of a violation of The Hague rule protecting neutral states from invasion by belligerents as was the act of Germany in crossing Belgium to get to France. But in this case there will probably be no armed resistance, for both premier and people sympathize with the Allies. It was, besides, not so much the technical violation of international law which in the case of Belgium incensed the American people against Germany, but rather the ruthless and oppressive way in which the invasion of Belgium was carried out. Among a friendly and non-resistant population like the Greeks there will be no excuse for the atrocities which in Belgium aroused the horror and sympathy of the world.

We can now see why it is that Germany chooses to send her troops to the Balkans instead of employing them in the pursuit of the fleeing Russians or in the strengthening of her hard-prest lines in France. It is not so much Constantinople that she covets as the cotton and the grain that lie beyond in the sunny plains of Anatolia. When by the combination of Great Britain, France and Italy she found herself shut out from northern Africa, Germany turned her eyes toward Asia Minor and projected a railroad from the Bosporus to the head of the Persian Gulf. But here she was checkmated by the agreement of Russia and Great Britain to divide Persia between them. A few years ago the British flag was hoisted on what is nominally Turkish territory at the head of the Gulf and so the German railroad was deprived of its terminus and reason for existence. Now a British army is fighting its way up the Tigris from the Persian Gulf to Bagdad. The railroad which begins just across the Bosporus from Constantinople ends for the time in the Taurus mountains near Adana of evil memory. Only a strip thirty miles thru along the Danube divides the Teutonic Powers from friendly Bulgaria and allied Turkey. Against this, the sole barrier between them and Constantinople, they have now struck.

THE PRESIDENT'S WEEK

LAST week President Wilson won the submarine controversy with Germany—the greatest international issue confronting the United States.

Last week President Wilson prepared a rational program for national defense—the greatest national issue confronting the United States.

Last week President Wilson came out for woman suffrage—the greatest state issue confronting the United States.

Last week Woodrow Wilson won a charming bride—the happiest event in the universe for him.

REGRETS FOR THE "ARABIC"

THE note which the German Ambassador, Count von Bernstorff, delivered to Secretary of State Lansing on October 5 probably puts an end to the controversy in regard to the sinking of liners by submarines. This is the text:

The order issued by His Majesty the Emperor to the commanders of the German submarines of which I notified you on a previous occasion has been made so stringent that the recurrence of incidents similar to the "Arabic" case is considered out of the question.

According to the report of Commander Schneider of the submarine which sank the "Arabic" and his affidavit, as well as those of his men, Commander Schneider was convinced that the "Arabic" intended to ram the submarine.

On the other hand the Imperial Government does not doubt the good faith of the affidavit of the British officers of the "Arabic," according to which the "Arabic" did not intend to ram the submarine. The attack of the submarine was undertaken against the instructions issued to the commander. The Imperial Government regrets and disavows this act, and has notified Commander Schneider accordingly.

Under these circumstances my Government is prepared to pay an indemnity for American lives which, to its deep regret, have been lost on the "Arabic." I am authorized to negotiate with you about the amount of this indemnity.

J. VON BERNSTORFF.

From this wording it will be seen that the German Government has changed both its policy and temper. The plea put forward by Commander Schneider in defense of his attack upon the "Arabic" was, it must be said, neither credible nor creditable, but the frank and unhesitating acceptance of the British version marks a pleasant change from the tone of the former German notes. There still remains unsettled the more serious case of the "Lusitania" and this cannot be explained away or disavowed since it was acknowledged and defended by the Germans, but doubtless they are now disposed to make such reparation as is possible, and seeing the odium which it has brought upon the German name, they must by this time be able to express sincere regret that they ever sank the ship.

The important thing is that Germany has been brought to concede practically all the points for which our Government has contended. She has pledged herself not to attack unresisting liners without warning and without providing for the safety of those on board. She has acknowledged the right of American vessels to pass

thru the war zone unmolested. She has recognized her liability for the loss of American lives and property even upon enemy vessels if these behave as noncombatants. She has agreed to indemnify for American vessels sunk while carrying conditional contraband to her enemies.

If Germany lives up to these agreements in the future there will be little occasion for protest on the ground of international law, and if Great Britain can be brought to abandon her illegal interference with neutral commerce, the United States will have deserved the gratitude of the world. Holland, Denmark, Norway, Sweden, all the neutral maritime nations are now rejoicing over the success of our efforts and the day will come when both Germany and Great Britain will thank us for having maintained in these trying times the principle of the freedom of the seas on which their commerce must depend. The British, of course, are inclined to ascribe Germany's change of policy to the destruction of her submarine fleet, over fifty of which they claim to have sunk or captured. But even the London *Standard* acknowledges that: "Superficially it might seem to constitute a considerable triumph for the slow but very pertinacious diplomacy of Dr. Wilson." But in our opinion "the slow but very pertinacious diplomacy" of the President has achieved a very real and lasting success and we congratulate him and the country upon the happy outcome of the difficult and dangerous endeavor.

CAN CARRANZA MAKE GOOD?

NOT long ago, when Villa held the capital of Mexico and was apparently soon to exercize a controlling influence thruout the country, there would have been no warrant for the recognition of what Carranza calls his Government by the seven nations that granted him recognition last week. But Villa has lost nearly all the power he then had, and Carranza has been steadily gaining. Recognition may increase his force as a leader by drawing to him many who are now in opposition. Unfortunately, Villa will continue to fight, and he may control the northwestern states. And in the south Zapata, an incurable bandit, cannot be conciliated. It remains to be seen whether Carranza can keep his promises, restore order, protect foreigners, and cause a general election to be held. He and those who speak for him may have overestimated his ability and the strength of the movement associated with his name.

SHOULDER ARMS!

HENRY A. WISE WOOD is alarmed. As President of the American Society of Aeronautical Engineers he attended the other day one of the "war luncheons" being held every week at the Technology Club of this city, and there made a few remarks. According to the papers Mr. Wood is said to have said:

> Records in Washington show that a certain European nation could land in the United States within forty-eight days 750,000 men, with 250,000 horses and munitions sufficient for a three months' campaign, with half the transports available before the present war. . . . Furthermore similar records show that a nation on the Pacific could land 350,000 troops on the Pacific Coast within sixty-one days with half its transports.

Tho it may show a culpable disregard for our national safety, we must defer for the present consideration of the "certain European nation." Whichever it may be, it has sufficient troubles of its own at this moment and we can assume it will not attack us during the next few weeks, certainly not before Congress meets and increases taxes three or four fold so as to release our "criminal unpreparedness."

But how about that "nation on the Pacific"? Can it possibly be Japan? If so, we should worry.

Just think how easy it would be for the little yellow men to seize the Pacific Coast, proceed up over the mountain passes of the Sierras and Rockies and thence overrun the corn belt of the Middle West. Indeed, once in the Mississippi Valley there would be no stopping them until the pie belt of New England and the fried chicken belt of "our beloved Southland" were completely occupied.

In the first place the astute Japanese statesmen, having reversed their historic policy of maintaining friendly relations with the United States, would have to consider how 60,000,000 people could invade territory occupied by 100,000,000 people, 5000 miles away. Having resolved that this was easy enough, they would then proceed to mobilize their present army of 250,000 and increase it sufficiently so that 350,000 troops could be spared to cross the seas. Of course they would have to increase the army much more than 350,000 in order to have at home enough to protect the Empire in case the United States sailed around the back way and attacked them in the rear.

But before the Japanese armada could attack America, the United States Navy would have to be sunk, for as Napoleon proved long ago, no overseas invasion can take place as long as the enemies' fleet is afloat. But as no fleet can operate 4000 miles from its base at more than fifty per cent of its strength, if Admiral Vreeland of our navy is to be believed, Japan, whose navy is now much inferior to ours, could hardly concentrate a fleet a third the strength of the American on the Pacific Coast.

But we know the Japanese are wonderful fighters, so we will assume that they have sunk our entire fleet. Then all they would have to do would be to clear the seas of our submarines and mines. The fact that England, with the greatest navy in the world, has not yet dared attempt to land an expedition on the German or Belgian coast, or Germany upon the English coast, is no proof that the abler yellow-skinned men would not succeed.

It will now be perfectly safe for the armada to set sail and be at our shores in the sixty-one days specified. The fact that some of these days have been consumed in waiting for the American fleet to be destroyed need give no concern. We know there are some four fast liners that go from Yokohama to San Francisco in three weeks. No doubt the 1000 slower, smaller transports that would be needed could be readily put in commission and convoyed over without mishap within the "sixty-one days." All the armada would then have to do would be to disembark its troops, demolish the fortified coast defenses and take the several lines of trenches that had been thrown up from Lower California to Puget Sound.

We all know how easily the coast defenses can be taken—at the Dardanelles, for instance—and how easily trenches have been captured in the present war, as the men on the firing lines universally attest. No doubt the Japanese would seize our entrenchments with but few

casualties. And to make certainty doubly certain, they would unquestionably bring with them sufficient 42 centimeter guns and ammunition, so that they would not be caught napping as the Russians have been. Despite the poverty of Japan and the enormous taxes owing to the Russo-Japanese War, she would find no difficulty in sending over enough ammunition so as to use up a million dollars' worth a day, as is frequently done before a charge by the Germans.

Having, then, with their considerably smaller navy, sunk our fleet, eluded our submarines and mines, and with their army taken our trenches and driven our reglar army and militia back over the Rockies, the Japanese would not find it very difficult to dispose of our "contemptible little army" of 1,000,000 volunteers, that would have been drilling night and day in the meantime.

And thus, in the shake of a lamb's tail, the subjugation of the United States would be complete. Mr. Henry A. Wise Wood deserves the thanks of the republic for his warning. To arms, Americans, to arms!

THE PUBLIC DEFENDER

WHY should there be a public defender?

Because the state, having committed itself to the principle that it should secure to the man accused of a criminal charge the benefit of legal advice, should see the thing thru.

The present system does not guarantee a prisoner the benefit of legal service to any adequate degree. The court appoints counsel for an indigent defendant, but the lawyer who is arbitrarily assigned to the defense is generally paid nothing and given no allowance for such legitimate expenses as the preparation of evidence and searching for witnesses. He may or may not be competent.

Without impugning the public spirit of the lawyers so appointed it is clear enough that the defendant thus equipped is by no means on an equal footing in court—tho the law assumes him innocent until his guilt is proved—with the salaried prosecutor who has the prestige and purse of the state behind him.

The state has therefore only technically fulfilled its acknowledged obligation to the defendant. In appointing a public defender whose salary and expenses are paid by the people the state is not so much adopting a new principle as making an old one effective. If the community should provide for the poor man's defense to the extent of compelling a lawyer selected at random to donate his services, much more should it provide really effective legal advice. That is what the public defender does, as the article on another page indicates, and this fact is sufficient reason for his existence.

A WALL STREET CRAZE

THERE is no reason at present for expecting that the Wall Street excitement will greatly affect the general business situation for good or for ill. A small group of speculators in the stocks of concerns making munitions of war have been as crazy as madhouse maniacs, and their depression of spirits will be as deep as their expectations of wealth were exalted. Their activity has been a phenomenon of gambling, pure and simple. They have made the Street a Monte Carlo, for the time being.

The stocks of sound railroad and industrial properties have not been much affected by the margin traders. Still less have ordinary commercial operations been disturbed. We have had a second year of record-breaking crops. The obvious and unquestioned prosperity of the farmers will make a steady and increasing demand for the normal variety of miscellaneous goods, and will give plenty of business to the transportation companies. In saying this we by no means forget that sooner or later a world-wide industrial depression must come, as economic enterprise begins to feel the effect of the appalling destruction of capital by the war. But that can be anticipated by prudent men, and if banking operations, especially in their relation to practical currency problems, are handled with good judgment, there should be for a long time to come no such thing as an unusually acute crisis or a "crash."

Out of the recent madness a few individuals will emerge with fortunes suddenly acquired, which they will have been lucky enough to carry away with them, and perhaps will be lucky enough to keep. They will become a new increment to the "new rich" class, which has no habit of tradition or responsibility, of *savoir faire*, of social usefulness. It is not a class to be admired, and too often it conducts itself as a class not worthy of respect. Its dominant idea is to get something for nothing, and it adds nothing to the strength of the nation in a business way or morally.

It ought not to be overlooked that the substantial business men of Wall Street have effectively done their part toward preventing a widespread mischief in this turmoil. Notwithstanding the general soundness of business conditions, good stocks might have been seriously impaired had the strong men on the Exchange and in the banking houses been carried away by the speculative excitement. On the whole, they have shown foresight and conservatism. Their policy has been bulwarked, too, by the new legislation governing our banking operations and the currency. As time goes on, people will discover how enormously important this reform has been and is. It ought to be possible to say that never again can quite the same conditions recur that were witnessed in 1873 and in 1903. Whether this shall be so or not, the chances that legitimate business from this time on will be less and less involved in these mad outbreaks of the gambling spirit, are distinctly better than they ever before have been in our financial history.

THE WISE COURSE

THE Panama Canal is to remain closed until all danger of slides in the Gaillard Cut is past. Governor Goethals is back in command and will see to it that the big ditch can play no more tricks after he has completed the work this time. The engineers are to blast away the tops of hills in order to bring all loose dirt into the channel and thus permanently remove the source of the slides. For Governor Goethals believes first of all in thoroness. His determination to see the thing thru is indomitable and his insistence on "nothing but the best" in his results is reassuring. "I purpose to fight it out on this line if it takes all summer" is in effect his slogan. Good luck to Governor Goethals. We need more public officials in the United States with the same sense of superficiality.

THE STORY OF THE WEEK

THE GREAT WAR

October 4—Germans regain Hohenzollern Redoubt, near Lens. French aviators bombard Luxemburg.

October 5—Bulgaria breaks with the Allies. British and French troops land at Salonica.

October 6—French take Tahure Butte, Champagne. Germany disavows sinking of "Arabic" and offers indemnity.

October 7—Zaimis replaces Venizelos as Greek Premier. Bulgarian port of Varna reported bombarded by Russian cruisers.

October 8—Austro-Germans cross Danube and Save into Serbia. Hindenburg besieges Dvinsk.

October 9—Austro-Germans capture Belgrade. Fierce but ineffectual German attacks on British at Loos and French at Tahure.

October 10—Germans gain in Pripet region, Volynia. Serbs hold Drina River against invaders.

The Fall of Venizelos The Allies had assumed that the mobilization of the Greek armies meant that Greece was to come to the aid of Serbia in resisting the Teutonic invasion and that the Allied forces landing at Salonica would be welcomed. This was the natural inference from the fact that Venizelos, who favored coöperation with the Allies, had again become Premier and that the King had consented to the mobilization. But it appears that the agreement between the King and the Premier extended no farther than the desirability of mobilizing; they differed as to what should be done with the troops after mobilization. The Premier insisted that the honor of Greece depended upon her fulfilling her treaty obligations to aid Serbia whenever the latter was attacked. The King replied that Serbia had refused to help Greece in May, 1914, when she was in danger of a war with Turkey. The King also said that the time to aid Serbia, if ever, was at the beginning of the war when Bulgaria was neutral, Rumania was disposed to coöperate and the Austrian forces did not exceed 150,000. Now, argued the King, it would be fatal for Greece to intervene when 500,000 Austro-Germans and 300,000 Bulgarians menace Serbia and the defeat of the Russians has made Rumania helpless.

On account of this disagreement with the King, Premier Venizelos resigned on October 5 and a coalition cabinet has been formed under Alexander Zaimis, governor of the Greek National Bank. He has been Premier twice before. It is understood that Venizelos who, altho out of favor with the King, still commands a parliamentary majority, will not oppose the new Premier.

The Landing at Salonica The French and British troops when they arrived at Salonica were disappointed not to be greeted as Allies but instead to be met with a formal protest against their landing as a violation of neutral territory. The French Minister at Athens on October 2 sent the following notification to the Greek Government:

> By order of my Government I have the honor to announce to your Excellency the arrival at Salonica of the first detachment of French troops, and to declare at the same time that France and England, allied to Serbia, send their troops to help the latter, as well as to maintain their communications with her, and that the two powers count upon Greece, who already has given them so many proofs of friendship, not to oppose measures taken in the interests of Serbia, of whom she also is the ally.

To this Premier Venizelos replied:

> In answer to your letter I have the honor to declare to your Excellency that, being neutral in the European war, the royal Government could not possibly authorize the proceeding in question, for it constitutes a breach of Greece's neutrality, the more manifest since it comes from two great belligerent powers. It is, therefore, the duty of the royal Government to protest against the passage of foreign troops across Greek territory. The circumstance that these troops are destined solely to aid Serbia, Greece's ally, in no way modifies the legal position of the King's Government; for, even from a Balkan point of view, Greece's neutrality could not be affected before an actual *casus fœderis* was committed, by the danger now threatening Serbia which caused the departure of international troops to her help.

The Greek Chamber of Deputies approved of this protest by a vote of 151 to 10 and at the same time supported the declaration of Premier Venizelos that Greece was bound by treaty and vital interests to go to the aid of Serbia. Germany and Bulgaria have notified Greece that they expect her to back up her protest by resisting the invasion of Greek territory by the Allied troops.

But the Greeks made no attempt to prevent the French and British troops from disembarking when they arrived in the harbor of Salonica at 8 o'clock on the morning of the 5th. The troops were conveyed on great transatlantic vessels followed by smaller transports carrying munitions and supplies and escorted by warships and destroyers. When the first detachment reached the quay they were welcomed by a message from the French Minister at Athens. Then they marched thru the streets to the sound of drums and trumpets to their encampment on the ground assigned to Serbian commerce. The 7.5 centimeter guns and their ammunition wagons followed quickly. The Greek gendarmes maintained order and the Greek officers and soldiers mingled on friendly terms with the French, British and Serbs.

The railroad leading from Salonica

THE BATTLEFIELD OF ARMAGEDDON

According to German papers the decisive conflict of the Great War is to be fought out on Serbian soil. Here the forces of the Allied and of the Teutonic powers are about to meet in a battle that will at least determine the fate of Constantinople, if not the war. German, Austrian and Hungarian armies have crossed the Danube, Save and Drina rivers on the north of Serbia. French and British troops are crossing Greece to enter Serbia from the south in spite of the protest of the Greek Government against this violation of neutral territory. The Bulgarian army has been mobilized and massed upon the Serbian and Greek frontiers. Seven nationalities will meet in the valley of the Vardar and of the Morava in the endeavor to secure the railroad line which runs from Belgrade to Salonica. German officers are engaged in fortifying the Bulgarian port of Dedeagatch. Russians cruisers are said to have bombarded the Bulgarian port of Varna. These operations are indicated on the above map by arrow points

into Serbia, which was owned by a German company, was taken over by the Greek Government and by this route the Allied troops were sent north into the interior as rapidly as possible. When they reached Serbia they were received with acclamations by the people who came to the stations offering fruit and flowers.

The Invasion of Serbia

Field Marshal Mackensen, withdrawn from Russia and placed in command of a new army group of some 400,000 Austro-Hungarians and Germans, opened the campaign by a bombardment of the Serbian fortifications on the banks of the three rivers which form the northern boundary of Serbia. Attacks were made at so many points simultaneously that the Serbians did not know where the enemy intended to cross, and the French aviators, who had come to their aid, were of little service in scouting, for the Austro-German aeroplanes and aircraft guns kept them off. Large quantities of pontoons and other material had been collected and as soon as the Serbian defense was sufficiently enfeebled bridges were thrown across the rivers in many places. The army of General von Gallwitz crost the Danube east of Semendria in four places. This will enable him to reach the junction of the Belgrade branch about ten miles south, and brings him within about forty miles of the Bulgarian frontier.

On the night of the 8th General von Koevess effected a crossing of the Save River southwest of Belgrade and the next morning was in possession of the city. The Austrians stormed the citadel in the northern part of the town and the German troops captured the Royal Palace and the southern part.

This is quicker work than formerly. The Austrians who began the attack upon Belgrade the first of August, 1914, did not take the city until the first of December and then were able to hold it only twelve days. But of course there was no expectation that Belgrade, demolished by repeated bombardments, would long hold out. The real stand will be made as before further in the interior, where eight lines of defense have been prepared under French engineers and furnished with French artillery. The Serbian army now numbers 250,000 to 350,000 men and is said to have been brought to a higher state of efficiency than ever before during its nine months of recuperation. Arms and ammunition have been brought in freely during the past year by way of Salonica, altho that involved a technical violation of the neutrality of Greece. Now French and British troops are being landed in Salonica at the rate of 14,000 a day and sent across to Serbia as rapidly as possible because the Bulgars are likely to cut the railroad at any time. They are rumored to have already done so.

We learn from German sources that the plan now being carried out for an invasion of Serbia by an Austro-German force from the north with the coöperation of the Bulgars from the eastern side was intended to be carried out early last spring but was postponed till fall for two reasons. One was that Italy came into the war and Austrian troops had to be sent to the frontier to meet the new foe. But now Italy is considered negligible. The Italians are reported to have given up all hope of getting Triest this year and the Austrian troops have been withdrawn from the Isonzo River to the Danube. The other was the outbreak of typhus in Serbia. This is said to have carried off 140,000 of the population, for eighty per cent of the cases were fatal. The Germans were unwilling to expose their soldiers to the contagion, so they postponed the invasion. But the army of American doctors and nurses who worked there during the summer have stamped out typhus and put Serbia in better sanitary condition than it ever has been, so the Germans now think it safe to enter.

WHERE THE ALLIES VIOLATED GREEK NEUTRALITY

The port of Salonica, the most important city acquired by Greece in the Balkan Wars, is the biblical Thessalonica and is the southern gateway to the Balkans. The railroad running from Salonica north thru Uskup and Nish to Belgrade will be the objective of both invaders and defenders of Serbia, and strategy and convenience led the Allies to land their expeditionary force here

Bulgaria Breaks with the Allies

The Russian ultimatum, demanding that Bulgaria dismiss the German officers from her army and protesting against the acceptance of German loans, was supported by the British and French representatives at Sofia. On October 5 at 2:40 p. m. the Bulgarian reply was delivered. Its independent tone was manifest from its language for it was written in Bulgarian instead of French as is customary in diplomatic intercourse, or Russian, which has hitherto been the language of communication between Bulgaria and Russia. The Bulgarian Government curtly declined to dismiss the "non-existent German officers" and asserted its right to employ whom it pleased and borrow where it liked. The representatives of the Allies promptly withdrew from Sofia.

It is said that General Liman von Sanders, the German officer who organized the Turkish army, has charge of the Bulgarian, and that he has with him 3000 German and Austrian officers and engineers. The mobilization expenses are supposed to be paid by Germany and it is said that $[illegible]

will be provided for the families of Bulgarian reservists called to the colors.

The Bulgarian Government has issued a manifesto to the people explaining its reasons for favoring the side of the Central Powers. It states that Bulgaria has waited until it became evident which side was going to win in the war and has improved the time in bringing the army up to a pitch of preparedness never before reached.

Bulgaria must fight at the victors' side. The Germans and Austro Hungarians are victorious on all fronts. Russia soon will have collapsed entirely. Then will come the turn of France, Italy and Serbia. Bulgaria would commit suicide if she did not fight on the side of the Central Powers, which offer the only possibility of realizing her desire for union of all Bulgarian peoples.

The Allies, according to this document, offered nothing adequate for Bulgaria's neutrality, but asked her to take Constantinople and hand it over to Russia, receiving then as a reward the territory up to the Ænos-Midia line on the east and on the west part of the Macedonian territory held by Serbia, and this only on condition that Serbia got sufficient compensation out of Austria. On the other hand the Teutonic Powers offered for Bulgarian neutrality the whole of Macedonia and the Turkish territory along the route to Dedeagatch, just occupied.

The manifesto explains that Bulgaria's commercial interests are inseparably bound up with Germany, Austria and Turkey and that Bulgaria's sympathies ought also to incline that way since Russia is fighting for Constantinople, Great Britain to destroy German competition, France to get Alsace and Lorraine and the other Allies to rob foreign countries, while the Central Powers are fighting to defend their property and to assure peaceful progress.

The manifesto includes this denunciation of Serbia:

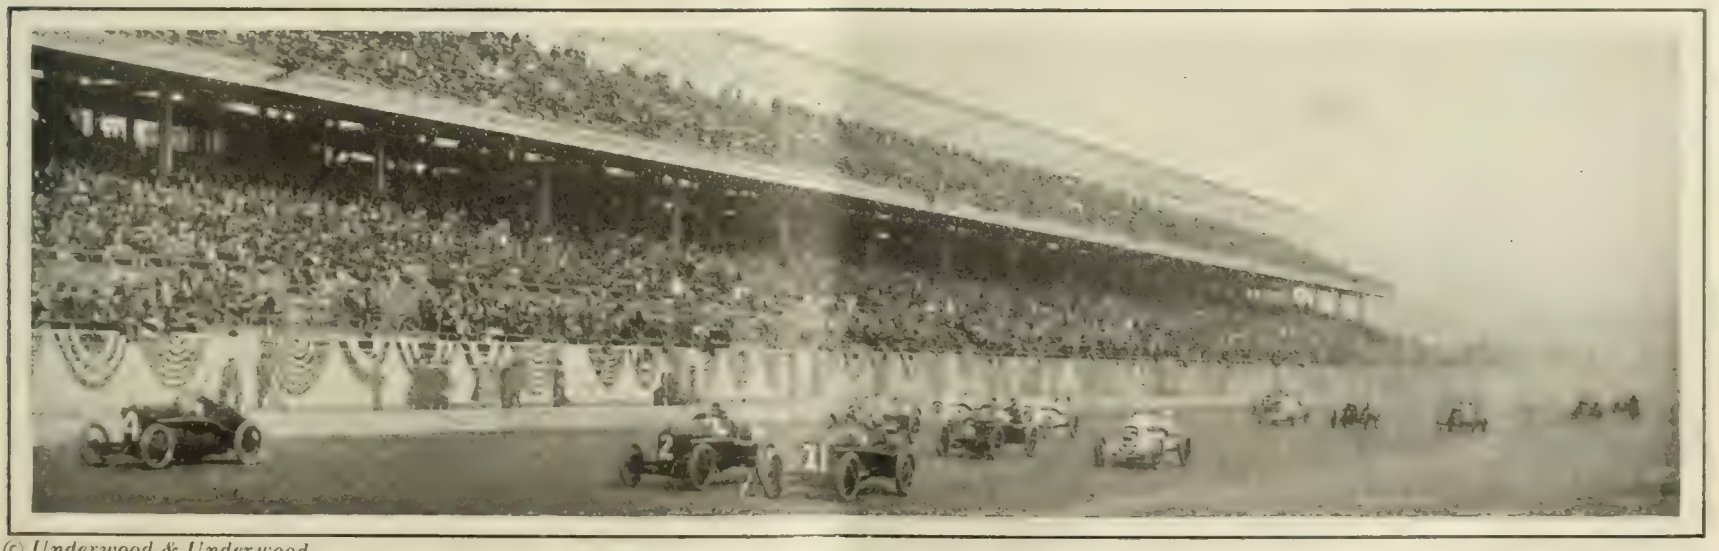
Serbia, the worst enemy of Bulgaria, has oppresst the purely Bulgarian population of Macedonia in the most barbarous manner, the male population being compelled to die for Serbia's cause, the women being outraged and the rivers running red with blood.

The Bulgarian Government declares that it cannot trust the Allied Powers. One of them, Italy, treacherously broke a treaty of thirty-three years. But Bulgaria can have confidence in Germany, who has always fulfilled her treaty obligations and is now fighting the whole world to carry out her pledge to Austria.

The Drive at Dvinsk

The chief center of activity in Russia is near the northern end of the line where Field Marshal von Hindenburg is energetically pushing the attack on Dvinsk. This is not easily gained, for it is a fortified city and situated in the crook of the Dvinsk River. The Germans are within ten miles of it on the west and south, but are separated from it by the river and the marshy land lying on that side of it. Here the Russians have the same advantage as Hindenburg had when he overwhelmed the Russian army in the Mazurian swamps a year ago. The Russians know the ground thoroly and the famous Cossack cavalry and the patient Russian infantry can be used successfully in this roadless region, where the Germans, dependent for their effectiveness upon their artillery and commissariat, are comparatively helpless. The German cavalry which a few weeks ago performed surprizing feats in the way of raiding distant railroads, is now, according to the Russian report, inactive thru exhaustion. In the region east of Vilna, and in the south about Tarnopol the Germans are barely standing their ground. South of the Pripet they have made decided gains.

General Mackensen, who led the southern army in its triumphal march thru Galicia and into the heart of Poland, has been withdrawn to manage the Serbian campaign and doubtless many of his troops have gone with him. But before the Germans relinquish their invasion of Russia because of the need of troops elsewhere and the approach of winter, they are determined to capture Dvinsk, which bars the road to Petrograd and protects the port of Riga. A field railroad twenty miles long has been constructed on the highway approaching Dvinsk from the south and up this their great siege guns are being transported. Across the river from Dvinsk the country looks like a vast open air machine shop, and here and there can be seen big cranes erected for the purpose of lifting the cannon off the trucks and mounting them upon their concrete foundations. The work of constructing railroads and emplacements goes on day and night and an endless procession of motor cars are bringing up the shells to be used in bombarding the city.



The Taking of Tahure

The western front, which was the scene of unprecedented activity the week before, has been comparatively quiescent since. Except for a slight loss in the British lines and a slight advance in the French there has been no change of position. To break thru modern entrenchments as the Allies did required a long period of preparation, and it cannot be expected that they will be able to repeat the feat immediately. This inactivity is, however, regarded by the German papers as a proof that the Allies have "shot their bolt" and will not be able to accomplish anything more before winter.

The gain of the French in the Champagne, tho inconsiderable in extent, is more important than it appears, for it includes part of the second German line and brings them within two miles of the railroad which they are trying to cut. The position captured is the Butte of Tahure, which rises above the surrounding hills. The French also took the little village of Tahure, which lies at its base and had been converted into fortifications. The nearby complex of trenches known as the Trapezium was also captured. The French artillery had been so successful in shelling the communications leading to the German front that the soldiers taken at Tahure had been without food for two days and were entirely out of ammunition.

On the Artois side near Lens the Germans have subjected the newly acquired positions of the Allies to heavy bombardments followed by repeated assaults. These, however, have all been repulsed except on the British left north of Loos, where the fortification named by the Germans the Hohenzollern Redoubt has been gained by them.

The German General Staff estimates the losses of the French in the recent offensive at 130,000 and those of the British at 60,000. According to the

MASKED MUSIC

In the Argonne poison gas has been extensively used by the Germans, and the French military bands keep themselves constantly protected, even at rehearsal

German account the Allies made their gains largely thru the use of bombs filled with poisonous gases.

The Grand Duchy of Luxemburg has sent a protest to the Allied Powers against their recent air raid against that city. As an unfortified city in a neutral land they regard the bombardment as a violation of the rules of civilized warfare. The French claim that their aviators dropped the bombs on the station, bridge and military buildings. The Luxemburgers state that the most densely populated part of the city was shelled and a workman and a shop girl wounded. The death of civilians from French bombs is also reported from Laon and Vouziers, which are French towns within the German lines. The French dirigible "Alsace" was brought down by the Germans and the crew captured.

Panama Canal Closed The slides in the Gold Hill section of the Gaillard Cut which closed the Panama Canal nearly a month ago have been followed by others, and now there are more than 1,000,000 cubic yards of soil and rock which must be removed before ships can pass. The Canal has been closed by official order until November 1, and General Goethals thinks that it cannot be opened until some weeks after that date. His resignation, submitted in August, to take effect on November 1, has been withdrawn, and he has taken charge of the work that must be done. Under his direction, the tops of the hills near the slides are to be blasted away. Thus he intends to prevent such slides in the future. Reports from the Isthmus say he has determined to make a permanent channel if the necessary work consumes a year.

Several of the ships tied up on the Atlantic side were carrying ammunition for Russia, with cars and rails for the Trans-Siberian Railroad. The equipment ordered in this country (40,000 cars are included) is sorely needed for this road, whose condition is such that there is a great accumulation of munitions and other war supplies at Vladivostock. Several of the ships have started to go around Cape Horn.

Plans for the Navy The new Naval Advisory Board, which is to be known hereafter as the Naval Consulting Board, and which is to assist the Navy Department in developing inventions and projects for defense, was organized last week, when Thomas A. Edison was elected chairman. The two vice-chairmen are Peter Cooper Hewitt, of New York, and William L. Saunders, of New Jersey.

A plan proposed by Mr. Edison, for the establishment of a great laboratory, to be used for experiments and research, was approved unanimously by the board. The cost of this laboratory, for grounds, buildings and equipment, would be $5,000,000, and the annual expenditure for operation would be from $2,500,000 to $3,000,000. The plan requires that the laboratory shall be located near a large city, and on tidewater, where the largest battleships can come to dock. It is to include pattern and machine shops, brass and steel foundries, a marine railway, chemical, physical and electrical laboratories, a motion picture department and other conveniences which might be needed for the testing and development of new inventions or projects. It is proposed that a naval officer of exceptional experience shall be in charge, and that there shall be staffs of chemists and physicists. There must be absolute secrecy, the approved plan says. The laboratory must be surrounded by a high fence, and protected by guards. Visitors are to be excluded. It is said that Secretary Daniels will ask Congress to appropriate the money required.

It is understood at Washington that the naval program to be laid before Congress will call for a considerable increase of expenditure for additions to the fleet. Some predict that the department will ask for four dreadnoughts, instead of the customary two, and a large number of submarines. A prominent feature in the list will be new battle cruisers. It is said that Congress will be asked to provide for the construction of such ships in accordance with designs that call for a speed of thirty-five knots an hour. These cruisers are to be more swift and powerful than any of their class now afloat. They will have eight-inch armor and carry fourteen inch guns. The fastest battle cruisers now in use have a speed of thirty knots. We have no ships of the kind.

Labor Controversies There are strikes in many places, but a large majority of them affect manufacturers who are working on war orders and are due to demands for an eight-hour day. This was sought by the employees of a machine company in Cleveland. The strike was of short duration, for the eight-hour day was granted, with an increase of wages. At the main plant of the General Electric Company, in Schenectady, New York, about 10,000 employees went out because they could not have an eight-hour day, and at the end of last week 13,000 were idle there. The company offered 9½ hours, with 5 per cent increase of pay, and nine hours a year hence, with a similar increase. The strikers also seek the "closed shop," and have attempted to draw into their movement the company's employees (nearly 50,000) in other plants. At the end of the week a conference between the union leaders and the company's officers began, with the State Board of Arbitration participating.

LADY ABERDEEN

In Arizona, at Clifton, there has been much disorder accompanying the strike of 8000 miners, which has closed three copper mines. The men demanded higher pay and recognition of their union. Several companies of militia are on guard. At Meriden, Connecticut, the 3000 employees of five silver factories are on strike because their demand for an eight-hour day and higher wages was rejected. The industrial coöperation plan proposed for the Colorado Fuel and Iron Company by John D. Rockefeller, Jr., who has been in the state for some time, has been approved by the company's employees, but is attacked by the officers of the national union, one of whom says it substitutes paternalism for democracy. The prosecution of about 1000 persons is required by 400 indictments due to the labor war in Colorado, and some have thought that the defendants should be set free. Governor Carlson has declined to interfere. John R. Lawson, a member of the national union's executive board, who was prosecuted for the murder of a deputy sheriff in the labor war, and sentenced to be imprisoned for life, has been released on $35,000 bail by the Colorado Supreme Court.

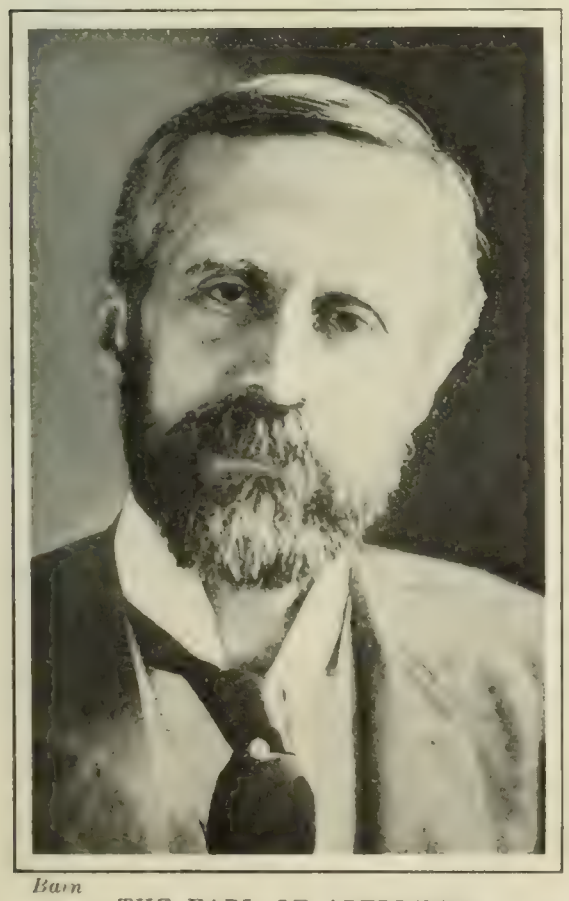
THE TRAPPINGS OF WAR

The hight of the grotesque seems to have been reached in this ape-like arrangement of aluminum gas-masks which some of the French are using



Recognition for Carranza

The conferring representatives of the governments of the United States, Argentina, Brazil, Chile, Bolivia, Uruguay and Guatemala, after hearing delegates sent by Carranza, Villa and other Mexican leaders, held a meeting on the 9th and decided by unanimous vote to recommend recognition of the Carranza faction as the *de facto* Government of Mexico. Secretary Lansing made the following formal announcement:

> The conferrees, after careful consideration of the facts, have found that the Carranza party is the only party possessing the essentials for recognition as the *de facto* Government of Mexico, and they have so reported to their respective governments.

Before reaching this decision the conferrees obtained from Carranza assurances that he would protect the lives and property of both foreigners and Mexicans; that persons connected with any religious organization would be permitted to return to Mexico and would not be molested "if they have not participated, and will not participate in politics"; that general amnesty will be granted, altho Villa, Huerta and other prominent opponents of Carranza may not be included; and that the *de facto* Government will restore order and provide for general elections. It will be seen that certain representatives of religious orders who have been driven from the country by persecution may not return in safety, because it is asserted that they were politically hostile to the Carranza movement. The subject of an embargo on the exportation of arms was not considered. An embargo would seriously affect Villa, who controls no seaport. Each of the seven nations will act separately and independently in granting recognition. The attitude of European nations is not known.

When the news was given to Villa he remarked that the war was just begun. He admitted that his strength and financial resources had been reduced, but declared that he would continue to fight. Recognition of Carranza, he asserted, would not bring peace, but would invite anarchy. Revolution would follow revolution. A dozen nations could not keep Carranza from failure. He was astonished, he added, because while he had promptly accepted President Wilson's invitation for a union of factions, Carranza had insolently rejected it, but was now rewarded. Villa recently proposed the retirement of both himself and Carranza, the establishment of a government in which each of the two factions should have help, and the selection of a neutral President by this combination. John R. Silliman, our Government's special agent with Carranza, came to Washington and urged recognition of the latter. Carranza, in a message to the conferrees, attacked George C. Carothers, another special agent, asserting that he had misled Villa by assuring him that he was preferred at Washington. It is said that bankers in this country will be asked to assist Carranza.

Bain

THE EARL OF ABERDEEN

The Lord Lieutenant of Ireland, with Lady Aberdeen, has just come to this country to accept an invitation to attend the Panama-Pacific Exposition

Events in Mexico

For some days past there has been but little fighting in Mexico, and quiet has been restored on the Texas border. Villa's men won a battle in Sonora, but Carranza's forces have continued their northward movement. Villa caused the destruction by dynamite of the residences of General Terrazas and Enrique Creel, his son-in-law, because of the escape of young Luis Terragas from the prison where he had been used for the collection of more than $500,000 for ransom. It became known that General Hernandez intended to turn against Villa, and therefore he was shot by his own soldiers.

In the south three of Zapata's generals, it is reported, accepted amnesty from Carranza and surrendered. Zapata's men wrecked a train on the road between the capital and Vera Cruz and killed fifty passengers. At the capital, Alberto Granados, Huerta's first Minister of the Interior, was tried for complicity in the murder of Madero, found guilty, and put to death. He declared that he resigned from Huerta's Cabinet to express his disapproval of the murder. At the request of our Government the Red Cross suspended work in the south and withdrew its agents, because it was asserted that Carranza could do all that was required. But the agents say their aid is still greatly needed. It is understood that Huerta will be held in custody until a new provisional Government has been established.

LONDON AS USUAL—AND YET—

BY HAROLD J. HOWLAND

When an invasion devastates a whole country its results must be at once apparent. But in London, far from the front, the war is causing changes fully as important, tho less obvious. After several weeks in London, where he has had many opportunities to study various phases of the English situation, Harold J. Howland, Associate Editor of The Independent, has put down his impressions of those changes. Mr. Howland has gone on to Paris, and his next article, "A Little Trip to the War," is on the way to us.—THE EDITOR.

WHEN the war began, the cry in England was "Business as usual." It was not long, it may well be believed, before the difficulties of such a program were discovered. But the visitor to London a year later is astonished to find how accurately a part of that phrase seems to describe the metropolis. It looks like London "as usual." And yet—

There are two places above all where one must look for the signs and effects of war—within what the French call "la zone des Armées," and in the hearts of the people. Now London is far from the scene of battle; not so far in miles perhaps, for scarcely a hundred and fifty separate London and Ypres, but immeasurably far in actuality, for the Channel and the British fleet lie between. And the Englishman does not wear his heart upon his sleeve. But even so the usualness of London takes the alien visitor—one soon gets used to being an "alien" and is only glad that the designation is not "alien enemy"—by surprize.

NEW SIGHTS IN THE OLD CROWDS

The streets have the familiar throngs. One still crosses them only at the price of eternal vigilance, for the charging phalanxes of towering motor busses and the darting swarms of taxis are all—or nearly all—there. The restaurants are well patronized; at the Savoy or the Piccadilly Grill or the Rendezvous in Soho or Simpson's it is not always easy to find a table at the popular hours. Even the theaters have comfortable audiences. Some are more numerous than others, but that is a condition not unknown in the piping times of peace, and a critical examination suggests that the quality of the play and the acting offers sufficient explanation. The old monuments still look down in grave imperturbability—the Abbey, the Tower, St. Paul's, the British Museum, the Temple, the building in Whitehall from which King Charles stepped debonair to a tragic end. To the casual eye it is the same old London.

The comparison with the last time I was here is even more exact. It was during the bitterly-fought election following the revolutionary act of the House of Lords in throwing out the Lloyd George budget, which sounded the first note of the Gilded Chamber's requiem. Then every hoarding was parti-colored with posters, so are they now. Then the Square beneath my window was filled daily with watching crowds; so is it now.

And yet—there are differences, not great, each by itself, but in sum significant. The streets are full, but there is a new note in the crowd. It is the note of khaki. Soldiers, soldiers, soldiers. On the streets, in the taxis, on the busses, in the restaurants, the music halls, the theaters. No matter where you go, you see hundreds of them in an hour, thousands of them in a day. This is but the fringe of an army, a fraction released for a moment on leave. What an army it must be! It is yet an unused army, by the look of it. Those fresh uniforms were never in the trenches. These are not the faces of veterans. K. of K. must have many an army corps still to launch, when the time and the men are ripe, against that grim line of trenches in Flanders and northern France. There must be still oceans of good British blood ready to be spilled under burning skies to open the Turkish door for the great ally in the East.

RECHRISTENING OLD LANDMARKS

The familiar landmarks are the same, but they, too, have a difference. The building before which King Charles died contains a fine museum of relics and instruments and war. But now as one studies the graphic plan of the Battle of Waterloo, one is elbowed by a field gun "taken from the Germans" a hundred years since British and Germans fought side by side in Flanders. One passes an accustomed arched gateway. But it's strange looking now, crowned by a wooden house fitted with great searchlights. The Tower stands stern as ever, a place of bloody memories. But there's another added just now. It was only yesterday, they say, a spy paid there the price of his treacherous patriotism. The Museum broods still on books and wisdom, old times and sages past. Not far away the other night dropt from the sky a deadly missile. It was only chance the Elgin marbles and the Rosetta stone did not go then to join the library of Louvain. By a broad boulevard a stone monument, merely picturesque till now, shows a slim gun fenced in by a wooden parapet and rakishly pointing athwart the sky.

The theaters go on as usual. Or not quite so. A last act, tragic in itself, when punctuated by the boom of bursting bombs and the sharp smack of shrapnel loaded shells, is quite unusual enough. It is no wonder the audience grows restive, some women whose nerves are not quite British enough take their escorts home, and the rest of us find ourselves listening with a divided mind. "The War in the Air" would make a fine subject for a play, but when it's acted not on the stage before us but outdoors above our heads, it's not the same thing at all.

THE NEW LONDON TWILIGHT

So there's life in London even at night, but when dusk falls it's a dusky city indeed. Half the street lights are out, the rest are hooded so that not a ray shines above the horizontal, the windows of hotels and houses are shrouded, the city moves in a lugubrious twilight. It is depressing at first, but the eye soon becomes wonted to it, the mind forgets that there ever was a Great White Way, and one goes on living almost as usual.

By day the hoardings, the shop windows, and every available vacant space are bright with attractive posters just as they were four years ago. But then they bore attacks by Englishmen upon Englishmen and exhortations to half the country to smite the other half hip and thigh. They sought to array class against class, to enlist the patriotic men of England under the opposing banners of political parties. Now they would enlist every true Englishman, class shoulder to shoulder with class, to fight an implacable fight against the common enemy. The unanimity of method then and now is interesting, the difference of time and purpose not uninstructive. The Englishmen, like the loving couple in the fable, may use flat-iron and chair-leg against each other at home as much as they like, but they have no intention of presenting a divided front to the intruder from without.

The crowds in the square. Like the posters, their purpose now, as then, is enlistment; but enlistment not against a partisan opponent, but against a national danger. The same

paign speakers are of various sorts—here a Canadian non-com. invalided back from the front and boasting already more than three thousand enlistments to the credit of his eloquence; there a major, equally *hors de combat* for the present, and not quite so much at ease with his audience; now the editor of a popular and rather sensational paper; then a young woman who escaped when the "Lusitania" sank but left her baby behind beneath the waves. They have varying success, but seldom does a meeting close without a few candidates for enlistment marched off to the medical officers for examination. K. of K.'s army is growing all the time, for these scenes are taking place all over the country, or at least the inevitable wastage is being continually made good. Three million men, they say, have already come forward, of their own free will and accord to fight the German menace.

WORK FOR EVERYBODY

So of the West End; what of the rest? In the East End, the home of the workers, the surprizing thing is not that there is so little change, but the direction in which the change has come. Materially speaking, times were never better. There is no unemployment, in this region where unemployment has been an almost chronic scourge. Every one has work except the incorrigible unemployables; and they have been reduced to their lowest terms. In a side street one passes a row of sad-looking detrimentals sitting listlessly along the curb. They are waiting with the hopeless patience of their kind for a night's free lodging. But eighteen months ago there would have been a hundred of them; today there is a bare dozen. Only the man who absolutely will not work is out of work now.

The women are working, too. Here is a biscuit factory. Its main product now is a kind of glorified dog biscuit, hard and substantial, but not unpalatable and "werry fillin' at the price." Its destination is the trenches at the front, and one can easily imagine that it is vastly more welcome to Tommy in the intervals of trench warfare than more toothsome food would be. The factory is busy night and day; and all day long dozens of women pack the hard squares in tins and deftly solder on the tops. They are women who have never worked before, outside the home. It is just because the home is not what it was before, with its men absent, that we find them here.

It is not only in this factory that we should find the women at work. The jam factory across the street has them as well, and hundreds of others within a quarter of an hour's walk; and thousands of others all over the United Kingdom. When we reach the munitions factories themselves we shall find them busy even there, doing what they surely have never done before. The women of England are mobilized as well as the men.

BETTER OFF IN WAR TIME

What the the ultimate effect of this mobilization will be when the war is over is a nice economic problem, whose solution will be more accurately discovered in the event than in anticipation. Surely, however, any one who has learned from experience and observation to deprecate the increasing entrance of women into industry in times of peace cannot but view the present tendency with anxiety. But the immediate effect is the one with which we are at the moment most concerned; and that effect is a curious one. Many a household, perhaps it would not be too much to say the typical household, among the working classes in England is during the war better rather than worse off because of it. The chief consumer of the family is away, his living being provided by the state. His wife's separation allowance of twelve or fifteen shillings a week or even more if the family is larger comes in with gratifying regularity; and the women of the household can find plenty of work if they only want it, to increase the family income. Incidentally the shillings which the workingman himself was not unaccustomed to spend on drink—for the British workman, take him by and large, usually has a regular item for beer in his weekly budget—are saved for other purposes. So the working class families of England are far from having a bad time of it just now.

It should be added by way of disclaimer that this does not purport to be a serious economic study, but a collection of more or less fugitive observations gathered on the wing. My text is that London—which if it is not England is a large section of it—looks "as usual." Of the East End it seems fair to say, as usual only better. Nor am I taking into consideration for the moment the emotional side of the picture, materials for which are to be found in the grievous lists of casualties that come with sickening regularity from the front. Well over a third of a million has England lost in killed, wounded and missing in a twelve-month. The homes from which those thousands have gone can never be "as usual" again.

There is one more place where London seems as usual, but different. Parliament met the other day after a six weeks' holiday. It was certainly odd to see Mr Asquith and Mr Bonar Law sitting amicably side by side on the Treasury bench and putting their heads together for a quiet chuckle when a member opposite—and not an Irishman either—opens his mouth and puts his foot in it. Not once in a generation do the leader of His Majesty's Government and the leader of "His Majesty's Opposition" forsake for reasons of state their hostile attitudes across the table like gentlemanly cats across the back fence. It is a little comic and decidedly unusual also to see hailed as the leader of the Opposition a worthy gentleman who in times of peace was notable for leading only himself.

ENGLAND WILL "MUDDLE THRU"

So much for the differences brought about in this war time by the creation of a government of all the parties. The likeness to the House of Commons of everyday life begins to show itself as soon as the vext question of compulsory service drops lightly upon the table. The question is not yet in any way formally before the House, but the Commons has adroit little ways of opening a subject to discussion even under such circumstances, and the hue and cry is soon under way. It is hardly a moment before it is clear that the subject of conscription is really a party one and that the division on it in the Commons and presumably in the country is to be on party lines. It seems unfortunate that when the wise course has been adopted of forming a coalition government in order to present a united front to the common enemy partizan differences should begin to creep in. And on such a subject as this, which, as the Englishman would probably paraphrase our American saying, "has cordite in it." But the Englishman is an Englishman still; and in priding himself on his national habit of "muddling thru" it sometimes almost seems as tho he considered it of equal importance to have the "muddle" and to get thru. And he is a very partizan person, who finds it very hard to give up even in times of danger and crisis his partizan antagonisms. One would feel better about this looming controversy over conscription if the suspicion were not present that both sides had their eye not so much on England's present needs, as on England's future policies. One can only hope, if one is England's friend, that she will "muddle thru"—"as usual."

London

MAKING THE LAW WORK BOTH WAYS

BY GEDDES SMITH

IF you have been arrested in any county but Los Angeles, and have no money to pay a lawyer, the judge before whom you are arraigned will designate some one to defend you free of charge, for the law recognizes your right to legal advice. But the lawyer who is thus thrust into your affairs is likely to be either too anxious or too reluctant to serve you. The anxious class is made up of briefless youngsters who haunt the courtroom in the hope of getting experience and notice by just such cases as yours. The reluctant lawyers are men well established in their profession who happen to be in court on other business when your case is called and who serve you ably if they can spare the time. It would be foolish to assert that all lawyers serve such clients ineffectively: there are thousands whose public spirit is as great as a physician's. But in neither case can you be sure of the faithfulness and ability you need, and if you are so unfortunate as to engage one of the "shysters" whose runners hang about the jail to waylay you, then you can be sure that your case will be mishandled and your money filched from you without scruple.

But in Los Angeles County, if you are penniless and in jail, you can say a word to the turnkey, and an experienced lawyer will come promptly to see you, to talk over your case, to advise you whether to plead guilty or not guilty, and to conduct your affairs from arraignment to acquittal or sentence. And for all this service to you the county pays the bills. Your lawyer is the public defender.

The only requirement is that you shall be too poor to hire a lawyer of your own. If you are in that class you can look to the public defender for defense not only if you are accused of crime before the Superior Court (the lowest court of record), but also if you are being "persecuted or unjustly harassed" by collection agents. Furthermore, if you have a claim for unpaid wages or other money due you, up to the sum of $100, the public defender will help you to collect it, and if necessary bring suit in your behalf, tho three-fourths of the time he is able to settle your difficulties out of court.

The man in the office, Walton J. Wood, is a Stanford graduate who was appointed in January, 1914, thru the civil service. You would call him young, and you notice while you wait for him to speak that his profile is keen and a little masterful. When he turns to face you the smile-wrinkles about the eyes show a man of geniality and humor—a man you would trust with your troubles.

Take the office and the man together, and it is not surprizing that in a single month no less than 1058 persons have asked for help in civil matters at the "legal county hospital." Almost a third of them want unpaid wages, which, without legal advice, it is difficult enough to get. The people whose cases must be refused—151 in the month just mentioned—are sent to the proper officer or to one of the thirty-five private attorneys who have agreed to coöperate with the public defender and make no charges without his approval.

These civil cases take the greater part of the public defender's time and form the most broadly useful branch of his work, but it is in the criminal court that his service becomes spectacular. There, while the public prosecutor, on behalf of the state, protects society, the public defender, *also on behalf of the state,* protects the individual.

At every step from arraignment to sentence or acquittal the public defender busies himself with the defendant's interests as assiduously as a good lawyer. He advises the prisoner how to plead, gets his story before the court clearly, conducts the case if it comes to trial, and digs into the farthest recesses of his history for information which bears on an application for probation.

But it is taxpayers' money that is thus making the road smoother for suspects and convicts in half the cases that the court handles. Does it pay? Mr. Wood believes that in spite of the cost of his office—he has eight deputies besides investigators and clerks—the county saves money. More than one judge agrees that there is a real reduction in trial expenses. Judge Charles Monroe of the Superior Court sums up the matter in his statement that "the whole attitude of the office, so far as this department is concerned, is endeavoring to avoid litigation instead of fostering it."

Not only are criminal cases more speedily handled; they are better handled. The public defender has no occasion to stoop to the marginal practises sometimes used by paid attorney. In one murder case in Los Angeles a precedent was set that deserves emulation in cases far from the public defender's jurisdiction both socially and geographically. The mental condition of the prisoner was in question, and the prosecutor and defender, instead of arraying alienists against each other, joined in asking the Court to appoint three disinterested physicians. These were the only expert witnesses called.

But the real gain lies deeper than mere efficiency. Mr Wood believes that the most important fruit of his work is the prevention of over punishment. Take the case which we shall call *People vs Black.* Black, a stranger in California, had no work. He lived on nothing at all some days, and little enough at best. Finally he entered a building, stole some tools, sold them and spent the money at an employment office. He was arrested and confest. The Court hesitated to grant probation because the man, with neither friends nor employment, was likely to have increasing difficulty in

TELLING HER TROUBLES TO THE PUBLIC DEFENDER

Walton J. Wood has made the "legal county hospital" a big constructive social factor in Los Angeles County

DAVID ROBINSON
Portland's public defender, who works in the police court

keeping straight, and would undoubtedly have sent him to jail had not the public defender found compatriots of the prisoner who promised to employ him, and thus persuaded the judge to release the man on probation. This is constructive work; it saves men. The poor man commands the services of a public officer, single of purpose, sympathetic as a well-paid lawyer and disinterested as a judge.

Where Los Angeles leaves off in this new system Portland, Oregon, begins. Mr. Wood is concerned only with the courts of record, but David Robinson, Portland's city public defender, works entirely in the lower court, generally known as the police court. Every morning he goes the rounds of the jail, and by nine o'clock has the story of every prisoner who needs him.

The man who has spent a night in jail, weary, unshaven, forlorn, is in bad shape for his hearing the next morning. His appearance and manner are against him. The patrolman who accuses him is cocksure and indifferent. The prisoner can seldom tell a coherent and convincing story, even if the facts are on his side.

The public defender is an efficient mouthpiece for these inarticulate men and women. He promises to stand by the terrified first offender. He warns the old-timer against bravado. When the magistrate calls the case the public defender is ready to tell the man's story more briefly and clearly than he could have told it himself. In this way the court's time is saved and the tendency of the police to make irresponsible arrests is checked.

Here, too, the public defender's office is the refuge of unpaid workmen, persecuted debtors, and folks in trouble generally. The defender and public prosecutor together have even begun to patch up domestic difficulties. The wife takes her woes to the prosecutor; the husband is arrested and comes under the care of the public defender; and then the two officials, each with an outraged partner in law, arrange a meeting and often work out a reconciliation on the spot.

What does it all signify? The district attorney himself is charged with the duty of treating the prisoner fairly. There are many legal aid societies to do just what the public defender does for poor litigants. Charity organizations and probation officers help men to get a fresh start. All these were at work long before the public defender was thought of.

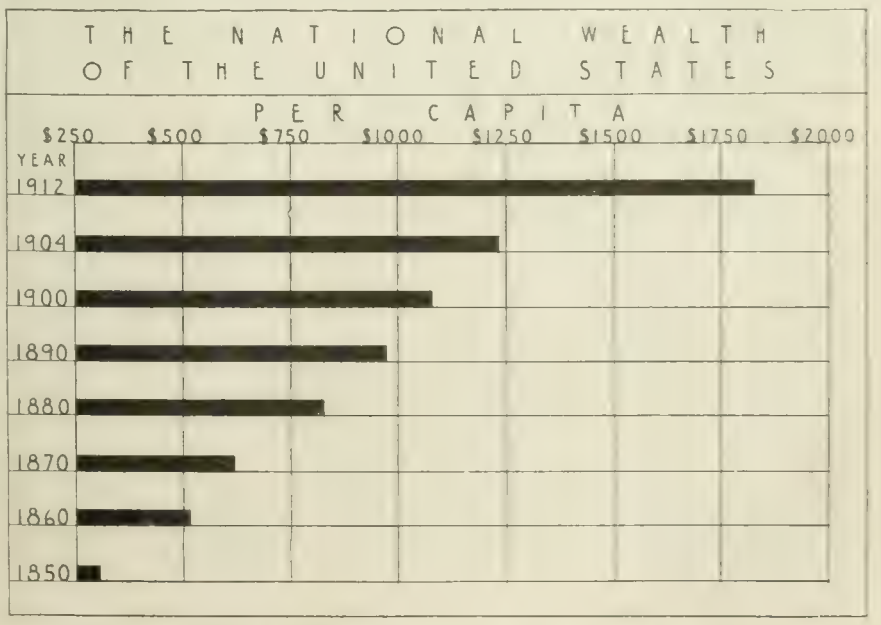
But it is the people who hire the public defender, and they hire him for this one duty. The district attorney is elected to get convictions; at best he can do little for the prisoner. Private agencies lack the essential quality of the new office: the recognition of the whole community's obligation to the man in court and to its own self-respect as a democracy. "Equality before the law" sounds well, and we take its existence for granted, tho when the public prosecutor is matched by the poor man's inexperienced or reluctant or unprincipled attorney, it is more theoretical than real. But Los Angeles and Portland are playing the game. The public defender serves the whole people by turning a catchword into a fact.

OUR NATIONAL WEALTH

BY WILLIAM B. BAILEY

IN a special bulletin of the Bureau of the Census is given the total and per capita national wealth of this country from 1850 to 1912.

Year.	Total (exclusive of exempt real property).	Per capita.
1912.....	$175,426,000,000	$1836
1904.....	100,273,000,000	1234
1900.....	82,305,000,000	1083
1890.....	61,204,000,000	975
1880.....	41,642,000,000	830
1870.....	24,055,000,000	624
1860.....	16,160,000,000	514
1850.....	7,136,000,000	308



In this total exempt real estate to the value of over twelve billions of dollars was not included. This is made up of the real property owned by the federal, state and local governments, together with the real property of educational, charitable and religious institutions exempted from taxation. If this amount were included the per capita wealth for the United States in 1912 would be $1965. The largest items which make up the total wealth of 175 billions of dollars are:

Taxed real property and improvements	$98,363,000,000
Railroads and equipment	16,149,000,000
Manufactured products.	14,694,000,000
Furniture, vehicles and kindred property.....	8,463,000,000
Live stock.....	6,238,000,000

The total wealth of New York state is about twenty-five billions of dollars, followed by Illinois and Pennsylvania with about fifteen billions each. There are ten other states with a total wealth of over five billions.

When we come to the per capita wealth the order of states is very different. Nevada leads with $4965, followed by Iowa with $3335, North Dakota with $3210 and California with $3113. There are six other states in which the per capita wealth is over $2500. Neither New York nor Pennsylvania, however, is in this list.

It is impossible to give comparative figures for many countries. In 1903 the total wealth of the British Empire was estimated at 108 billions. In 1908 the wealth of Germany was estimated at seventy-eight billions of dollars.

THE STEADY INCREASE OF OUR WEALTH

THE ASSASSINATION OF A RACE

THE HOPES AND THE THREATENED FATE OF THE ARMENIANS

Just at the time when it seems that the tyranny of the Turk is about to be broken and the submerged Christian peoples given an opportunity to develop a national life of their own, the terrible news comes to us that the Armenians are being massacred, dispersed and enslaved with the object of extirpating the race before the hour of their deliverance has come. In an editorial on another page of this issue we consider what this means to the world. We have also asked one who is better informed on the Armenian problem than any other man in America to explain who the Armenians are and what might be made of them if the red hand of the assassin can be stayed. On account of his official position and close relations with the people now endangered, it is necessary to conceal the name of the author, but we can vouch for his competency, high standing and truthfulness.—THE EDITOR.

THE Armenians in Turkey before the present onslaught upon them numbered about two millions, but their importance in the empire is not to be measured by their numbers. Intellectually and physically they are vastly superior to the Turks. In education, enterprise, industry and love of home they surpass all the other races. Among all the peoples of Turkey they have been the quickest to catch the spirit of modern education and twentieth century progress. Within the last fifty years in the eastern part of Turkey wholly, and in a measure thruout the empire, they have been the artizans, the leaders in the learned professions and promoters of commercial enterprises.

This ancient and proud-spirited race, conscious of its own innate superiority, ambitious to educate its children, Christian in its religion, and eager for progress, cherished the hope of an independent Armenia reëstablished upon the ruins of its ancient kingdom.

For thirty years a few of the more hot-headed youth, both within and without the country, have carried on a revolutionary propaganda that was as hopeless of successful achievement as it was foolish in organization. The loud talk of some of these revolutionary leaders frightened Abdul Hamid into a nightmare of massacre and brought untold suffering upon innocent heads. There has been comparatively little of this in more recent years, but the fear of this aggressive, successful, prolific and industrious Christian race never departed from the councils of the Mohammedans.

When Turkey entered into this war, the Armenians enlisted in large numbers and showed themselves loyal Ottomans. For some reason not explained—some say because of German prejudice—arms were gradually taken away from them and they were set to other tasks.

Early in March the Russians were drawing down toward Van, where, as has already been stated, the Armenians are unusually strong. The Governor of Van was Jevdet Bey, a brother-in-law of Enver Pasha, who, with Talaat Bey, controlled the fate of Turkey. The Armenian men of Van loyally offered their services to the Governor, who, under pretense of gratitude, tried to conduct the leaders into an ambush for their destruction. Three of the five leaders and spokesmen for the Armenians were killed, but two escaped. These rallied their followers while Jevdet called out his troops and enlisted the services of the Kurds to annihilate them. For five weeks they maintained their position, until the Russians entered the city and the Turks fled to the west.

This attempt of the Armenians to defend their lives against treachery and open attack seemed to awaken in the Turks a generation of slumbering wrath. From that hour, so far as the leaders at Constantinople were concerned, the Armenians were doomed to extinction thruout the length and breadth of the Empire. Not only were men and boys imprisoned without charge, assassinated, tortured beyond comprehension, and killed, singly or in groups, but the women were ravished, girls carried into Moslem slavery, and entire towns—what remained after the slaughter—sent across hundreds of miles of country, without preparation for the journey, to die like animals upon the road thru disease, starvation and repeated attacks by their guards or other ruffians, and ultimately miserably to perish in the deserts of northern Arabia.

This process of destruction, begun last March, is now going on, according to indisputable evidence of creditable eye witnesses recently compiled from authentic documents by a special committee designated to that task, and recently made public. Constantinople is threatened, and the 150,000 Armenians in that city may any day be started upon their death march to the desert.

Our Ambassador, Dr. Morgenthau, at Constantinople, is doing all in his power to stay the gruesome tide of death, and we note with gratification that the public sentiment stirred by a knowledge of this tragedy is moving the President to protest in the name of humanity against such crimes against civilization.

If the Central Powers win in this war over the Allies, Turkey will become a German province, in which the Armenians would find scant place. Officials at Constantinople have declared that the Greeks also must follow in the same path, so that when Germany becomes master of Asia Minor, no stray races claiming the land as inherently belonging to them thru centuries of occupation, and dreaming of possible independent principalities, will be there to challenge the German right of occupancy. The Kurds could be easily subdued and the Turks would have no spirit to resist. Some have gone so far as to declare that the present attack upon the Armenians is but the first step in the preparation of the promised land for the incoming hosts.

On the other hand, if Constaninople capitulates to the Allies, and the two men who drove Turkey into war and rule her today with an iron hand and their German advisers are shorn of their power, there is reason to expect that the Turks as a whole will sue for peace, as multitudes of them today keenly desire to do.

We can hardly conceive of any power's favoring the perpetuation of Turkey in any form, after this ghastly exhibit of Moslem incapacity to rule alien peoples or even Mohammedans. At once then will and must begin the repatriation of the exiled Armenians and Greeks, for the Greeks also in a measure are suffering the same treatment. This will be an expensive task, but the civilized world must unite to achieve it. There are said to be 300,000 refuge Armenians in Russia and more than half that number in Persia. In their return naturally the most of them will drift back to the land of Ancient Armenia, where in a few years it will be possible to create, under the protection of one or more friendly powers, an autonomous Armenia. In western Asia Minor, where the Greeks predominate, a Greek principality would be the natural outcome.

We have reason to expect that following this baptism of fire and blood, Asia Minor, freed from Turkish domination, will become a place in which non-Moslem races may, for the first time in a century, live in peace and enjoy the prosperity due their quiet, constructive industry.

THE CASE FOR GREECE AND BULGARIA

GREECE—BY SOLON S. I. VLASTO

EXARCH GENERAL OF THE GREEK ORTHODOX CHURCH

THE present crisis in Greece, culminating in the resignation of Venizelos, is due to the dissension between the King and his Prime Minister as to the proper policy for Greece to follow in the present war. Rumors that the King is pro-German are absolutely without foundation. Above everything else the King and Queen are Greek, and they would certainly do nothing to endanger the dynasty or to antagonize the popular feeling of Greece, which for historical reasons could not be otherwise than with the Allies. To England, France and Russia we owe our independence.

The real cause of the controversy seems to be that, contrary to the Constitution, Venizelos permitted the landing of the French and British troops at Salonica without submitting the matter to the Chamber and asking for authority. His protest was made after troops had been landed, tho he had been notified in advance. If a protest was to be made it should have been made before.

But Greece has repeatedly declared that she would give Serbia material and financial help if she should be attacked by any of the Balkan states, tho the treaty of alliance between Greece and Serbia unfortunately ceased to exist from the moment that Serbia, without consulting Greece, offered Bulgaria a considerable part of the territory conquered during the last war.

Greece mobilized her army to protect her own frontier against any Bulgarian attack, and the policy of armed neutrality, which is supported by all the four former prime ministers who are in the new Cabinet, seems to me to be the proper policy for the safeguard of Greek interests. Greece cannot afford to go to war with Austria and Germany, and if French or English troops were to go to Serbia they could have been sent without violating Greek neutrality.

From the new ministry, with Zaimis at its head, Venizelos has been left out, altho he has a majority in the Chamber and is the most popular man in Greece. Today we do not know where we stand. Venizelos refused to the last moment to state what his foreign policy was going to be. The new ministry will probably make a declaration about the course which Greece will pursue.

Bulgaria's claim to a part of purely Greek Macedonia was only a pretext for mobilization in order to cast in her lot with the Central Powers. Bulgaria has no right whatever to Greek Macedonia or Thrace. They are Greek by tradition as well as race.

Yet Greek aspirations for national unity are not as wild as some are trying to represent them. Our Greek population in the former European and present Asiatic Turkey is between eight and ten millions. The coast of Asia Minor, from the Syrian Gulf to Constantinople, is Greek, and the interior for a distance of 500 to 800 miles from the coast is mostly inhabited by Greeks. Venizelos's dream was to unite all these Greeks.

The Asiatic shore, it is true, was offered us by the Allies. But to appease Bulgaria they asked Greece to surrender Kavala and the adjacent territory to Bulgaria, and to do so immediately. Public opinion in Greece is unalterably opposed to such a cession. The Allies promised to give us territory—Turkish land—some time in the future. They asked us to give up something we hold now—Greek land. Who could say whether tomorrow they would not ask us to give up Asia Minor also?

Greece must defend herself against Bulgarian aggression. Further than that, in spite of her friendliness for the Allies, her best interests lie in neutrality, at least for the present.

BULGARIA—BY SVETOZAR TONJOROFF

OF THE EDITORIAL STAFF OF THE NEW YORK "TIMES"

THE policy of Bulgaria in the Great War is governed absolutely by one vital consideration—the recovery of the lands which were taken from her by her former allies and by Rumania under the provisions of the treaty of Bucharest at the close of the second Balkan war. The urgency of the need for a complete and final restoration of the major part of Macedonia and of the part of Dobrudja annexed by the nations adjoining Bulgaria, is emphasized by the detailed and specific charges made at Sofia that, in Serbian as well as in Greek Macedonia, the predominating Bulgarian element is being eliminated or placed in a state of hopeless economic and cultural disadvantage.

Recognition of the justice of Bulgaria's claims to the "lost provinces" was distinctly implied by the promise of the Allies of the Entente, several months ago, to induce Serbia, Greece and Rumania to cede territories taken away from Bulgaria.

This promise has not been carried out. Greece, since the first fall of the Venizelos cabinet, has given no indication of a willingness to surrender Kavala, which was included in the irreducible minimum of the terms submitted by Bulgaria at the behest of the Allies. Rumania, it is disclosed by Premier Radoslavoff of Bulgaria, has assumed a similar uncompromising attitude. The concessions offered by Serbia in response to pressure from London and Paris comprized only about one-third of the territory designated by Bulgaria, and its surrender was to be deferred until the end of the war.

Promises, however, are no longer accepted as currency by Bulgaria, in view of the painful experiences which that country had with the unsecured paper of the powers constituting the Triple Entente, at the end of the first and second Balkan wars.

There was no great surprize in Bulgaria when Serbia, even while the collective struggle against Turkey was pending and the Bulgarians were fighting the common battle of the Balkan states in the trenches of Tchatalja, deliberately broke her ante-bellum territorial agreement and referred the new issue to Russia as arbitrator—an arbitrator pledged by her minister at Belgrade, the late Baron Hartwig, to a complete adjudication of the case in Serbia's favor. But that France and Great Britain would countenance such facile treaty-breaking was wholly unexpected at Sofia.

The second painful experience that Bulgaria had with foreign promises came with the reoccupation of Adrianople and the Thracian triangle by the Turks, in clear violation of the treaty of London. Under this treaty Bulgaria had accepted the minimum of territory which she had conquered in Thrace, in consideration of the pledge of the powers—and especially of Great Britain and Russia—that Turkey would be held responsible by Europe for the observance of the agreement. And yet the Turkish reoccupation of Thrace was permitted by Great Britain, France and Russia when the ink of the signature of Sir Edward Grey upon the treaty was hardly dry.

As between friends who have failed her in her dire need, in violation of their plighted word, and a foe whose enmity has been open and unconcealed, Bulgaria has chosen to cast her lot with her former enemy—Germany. And in the background of the failure of the Allies to secure to Bulgaria her right to unity and liberty, lies the sinister shadow of the persecution of two millions of Bulgarians in Macedonia, continued in all its ferocity even while Serbia was ostensibly negotiating a reconciliation.

THE WORLD OVER

City-Grown Physique

If you were to tell the average proud parent in the average small town that almost any school boy of the big, congested, play-suffocating cities can jump farther, run faster, and has stronger arms than his own village-bred son, he would be inclined to dispute the point emphatically. People have heard so much about how the slums dwarf children and how the city has to recruit its sound, able-bodied men in rural districts, that the inferiority of city-grown lungs and muscles has become a by-word.

In order to get at the facts in the case, a man connected with the Russell Sage Foundation was recently led to apply his yard stick to this particular tradition. Selecting certain athletic tests which are commonly used by large numbers of schools in New York and other large cities, he took them back to the good old New England town of Ipswich and tried them on its home-grown school children.

The tests were in jumping, running, and chinning, and the passing marks in these three events which the Ipswich boys were asked to make are met each year by thousands of boys of the same age in many large cities. Only one of the country boys, however, was able to fulfill the requirements for elementary pupils and among the high school boys there was not a single student who was able to make the marks set by the city boys of that age.

Mr. Howard Roscoe Knight, who made this investigation, does not claim that the results demonstrate an all-round physical inferiority on the part of these Ipswich boys. They had had no body training in their schools. The New York boys, on the other hand, had enjoyed systematic physical education since entering school. The comparisons, in other words, are straws which indicate that the large cities are overcoming their defects as habitats for the human animal, and that if the towns and villages do not wake up they may some day suffer the chagrin of having to look upon the large cities as health resorts.

Mr. Knight's survey of the recreational life of Ipswich which, by the way, numbers about 6000 souls, throws an illuminating light upon several features of the recreational life and needs of a small town. Among the recommendations given are the following:

Physical training for all boys and girls as a regular part of the school curriculum.

The extensive use of group games in physical training.

Equipment of each school and school yard with playground apparatus.

Gymnasium with lockers and shower baths in the school building.

Movable furniture, so that the class rooms may be used for civic, social, and recreational purposes after school hours.

The organization of a Public Athletic League.

Shoes That Sell Themselves

"The Kafateria Shoe Store," probably the latest adventure in the retail store line, has just made its appearance in Pasadena, California. It is just what its name implies, a store where the customers wait on themselves. The proprietor argues that this "wait on yourself" plan has been successful in the "eating" line, and there is no reason why it should not win out in the shoe business.

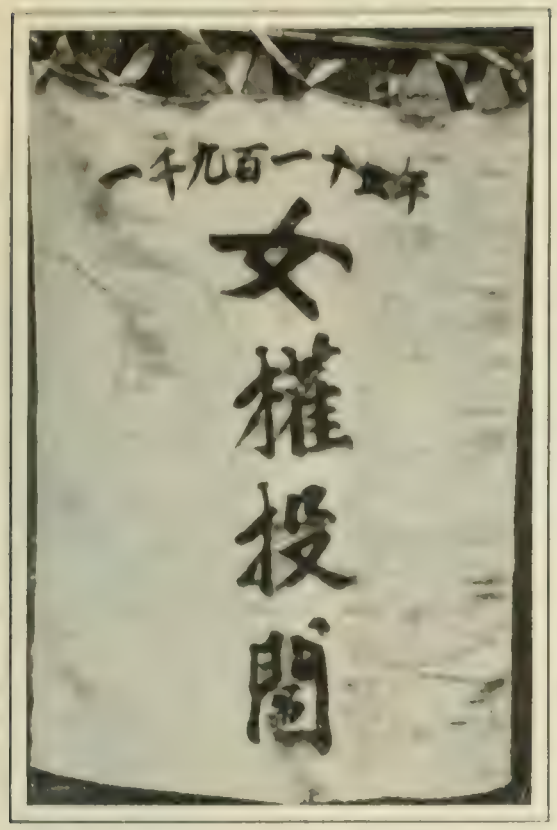
A STORE THAT SAVES TIME AND MONEY

This store is divided into two sections, the lobby and the counter section. Upon entering the establishment the prospective customer is confronted by a sign which reads, "Check your parcels and grips before passing thru gate." After complying with this demand he passes thru the gate in the "fence" which separates the front from the rear section of the store. When once behind the railing the customer is permitted to roam around at will and to take as long as he cares to in the selection of shoes. All of the shoes are separated, sized and priced, and the customer is required to select his shoes, fit them to his own feet, and, in fact, sell himself the shoes he desires. There is but a single clerk present, whose business it is to answer questions and to assist customers when requested. Upon making a selection the buyer pays the cashier and passes his shoes to the wrapper.

There are numerous signs upon the walls of the store explanatory of the store's method of doing business. One of these reads, "If you want to wear your new shoes home, take them off, pay the cashier, then put them on again in the lobby." By the amount of success this new style of shoe store is experiencing it would seem that the "Kafateria" plan, even in the shoe line, is meeting with the approval of the general public. The ordinary store does not encourage the customer who is "just looking," clerks are apt to force a hasty and sometimes unsatisfactory selection in the interests of a "trade"; but in the Kafateria shoe store there is ample opportunity to look around leisurely and to weigh the merits of style versus comfort, unhampered by the insistent reiteration of "Perfect, Madam, just what you want, I'm sure."

Photographic Speed

Can a camera shoot as fast as a gun? The answer has always been No. But Captain F. J. Behr, of the United States Coast Artillery, has recently invented a camera that will actually photograph a mortar shell at the instant when it leaves the muzzle of the gun. The snapshot even shows the curious "smoke ring" or "gas ring" that accompanies the projectile as it emerges.



The camera differs from the ordinary one in size and in the mechanism of its shutter. An electric motor that makes several thousand revolutions a second works the shutter and its speed can be so accurately adjusted that the photographer can determine the length of exposure down to 1/5000 of a second. The camera box is about four feet high—the electric motor precludes the possibility of a vest pocket size.

As yet its use has been for the most part in connection with war. It is hoped that it may help to determine exactly what happens when a modern high-power shell plows its way thru solid steel. But its largest possibilities are yet to be developed in the general field of mechanics.

The School House Pig

"The school house pig" is the latest result of the effort being made to introduce a more extensive raising of live stock in the South. In some sections wealthy patrons give a pig or sheep to the school children of the local district. The older boys construct a pen for it in a suitable place on the school grounds. The smaller boys gather pine needles and other leaves for a bed and the girls daily collect the scraps of food left from the lunches and carry them to the feed trough. Over Saturday and Sunday a boy living near the school sees to the feeding. At the end of the year the pig is disposed of. In some districts it is killed and served at a district banquet. At others it may be sold and the proceeds used to buy books for the school library or for any other need of the school.

The object is to teach the value of thrift and economy. Incidentally the

CHINESE VOTES FOR WOMEN

young people learn something about hog raising that will yield rich returns when they are settled on farms of their own. The greatest attention is needed to keep the pig from being overfed. Parents say the children carry away lunch baskets fairly groaning with eatables, yet they come home at night hungry enough to eat a threshing man's meal. They have divided liberally with the school house pig.

Campaigning in Chinatown

Chinatown and Woman Suffrage. Somehow the connection is rather startling. For Chinatown—the real Chinatown, that is, and not the lurid, megaphoned district of the New York Sightseeing Bus—is a community remote from the march of modern events, keeping rather tenaciously to its old-world customs and traditions. To invade its Oriental impassivity with the enthusiastic propaganda of "Votes for Women" was a tribute to the bravery of the suffragists.

But at any rate the idea worked. Chinatown decided that it approved of suffrage, particularly when it was presented by a brightly colored Chinese banner, carried by Miss Lavinia Dock, of the Henry Street Nurses' Settlement. Old rose, light blue and bright yellow, combined with black and white, are the colors of the new Chinese flag. They drew the attention of all Chinatown and Miss Dock's informal speeches and questions did the rest.

"Velly good; all right," said one old Chinese lady of high degree to the question of what she thought of equal suffrage. "I want my wife to be a citizen," added a prosperous looking Chinaman in American clothes. To these immigrants America is the land of justice and progress. That the women here do not bind their feet seems to them symbolic.

A Motor Land Yacht

One of the most unique motor vehicles ever built, recently started over the Lincoln Highway from New York en route for San Francisco. The "Gipsy Van," as it is called, is owned by Roland R. Conklin, of New York, who conceived the idea of an automobile which would provide living as well as traveling facilities.

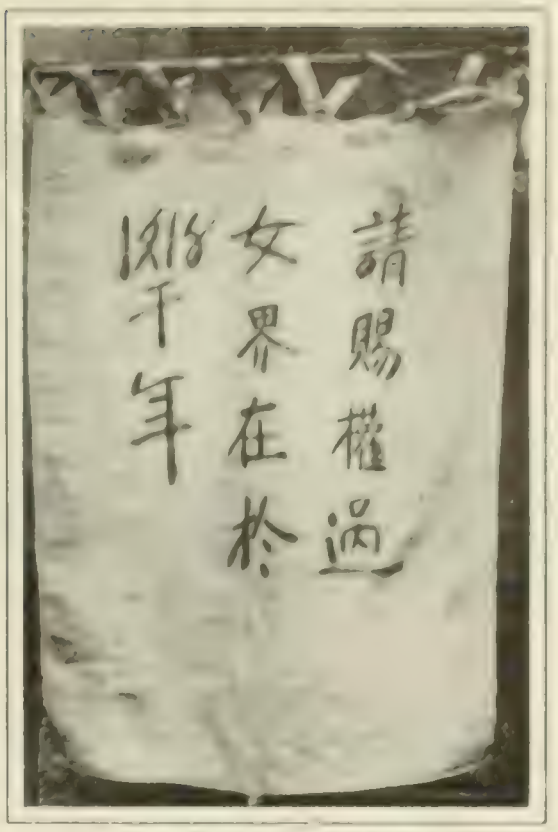
The body of this land yacht is mounted on a truck chassis, of the motor omnibus type. The inside dimensions of the body are 21 feet in length, 7½ feet wide and 6½ feet high. It is divided into three compartments, and on top there is a full sized deck, fitted with a big folding leather top and Jiffe side curtains.

The forward compartment contains the steering wheel, controlling levers, driver's seat, and gasoline tank. It also has two berths, for the crew, which are raised into the ceiling when not in use. The rear compartment is finished in white enamel. A toilet is partitioned off, and a shower bath and folding lavatory provided. The ice box, holding 100 pounds of ice, and an electric range, with two burners, a broiler, and an oven, cupboards and shelves for provisions, dishes and cooking utensils and a sink with running water, are all included in the equipment. Both hot and cold water are available.

The middle compartment is ten feet long and contains a luxurious couch convertible into a bed, two separate upholstered arm chairs, also convertible into a bed, and four berths which are raised up into the ceiling when not in use. When used for sleeping, this compartment is curtained off so that each of the six beds or berths has the same privacy as a Pullman sleeper berth. Each also has its own electric reading lights, and an innovation locker with special arrangements for hanging clothes. This compartment also has a writing desk and a Victrola.

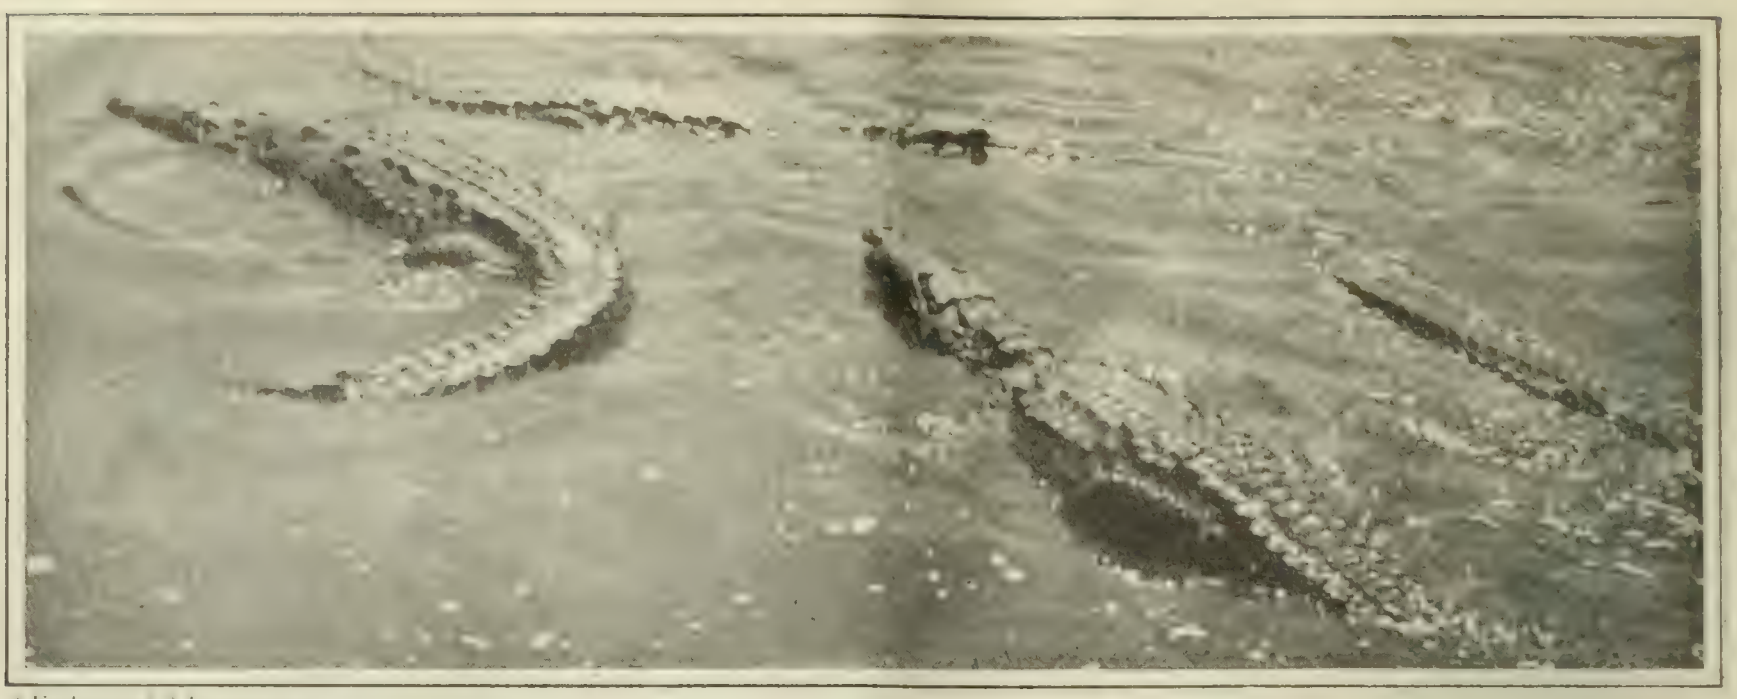
Folding steps used in reaching the upper deck are convertible into a tea or card table and there is also a folding dining table, eight by two feet, which can be stored away against the ceiling.

The floors are all prest cork.



On the upper deck are lockers for guns, fishing tackle and commissary supplies sufficient for two weeks, folding chairs and divans with mattresses, for outdoor sleeping. One locker contains a motor cycle, which may readily be lifted out and lowered to the ground by means of a crane.

One of the most interesting features of the car is its easy transformation into a mosquito-proof camp when the owner wants to stop for the night.



The entire weight of the vehicle is a little less than that of a Fifth avenue motor bus with its passengers. The wheelbase is 206 inches. A six-cylinder gasoline motor with cylinders 4¼ by 5, is used. The transmission is of the selective sliding dog type, with gears always in mesh. It is really a double gear box, as it gives nine speeds forward and three in reverse, an unusual transmission made necessary by the special requirements of this vehicle.

"ENJOYING THE SUNSHINE AND EVIDENTLY HAPPY"

AN IDYLL OF THE ALLIGATORS

BY E. P. POWELL

When our old friend and contributor, E. P. Powell, died, we had several unpublished manuscripts which he had sent us from his home in Sorrento, Florida, at which he spent all his time in his last years. Two other sketches of the state that shared his affections with rural New York will be published in forthcoming numbers of The Independent.— THE EDITOR.

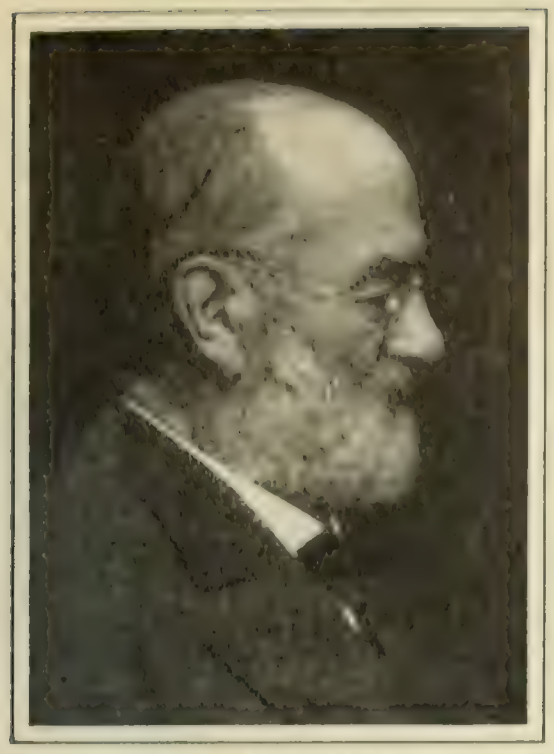
ALLIGATOR is simply the Yankee pronunciation for lizard. This particular fellow has a savage reputation, and whoever sets out for Florida expects to be careful of exposing himself when he goes in bathing, and that possibly his boat may be upset by the huge whack of a saurian tail. Yesterday our neighbors, a couple of gentle ladies, called to us to assist them in photographing a young alligator who had strolled up to their cottage door. He was not full size, to be sure, about four feet long, but quite inquisitive. We could not find out exactly what he wanted, only it was evident that he did not understand the difference between civilization and the wilderness. A touch of broomstick on his nose brought a snap of anger and a blow of his tail that would have been equal to a schoolma'am's ruler. He scrambled away, however, as soon as we would let him.

Driving around Lake Emerson the other day, we saw a very domestic group on one of the little islands consisting of a mother and half a dozen young ones climbing or resting on her back. They were enjoying the sunshine hugely and were evidently happy. But they saw us at quite a distance and had no desire for close acquaintance. We have been finding out that the alligator has no disposition whatever for quarreling. Take them in the lagoons where they are crowded and where food is not over-abundant, and their companionship may as well be avoided; but everywhere else over Florida they run loose with no more danger to human folk than the wild pigs, nor so much. They frequently travel from one small lake to another, especially in breeding time, and if you do not turn out for one in the woods he will turn out for you.

An old fellow whom we call Ahasuerus spends most of his time in Lake Lucy, buried in the mud when it is cold, and occasionally showing himself like a bit of an island when it is warm. We in our corn fields leave our hoes to look at him, and once in a while we hear him growl, but anything like war between us is absurd. The growl or call is more than half bellow, very much like that of young bulls. He must be a big eater, but he cannot do much damage among the fishes, as he is too heavy and sluggish. We caught a turtle the other day that had alligator teeth marks dented heavily into his shell. Turtles both in the lake and out are so common here that he is welcome to what he can catch.

It becomes a matter of sentiment whether we shall allow alligators to indulge their tastes in our preserves or not; it would probably be very difficult to hinder them without killing. A darky will surely shoot a "'gator" if he gets a chance and is permitted. They are becoming extinct very rapidly, thru a class of tourists who pass themselves off for sportsmen—a folk with at any other purpose in life but to shoot something. These people come into Florida once a year like an overflow of uselessness, seeing nothing that is beautiful and having nothing to do that is useful. They bring along an inherited desire to hit something and destroy all that they can.

So our saurian is going out with the wild hogs and the wild cattle. Florida is destined to become a wonderful home of stock growers. We are glad to see the last of "razor backs," but we are rather proud of still having an alligator in our pond. Lake Lucy is about half a mile across and three-quarters of a mile in length. We pet it a good deal as we would pet an orange orchard in the pine woods or an apple orchard in New York. It gives us a dinner now and then and no end of fun, and it can indulge in one or two alligators without harm to anybody.



Ten more years and we shall see the last of an alligator, unless legislation protects them from obliteration. The whole land is being transformed, just as Ohio and New York were transformed seventy-five years ago. But we are trying to keep a little of our wildness by aid of the Government. Our lakes are being restocked and the land which is recovered from racing, ravening hogs is rapidly being turned into stock farms. It is not likely that alligators will ever destroy a lamb or a calf, tho it is just possible.

At any rate, our little home lakes are absolutely safe for human beings to row about them and fish as they please. Florida is a wonderful state for an alert mind, and before long it will be enabled to feed twenty-five millions, only these must be men. Better than many of the tourists would be an increase of alligators and wild cattle. They would do less harm on both land and water.

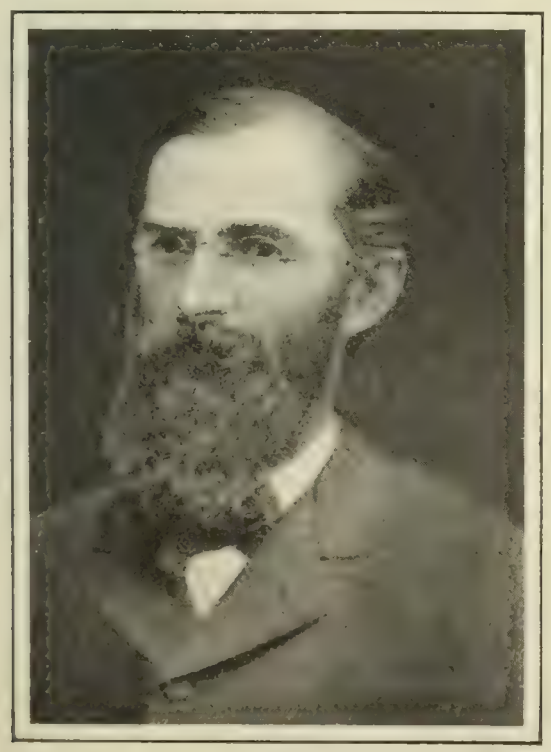
DR. WARD'S CREDO

A REVIEW OF "WHAT I BELIEVE AND WHY."

BY WASHINGTON GLADDEN, D.D.

DR. WARD TODAY

Many who followed during the past year the articles in The Independent by Dr. William Hayes Ward, for nearly fifty years an editor of The Independent and now its Honorary Editor, entitled "What I Believe and Why," will be glad to learn that the series has been republished in a volume with the same title. We asked Dr. Washington Gladden, pastor emeritus of the First Congregational Church of Columbus, Ohio, and author of many books on religion and ethics, to review the book. Dr. Gladden was associated with Dr. Ward on the editorial staff of The Independent in the seventies and has frequently contributed to these pages since then.* — THE EDITOR.



I HAVE known Dr. Ward for forty-five years. The first five years of that time we were shopmates in a newspaper factory, working side by side on the task of filling the columns of the New York Independent with sound and wholesome teaching. We consulted freely about the policy of the paper and the questions then pending in the political and the religious world, and came to know each other's minds about as well as men can.

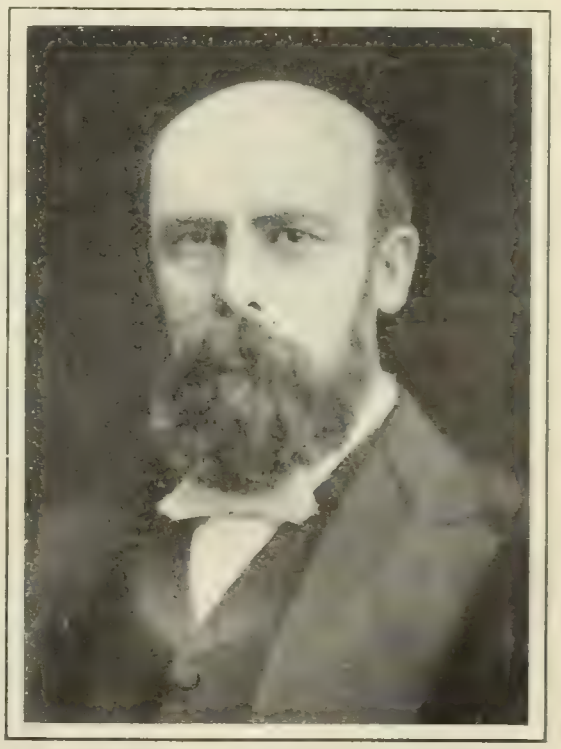
For myself I can only say that my respect for the intellectual and moral integrity of my comrade steadily deepened; I grew to value more and more his judgment and his character. Such questions as those discussed in this book were often cropping up in our conversation, and the thoroness of his thinking and the firmness of his grasp on reality were always reassuring. I find many echoes of those old talks on these pages.

The bit of autobiography which Dr. Ward gives us in the Introduction is informing. Such an education is not the portion of many boys. To have read the Bible thru in Hebrew before he was nine years old was a strenuous propædeutic. His father was his teacher. "He believed, I am glad to say, that Hebrew was an easier language to learn than Greek or Latin, and with three years for each and in the reverse order, he required me to read the whole Bible in the original tongues, with the Old Testament also in Greek and the New in Hebrew and both in Latin." I think that there is a legend of that remarkable family, two sons and two daughters, reading the Bible thru, verse about, at family prayers, each in a different language. This is, perhaps, the second miracle of the tongues. This splendid linguistic training was what opened the gates of the buried languages to Dr. Ward and gave him for playthings, cuneiform inscriptions and Assyrian cylinders.

But his interest in scientific and philosophical questions has been hardly less keen; the latest news from the laboratories has always been interesting to him, and the explorations into the mysteries of life and being have held his attention.

For such work as he has undertaken in this book he has, therefore, some unusual qualifications. His mind is keenly analytical; the larger aspects of scientific discovery are familiar to him; he knows pretty well what has been proved by scientific investigation and what is still *sub judice;* and while he is absolutely veracious and not a bit afraid to face any truth, no matter how disturbing may be its implications, he is yet constitutionally conservative, and not disposed to relinquish any portion of his ancestral faith until it is shown to be no longer tenable.

DR. WARD IN THE SEVENTIES



*Charles Scribner's Sons. $1.50.

WASHINGTON GLADDEN TODAY

This book of his might be prescribed by the doctors as a regimen for a manly mind. Any man who wants to put himself thru a course of straight and severe thinking on the deepest themes with which the human mind can grapple, would do well to read it. It is not technical; the argument can be followed by any fairly intelligent man; and the exercize will be mightily invigorating. I have observed that some of the brightest scientific men I know have followed these articles thru The Independent, with steadily deepening interest.

The ontological and cosmical discussions of the opening chapters lead the mind out into a large place and give us some great impressions of the magnitude of the things by which we are surrounded; the chap-

The Reconciliation of Government with Liberty

By JOHN W. BURGESS, Ph.D., Ju.D., LL.D.

To reconcile government and liberty has been the effort of the ages. It has never been fully consummated. The story of this endeavor to keep the true path between despotism and anarchy is the theme of this intensely and immediately interesting book.

Particularly in view of the present extraordinary European crisis!

The Holy Earth

By L. H. BAILEY

An inspiring revelation of the significance of the backgrounds of human life.

$1.00 net

Charles Scribner's Sons **Fifth Avenue, New York**

ters on The Mystery of Life, Foresight in Evolution, and Nature's Preparation for Man, will force a man to think deeply, and the more theological chapters, on The Direct Vision of God, How to Think of God, Essentials and Non-Essentials in Religion, The Scriptures, Jesus the Christ, and The Future Life are full of spiritual insight and fine interpretation.

Dr. Ward has lived a very brave, devoted, laborious, self-denying Christian life; he has given himself unreservedly to all good causes; he has devoted days and months to the drudgery of committee work, with no bouquets and no bands of music; he has been one of the most genuinely serviceable men I have ever known; yet I doubt if he has ever done any greater service to the cause of the Master whom he loves, than he has done by writing this book.

It is doubtful whether the literature of apologetics contains any better work than this. I wish that a hundred thousand copies might be sold. It would greatly help to make Christianity intelligible and rational and credible.

THE EVOLUTION OF SOCIETY

Appreciating keenly the value of the methods and the principles of biological sciences, Professor Keller in his new book, *Societal Evolution*, attempts to adapt them to his field. While criticizing many of his colleagues for confusing evolution with Spencer, he himself confuses evolution with Darwin. He gives some very interesting examples to show the "adaptive" value of many customs and conventions under divergent maintenance conditions, and emphasizes the fundamental influence of such conditions in determining religions, moralities, decencies. He does not object to his views being called "economic determinism," but he does object to socialistic inferences being drawn from these views. At the same time he ignores the biological and the social fact that many characters resulting even directly from the reaction to the environment are quite without "adaptive" value, and certainly without selective value. Biologists today are about a generation ahead of the position attributed to them by Professor Keller. The practical inferences that the author permits are thoroly Spencerian, that is to say, negative.

With a sounder understanding of psychology and of economics, Professor Ellwood of the University of Missouri discusses *The Social Problem* in broad outlines, to discover a guide to practical statesmanship. The problem of social advance appears in terms of individual adjustment to artificial surroundings. Society is always changing and eventually becomes conscious of its own changes, and deliberately plans its further progress. The agencies of practical optimism are education and a well-balanced program of social progress.

Assuming on the part of thinking people a desire to make practical application of the results of scientific studies of social problems, Dr. Melvin in his *Things, Sensations or the Sensory-*

ical Ideal, attempts to formulate the humanitarian and democratic ideals of the day and to show what kind of program can best carry them into effect. Government is shown to pass from a restraint upon persons to a management of affairs of common concern: the practical problems of society are therefore those that have to do with the relation of communal enterprise to individual enterprise. There is an interesting differentiation of socialism from government action, in terms of aims and spirit.

Societal Evolution: a study of the evolutionary basis of the study of society, by Albert Galloway Keller. New York: The Macmillan Co. $1.60. *The Social Problem*, by Charles A. Ellwood. New York: The Macmillan Co. $1.25. *Socialism as the Sociological Ideal*, by Floyd J. Melvin. New York: Sturgis & Walton Co. $1.25.

INSECT ROMANCE

A fourth volume in the collection of remarkable descriptions of insect life by the late J. Henri Fabre, the "insects' Homer," has been translated by Alexander Teixeira de Mattos. In this are described the *Bramble-Bees and Others*, the others being all the wild bees reported by Fabre except the Mason-Bees (the notes on which were printed in a previous volume), and include the plasterers, the burrowers, the leaf-cutters, the cotton bees and the resin bees. The author's tendency to "humanize" his interpretations of insect activities is one of the chief sources of his charm to the lay reader; and it does not appear to affect the accuracy of his observations, which make these books of great value to the scientific student.

Bramble-Bees and Others, by J. Henri Fabre. Dodd, Mead & Co. $1.50.

THE WAR IN SEVEN COLORS

Problems of Readjustment After the War is a syndicated book written by a number of the intellectual leaders of the nation. Professor Albert Bushnell Hart of Harvard University reviews the various suspensions of parliamentary authority and of constitutional guarantees during the course of the war in the belligerent countries, but prophesies a reaction toward liberty and democracy when the struggle is at last ended. Professor George Grafton Wilson, also of Harvard, regards the European conflict not as an interregnum in the reign of international law but an important step in its further development. Less optimistic is Professor Seligman of Columbia, who ascribes the war almost entirely to economic causes and sees no hope for universal peace until all the backward regions of the earth have been fully exploited and industry is world wide and no longer national in scope. Professor Franklin H. Giddings of Columbia and Professor W. W. Willoughby of Johns Hopkins interpret the Great War as a struggle between the political system and ideals of central Europe, based on coercion, autocracy and collectivism, and those of western Europe and the United States, based on voluntary action, democracy and individual liberty. Professor Emory R. Johnson treats of the possible transfer of commercial and financial hegemony from Europe to the

That short Fall or Winter rest,—try a fortnight in retreat, on that 800-acre tract, with the "Quakers at the Manor," comfort without ostentation. Golf, tennis and garage; no bar or dancing.

J. W. HURLEY, Manager

United States, and Rear-Admiral Caspar F. Goodrich concludes the volume with a cautious discussion of the military and naval lessons apparent from the events of the past year.

Problems of Readjustment after the War. New York: D. Appleton & Co. $1.

LAUDANDA EST CALIFORNIA

"California invites the world." But this is no R. S. V. P. affair for the world to take or leave. California follows up her invitation in the most approved business fashion. Two great fairs have turned the eyes of the country toward the Golden State, and now appears *California's Magazine.* The "Cornerstone Number," a sumptuous thing of fine pictures, rich color-plates, and the glowing articles that only a Westerner can write, devotes its four pounds of weight and 672 pages to preaching California from every possible text. The editors, headed by Professor E. J. Wickson of the University of California, expect to repeat the clarion call, a little less stupendously, once every quarter.

Eugen Neuhaus has written another book for art-lovers who visit San Francisco. *The Galleries of the Exposition* is practically a well-drest critical catalog of the contents of the Fine Arts Building, not too esoteric for the layman's use, and with a sprinkling of general comment and a number of very beautiful reproductions that somewhat modify the book's essentially ephemeral quality.

For those who like their antiquarian guide-books freshened with a conversational style and dissolved in a trickle of fiction, *The Lure of San Francisco* is just the thing. There is plenty of ancient romance and some lively description in it, and charcoal drawings by Audley B. Wells harmonize with the eminently well-brcd text.

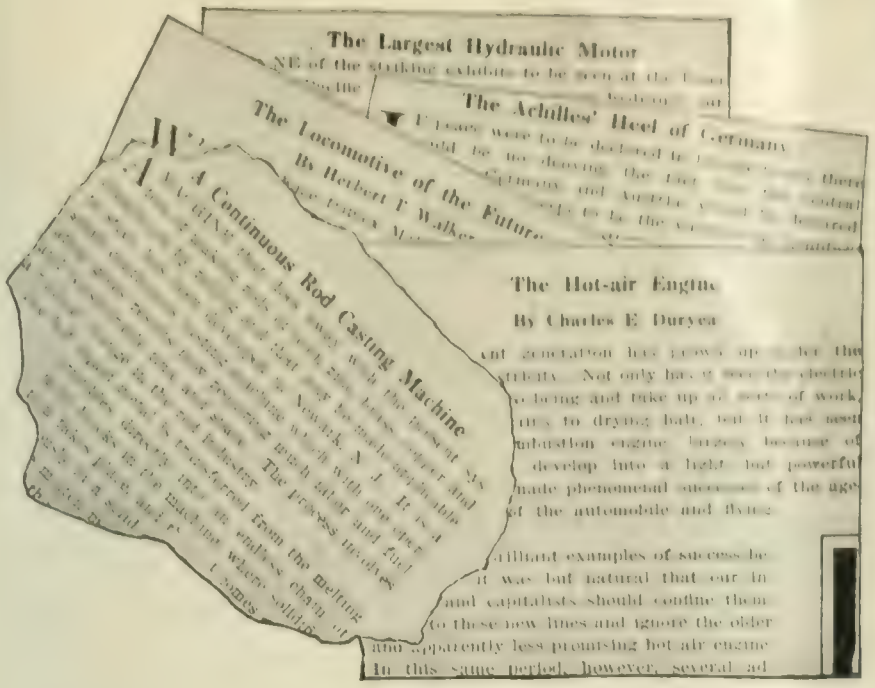
California's Magazine, edited by E. J. Wickson. San Francisco: California Publishers' Co-operative Association. $1.50. *The Galleries of the Exposition*, by Eugen Neuhaus. Paul Elder. $1.50. *The Lure of San Francisco*, by Elizabeth Grey Potter and Mabel Thayer Gray. Paul Elder. $2.25.

A GOOD COOK BOOK

An excellent *Text-Book of Cooking* has been prepared by Carlotta C. Greer, of the East Technical High School of Cleveland, Ohio. In it she takes nothing for granted. The seeker after guidance in cookery is scientifically but clearly instructed as to the baking of potatoes and other simple processes as well as the more elaborate dishes. The standardized process of [illegible] making in relation to food values is [illegible] with. The book is a safe and sure guide toward food efficiency.

Allyn. Boston. $1.00.

ESSAYS AT RANDOM



Politics and Morality, by Frank Preston Stearns, treats a wide range of topics in a thoughtful [illegible] sometimes rather superficial fashion. One [illegible] in the book considers the [illegible] of Machiavelli, which the [illegible] Prince to be [illegible] and ill-informed attack on the position of [illegible] Times, whose doctrine, says Mr. Stearns, "might be described succinctly as materialism based on skepticism." Shades of Mrs. Piper!

Badger. Boston. $1.50.

THE ALL AMERICAN VACATION

"The dreadful truth about the summer is that most of it is [illegible] in work rather than in play." So Harriet

Which Interests You Most?

And these are but a few of the articles that appeared in a single recent issue of Scientific American.

One—entitled "A Continuous Rod Casting Machine," is a complete description of a machine that will save hundreds of thousands of dollars for the manufacturers who use it.

Another—"The Achilles Heel of Germany," tells of one grave danger which Germany runs in the present stupendous conflict.

Read these titles of a few of the more important articles which have appeared in Scientific American during a single recent month only:

Effect of the War on American Industries.
A Thinking Machine.
Erecting the Largest Steel Arch Bridge in Existence.
America's Greatest Engineering Project.
Strategic Moves of the War.
How Excitement Relieves Fatigue.
Inventions, New and Interesting.
Mechanical Equipment of the Grand Central Post Office.
Where Wings Are Made for Fighting Men.
Emergency Exit from Boiler Rooms.
The Austrian Submarines.
Multiplex-Cylinder Motors.
How the War Has Modified the Aeroplane.
A Million Chicks to the Acre.
Influence of the War on the Automobile Industry.
Chain Screen Doors for Oven and Furnace Openings.
Measuring the Hardness and Elasticity of Rubber.
Educating Invalid Soldiers.
A Small Aero-Electric Plant.
The War and Immigration.
To Make Coal Tar Dyes in America.

Is it any wonder that Scientific American is one of the most widely quoted publications in America or that such men as Henry Ford, Thomas Edison, Hiram Maxim, and countless business executives and men of affairs should have in their library bound volumes of the publication for many years back? They are frank to confess the debt they owe Scientific American for the help it has given them in the past and for the help it is giving them today.

For the non-technical man who would read, in simple language, of practical science and invention; for the technical man who would hear the last word in scientific achievement; for the business man who would learn what science can do for him; for all those who seek to keep in broad touch with the world's material progress; and finally, for the larger public which is attracted by the fascinating interest which underlies all scientific and mechanical achievement, Scientific American is above all—

SCHOOLS AND COLLEGES

THE METROPOLITAN TRAINING SCHOOL FOR NURSES

offers a **three years' course, FREE,** and pays besides maintenance, $10 a month for the first year, $12 a month for the second and $15 a month the last year.

Classes are formed every month.

The Nurses' Home is located on one of the finest sites in New York City. The rooms are all single with spacious entrance hall, library and sitting rooms. The school is registered and connected with a hospital of over 1500 beds.

Applicants must be over 18 and under 35 years of age, and have had one year in high school or its equivalent.

Apply at once for information to

AGNES S. WARD, R.N.

Superintendent, Metropolitan Training School, Blackwell's Island, New York City

The Brookfield School

An open-air school for a small group of girls

Directors: Miss Helen Fairman Cooke, A.B. Wellesley College; Miss Marion F. E. Cooke, A.B. Wellesley College

AIM

To develop a sound mind and heart in a sound body.
To make the girl capable, alert and womanly.
To make her thorough.
To make her reliable and resourceful.
To make her likable and sincere.
To teach her to think and act with intelligence.
To teach her how to study.
To teach her how to use her mother tongue.
To help her to find herself, and therefore
To make her happy and useful.

EQUIPMENT

Colonial house—atmosphere of simplicity — open-air sleeping and dining porches — open-air school-room — unstinted sunshine — gardens for all — space for play—woods and fields—experienced understanding, motherly teachers.

METHODS

Individual and class instruction—close supervision of work — careful study of each girl's nature—work made a joy — power of concentration developed—intimate association with teachers—spirit made a matter of education—teaching by example rather than precept.

COURSE OF STUDY

An enriched high school course—general, special, and college preparatory—modern languages a part of daily life—Domestic Arts, Music, Gymnastics—foundations laid for culture.

PLAY

Tennis—basket-ball—tramping—coasting—skating—snow-shoeing—dancing—singing—games—story-telling—play-acting.

References given and required

Correspondence with the Directors by appointment only

How to Use The Independent in the Teaching of English

This brochure is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address W. W. Ferrin, The Independent, 119 West 40th St., New York.

Rhodes has pictured a series of alluring vacations, which may be taken with or without work as circumstances dictate. Newport fashions and the Adirondack "camp" have their place *In Vacation America*, but so has the city-dweller's "vacationette" and even Coney Island.

Harper's. $1.50.

LAUGHS AT HOME AND ABROAD

National Humour, by David Macrae, is a random compilation of characteristic jests from various parts of the English-speaking world: Scottish, Highland, English, Cockney, Welsh, Irish and American. We hope for another volume of Canadian, Australasian, Manx and South African, in order that no part of the British Empire may be neglected.

Stokes. $1.75.

THE COST OF PEACE

The Story of Julia Page—for once the title accurately describes the book—is the biography of a woman with courage and wisdom. Having the rare gift of recognizing the best in life, she tenaciously refuses any bargain-counter substitutes, and willingly pays the full price of effort and sacrifice to carry out her ideals. It is an interesting and convincing characterization that Kathleen Norris has given us.

Doubleday, Page. $1.35.

NOT VERY WICKED

It would be easy to draw a wrong conclusion from the title of Mrs. David G. Ritchie's latest novel, *Two Sinners*. It is a quiet story of English country life, low in key as an English landscape on a gray day, with nothing hectic about it. An attractive heroine very nearly marries for his money a man she doesn't love, but repents in time to save her from the sin which Mrs. Grundy has always condoned.

Dutton. $1.35.

ANOTHER ROUTE TO THE MILLENNIUM

To endeavor to convert into story form a theological treatise on the Prayer Book is like mixing oil and water, tho undoubtedly E. M. Greene hoped to gain a wider audience for his message under the cloak of narrative in *The Archbishop's Test*. As a treatise, while its theology is indigenous to the Church of England, its spirit is universal, but as a story it is a book without a country.

Dutton. $1

UNOFFICIAL HEROES

Those unofficial heroes, few of them remembered even by name, who helped win an empire for the Stars and Stripes, make the theme of E. Alexander Powell's *The Road to Glory*. Vividly the historian's neglect is made good, as the author follows his adventurers amid Florida swamps, across torrid Texas plains and Chihuahua deserts and into the fastnesses of the Indian country. A fit companion-piece to his *Gentlemen Rovers*.

Scribner's. $1.50.

A MORAL ENTHUSIAST

Whatever one may think of his judgment in this attempt to awaken the conscience of the absentee landlordism that [illegible] shooting [at Ludlow], and the support that relieves these absentee landlords with spiritual consolation, the devotion and sincerity of Bouck White are revealed in his *Letters from Prison*. If those who do not accept his conclusions will give us an equally impassioned reply they will do the public valuable service.

Boston, Badger. 50 cents.

THE NOVELS OF DOSTOEVSKY

While the *House of the Dead* was written in 1854 and has twice appeared in English under slightly varying titles, it is necessary to call attention to the publication in the series of excellent translations of Dostoevsky by Constance Garnett, Nos. [illegible] and Miss Garnett proved admirably capable of carrying over the spirit of the book and also makes plain many local details of Siberian life otherwise [illegible] to the American reader.

Macmillan. $1.50

EFFICIENCY QUESTION BOX

CONDUCTED BY EDWARD EARLE PURINTON
DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

162. Mr. T. F. D., New York. "In your article on The Road to Efficiency, you spoke of the brain's being made to double its output by regular use of the right methods. As a literary worker I am particularly interested in what you term *intensive farming* of the mind, and should be glad to have suggestions. I sincerely appreciate the work you are doing."

The brain is like a field, and must be tilled accordingly. Among the essentials of intensive farming are soil selection, seed selection, irrigation, fertilization, planting time, protecting from weeds and insects, harvest and sale, rotation of crops.

Apply those principles to your work. Let your mind and your work be suited and adapted to each other; select your thought seed with utmost care; ventilate your mind with humor, candor, faith; enrich it with observation, toil, sympathy; plant your best ideas alone, in the early morning; protect them from the weeds of conceit, the blight of discouragement, the peril of interference; harvest your thoughts effectively, and sell them wisely. Learn to vary your mental productions to rotate your crops. I know an author who, formerly a mere poet, now writes poems in the morning, epigrams or advertisements in the afternoon. He rests one group of brain-cells by cultivating another.

---

163. Rev. J. W. M., Illinois. "(a) I would like to systematize, for easy reference, all valuable information found in my reading of books and magazines. Please give suggestions. (b) How can we apply your principles of organization to a church? There is great need for such application. (c) Is there a practical, helpful book on the development of the will?"

Partial answers to your three questions have already appeared in the Question Box. Consult all back numbers.

(a) The answer to X. Y. Z., Brooklyn, gives references on filing methods. You should construct a topical index, alphabetically arranged, of general subjects; and under each a series of subtitles, with location of article, chapter or clipping referring to these respective subdivisions. Then as you read a book or magazine, note on your index the memoranda which may be valuable later, with page on which it occurs.

(b) Write the Seabury Society and the Laymen's Efficiency League, both of 49 East Twenty-fifth street, New York. Also obtain list of publications of the University of Chicago Press.

(c) Frank Channing Haddock's book, *Power of Will*, is one of the most widely known; write Pelton Publishing Company, Meriden, Connecticut.

---

164. Mr. C. W. H., New York. "I read your articles with great interest and believe you can help me to eliminate these conditions of ill health: Auto-intoxication, low vitality, spells of mental depression, haze over the mind, excessive desire for sleep, chronic constipation, headaches from worry or prolonged study. Have consulted several doctors, with no marked improvement from their treatment."

Drugs will never cure you. But a sane combination of diet, exercize, baths, and psychology should be effective. Your greatest trouble may be a sluggish liver, producing the constipation. Write for list of books to the Battle Creek Sanitarium, Battle Creek, Michigan; to *Health Culture* magazine, Passaic, New Jersey; to *Physical Culture* magazine, Flatiron Building, New York; to Lindlahr Sanitarium, 525 Ashland Boulevard, Chicago; to Corrective Eating Society, Maywood, New Jersey. Other books of interest: Dr. E. H. Dewey's *No-Breakfast Plan*, Alfred McCann's *Starving America*, Adolf Just's *Return to Nature*. Can you not join a Y. M. C. A. gymnasium, and put yourself under the physical director? He should be able to outline a good system of exercize. A copy of the *Nautilus Magazine*, Holyoke, Massachusetts, should start you to thinking along hygienic lines.

165. Professor E., Minnesota. "I solicit your help. My weakness seems to be indecision. I am twenty-three years old and a school principal. I am not successful as a disciplinarian. I cannot act promptly in a crisis. My efforts to instruct the boys in better methods seem to fail. I keep cheerful most of the time, but my responsibilities beat too much on my mind. Inexperience hampers me. I should like to be a medical missionary, but hardly see my way to it. Have I missed my calling?"

You need *action*, and lots of it. Tennis, boxing, bicycling would make your mind more alert, with your muscles. Hire a lonely barn somewhere and in solitude learn to be a *leader* in some athletic sport. This will give you confidence, and immediately put you on a pedestal with the boys. Youth listens not to the man who talks, but to the man who does things. Get a sporting goods catalog, then get busy. Secure a copy of my booklet, *The Triumph of the Man Who Acts*.

Do you really want to be a medical missionary? Then you should be, and you can be. First, however, prove equal to the job you have!

---

166. Mr. C. V. J., Michigan. "Our fraternity chapter of forty men has undertaken a study of personal efficiency. We understand that the problem in its final application must be worked out by the individual, but we want to find a general method of attack which we can all follow in becoming more efficient students and in solving the various problems of college work. Can you suggest a plan?"

We can suggest only the beginning of one. To make it effective, you must work it out yourselves.

Obtain for each member of your fraternity a copy of The Independent Efficiency Booklet. Have him grade himself (silently) and write down (perhaps anonymously) the subject he considers most profitable to study. Take a vote on these subjects, and ask us for information on the one representing widest need and interest.

Or, secure all back files of The Independent containing Efficiency articles and Question Box. Assign to each member an article, a test or a group of eight or ten Question Box answers. Let each man gather ideas and possible applications for college work, then have your secretary put these in a joint report. Send this to us for criticism and coöperation, or submit to one of your college faculty. We specially applaud your endeavor as a much-needed innovation.

---

167. Miss R., North Dakota. "I am a teacher in a normal school. I know we teachers generally are not efficient as women, and you have led me to think we fail partly because of our inability to play. Am I right? I am a plodder by day and night, and am a very uninteresting, clumsy-minded person in society. I don't know how to have a good time and can't help others play. Is there any tangible remedy?"

There is always a remedy. Ask the Playground Association of America, at No. 1 Madison avenue, New York, for all their literature, and for a list of books on the hygiene, psychology and sociology of play. Then plan how to introduce the playground movement in your school, or adapt it thereto.

Subscribe for a good "funny paper" and take a large dose of mirth after dinner. Cultivate a fondness for funny stories and absurd fiction. Maybe you could write a fairy tale yourself—who knows? Try it.

Do not think of yourself as "clumsy-minded" in society. Society itself is clumsy-minded, artificial, stupid and unfair. It can never appreciate your full worth. But when a sincere woman like you learns to *enjoy herself*, she can help society more than the common, thoughtless women can.

What are you kicking about?

—You men who think you're underpaid

The men who get big pay are those who are ***trained*** to earn it. Your pay is small because you have no special training—***and you only are to blame.***

You can ***learn*** to ***earn*** more. No matter what your job, where you live or how old you are, if you can read and write, the International Correspondence Schools can train you for a ***better position*** and ***bigger pay.***

If you want to get out of the ranks of the "hard-ups" and be somebody, prove your ambition by marking and mailing the coupon on this page today. Thousands of others ***just like you*** who have used this coupon are now occupying positions of power and high pay. You can join them. ***Grit your teeth, say "I will" and mail the coupon NOW.***

HOW TO USE THE INDEPENDENT IN THE TEACHING OF CIVICS

This brochure is of special help to teachers of Current History, Current Topics, Civil Government, Law and Economics. It is free. Sending for it will not place you under any obligation. Address W. W. Ferrin, The Independent, 119 W. 40th St., New York

This Typewriter

was selected by the juries of both the

Panama-Pacific

and

Panama-California Expositions

for the

HIGHEST AWARD

in the portable typewriter class

Such an indisputable testimonial to the merits of the Corona is not surprising since competent judges, everywhere, admit that in design, construction, and quality of work, the Corona can be equalled only by a very few of the more expensive office machines.

For the man or woman who travels, or who does not find it convenient to own a typewriter which cannot be carried from place to place, the Corona will prove of the greatest assistance.

Weighing but 6 pounds (with substantial carrying case, 8¾ lbs.), it is the ideal Machine for Personal Use at home, in the office, or while traveling.

Colon Hygiene

A New Book, fully illustrated, wholly 100 pages, by
Dr. J. H. Kellogg
Superintendent Battle Creek Sanitarium

Describes causes and results of chronic constipation and new and successful methods of *home treatment*. Any reader of this magazine may, by sending $1 secure the book on examination with privilege of return in five days for refund. Send order to Good Health Publishing Co., 489 W. Main St., Battle Creek, Michigan

FINISHING GOVERNESS

Recent employer highly recommends finishing governess or companion for young ladies at home or abroad. Unusually social teacher. Executive faculties. Highest references. Perfect German and French; would accept position as companion. Address Miss E. P., care of Independent.

SHORT-STORY WRITING

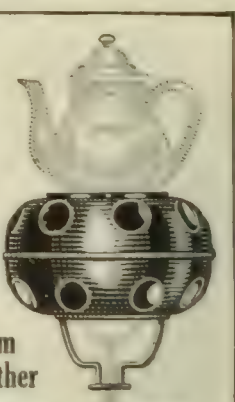
A course of forty lessons in the history, form, structure and writing of the Short Story taught by Dr. J. Berg Esenwein, Editor Lippincott's Magazine. 250-page catalogue free. Prose writers wanted.
THE HOME CORRESPONDENCE SCHOOL
Dept. 305, Springfield, Mass.

The Chautauqua Idea

Helen Keller and Mrs. Macy have made their first Chautauqua tour. "Happiness" was the subject announced for the address by the famous deaf and blind authoress and her companion.

Alice Nielsen, operatic prima donna, and Creatore's Band were the two most expensive new attractions on Chautauqua circuits this season. $50,000 is reported as the contract price for Miss Neilsen's tour of 120 towns.

The International Lyceum Association convention of people actively engaged in Lyceum and Chautauqua work met in Chicago September 13-17. Besides a general program of platform performances, problems of lecturers and the question of subsidies were discussed.



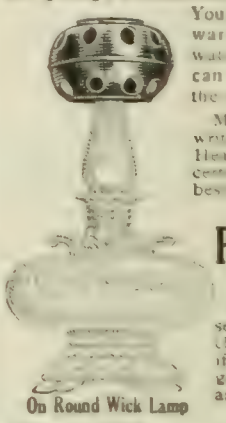
The Pennsylvania Chautauqua Circuit introduced the feature of a town parade this season on the day before the Chautauqua opened. Churches and civic associations, boy scouts and the like, as well as suffrage societies and merchants, took to the idea. Motion pictures of the town parade were exhibited later at the Chautauqua.

Twenty-six people graduated from the Chautauqua Home Reading Course at the Chautauqua Assembly in Long Beach, California. The exercizes were carried out in detail in imitation of the Recognition Day at Chautauqua, New York. The city of Long Beach contributed the municipal band and mounted guards for the march of the graduates.

One hundred and forty graduates of the four-year Chautauqua Course past thru the Golden Gate at Chautauqua, New York, on Recognition Day. They represented nearly every state in the Union and several foreign countries. Dr. Shailer Mathews delivered the baccalaureate sermon. Bishop John H. Vincent presented the diplomas.

Members of the new class of the Chautauqua Home Reading Circle from all parts of the country elected the following class officers at Chautauqua, New York, during the season: President, J. Spencer Voorhees, Lee, Massachusetts; vice-presidents, Rev. F. B. Allnut, Montreal, Canada; Mr. J. V. Gano, Cincinnati, Ohio; Miss Ida R. Wholey, Baltimore, Maryland; Dr. W. L. Bevat, Hengchow, Hunan, China; secretary, Mrs. W. J. Bradberry, Pittsburgh, Pennsylvania; treasurer, Miss Karl Switzer, Orlando, Florida. "America" was chosen as the class name, "Peace and Democracy," the class motto, the American Beauty Rose, the class flower.

Giant Heater



Will Make a Stove of your round wick lamp, gas-jet or mantle burner. Requires no more gas or oil than for light; does not lessen the volume of light; utilizes the waste heat. Heat and light at one cost.

Will Heat Ordinary Room Comfortably in Zero Weather

A river will run mills by concentrating its power—your lamp or gas jet will heat a room by concentrating, intensifying and distributing the waste heat with a **GIANT HEATER.** This heater causes a circulation of the air, giving a uniform heat. No odor, dust, ashes or trouble.

On Gas-Jet

On Round Wick Lamp

You can heat any room, office or den; warm baby's food or your shaving water; make tea or coffee and you can do these things **quickly,** for the heat is intense.

Mr. Homer Smith, Wyoming, Del., writes: "We have used your Giant Heater in our home five years, and are certain it saves us a ton of coal a year besides its convenience."

Price

Black Iron	$1.00
Polished Brass	$1.50
Nickel Plated on Brass	$2.00

Send today for a heater—we will send it by first mail or express, all charges prepaid. Use it 10 days and if not satisfied return it within 10 days and get money back. Send for free book anyway.

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an annuity as issued by the Home Life Insurance Company of New York. This will yield a much larger income than can be obtained from any other absolutely secure investment. For a sample policy write to

W. E. UNDERWOOD

FURNISHING FORGOTTEN FACTS

This department of The Independent has just performed for one of its readers a service which, considering the discouraging circumstances under which it was undertaken, may fairly be regarded as gratifying. The interesting nature of the incident warrants its narration.

A reader in China wrote in substance: "I have lost my insurance policy of $1000 in a company the name of which I have forgotten. I have not paid anything on it for at least fourteen years. I took it out in 1894 and kept it paid up, I think, until 1901. The company's headquarters were in Connecticut and it seems to me it was called the Connecticut Mutual. There was a series of values on the face of the policy, varying with the number of years it was kept up. What should I do in the premises?"

Here was a hard one. As may be seen, the facts presented were meager and of the most indefinite character. It looked a hopeless task. But it was not.

The policy was issued in 1894 on an application made at Omaha, Nebraska, and, as stated by the correspondent, was kept paid by him until its anniversary date in 1902, when it lapsed. As paid-up insurance it is worth $244, plus $19 bought with dividends. There also stands to his credit $6.96 in cash dividends. The details of the transaction may be found elsewhere in this department.

C. J. W. O., Springfield, N. J.—According to its report of December 31, 1914, the company you mention is fully solvent and has a small but sufficient surplus. My judgment respecting its advantages as a policyholders' company do not at all coincide with the claims made by its managers. During the brief period the company has been operating under its present system it has produced no results that would justify me in believing that it will, in the future, surpass or even equal those achieved year after year by twenty companies I could name. I am not convinced as to the future of the company and, while I may be mistaken on that point, I cannot recommend to another something I would not do myself. A life insurance policy is generally a long contract and it cannot be too secure, particularly as to the future.

G. C., Kia-ying Chau, Swatow, China.—In 1894, at Omaha, Nebraska, you applied to the State Mutual Life Assurance Company of Worcester, Massachusetts, for a $1000 policy, naming your wife as beneficiary. That company issued to you its 39-Year Life Rate Endowment policy for that amount. The policy lapsed in 1902 for non-payment of premium, and automatically became paid-up for the sum of $244. There are also to your credit accumulated dividends of $6.96 and $19 of additional insurance purchased by dividends. Communicate with the company, state your wishes in the matter, and you will be instructed how to proceed.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors which will give personal attention to the desires of its subscribers for information in regard to investments of all kinds. The Independent has always given more space to financial affairs than any other popular weekly. It maintains departments of finance and insurance and carries an exceptional amount of financial advertising. Now "The Market Place" is to be expanded so as to meet the needs of the average investor. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them either by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves on this important question. Our aim, in brief, is to aid our readers to invest with full knowledge, to help them select investments wisely, to help them distinguish the best investments and know what is back of them, to make them familiar with these four cardinal requirements of sound investment: security of principal, ready convertibility, fair interest rate, steadiness of income.

THE ANGLO-FRENCH LOAN

The books for subscriptions to the Anglo-French loan of $500,000,000 were closed on the 5th. Many applications were received by mail or telegraph afterward. While there has been no official publication of the figures, it is understood that the subscriptions have exceeded by $100,000,000 or $150,000,000 the $500,000,000 required. It is asserted that the first six subscriptions amounted to $100,000,000. It is reported that there may be another loan, a few months hence.

Mr. Bryan has continued to express his disapproval of the transaction. Henry Ford, the manufacturer of automobiles, who promised to withdraw from banks participating in the loan any funds deposited by himself or his company, is annoyed by a boycott of his motors in Canada.

Two or three weeks ago, Dr. Hexamer, president of the German-American Alliance, sought, by many telegrams, to cause withdrawals in various parts of the country. The loan, he said, was the project of a Money Trust conspiracy. Similar appeals to depositors were made by the American Truth Society, a prominent officer of which is Bernhard Ridder. Threats that withdrawals would be made were sent to many banks in the West. A Magyar mutual aid society withdrew its fund of about $500,000 from a Western bank and urged its 28,000 members to take similar action. In New York, the German Savings Bank, which has $92,000,000 of deposits, addrest to banks in which its cash had been placed inquiries which foreshadowed withdrawal. The American Truth Society has appointed a committee of one hundred men, directed to visit the savings banks and other banks, and to ascertain whether they have a financial interest in the loan. The officers of one savings bank reminded the committee that the institution held mortgages on the homes of more than 5000 German-Americans, and might decline to extend the terms of these liens. While this movement in relation to deposits is said to have affected the action of a few banks in the Middle West, there is some evidence that it stimulated investment in the loan by individuals who regarded it with resentment and hostility.

A BILLION BUSHELS OF WHEAT

From month to month the Government's estimate of this year's wheat crop has been growing, and now the billion mark has been reached. Last week's report adds 23,000,000 bushels to the yield of spring-sown wheat, and thus makes a total of 1,002,029,000. While, of course, this is the greatest crop ever harvested in this country, it should not be forgotten that its immediate predecessor (891,017,000 bushels) was also the largest that had then been known.

Nearly all of the great surplus for export from last year's crop has been sold at high prices. Probably there will be a good market abroad for the new and larger surplus. Exports are increasing. Last week they were nearly 11,000,000 bushels, altho the weekly average in July was only 3,500,000 But the prices of a few months ago will not be paid. The supply is very large; Canada has a great surplus, and if the Dardanelles should be opened, Russia's surplus for two years would be released.

Our wheat crop is not the only one that breaks the record. There are 1,317,178,000 bushels of oats, or 100,000,000 more than the greatest of preceding crops, and 376,000,000 more than we had last year. New high records are made by barley, rye, and hay. The corn crop of 3,026,159,000 bushels (valued at more than $1,750,000,000) has been surpassed in only one year, and last year's yield was smaller by 350,000,000. Gains over the crops of 1914 are shown by flax, rice, tobacco and peaches. The yield of potatoes is a notable exception. A reduction of the estimate by 37,000,000,000 bushels in September, due to unfavorable weather and blight, makes the crop a short and poor one. The report as a whole, however, shows that our country has been remarkably fortunate in a large majority of the products of its soil at a time when Europe needs what we can spare.

Cotton cannot be included in this majority. The latest official report, issued three days before the report about grain, disclosed a sharp decline of condition to 60.8, which permitted an estimate of only 10,950,000 bales. This is the smallest crop in ten years. It follows one of 16,135,000 bales. The change is due in part to a reduction of planted area by 14 per cent, or 5,297,000 acres, and this reduction was caused by the war, which so seriously affected the marketing and price of last year's great crop.

THE STOCK MARKET

On the New York Stock Exchange last week the daily average was about 1,350,0000 shares. From the beginning, wild speculation in war order shares was subjected to some restraint, owing to advice given by brokerage houses to their customers, the exaction of larger margins on purchases, and a higher commission on odd lots. In the first three days there were net losses for the war shares with one or two exceptions. Selling pressure compelled a general decline. The most notable exception was Bethlehem Steel, which rose to 401. Sales were made in January at 46. On Thursday, recovery caused net gains thruout the list. On sales of only 6300 shares Bethlehem advanced to 450, showing a gain of 48½ in one day. An irregular market on Friday showed no uniformity in the changes. For the five full days there were losses for nearly all the war order shares. Bethlehem Steel's net gain was 64 points.

For American Car and Foundry and Crucible Steel a net loss of 12 may have been due in part to official statements which swept away delusions. There had been reports that Car and Foundry's war orders amounted to $90,000,000. The company's president, Mr. Eaton, said to the public that the total was only $7,561,000 and that no negotiations for additional contracts were pending.

In the latter part of the week there was a noticeable revival of activity in railroad stocks, with gains of 3 or 4 points for several issues. 8 for Lehigh Valley and 7 for Reading. This was unexpected and encouraging, for the railroad shares had for some weeks been neglected.

Independent Opinions

THE position which the United States occupies as the only great maritime power not involved in the war imposes upon us as our especial duty the safeguarding of the freedom of the seas. This impels us to protest and remonstrate first with one side and then with the other, for any nation when at war, not excepting the United States, is tempted to interpret international law in its own interests and to disregard the rights of neutral nations.

But the efforts of the United States to maintain the principles of international law against violation from either side naturally subject us to dislike and misconception from both. The Germans can conceive of no reason why we should object to the sinking of the "Lusitania" and the "Arabic" except our being bought by British gold. The British regard our protests against their confiscation of our beef and their stopping of our ships as proof of our mercenary nature. Whenever we write an editorial on this question we get hit from both sides, as the following letters show:

Your editorial of September 13 on "For the Freedom of the Seas" certainly has for its thought a timely subject, but the soft way in which you handle it, and especially toward England, the country which far more than any other has interfered with our freedom of the seas, leads me to feel that your sympathy for England is so marked that you cannot speak out as you do against Germany. I have felt at times that you have gone out of your way to give Germany digs and at the same time you were silent as to England's high-handed course upon the high seas. Why do you not say something about the 2000 cargoes that have been detained in British ports, many of which were seized upon the high seas, even tho consigned to a neutral port?

History proves that we have vastly more to fear from the navyism of England than the armies of Germany. Go on, and close your eyes to the horrible hell made by our shrapnel, but I shall continue to pray that God may open your eyes that you may see. Possibly God is getting after a nation that has lorded it over the earth for two hundred years and some day Gibraltar, the Boers, and many islands and countries, will be vindicated. REV. H. A. OTT

Grace Lutheran Church,
Columbia City, Indiana

I read your colleague's, Mr H Howland's, letter in the *Daily Express*. I think he takes too narrow a view of the war, as if it were a personal affair—a little war between two peoples instead of a world wide war, a war that will more or less affect the power and liberty of every neutral country, great or small. Once Germany becomes top-dog we all go under, her own Austria and Turkey. So instead of harassing England with the loss of a few dollars of a few weeks or months delay in trade, why not unite and strive with every nerve to help England to starve, to crush, to do anything to stop the war? No peace proposals will stop the war—it's a fight to the finish now. And the Allies still never field —they are for Right and the Germans for Might! The United States must practise and preach less; they are in a very safe area; they can greatly help us with munitions, and *no one* but Germany wants them to join in fighting. H. DOVE

Hastings, England

In relation to our editorial of August 16 on the problem of the Pribiloff seals we have received the following communication from one who has a thoro acquaintance with the situation:

While certain phases of the fur seal matter are very well stated in your editorial, the real point at issue now is omitted. Not only was pelagic sealing stopped in 1911 by international agreement, but commercial sealing was also stopped in 1912 by act of the United States Congress, altho an agreement to share our land catch with Canada and Japan was the consideration on which these nations agreed to discontinue pelagic sealing. It was this action of Congress that continued the "seal controversy."

The report under discussion condemns anew this law of 1912, stating at page 105 that it "now offers no compensations for its many disadvantages." It further states, as you point out, that we should "resume commercial sealing at once." This is in effect a recommendation that the law be repealed. The investigation was concluded in August, 1914, but the report was not submitted to Congress until February 17, 1915, too late for action to save the commercial catch of 1915, a matter of half a million dollars worth of sealskins. This is part of the $2,700,000 of loss which you point out is to result from the failure "to take and market the skins at the proper time." A million dollars worth of this loss occurred in 1913 and 1914 for the same reason. My reports for 1912 and 1913 calling attention to the imminence of the loss unless the law was repealed were ignored and suppressed by the Secretary of Commerce. He has now delayed the new report with its reiterated recommendations for repeal until too late to make it immediately effective as contemplated, and his colorless letter of transmittal gives no assurance of active effort to secure repeal in the Congress to convene in December.

It is the duty of a journal like The Independent to help arouse and shape public opinion so that such mismanagement of public property shall not pass unscathed of criticism. GEORGE A. CLARK

Stanford University, California

The question of what can be done to revive our merchant marine is one of such timeliness and perplexity that we are glad to give space to one who can speak from experience as a seaman.

Mr. Edwin E. Slosson's article in your issue of September 6 I read with great interest. I would like to take issue with him on one of the reasons he gives for the decline of the American merchant marine, which he expresses in the following statement: "We have never recovered from the destruction of our shipping during the Civil War by cruisers 'made in England.'"

The principal cause, and the only one of the disappearance of the American flag abroad is wages.

In all the literature on the subject, only one man hit the nail on the head. That was the late Senator Frye of Maine in an article in The Independent of June 21, 1906.

The writer has sailed in American sailing ships deep water voyages a number of years, both before and abaft the mast.

When in the 80's American ships were paying able seamen $25 a month on deep water voyages England paid £3 10s., roughly speaking $17.50 which at that time was the highest wage out of Europe. Germany, France, Holland, Norway, Sweden, Italy did not pay nearly that much.

That was and still is the reason why so many nationals of these countries sail in British ships. As soon as they came to an American port a great many took French leave, to secure the higher American wages.

Then, too, the United States built wooden ships mostly. England built iron ships, then steel ships, which she is still building today, and which both England and Germany can build considerably cheaper than American shipyards. *Wages* again!

A vessel under the American flag does not get a penny more freight than ships under a foreign flag.

Not many years ago a French ship came in ballast from Valparaiso to Philadelphia to load case oil for Japan, at a lesser rate than a large American ship, the "Emily E. Southard," I believe, in port at Philadelphia at the time, could carry it and come out even, let alone make a profit.

We have heard a great deal of late about the American merchants buying some of the large German steamers tied up in American ports. They are not the class of ships that do the bulk of the carrying trade to foreign ports for their respective countries. It is the tramp steamer from 3000 to 6000, tons that can wallow along at a ten or thirteen mile clip, with low coal consumption.

Our coasting trade, and the trade on the Great Lakes, at which our national Solons point with pride, are monopolies.

The whole thing in a nutshell, from beginning to end, is simply a matter of *wages, wages, wages.* E. M. WITSCH

St. Louis, Missouri

The observant reader will note that the statement he quotes from the "Conquest of Commerce" article is literally true, but that it was not given as a reason for the present condition of American commerce. Mr. Slosson did not accuse England of being to blame for our present lack of shipping for obviously we have had plenty of time in the last fifty years to recover from that blow and would have built up a new merchant marine if it had paid us to do it.

In writing to us about our editorial, "Making Every Vote Count," the editor of the Hillsdale *Leader* expresses the opinion that the reason why proportional representation, which is so logical and just in theory, has failed to gain general acceptance is because it seems too complicated and difficult to operate. He suggests a plan for effective proportional representation which makes simple both the voting and the counting of the ballots:

Provide for election on a general ticket. Allow each voter but a single vote for his first choice only. Then provide that the required number of candidates receiving the greatest number of votes shall be elected, but that the terms for which they are elected shall be of different length according to the number of votes received. For instance, if a board of commissioners of ten members is desired, let four be elected each year, one for four years, one for three years, one for two years and two for one year. If seven members are required elect three each year, for four years, two years and one year respectively; or one for three years, one for two years and two for one year. Almost unlimited variation is possible to provide for large or small boards and for terms of considerable length or comparatively short.

This plan might not always result in effective representation of so large a portion of the voters as would a more complicated plan, but the greater simplicity far outweighs this theoretical objection, especially when we consider how much more satisfactory in every respect such a plan would be than any plan which has ever been put in general operation.

JUST A WORD

The cover of The Independent this week is taken from a photograph copyright by Van der Weyde, New York.

Mrs. Fannie Bullock Workman, who has traveled extensively in the East and has been the first woman to climb many peaks, will tell the readers of The Independent her experiences in *Exploring Asia's Greatest Glacier*. A contribution will be published in the near future from the able pen of Gertrude Atherton. Christabel Pankhurst and Fola La Follette will discuss some phases of feminism. Mrs. Corra Harris and Irving Bacheller are to answer the question of perennial interest, "Do women understand men or men women?"

What Is the Best Thing in Your Town we asked our readers in the October 4 issue of The Independent. What is it that makes your town the best place in the world to live? Already we have had many interesting and varied answers. "The town library," says one; "crops" says another. But what we want is an answer from every town in the United States. Perhaps opinions may differ and we shall have two or three "best" things for one town. So much the better.

For the most interesting article we will give a prize of $100. For any other printed in full we will give $25. If we use quotations we will pay for them according to space. Don't make your article over 1200 words and remember that an illustration may add greatly to the interest. All manuscripts must be in hand not later than December 1.

REMARKABLE REMARKS

MRS. GALT—Isn't it perfectly beautiful?

J. P. MORGAN—Business is picking up.

WILL S. HAYS—The good is dead.

MAURICE MAETERLINCK—The dead do not die.

PROF. H. T. BOREHAM—What is a press agent?

DR. CARL T. CHAPMAN—The President is a nice man.

PROF. GEORGE F. GUNDELFINGER—Salmon needs exercise.

JAMES WHITCOMB RILEY—I never read the newspapers.

IGNACE JAN PADEREWSKI—All I have is my country's.

HENRY FORD—Anything imaginable can be accomplished.

SENATOR BURTON—Passively I may be regarded as a candidate.

MRS. HOBART CHATFIELD TAYLOR—I advocate a larger army.

REV. E. C. S. DORIAN—How many people ever pray for the police?

MAY IRWIN—If your savings amount to $2000 put them in four banks.

J. D. ROCKEFELLER, JR.—My father does not know the meaning of fear.

EX-ATTORNEY GENERAL BONAPARTE—I have no faith whatever in treaties.

ALICE NIELSEN—I haven't found that motherhood interfered with my career.

REV. MALCOLM JAMES MACLEOD—The sword of flesh is fast cutting its own throat.

SECRETARY DANIELS—Hazing of all kinds is to be ended at the Naval Academy.

JUDGE BEN LINDSAY—I will use a shotgun if necessary to protect my reputation.

DAVID LLOYD GEORGE—Upon the future attitude of labor depends the issue of the war.

DR. KOO, CHINESE AMBASSADOR—Columbia I regard as the great university of the future.

ROSHANARA, DANCER—American women would be more beautiful if they would live more upon the floor.

PROFESSOR M. V. O'SHEA—There is a fascination for both sexes in promenading the streets at night.

WALTER CAMP—Driving maketh a proud man, approaching maketh a dangerous man, but putting maketh a winner.

REV. BOUCK WHITE—No clergyman has the right to bind a man and a woman together so long as life shall last.

W. J. BRYAN—I regard it as entirely too early to discuss the next national convention of the Democratic Party.

LILLIAN RUSSELL—To preserve the feet in a thoroly healthy and comfortable state, the first object of attention should be cleanliness.

GERTRUDE ATHERTON—I have been very much struck with the assumption of my critics that as I am a writer of fiction, I must necessarily be a liar.

KING GEORGE—I have had electric light at my dinner nearly all my life, and I am not going to do without it now, whether there are Zeppelins or not.

CHARLOTTE PERKINS GILMAN—Suppose the women had the money and a man had to come to her for every hat, for every suit of clothes he wanted to wear.

MISS ALBERTA HILL, EXECUTIVE SECRETARY OF THE WOMEN'S POLITICAL UNION—It doesn't make a bit of difference to me what happens to suffrage, I'm going to be married.

CARRIE CHAPMAN CATT—Anti-suffragists are demanding the right of freedom from a duty. . . . The guillotine answered this claim of the right of aristocracy to be free from its political duties.

ED. HOWE—In every crowd, when the band strikes up "Dixie" or a speaker mentions Roosevelt, there is applause. It is a habit. "Dixie" isn't a very good tune, and Roosevelt never reduced taxes.

Are You a Winter Stay-Indoors?

When winter's bite makes the touring car cheerless and uncomfortable, do you become a stay-indoors, limiting your activities to absolute necessity? Or do you enjoy the wonderful freedom of going and coming that a closed car provides?

The work a touring car does for you in summer is nothing to the grateful service rendered by the closed car in even the worst weather that old Father Winter can fling at us. Between home and office, to the theatre, the dance and dinner, to the homes of friends, for every engagement of every nature, the limousine or the sedan is a coach that defies weather and affords living-room comfort and good cheer.

Every successful family requires a closed car. It is the car of greatest convenience and of most distinction. We can make for you a Winton Six closed car of whatever variety you prefer, and finish it exactly to your taste. We take especial pride in the excellence of our coach work, and that requires time. Better place your order now, and have a delightful surprise in store for your family and your friends.

Prices range from $3250 to $3500. Sport limousines, coupes, and, other special types of closed cars designed to order. Write us today.

THE DEMONSTRATION OF EQUAL SUFFRAGE

LAST week for the first time the women of Norway exercized the parliamentary suffrage on the same terms as men. This is no revolution: this is the result of no violent agitation. It is the completion of a quiet and normal process of political development. A hundred years ago the Norwegian people determined that they wanted a complete democracy. Now they have got it. The Eidsvold constitution of 1814, one of the most remarkable political documents of history, gave the rights of citizenship to all men and women of twenty-five. But the powers of Europe, then combined for the suppression of democratic movements everywhere, crushed out independent Norway, and since then the people have been slowly striving to realize the ideal exprest in that famous instrument. One by one the clauses of the Eidsvold constitution have been put into effect, until now the people have practically gained all the liberties to which they then aspired. The emancipation of women began in 1901 and proceeded by easy stages; first, local suffrage with property limitation; then limited suffrage in general elections. In 1911, Anna Rogstad was elected to the Storthing. In 1912, women were made eligible to all offices except ecclesiastical, military or cabinet. In 1913, full parliamentary suffrage was given to women, and now it is being exercized.

In all of the Scandinavian countries women now have the suffrage; complete in Norway, Denmark, Finland and Iceland, partial in Sweden. Besides this, the women have the right to vote in Australia and New Zealand, and in twelve of the American states and Alaska, not counting such limited electoral privileges as they possess in most of the other states and Great Britain. The territory now under the equality régime embraces 5,287,000 square miles and a population of 28,000,000. In some of these communities the women have been voting for over forty-five years.

Whatever else may be said of woman suffrage it can not be called a theory. It is an established fact. It is no longer an experiment; it is a demonstration. It is not a question; it has been settled for lands much larger than all Europe. It is the one reform that never goes backward. Never has any community which introduced full adult suffrage by popular vote or popular legislature shown any signs of repenting its decision. There are not enough antis left in the Western States even to bring up the question again thru the initiative and referendum. It may safely be said that in the communities where the régime of equality has been for some years established the right and expediency of allowing women to vote is no more questioned than is the right and expediency of allowing men to vote questioned in our Eastern States, if so much.

To the theoretic argument for woman suffrage there has not been much to add since the time of Plato, who appears to have been the first president of the Athens branch of the Men's League for Woman Suffrage. But the experimental demonstration of its feasibility and success has been left to our own times. If the man-on-the-fence doubts whether the example of such small and isolated communities as Iceland and the Isle of Man can be taken as examples for New York or Pennsylvania, he can be referred to Australia and New Zealand, which are more nearly like America in the character and conditions than any other foreign country, or he may take a transcontinental excursion ticket and find out for himself that the people living in the western half of his own country are not so alien as he thinks they are.

It is funny to hear a man in Massachusetts or New Jersey say: "I, for one, will never live under a petticoat government." Poor man, he can't help himself unless he emigrates to some other country, and these are mostly at war. He already is living under a national government elected in large part by the votes of women. The women help elect twenty-four senators out of ninety-six. They control a sixth of the President, or, according to last week's announcement, the whole of him. The real situation is more striking than appears from these figures, for, owing to our unequal allotment of representation, the women voters of the West have more political power in national affairs than the men voters of the East. The ballot of one woman in Nevada will outweigh in senatorial legislation the ballot of 111 men in New York. So the question which the voter in New York or Pennsylvania has to decide next November is not, as he sometimes conceives it, whether he will allow women a share in the government under which he lives. It is merely whether he will continue to deprive his mother, wife or sister of the rights which the unknown women of the West have in the nation.

IT is over fifty years since The Independent advocated woman's rights in all three fields: educational, the right of women to enter educational institutions; industrial, the right of women to engage in any occupations; political, the right of women to an equal share in government. We may say—since none of the editorial staff of those days is with us now—that to take such a step at that time required some moral courage, also financial courage. Highly respectable people regarded us with abhorrence because of these demoralizing doctrines, and some of our friends deplored our eccentricity. Nothing that we have advocated brought down upon us more opprobrium unless it was our other queer idea, that human beings ought not to be held in slavery.

But now two-thirds of our woman's rights program

is accomplished, and one may advocate the third in almost any circle without being regarded as a social incendiary. The political rights of women in the matter of voting have been allowed to lag behind, because they were regarded, perhaps rightly, as less necessary than the educational and industrial rights. But the successful exercize of these has demonstrated the eligibility of women to the political rights, and these cannot be longer denied without rank injustice and obvious absurdity.

Lincoln and Wilson, Republican and Democrat, stand on the same platform in regard to equal political rights for women. But during the fifty years that separates them, woman suffrage has been tried in three continents, so that what was to Lincoln a hope is to Wilson a demonstrated fact. In 1865 it required prophetic faith to see the feasibility of woman suffrage. In 1915 it requires no more than candid observation.

THE END OF TURKEY

IF there is any justice in the course of history the end of the Turkish Empire must be not far off. What a happy, what a glorious conclusion of an inglorious history that will be!

We still anticipate, notwithstanding Germany's magnificent attack and defense, that the Allies will wear her out and the two empires she has led. But, whatever the result of this war Turkey as an independent power will be wiped off the map. If Germany wins Turkey will be under her sphere of influence, independent only in name; if the Allies win the Turkish Empire will be blown to the four winds of heaven, and this last is what we devoutly hope for and believe.

The Turkish rule for the past five centuries has insulted heaven. It has been the rule of cruelty, murder and lust, and the present attempt to exterminate its Christian subjects has simply filled up the measure of its wrath. Of the facts there can be no doubt, from many sources of information, from American citizens escaping the massacres, and now fully confirmed by Ambassador Morgenthau. The Turkish rulers made a suicidal blunder when they put themselves under the orders of Berlin, and they must suffer the consequences.

Beyond the present horrors we look forward to the happier days when Moslem rule shall be ended. The Turkish Empire covers the choicest region historically of all the earth's surface. It yields not even to Greece. There human history begins. There ruled Babylonia, then Assyria, then Persia, then the Macedonian Empire, then that of Rome, till Constantine established his capital on the Hellespont and ruled the world from the city that bears his name. Within what is now the Turkish Empire the three great historical religions, the Hebrew, the Christian and the Mohammedan, had their origin.

The resolution will be a renaissance by which these ancient lands, so long opprest, come under the rule of civilization, for Turkey has never risen out of barbarism. An American traveler, after riding from sunrise to sunset in the incredibly fertile valley of the lower Euphrates, saw not a single man or beast, only the remains of former irrigation. Reaching at night a miserable village of agricultural Arabs, he asked why the land had been deserted, and was told that some years before the Turkish ruler doubled the taxes, and when the people could not pay he shut off the water from their irrigating canals. The people died of starvation or fled the land. That was Turkish rule.

The British are marching on Bagdad. They will hold the valley of the Tigris and Euphrates. They have had their eyes on the railroad connection with India ever since sixty years ago Colonel Chesney mapped the route along the Euphrates. England holds the Nile and Bagdad will be a British capital, and once more the desert shall become a Garden of Eden and populous as in the days of old. The Arabian coast from the Persian Gulf to the Red Sea will equally be under British rule, with a fair hope for the renewal of the old fame of Araby the Blest. From the north Russia will allow its fugitives to return to Armenia and will hold that splendid region under some such independent rule as it promised Poland. Constantinople as a new capital of Russia, or as a free city under the protection of the powers, will again flourish as the emporium of the world. Asia Minor and Syria will be portioned out under the control of European nations, and wealth and enterprise will flow in a golden stream, while the scholarship of the world will for centuries search the ruins and mounds for the recovered records of ancient civilization.

Or if the Teuton hosts prevail the Turkish Empire will remain as a name and a fleshless ghost subject to the will of its German protectors. Even so, barbarism will go, and civilization will come imposed by force. The old Moslem power must end. The world demands it, and in one way or another it will effect what it demands.

IS IT NECESSARY?

THE plans worked out by Secretary Garrison and Secretary Daniels for increasing the army and navy were given out at Washington last week. They are said to have the President's approval.

The Garrison plan calls for an increase of our regular army from 93,000 to 140,000, and the establishment of a continental army of soldiers who will enlist for six years. During the first three years they will be required to serve two months each year. During the last three years they will be subject to call to the colors at any time.

Secretary Daniels proposes a naval program for five years. The first year there will be begun two dreadnoughts, two battle cruisers, twenty-five coast submarines, five sea-going submarines, twelve destroyers, etc., and there will be an increase of 8000 men in the navy and an addition of 2500 to the Naval Academy. This program will increase the army appropriations by $75,000,000 a year and the navy appropriations about the same. The entire program for national defense will total $400,000,000 for next year

This raises two questions that the American people have got to face, and face squarely. How are they going to raise the money? What are they going to get for it?

First. The National Government is proposing a budget of a billion and a quarter dollars.

Excluding postal appropriations, which the Government ultimately gets back in charge for service, Congress must provide about $900,000,000 next year. Over $600,000,000 of this will be for army, navy, pensions and interest on the public debt, all war items. This is more than twice as much as were expended on the German army and navy the year before the war

Thus the total expenditure for war will be more than two-thirds of all the disbursements of our Government. This means that the American people have got to go deep down in their pockets. And what for?

To be sure, methods of warfare have changed, but defense as a political philosophy or a practical proposition of statesmanship remains about the same as ever. Defense is only the last link in a long chain of reasoning. As has been said, "before defense comes attack, and before attack come all the motives for aggression, all the misunderstandings and racial prejudices, all the intrigue and secret diplomacy and military preparation."

The war has no doubt rendered a change in military methods necessary, and undoubtedly a strengthening of our forces. But why should the American people go beyond this and overload themselves with taxation for defense, when Europe is bleeding to death and Asia is straining every nerve to keep on good terms with us, and when war is certain to be the most hated word in existence when peace is once declared?

The United States never was so safe from invasion as it is today. Even tho the proposed increase is not unbearable it will necessarily tend to promote a feeling which will involve year by year greater expenditures until finally we fall under the same burden as the European nations.

We are at the parting of the ways. Let us give this matter the most sober consideration before it is too late.

A GAINFUL LOSS

ONE item in the receipts the past year from internal revenue shows a great loss for the national treasury. That loss amounts to over $23,000,000. It would be a very serious loss but for the fact that it comes where the greater the loss the greater the gain. From 1860 to 1907 there was a very rapid increase in the consumption of alcoholic liquors, beginning with six and a half gallons per capita and reaching nearly twenty-three gallons per capita. Then for several years there was little change, and, indeed, a slight lessening of the per capita rate. This of course was due to the increase of prohibition territory. Now, for the first time there has been a great downward swing and a falling off in the consumption of 15,000,000 gallons of distilled spirit and 6,358,744 barrels of beer in one year, with the loss of $23,000,000 of revenue. There is a further loss of $307,379 from the tax of $25 which every retail liquor dealer must pay, and this indicates that there are over 12,000 fewer saloon keepers doing business in 1915 than in 1914.

It is not strange that the liquor business is disturbed and is going actively into politics. There are now eight prohibition states and eighteen other states in which local option laws have shut out the saloon from more than half the population. At present it appears as if the anti-saloon movement might overtake the movement for female suffrage.

Prohibition does prohibit, as proved by the decreased internal revenue receipts. Whatever the treasury loses the country gains ten times as much in wealth. Such a loss is a great gain.

When we say that prohibition prohibits we do not mean to declare that there are no drunkards and no liquor selling in prohibition territory. Whether the law will be faithfully executed depends upon the temper of the people particularly in the larger cities and on the character of the sheriffs elected. The execution of the law depends on the sheriff and sheriffs are not all of a sturdy mold. In many places it is very easy to get around the law. As an illustration we give one case that has come under our observation. In a county in a prohibition state a new sheriff of another party was elected. Immediately the representative of a large wholesale liquor house in one of our largest cities called on the county chairman of the successful party and asked that the arrangement of previous years might be continued by which his firm would have the right to supply all liquor sellers in the county, and offered as hitherto to pay $500 a month for political use, the sum to be paid to him or the sheriff or any one he might select. Under this arrangement, of course, all such saloons would be unmolested, while any which bought their liquor elsewhere would be sternly suppressed. There is, no doubt, much similar evasion of the law, but the returns of the internal revenue receipts prove conclusively that prohibition is not a failure.

OUR SHAMELESS PENSIONERS

THE newspapers report that in a single day at the opening of the college term at Harvard University the bursar received $400,000 from a portion of the four thousand students. This they paid for tuition. They paid all that was asked of them and doubtless felt as if they had fully met an honest charge, but they had not paid the cost of their tuition, scarce a third of it. About two-thirds of it was a gift. For from four to eight years, these students are receiving a pension, and not a bit ashamed of it. They are proud to be pensioners of the university, and the university is proud to have them as its pensioners. The university with its $37,000,000 of property is untaxed by the state and so these four thousand students from all over the country and the world are also pensioners of the state of Massachusetts.

What is true of the pensioned youth of Harvard University is true of a hundred other colleges in various degrees and still more of our state universities which charge no tuition and where the state entirely pensions its students. We need not speak further of the children and youth in our public schools who are equally pensioned from the public treasury. It is all right. We are glad to have it so. The education of children and youth at public expense is our wise policy, but it is well that attention should be called to our pension system in the case of young men and women who attend institutions like Harvard, which make a partial charge for tuition. Yale University received by gift during the past year nearly a million dollars and the entire income of it goes to pension its students, who feel no shame in receiving the annual grant.

And why should they? A writer lately spoke of Erasmus as the glory and shame of his century. The glory certainly, but why the shame? For no other reason than because over and over again he applied to patrons persistently for support in his unwearied scholarly labors. He found it disagreeable enough to make these appeals, but he was not ashamed to. In those days it was the duty of men of wealth to patronize letters. So it was in the older days of Virgil and Horace and of every one else who wrote. Every one had to have his Mæcenas. The patron and the patronized had equal pride.

With the increase of the reading public this relation of the pension giver to the pension receiver has largely past away, but we retain it for our youth. It continued in Edmond Spenser's day, but the author of the "Faery Queen" expresses no shame at seeking support, as a poet, from titled patrons, but he felt the indignity of seeing such demands refused. In a famous passage he writes:

> Full little knowest thou that has not try'd
> What hell it is in suing long to byde;
>
> . . . . . .
>
> To fawn, to crouch, to wait, to ride, to run,
> To spend, to give, to want, to be undone;

but he always felt he had a right to ask what ought to be given. So he says again

> It most behoves the honorable race
> Of mightie peeres true wisdome to sustaine
> And with their noble countenance to grace
> The learned foreheads, without gifts or gaine.

In Thomas Gray's time this system of patronage had so far past away that pride and shame prevented him from suing for such pensioning and he wrote as his epitaph:

> Too honest to steal and too proud to importune,
> He had not the knack of making a fortune.
> Could love and could hate, so was thought rather odd,
> No very great wit, he believed in a God.

Nowadays the literary pensioner scarcely lingers except in a tun of wine annually given to the Poet Laureate. But our literary youth take proper pride in accepting their annual pensions.

THE MYSTERY OF DELCASSÉ

THE chief German victory of the month is not the capture of Belgrade but the mysterious disappearance of Théophile Delcassé from the French Cabinet. Ten years ago, when he resigned from the Foreign Office, it was interpreted to mean that France had given way to Germany on the Morocco question, and we now know that that interpretation was correct. The French Government of 1905 counted the cost and the chances and concluded that they could not afford the risk of a war with Germany then. The Ministers of War and Navy reported that the army and fleet would have to be strengthened before France could meet Germany with any chance of success. Russia was exhausted by her war with Japan. The Anglo-French *entente* was only a year old and it was doubtful whether the British would be willing to take up arms to enforce the claims of their hereditary enemy to territory they formerly had hoped to possess for themselves. So the French Government threw overboard Delcassé and consented to refer the Moroccan question to an international conference. The Algeciras conference was a stately farce. The representatives of thirteen countries, including the United States, spent three months at the only decent hotel in the town and, having talked themselves out, signed an agreement to which no attention has been paid since. The integrity of Morocco and the sovereignty of the Sultan were among the provisions of the agreement. When a few years later France acquired Morocco as a protectorate nobody made any fuss about the violation of the treaty except the Germans, and they would not have done so except that it interfered with their business.

Of course, the French and British Governments knew in advance that the Algeciras conference could not accomplish the ostensible object for which it was called, the rehabilitation of Morocco under an independent Sultan, because the Anglo-French convention of the year before contained a clause, kept secret at the time but presumably known or suspected by the Kaiser, providing for the eventuality of the acquisition of Morocco by France and Egypt by England. It was arranged at the same time that Italy was to annex Tripoli. All this has come to pass exactly as planned when M. Delcassé and King Edward first put their heads together at Paris in 1903. According to André Tardieu, the chief authority on the subject, it was Edward VII who "both conceived and facilitated" the *rapprochement* between France and England which has altered the aspect of the world. Two months after the King's famous visit to Paris, President Loubet and his Foreign Minister returned the call, and M. Delcassé and Lord Lansdowne carried on the conversations which resulted in the Anglo-French convention of April 8, 1904. Three years later Great Britain and Russia came to an agreement which completed what the jubilant journalists of that time called the "Iron Ring" about Germany.

But Germany, in her frantic efforts to break thru the Iron Ring, at last discovered in the Balkans what seems to be a weak point. Only thirty miles of Serbian mountains separate Hungary from Bulgaria, and this once past the way is clear to Constantinople. The Allies have been taking such pride in their skilful diplomacy in contrast with the clumsy way of the Germans that it is especially humiliating to find that they have failed to win over any of the Balkan states. And now, in order to check the German drive thru Serbia, the French and British have had to cross Greece and the Russians are threatening to cross Rumania, both violations of neutrality, which, however defensible, bear an unpleasant resemblance to the crossing of Belgium by the Germans.

Naturally the disappointment of the Allies over this failure in diplomacy falls upon the two men who are held responsible for it, M. Delcassé and Sir Edward Grey. The former is out and the latter has been subjected to such hard criticism from both parties that his resignation would not be surprizing. Obviously some one has blundered, but who? The official statements in both parliaments throw no light upon it. Immediately after the return of the Premier from London M. Delcassé sent in his letter of resignation, but when the deputies called for the reading of it Premier Viviani refused, altho his refusal imperiled his position.

Delcassé is one of the ablest diplomats of the century and no one understands better the relations of the powers joined in the *entente*. He spent the spring of 1914 in Petrograd at the invitation of the Czar, perfecting the arrangements for the war which was, even then, regarded as inevitable and imminent. The French Government would not be likely to dispense with his services unless there was a serious disagreement with his colleagues over the policy to be pursued. But Premier Viviani flatly denies such a disagreement. Hence the mystery. Perhaps we shall know next week why Delcassé resigned. Perhaps we shall not know until, some fifty years hence, the diaries, the letters and the chancellery pigeonholes give up their secrets to the historian.

THE STORY OF THE WEEK

The War in Serbia

General von Mackensen, after the capture of Belgrade, attacked the Serbian fortifications on the hills beyond the city. Here they occupied a strong position consisting of four successive lines of entrenchments protected by barbed wire entanglements and defended with artillery under French, British and Serbian officers. But these defenses were bombarded at long range by the Austrian guns at Semlin which fired across the Save River and over the city of Belgrade. After weakening the lines by bombardment the Germans, following their usual tactics, charged en masse and captured the positions, altho at terrible sacrifice. According to Serbian accounts 20,000 Germans were killed in this assault.

General von Gallwitz, who crost the Danube at Semendria, east of Belgrade, has advanced some ten miles up the Morava River and along the railroad that leads to Nish. A further advance in this direction will divide the Serbians on the eastern or Belgrade side from those on the western or Bosnian side.

The Bulgarians have crost the Serbian frontier at several points with the object of cutting the lines of communication. Their attack near Zaitchar, about twenty-five miles northeast of Nish, is said to have succeeded in cutting the railroad which leads from Nish to the Danube and the Rumanian frontier. This would make it impossible for Rumanian aid to reach Serbia.

South of Nish and near the Greek border the Bulgarians entered Serbian territory to cut the Orient Railroad where it crosses the Vardar River, and runs close to the Bulgarian boundary. They are reported to have been repulsed by the Serbians who, with the aid of the French troops, then carried the war into the enemy's country and attacked Strumnitza, a Bulgarian town where the Greeks were defeated by the Bulgars on July 17, 1913.

The censor allows nothing to be disclosed about the movements of the French and British troops which were landed a week ago at Salonica. It is not known, therefore, how many of them have been sent into Serbia to help the Serbs meet the Teutonic invasion from the north or whether they are still encamped near Salonica for the purpose of invading Bulgaria from Greek territory. Premier Zaimis, who has replaced Venizelos at the head of the Greek Government, declares that Greece will preserve an armed neutrality. The London papers, fearing lest the allied expedition when it gets into the interior of the Balkans will be attacked in the back by the Greeks, are urging the Government to seize the Greek shipping and islands and blockade the coast in order to force Greece to drop her neutrality and take side with the Allies.

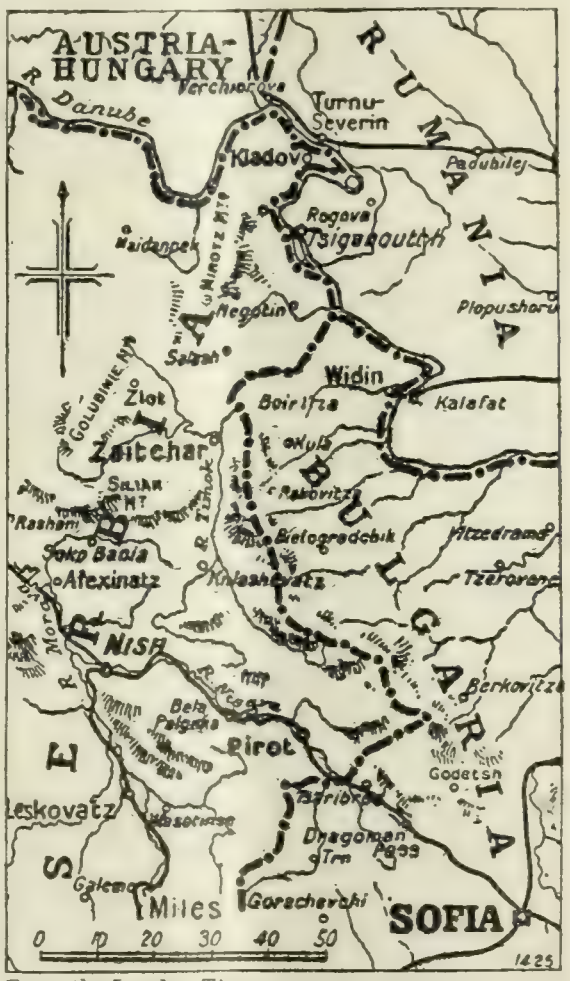
The allied fleet has blocked the Bulgarian ports at the Aegean Sea and a Russian expedition is said to be preparing for descent upon the Bulgarian port of Varna on the Black Sea. It is also reported that a Russian force has been assembled upon the borders of Rumania with intent to force their way across Rumanian territory into Bulgaria in case Rumania does not voluntarily espouse the cause of the Allies. German mechanics from Constantinople are said to be at Varna putting together submarines for service on the Black Sea. Turkish troops have been sent from Constantinople to Varna and Dedeagatch in order to defend these ports against the attack of the Allies while the Bulgarians concentrate their forces on the Serbian and Greek frontiers.

It is positively asserted that Italian troops are to be sent to the Balkans, but if so, it is expected they will be employed against Bulgaria instead of being sent into Serbia. This will avoid a conflict with the Germans who are invading Serbia, for Italy is not yet formally at war with Germany.

THE GREAT WAR

October 11 Bulgars invade Serbia northeast of Nish. Germans take Illuksi near Dvinsk.

October 12 Parliament approves American loan of half million dollars. Fighting about Tahure Butte continues indecisive.



October 13 Foreign Minister Delcassé of France resigned. Zeppelins kill 35 in London.

October 14 British take main trench in Hohenzollern Redoubt, near Loos. Bulgars try to cut Orient R. R. near Serbo-Greek border.

October 15 Great Britain declares war on Bulgaria. Russians drive Austrians back to Stry river, Galicia.

October 16 French recapture Hartmanns-Weilerkopf, Vosges. Allies blockade Bulgarian coasts.

October 17 French invade Bulgaria near Strumnitza. Hindenburg dislodges Russians east of Mitau.

From the London Times

THE STORM CENTER IN THE BALKANS

The armies of seven nations are now being rushed to the old Serbian town of Nish, which has since the war began served as the capital of the kingdom. German, Austrian and Hungarian troops are marching down from Belgrade, 130 miles to the north. French, British and probably Italian troops are on their way from Salonica, 240 miles to the south. Bulgarian troops from the east have crossed the Serbian boundary near Zaitchar, Kniashevatz and Pirot in the effort to cut the railroad which leads from Salonica to Belgrade

The Balkan Imbroglio

The failure of the Allies to win over any one of the neutral Balkan States to their side has caused bitter disappointment in France, Russia and England. The Duma is muzzled, but in the House of Commons and the Chamber of Deputies the Government was criticized more openly than at any time since the war began. The British public awaited Sir Edward Grey's explanation with intense eagerness and there was general dissatisfaction because the Foreign Secretary spoke in the vaguest terms and threw no light on the situation. He stated that the efforts of the Allies had been directed toward securing an agreement among the Balkan States, but a decisive preponderating advantage was necessary for that policy. The Central Powers offered more to Bulgaria than could the Allies except in regard to Thrace. In order to obtain the consent of Greece and Serbia to the cession of their territory it was necessary that Bulgaria first take up arms against the Turks.

About all that can be gathered then from the cautious statement of Sir Edward Grey is that the Central Powers offered Bulgaria extensive concessions of Macedonian territory at the expense of Serbia and a smaller amount of Thracian territory at the expense of Turkey, while the Allies naturally were more liberal in their offers of Turkish territory and more chary in regard to Serbian and Greek. This tends to confirm the statement of the Bulgarian Foreign Minister, General Jecoff, that the Allies tried to force Bulgaria into the war and that the Bulgarian Government waited to see which side was going to win and decided in favor of the Central Powers. It would have meant suicide, he said, for Bulgaria to have complied with the ultimatum of Great Britain.

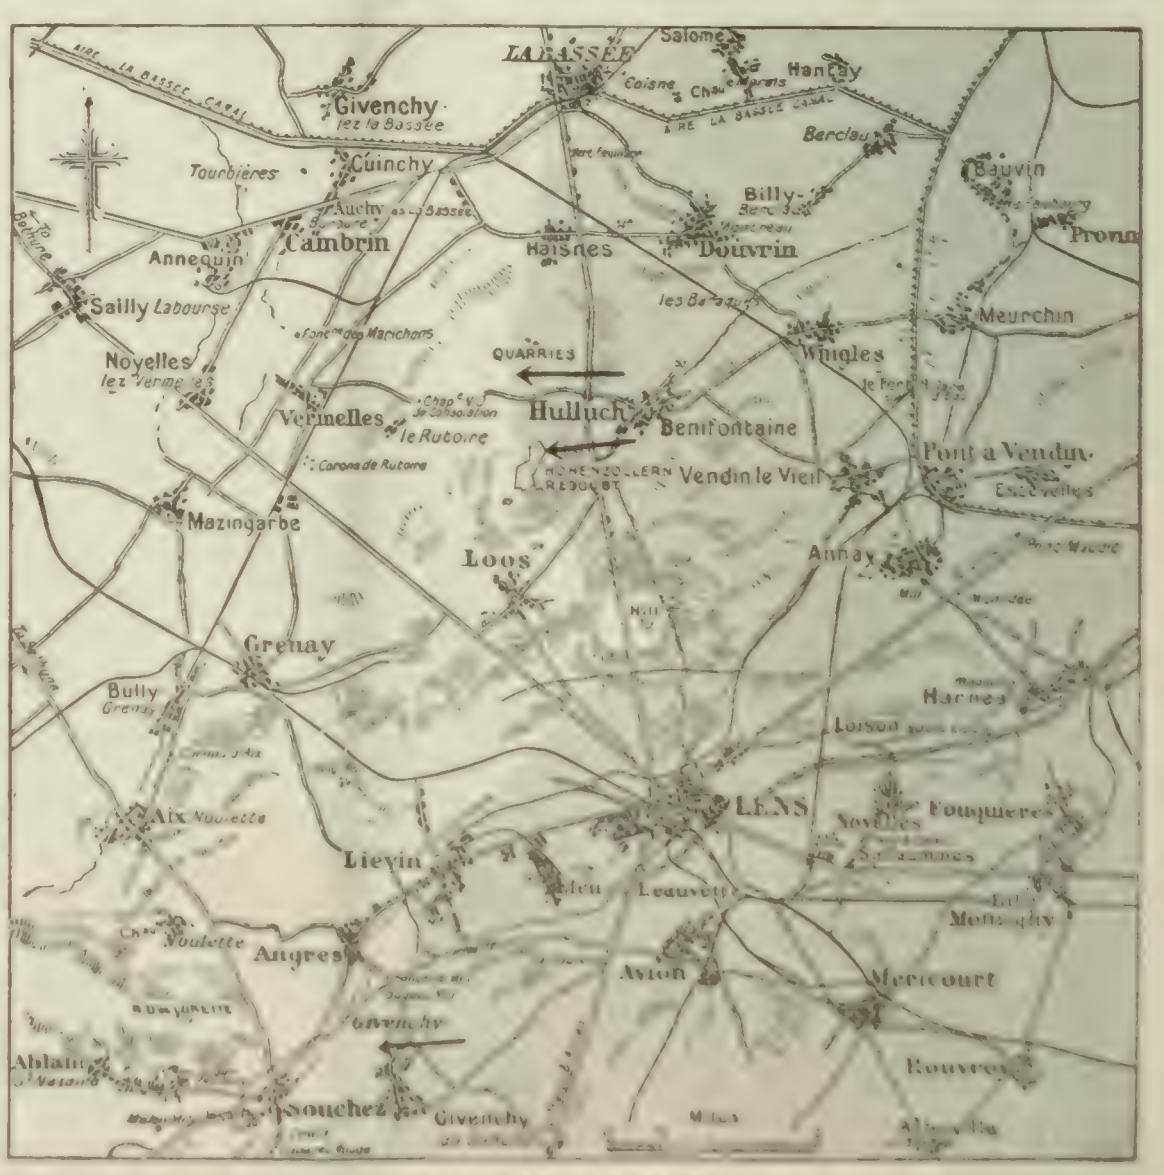
The withdrawal of part of the British and French troops from Gallipoli to Salonica has led to the inference that the campaign against Constanti-

AT THE CENTER OF THE WAR NEWS

The detailed map on the preceding page shows the objective of the several armies which are striking at each other thru Serbia. The general situation remains practically unchanged, and there is no authoritative news as yet of the whereabouts of the Allied troops landed at Salonica

nople was to be abandoned. The Government, interrogated on this point in Parliament, refused to confirm or deny the rumor. In the House of Lords it was argued that British prestige would be less injured by the abandonment of the Gallipoli campaign than by persisting in such a hopeless adventure. The British losses in the Dardanelles up to October 9 amounted to 96,899, of whom 29,121 were Australians. The Australian papers are furious at the thought that this sacrifice has been in vain and demand the punishment of whoever was responsible for the blunder of sending the troops to Gallipoli.

Conscription is again urged in England as the only way to find the troops needed on this new field. In the course of a debate on the subject in the Commons, which the Government was unable to suppress, it was asserted that voluntary enlistment had failed to bring forward more than 2,000,000 men, instead of the 3,000,000 announced by the Premier and the 4,000,000 claimed by the press. Skilled mechanics have been brought back from the front to serve in the munition factories, but some of these are non-union men and in the Thornycroft works the employees have struck rather than work with them.



In the French Chamber of Deputies there was wild excitement and disorder when it was announced that M. Delcassé, the Minister for Foreign Affairs, had resigned. The Chamber demanded that the letter of resignation be read, but the Premier refused, stating that it was not on account of any disagreement with the rest of the Cabinet. The Premier admitted that faults had been committed, but it was necessary for France to act in cooperation with her Allies. It was impossible to let Serbia be accumulated either from in front or behind. In the course of the debate it was hinted that France was looking for a ruler in the person of King Albert of Belgium. Some accused the Government of diverting troops needed for the defense of France to the protection of the British route to India, but Premier Viviani stated that the lines in France had not been weakened by the despatch of the expeditions to Gallipoli and Salonica.

The Russian Situation

The German offensive in Russia has visibly slackened in intensity, doubtless because of the withdrawal of forces for the Serbian campaign. On the other hand the Russians have received a new supply of ammunition, and, it is rumored, of reinforcements from Japan. With the aid of these they have attacked the German line at various points and in Galicia, southwest of Tarnopol, the Germans were dislodged from their entrenchments and driven back nearly five miles to the Stry River.

In the north Hindenburg doggedly continues his efforts to capture the city and fortress of Dvinsk, tho with doubtful success. He is making renewed efforts to gain the port and fortress of Riga and has driven the Russians from their positions east of Mitau.

It is evident that important political changes are taking place in Russia altho the censorship prevents us from

THE BRITISH DRIVE

ascertaining much about them. The news some weeks ago that the Government was about to pass into the hands of the progressive element of the Duma proved fallacious. Instead of this the reactionaries got the upper hand. The Duma was dismist and members of the Government suspected of progressive tendencies have been replaced by conservatives. Thru German channels we learn that the students of the university and civilians at Moscow rose in revolt against the Government and erected barricades in the streets. In this outbreak eight officials and twenty five policemen were killed and also several civilians. In Petrograd and other cities similar riots occurred.

Prince Cherbatoff, a progressive who was appointed Minister of the Interior last June and undertook to introduce various reforms, especially in regard to freeing the Jews from their legal disabilities, has now been discharged and the place filled by Alexei Khvostoff. He is a reactionary, leader of the extreme right in the Duma, and as Governor of Nishni Novgorod acquired an unenviable reputation for severity. He has announced that he will curb the activity of speculators and will organize the Russian workingmen "on a national basis." He is opposed to allowing the Jews to buy land because they are so clever that the Russian peasants would be swallowed up. Alexander Samarin, Procurator of the Holy Synod, is also retired because of a disagreement with the Czar.

THE BULGARIAN BORDER COUNTRY

News of attacks on Bulgarian points by Serbia and vice versa has been received. The Bulgarians have a high mountain range, running north and south along the Serbian frontier, to cross before they can get to the central valley

Zeppelins Again Attack London

The most extensive and destructive raid of dirigibles on England took place on the night of the 13th. The number of Zeppelins in the German fleet is not published in England but from Rotterdam it is reported that four passed over Holland on their way back. The Dutch fired upon them for crossing their territory and one of them was, it is claimed, hit and crippled. Since the Dutch Government has adopted the rule that all telegrams warning England of approaching Zeppelins be held up for six hours unless they actually pass over Dutch territory the Zeppelins have avoided such violation of neutrality on their way out, tho they have not been so particular in going back.

No detailed information is allowed to be sent out as to the places struck, but it is stated that the airships visited "the eastern counties and a portion of the London area." The Germans claim to have inflicted severe damage upon the Ipswich batteries, the London docks and waterworks and the Woolwich arsenal. It is evident that some military damage was done for the official British report specifies fourteen soldiers killed and thirteen wounded. The civilian casualities were, killed, 27 men, 9 women and 5 children; wounded, 64 men, 30 women and 7 children; total, 142. Nine of the victims, mostly women, died of shock and heart failure due to fright. One, a taxicab driver, was killed by shrapnel from an anti-aircraft gun. The Royal Field Artillery bombarded the Zeppelins and five aeroplanes of the Royal Flying Corps went up, but none of the attacking fleet was brought down.

The chief effect in England is to increase the abhorrence of German methods of warfare and to stimulate recruiting. A recruiting stand erected in the midst of a hole made by a bomb in the middle of the street proved even more effective than the "Lusitania" sufferers, wounded V. C. men, and other speakers who have been pleading for enlistments. Newspapers and mass meetings are demanding that the Government adopt a systematic system of reprisals and "bomb the Kaiser's sleeping towns as he bombs ours."

On their side the German papers are equally angry against the aerial bombardment of the open city and royal castle of Stuttgart, in which women and children were killed.

MOBILIZED, BUT STILL NEUTRAL

Greek troops marching thru the streets of the Piraeus during preliminary mobilization. The refusal of the king to use the army against the Bulgars was a severe blow to the Allies and the failure of Allied diplomacy to line up the Balkans against Germany and Turkey is causing much discontent in England and France

The Struggle for the Hulluch Hills

There has been no respite in the conflict that has been raging for a month among the bluffs which shelter Lens on the northern side. The Germans found in the chalk pits of this region fortifications already half made and they have spent the year in putting them into the highest possible state of defense. The long hill which lies just west of the village of Hulluch was converted into a fortress of a complicated system of entrenchments of which the southern terminus near Loos was distinguished by the name of the Hohenzollern Redoubt. Further to the south between Hulluch and Lens is the hill designated on the military maps as No. 70.

This line of fortifications was assaulted by the British on September 25 after a furious bombardment of three days and they captured a large part of it along a front of about five miles. It was announced by Sir John French on September 30 that Hill 70 had been taken by the British. The Germans, however, claim to hold the hill and when the question was raised in Parliament by Annan Bryce the Under Secretary of War, Mr. Tennant, said that the despatch referred to the quarries about the hill. As will be seen from the map Hill 70, if it were captured, would make a salient in the line which would be difficult to hold.

The Germans, with a force of some 50,000 men, have made violent counter attacks in which they have suffered almost unprecedented losses. In an effort to regain the chalk pit north of Hill 70, on October 8, the Germans assembled behind the woods 300 to 500 yards from the British trenches. But when they charged they were met with such a furious fire from rifles, machine guns and artillery that not a man succeeded in getting within forty yards of the trenches. The French report of October 11 states that from 7000 to 8000 German soldiers lie dead between the lines. The wounded must number some 30,000 if the usual ratio of one to four for killed and wounded holds here. The British official despatches mention for the first time their use of gas and smoke in these recent attacks. The Germans some months ago asserted that the British and French were using asphyxiating fumes but the charge was at that time denied with indignation.

In Lorraine the struggle about the village and hill of Tahure continues indecisive, claims of trenches gained on one side being matched by counter claims on the other. In the Vosges mountains the French have made an admitted gain in the recapture of Hartmanns-Weilerkopf. This important strategic position, the most easterly of the peak, has changed hands several times during the war.

The great Argentine newspaper, *La Prensa*, announces by a siren the receipt of important news and the crowds gather quickly about the bulletin boards. At the right is a subway entrance

Army and Navy Plans

Our Government's plans for enlarging the army and the navy have excited much interest thruout the country. The estimates prepared by the Departments for the coming fiscal year were given to the Secretary of the Treasury on the 15th. While the exact figures have not been published, it is known that the total is about $1,240,000,000, the largest sum Congress has ever been asked to appropriate for a year in time of peace. Estimates for several Departments are not far from those of last year, but the Department of Commerce asks for an increase of $16,000,000, to be used in promoting foreign trade, and the additions proposed for the army and the navy may exceed $150,000,000.

For the navy a five years program has been planned, the cost to be $500,000,000. It is proposed that in this time the strength of the navy shall be doubled. The additions indicated include 10 dreadnoughts, 6 battle cruisers, 85 submarines, 50 destroyers, and 10 scout cruisers, with auxiliaries. Secretary Daniels asks Congress to authorize the construction, in the first year, of 2 dreadnoughts, 2 battle cruisers, 25 coast submarines, 5 seagoing submarines, and 12 destroyers, with an addition of 8000 to the number of men. Something is sought, also, for the proposed $3,000,000 experimental laboratory. An addition of about $100,000,000 to the appropriation for the current year would be required.

Secretary Garrison's plans and estimates include an increase of the regular army to 140,000 men, and the creation of a citizens' force of 400,000, to be called the Continental Army. It is proposed that men between the ages of 18 and 28 shall enlist in this army to serve for six years. During the first three years they are to be in summer training camps for two months each

International Film Service

UNCLE SAM'S CRUISING SUBMARINES

Three new submarines, the K-3, K-4 K-5, and K-6, made the trip of 2427 miles from San Francisco to Pearl Harbor, Hawaii, under their own power and in safety. This record is said to be a first for American submarines, but it does not approximate that of the German submarine which ran from Wilhelmshaven to the Dardanelles

year, receiving the pay of regulars. For the remaining three years they are to be on furlough, subject to call in case of war or a threat of hostilities. The camps are to be at abandoned or unused army posts. One third of the force is to be enlisted the first year, one third the second, and the remainder in the third. The term of a regular is to be made six years, with the provision that he shall be on furlough four years, subject to call. The National Guard of the States is to be encouraged and strengthened. Enlargement of the regular army will require 10 new regiments of infantry, 4 of field artillery, 52 new companies of coast artillery, 15 new companies of engineers, and 4 new squadrons (48 fliers) of aeroplanes. The additional cost for next year is said to be $72,000,000. By the two additions the total for both Departments is raised to about $430,000,000, and this may be reduced to $400,000,000.

President Wilson has given his approval to these plans, and in public addresses, it is expected, will urge the people to support them. Employers (manufacturers, corporations, and business men) will be asked to support the proposed Continental Army, or reserve force, by permitting employees to serve for two months in the summer training camps without losing their positions. Mr. Bryan opposes the projects, saying the large appropriations involve the setting up of false standards of honor, the encouragement of a military spirit, and the cultivation of international hatreds. He thinks "the jingoes will find it difficult to raise enough money to cover the expenditures they favor." The National Security League says that, in answer to its inquiries, 150 Congressmen have exprest approval of the plans.

Labor Questions

The movement for an eight-hour day, which began with the machinists employed in the munition factories at Bridgeport, spreads slowly but surely. While the changes are made without complaint by these manufacturers who have war orders, they are opposed by those who are not making exceptional gains. Some predict serious controversies between workmen and employers after the war, when there will be an attempt to restore old conditions. In some of the Bridgeport factories, where three shifts of eight hours take the place of two of ten hours, there are employees who work eight hours in one shop and eight in another, in the same day. In another city where eight hours have been granted, many take advantage of an opportunity to work two or three hours more for additional pay.

The strike of 13,000 employees of the General Electric Company at Schenectady was not ended last week, but there were indications that the company's offer of 9½ hours, with increase of pay, would be accepted. One or two small strikes for eight hours, in the West, were reported. Joseph J. Ettor and other representatives of the I. W. W. are organizing 23,000 employees of the Paterson silk mills, in order that a demand for higher pay may be made.

Declaring for Suffrage

The woman suffrage cause has recently added some important names to its roll of adherents. President Wilson's declaration "I intend to vote for woman suffrage because I believe that the time has come to extend that privilege and responsibility to the women of the state" is of course of first importance. Tho he speaks merely as a private citizen, his opinion cannot fail to carry weight.

Most of the Cabinet agree with the President on the suffrage question. Secretary Garrison, Secretary McAdoo, Secretary Redfield, Secretary Lane, and Secretary Wilson all believe that women should have the right to vote.

Headed by Thomas A. Edison, fourteen of New Jersey's best known citizens have issued a statement of the reasons why they vote for woman suffrage, "the next great forward reach in the eternal onward march of the human race." Colonel George Harvey, Senator William Hughes, Attorney General John W. Westcott, ex-Governor Franklin Fort, Richard Lindabury, Judge Robert Carey, Senator Charles Hennessy and Judge Thomas A. Davis are some of those men who believe that "not only justice but expediency dictates that the amendment is adopted."

The Closed Panama Canal

Dredges are working night and day in the Gaillard (formerly called the Culebra) cut, but there is little hope that the Panama Canal will be opened before the beginning of next year. It is estimated that 10,000,000 cubic yards of soil and rock must be taken out. The present rate of excavation is less than 1,500,000 yards a month. The slide extends for nearly half a mile along both banks, reaching back from the center line of the waterway for an average distance of 1500 feet. Unfortunately, the removal of the soil by dredging causes new slides, and in some places the dredges have been unable to withdraw material as fast as it comes in. Sometimes the pressure from the hills causes the bottom of the Canal to bulge up fifteen feet above the surface of the water.

General Goethals, who superintends the work, has made preparations to remain on the Isthmus for six months. In messages to Washington he advises the discontinuance of sailings via Panama Canal until further notice. In all, there have been 111 ships waiting for passage. The railroad service has been insufficient for prompt transportation of cargoes. Several ships have started to go around South America. Others, on the Atlantic side, have turned back to seek passage thru the Suez Canal. Our Government loses the cost of excavation (which will exceed $2,000,000) and the passage fees of many ships. Exporters and importers who have been using the Canal must now pay higher freight charges, required by the additional thirty days for a voyage around South America, or by the expense of shipping cargoes by rail across the Isthmus. It is said that the increase for iron and steel will be about 30 per cent. The companies have to bear in mind, however, the competing rates of the transcontinental railroads.

These crawling wagons make possible the successes which the French and British have won. They bring up ammunition from the railroads to the lines for use in the big guns that clear the way for the bayonet charges

The Recognition of Carranza

All the Governments represented in the conferences relating to Mexico have approved the proposed recognition of Carranza's Government, and this recognition is soon to be announced. At the same time our Government will forbid the exportation of arms or ammunition to any faction which opposes Carranza. For some days, however, there has been an embargo on supplies for Villa, and ammunition on its way to him has been seized at El Paso. Carranza, sailing from Vera Cruz, has visited his forces at Tampico and Monterey. Zapata still menaces the capital, but Carranza asserts that two of his generals have offered to surrender, if amnesty be granted. General Gonzales, in command at the capital, is preparing to drop bombs on Zapata strongholds from seven aeroplanes which he has procured.

The recognition of Carranza is sharply denounced by prominent Catholic journals in this country. One of them, calling him an outlaw, a persecutor of the Catholic Church, a despoiler of its sanctuaries, schools and convents, and a murderer of priests, asserts that the recognition is an insult to the Catholics of the United States. Mr. Wilson, it continues, repudiated all the promises given to Catholics when Mr. Bryan was Secretary of State, and the 16,000,000 of Catholics should give him an answer at the polls. Another says the Catholics have been insulted and their protests and appeals ignored. Reports from Guadalajara say that Carranza's men are using the Cathedral there for a dance hall and moving picture shows. Priests and nuns who fled from Yucatan and arrived in Cuba last week, say that Carranza's forces attempted to burn a cathedral during a mass service, and extorted ransoms from the priests, whom they imprisoned.

Reports from Guatemala say that a revolution there has been promoted by Carranza, who sent two expeditions into the country, after he had expelled from Mexico the Guatemalan Minister, Dr Ortego. The leaders of the revolt, however, are two Guatemalan exiles, and Carranza denies that he has been connected with it.

If Carranza should restore peace, the financial obligations of his Government would be a great burden. It is estimated that his fiat money issues exceed 1,000,000,000 pesos; that indemnities to foreigners will equal the old foreign debt, and that the total will be $1,000,000,000 in gold. He intends, it is said, to place export duties on minerals, oil and cotton.

Villa's Course

Villa's determination to go on fighting against Carranza is not approved by all of his associates. Many of his soldiers have deserted. It was reported last week that deserters had killed him, but the report appeared to be unwarranted. His brother, Hipolito, it was said, had been killed by mutineers on a railway train, as he was approaching Juarez. This was not denied, and the story that General Fierro had been drowned was accepted as a true one. Fierro, formerly Villa's bodyguard, was responsible for the death of Benton, the English ranchman, two years ago, and it is said that after a battle he put to death 300 prisoners with his own rifle and pistols. Villa has lost Guaymas, his only seaport, which was captured last week by Carranza soldiers, who landed from transports. General Ornelas, Villa's commander at Juarez for a long time past, advised him to retire and to permit his officers to make peace. Whereupon Villa ordered that he be brought to Chihuahua City. Ornelas intercepted a message in which Villa directed that he be put to death during the journey. Therefore he fled to El Paso, and was joined there by the mayor and several other civil officers of Juarez, where a revolt was expected.

Villa and his Governor in Chihuahua directed the American Smelting and Refining Company to resume work and to refine ores which they had confiscated, the penalty being seizure of the company's smelter and mines. Complaint has been made at Washington. The company says the departure of Americans, in obedience to our Government's warning, has left no expert workmen, and that for this reason the Mexican employees are idle. Later reports said that Villa insisted upon seizing the property. He levied a tax of $8 a head on 7000 cattle owned by a resident of New York. Villa's soldiers had been living on the ranch and killing about 200 cattle every day. The owner has consented to pay "at the border," if the cattle are permitted to cross the boundary. He thinks that only in this way he can save them. All exports of cattle, ore and cotton are now held at El Paso in order that the owners of the property, stolen or confiscated, may identify and claim it. This deprives Villa of a considerable part of his income.

A FRIENDLY ATROCITY

Hayti

The Chamber of Deputies, or lower branch of Hayti's Congress, has ratified, by the decisive vote of 75 to 6, the new treaty which gives control of the country's finances to the United States. Similar action in the Senate is expected. The treaty will be considered by our Senate at Washington in December.

It appears that the rebels have been true to their agreement, reached on September 29, binding them to lay down their arms, for an American expeditionary force that visited several ports and towns along the north coast, has returned to Cape Haytien with a report that quiet prevailed. American marines are now serving as police at various points in the interior, and as far southward as the boundary of Santo Domingo. Dr. Bobo, recently a leader of revolutionists, is in Cuba, near Guantanamo, and several of his followers have joined him there. At first the Cuban Government suspected that he sought to cause an uprising of negroes in the island, but it was shown that he was plotting against the new Government in Hayti.

S'POSIN'

BY WASHINGTON GLADDEN

(UNCLE SAM LOQUITUR)

Some folks is layin' awake o' nights,
  Harkin' fer noises of furrin invaders,
Conj'rin' up all sorts o' frights,
  Wond'rin' when we shall see the raiders;
Nuthin's doin' yit, ez fur's I know,
  But while their common sense is dozin',
Some on 'em's lettin' their guess-crop grow,
  An' workin' their wits on jest supposin'.

"S'posin," they say, "that the Teuton allies
  Sh'd jine with the Slavs 'n' the French 'n' the British,
An' jest drop daown on us aout o' the skies,
  Wouldn't we feel a leetle mite skittish?
An' s'posin' they brung a dreadnought fleet
  An' lined it up out in Boston Bay there,
An' shot up the city with shrapnel sleet,—
  (The wust east wind that was ever astray there,)—

" An' battered the Bunker Hill moniment daown,
  An' the rest o' the chimblys that overtop it,
An' bored some holes in the golden craown
  O' the Hub o' the Univarse—(who could stop it?)
An' blew up the Cradle o' Libutty,
  An' levied a tribbit o' twenty bilyuns,
An' then marched over the Land o' the Free,
  An' baound their yoke on a hundred milyuns!

"Naow jest supposin' all that," they say;
  "An' that ain't the wust; fer the stars in their courses
Is fightin' forever, night 'n' day,
  Agin all peoples, that lack big forces;
Look at the moon! S'posin' *she* lets go,
  An' drops on the airth; (an' what's to prevent it?)
She could flatten New York to a pancake, you know,
  An' nobody know what fate had sent it.

"The Great B'ar's bin seen swingin' his tail,
  Orion's said to be gittin' his back up,
An' fust you know, they'll be comin', full sail,
  An' no time left us, even to pack up;
This cont'nent's got to be roofed with steel;
  No time's to lose; there's a good job in it;
Preparidniss means a big, big deal,
  An' we can't afford to wait one minnit."

Naow talk like that's tew blamed histericky,—
  Fencin' the state with fears 'n' flurries;
Tain't my notion o' free Americky,
  Livin' on s'pishuns 'n' hates, 'n' worries,—
Takin' a fog-horn fer Gabri'l's trump;
  Spellin' aour guesses from A's to izzards;
Seein' a ghost 'hind o' every stump,
  Spinnin' aour s'posins aout o' aour gizzards.

I mind haow a niece o' mine, naow long dead,—
  A maiden who fifty summers carried,—
Was cryin' 'n' wouldn't be comforted;
  "S'posin'," she said, "that I sh'd be married;
An' s'posin' a little gal o' mine,
  While I was a lookin' out o' the winder,
An' jest a thinkin' the weather was fine,
  Sh'd fall in the grate 'n' burn to a cinder!"

"I know it," I said; "'twould be awful, sis;
  You couldn't stand it; I know you couldn't;
But did you ever consider o' this—
  S'posin' she didn't,—an' s'posin' you shouldn't?"

"Sure enuf," she said, with a kind o' [illegible]
  Ez ef she had won her heart's best wished;
An' chirked right up, 'n' dried her eyes,
  An' went right on awipin' her dishes.

Same mind cure's got to be tried, I think,
  On all old maids o' the male perswashun,
Drivin' theirselves 'n' their nabers to drink
  By fidgettin' over a furrin invashun;
What's the mortal use o' addlin' aour brains
  'Baout things that ain't never agoin' to be so,—
Borryin' trouble 'n' payin' with pains?
  Ain't it stoopid? It looks to me so.

S'posin' some nation, bleedin' 'n' pale,
  Sore with her waounds 'n' faint from fightin',—
Bendin' under a burden o' bale
  That toilin' years won't greatly lighten,
Sh'd stagger aout o' her pool o' blood,
  To run amuck, when she knew she couldn't,
An' strike at aour land! Yas! s'posin' she should;
  An' then, agin, *supposin' she shouldn't!*

Ain't that a blamed sight better surmise?
  I've faound, in farmin' 'n' huntin' 'n' trappin',
In figgerin' aout how the futur' lies,—
  That the likely things is the ones that happen;
Git ready for them, 'n' trust yer pluck;
  Stay right with the trail that looks the plainest;
Yer wild-goose-chasin' after ill-luck,
  Of all fool things is jest the insanest.

We *kin* hev' war, ef we want it so;
  Hev it we shall, ef we keep on s'posin' it;
The camel gits inter the tent, you know,
  By dent o' pokin' his pesky nose in it;
But ef we keep on, ez aour fathers begun,
  Bound to be friends with every nation,
There's nothin' onlikelier, under the sun,
  Than war, for another generation.

An' naow, by yer leave, I'll take a walk
  In the gardin plot that the futur' grows in,
An' listen to hear the spring buds talk,
  An' pluck fer myself a sprig o' s'posin'.
S'posin' these nations, tatter'd 'n' rent,
  Sick with the surfit o' shame an' sorrow,
Their lands all wasted, their strength all spent,
  All dreadin' today a darker to-morrow,—

S'posin' they sh'd break the shackles o' fear,
  An' the bonds o' hate, 'n' the chains o' s'pishun,
An' wake to the day that is dawnin' clear,
  An' ketch at the light of a great new vishun,
An' put on the beautiful garments o' peace;
  An' s'posin' we sh'd go aout to meet 'em;
What c'd we do fer their joy's increase?
  What sh'd we show 'em? Haow sh'd we greet 'em?

Not with dreadnoughts 'n' submareens,
  Not with armies in milyun masses,
Not with an outfit o' killin'-masheens,
  Shrapnel 'n' bombs, 'n' noxious gases,—
No; but with blessin's 'n' praises, 'n' prayers,
  Hands reachin' aout with love's endeavor,
Prayin' with faith that never despairs,
  Fer peace 'n' good will, forever 'n' ever.

ENGLAND'S DISAPPOINTED FOREIGN SECRETARY

SIR EDWARD GREY HAS BEEN UNDER FIRE FROM THE PRESS AND MEMBERS OF PARLIAMENT BECAUSE THE ALLIES HAVE ACCIDENTLY FAILED TO SECURE THE COOPERATION OF ANY OF THE BALKAN STATES ON ACCOUNT OF THE ENMITY OF BULGARIA AND THE NEUTRALITY OF GREECE AND RUMANIA THE TEUTONIC ATTACK ON SERBIA ASSUMES VERY GRAVE PROPORTIONS

THE TOTTERING TURK

BY FULLERTON L. WALDO, F. R. G. S.

ASSOCIATE EDITOR OF THE PHILADELPHIA PUBLIC LEDGER

Constantinople is now the critical point in the Great War. The issue of the conflict turns upon it, and the next few weeks may decide the question. The city is besieged by armies of Russians, English, Australians, New Zealanders, Indians, French, Senegalese and Italians. Armies of Austrians and Germans are pushing down thru Serbia to reach Constantinople before it falls. British, French and Italian troops have rushed up to stop their onward march. Meanwhile "the Sick Man of the East" is in mortal danger. The Turk feels that he is losing his grip and the subject races who have suffered under his tyranny for centuries are getting restive at the thought that the day of their deliverance is at hand. He has determined that they shall be destroyed rather than be freed. The colleges which Americans have founded in Turkey are threatened with extinction. It makes an American thrill with pride to read in Mr. Waldo's article how these educational outposts of ours in the East are calmly continuing their work in the midst of war.—THE EDITOR.

WHEN I was in Constantinople the air seemed more than ordinarily surcharged with that sense of things sinister and grewsome that somehow the city never quite shakes off even in its most lethargic moods in times of peace. The Armenians, in mid-August, had spread about, like running torches, the rumors that sealed orders were at every police station for a general slaughter on the third day of Beiram. Twenty years ago the pavements were reddened with the blood of 8000 massacred innocents: and those who remembered thought the time ripe for a repetition of the horrors of 1895. For the Young Turks, betwixt the upper millstone of a German vassalage and the nether of the Allies battering at the Dardanelles and toiling up thru Mesopotamia, have determined on Turkey for the Turks, and Armenia without the Armenians. Betwixt devil and deep sea, the German incubus and the Ægean, Enver Pasha, Talaat Bey and Shukri Bey are playing out the lurid drama to the end.

There are 100,000 Armenians in Constantinople. The Turks whenever they please hale them to the police stations, soak their feet in salt water, and then apply the bastinado till their victims have to walk about on their knees for many days thereafter, if they walk at all. One man I talked with, a cook in charge of a bake oven at an American institution, had recently received the full official tale of seventy strokes while the doctor held his pulse to make sure the exquisite torment did not send the victim's fluttering life quite over the brink. But a weak old man, who in the same hour was given but twenty strokes, died on the day following.

The newspapers today are filled with the execrable deeds of hireling Kurds and Bashi-Bazouks in Asia Minor. And still, Ambassador Morgenthau assured me, the half has not been told. The Black Sea and the Tigris River hold the secret of struggling thousands ruthlessly thrown into deep water and shot from the bank. A good woman that I knew wanted to go down from Scutari to Nicomedia by rail to help the evicted there, but the Turks would not let her, for they did not wish her to see the crimes committed and apprise the world of them. From that region 30,000 at least had been thrust forth to desert wanderings, and tens of thousands more were interned in and around the station, waiting till the cattle-cars had dumped their human freight and returned for more.

Of course, the Turk, with his sluggish mentality, is jealous of the Armenian's progressive temper that outbargains, outbuilds, outparleys and in all non-military ways outgenerals him. The Turk fears the league of the Armenians and the Russians, for which the former have toiled as their one hope of political and social salvation.

In the meantime, this man Morgenthau, his soul fired to white heat by Russia's oppression of his own people, the Jews, is determined to do his best for those whom Turkey so barbarously mishandles. On his executive capacity nine nations at least are now depending, and the embassy is the camp of refuge for black-clad weeping Armenian women with their infants in their arms, for priests and merchants and teachers with a Damocletian sword over their heads in a reign of terror. When the Turks on a drenching day of rain began to throw the French nuns and the orphans out into the street, Morgenthau rushed round to their place, and Mrs. Morgenthau went with him. While the Ambassador got a stay from the Under Secretary for Foreign Affairs, Mrs. Morgenthau procured the title deeds and the money and ran the gauntlet with them hidden in her dress and her heart fast beating. The Turks tried to kidnap Sir Edwin Pears, for two score years a highly respected advocate, whose knowledge of the Levant almost reached to the encyclopedic understanding of the late Dr. Washburn. Morgenthau heard of it and saved him, and Sir Edwin is now safe at home in England.

Then there is William Wheelock Peet, the famous missionary treasurer. He has been thirty-four years on the scene, and knows Asia Minor, Macedonia, Albania as a hadji knows the Koran. "How are you getting the money to the missionaries in these troublous times?" I asked. "I used the money-orders of the post office till the post office broke down," he said "then the tobacco monopoly distributed it for me, and now it is the Standard Oil agents. They've never been able to stump me yet!" That is the American spirit—the same spirit that keeps Gates at Robert College, Dr. Patrick at Constantinople College, Dr. Howard Bliss at the Syrian Protestant College, Beirut, determined not to haul down the flag to Islam. I talked with an ensign from our tiny *stationnaire* the "Scorpion." She is a boat of 900 tons, carrying ninety men. The Turks have moved her to the far end of the Golden Horn, within the two bridges and the tangle of shipping, where in no case can her limited puissance be made available, tho her men ashore might guard the Embassy. Aside from the "Scorpion's" complement there are perhaps 150 Americans in the city.

Daily more audacious, the Turks cut mail to ribbons and deny to travelers the least written communication in their baggage. They have erased the French and English signs, and ordered these languages off the streets. They aim—successfully—to keep the foreigners in Cimmerian darkness as to all that goes on at Gallipoli. They poison the mind of the Turk against the American by telling him that American munitions feed the guns of the Allies. In spite of all, Robert College—typical of these brave American institutions — has started the year with an enrollment of nearly 400, in the teeth of a famine in oil and coal and bread and many things. There is, at any rate, no dearth of the splendid courage that holds the fort "till the day break and the shadows flee away."

BARBAROUS SERBIA

BY PALMER SMITH

A party of twenty-three Columbia students in charge of an instructor went to Serbia in June under the auspices of the Committee of Mercy to engage in relief work during the summer. The men drove automobiles and formed a special transportation service for the purpose of distributing medical and food supplies under the direction of the Red Cross. Palmer Smith is a student in the Columbia School of Journalism who was a member of the expedition.—THE EDITOR.

WHAT does Serbia need to put her abreast of Europe? First of all, an American roadmaster and a few American train crews—that was my impression as I journeyed into the country on the "Oriental Express," the best train from Salonica to Nish. We reached Gheuvgeli, the border station, about noon, and did not arrive at Uskub, eighty miles north as the crow flies, until nearly ten o'clock in the evening. This single track, third class railroad is Serbia's only connection with the outside world at present, and to see the warehouses full of food, implements, munitions, and the like, at Salonica, one would suppose that there would be a more rapid system of transportation on a government railroad, as there might easily be if the equipment were worked up to its capacity.

Serbia is building more railways, even during the war. She is using the labor of Austrian prisoners in building a track west from Nish, their chief railway center, to Port St. Michael on the Adriatic. During the whole of her national existence she has been cut off from the rest of the world by hostile tariff boundaries. She expects an outlet to the sea as one of her rewards in the war, particularly as she has conquered northern Albania. The army did not enter Durazzo during the summer because of possible complications with Italy.

A railway to an open market, where the produce of the farmers may compete with the rest of the world on even terms, may prove such an economic stimulus to the country that it will be able to throw off its archaic methods of cultivation and do some real farming. The soil is tilled with primitive wooden plows, drawn by oxen, which do not even turn a furrow. They merely stir the ground for three or four inches. The soil must be very fertile, for even with such primitive methods I saw fields that would yield as much as many in this country. If properly farmed, they ought to be highly productive, and considering the excellent markets along the Mediterranean coast should be very profitable.

During the war the Serbian Agricultural Relief Committee and other charitable organizations have sent over huge quantities of good modern American farming implements. The Serbs have been too busy fighting to get these very well distributed, but they are in the country, and when peace returns they will be used. Their superiority ought to make itself manifest immediately and should stimulate further purchase and a more enlightened system of tillage with a resulting betterment of crops and economic conditions generally.

The Serbians also need an injection of the push and vim of the western world. They are slow to learn, and conservative in their opinions. Nearly all the hospitals and relief agencies now operating in the country have given up trying to use Serbs as helpers. Every orderly in the American Red Cross Hospital at Belgrade is an Austrian prisoner. They are more obedient and learn very much more rapidly. Dr. Ryan, head of the hospital, complained that the Serbs were almost useless because of their utter inability to learn or even comprehend the simplest rules of sanitation and cleanliness, which suggests what to me is the most imperative need of the nation.

There is seemingly absolute ignorance or wanton disregard of the primary rules of sex hygiene among all except the wealthier and more cultured classes of the nation, which form only a very small proportion of the population. Several doctors who had been working thru different parts of the country were unanimous in the opinion that an amazingly high percentage of the population were suffering from the ravages of venereal diseases, a condition which seems to arise more from ignorance than from viciousness. It is only the healthful outdoor life which all classes of the people lead which enables them to survive the curse.

They seem to have an almost bestial disregard for vermin. Hotels and lodging houses simply swarm with bedbugs, fleas, and even lice. I have sometimes wondered whether according to the Darwinian theory all those who disliked vermin have either died or lost their reason from the constant torture of the bites so that the children as they were born tended to be immune to the vexation of the insects, altho fortunately or unfortunately, as you please, not immune to the toxins they carry.

Education is the only thing that can help Serbia. And how can education best be accomplished? Not by teaching the older people. They are too conservative. They regard the American doctors who are employed by the Serbian Government to supervise the sanitation in the principal cities and towns as flying in the face of providence. They have a fatalistic belief that if disease is coming it will come anyway, and if precautions are taken it is a sign of cowardice and an endeavor to escape your fate. The only angle of attack that seems to offer any real prospect of success lies in taking the children at an early age and giving them a good education. This seems entirely feasible if money is forthcoming either from the government or from private sources.

The Balkan wars left a great number of orphan children. The present war and the typhus scourge of last winter increased the number tremendously. If these orphans could have the advantages of instruction under English or American methods with a degree of separation from the surrounding sloth, and constant examples of Anglo-Saxon initiative and enterprise, they might prove a leaven that would cause the whole mass to rise somewhat in the course of the next generation or two.

One such institution was expected to get under way this fall at Kraguevatz. It was to be called the Madam Gruetz Baby Hospital, and is sponsored by the mother of the present secretary of foreign affairs, a very capable, well educated, and cultured woman with an eye for the future of the country. Such an institution is not an absolute novelty in the Balkans, but Serbia needs many of them. A school with a similar object has been in successful operation for several years in the neighborhood of Salonica, Greece. Boys are taught on a farm. The day is divided between the class room and the field. Modern methods of farming are demonstrated and it is hoped that these boys will spread the gospel of good cultivation of the soil. The school is not primarily religious and consequently does not run counter to the established church, altho the scholars are under a Christian influence. If any charitable or missionary institution desires to take up such a work there is a great field open to them. This from my observation is what Serbia needs most.

HAND-SPRAYED TROOPS TO DEFEND SERBIA

American Red Cross workers applying a disinfectant to soldiers who have just come in from a long stay in the trenches. Serbia is still disease-ridden, tho the typhus epidemic was definitely ended

ADOPT THE NEW YORK CONSTITUTION

BY HERBERT PARSONS

On September 13 The Independent published an article by Frederick M. Davenport, entitled "Elihu Root—Progressive," which outlined some of the innovations which the New York Constitutional Convention, then just finishing its work, had decided upon. The complete draft of the Constitution will be voted on at this November election, and we asked Mr. Parsons to give his reasons for believing that it should be adopted in spite of the opposition to it. Mr. Parsons is a thorogoing Republican. He has been a congressman and served as a delegate-at-large to the Constitutional Convention.—THE EDITOR.

THE proposed Constitution for New York State should be adopted because it makes changes for the better wherever it is *essential* that changes be made.

A growth in New York State's annual expenditure in twenty years from twelve millions to forty-two millions called for a more scientific method of appropriating money. The proposed Constitution accordingly provides for a budget to be prepared by the Governor, whose subordinates spend the money, know the needs, and can be made by him to estimate closely what is needed. Now the appropriation bills are prepared by legislative committees and passed in the closing days of the legislative session with substantially no scrutiny from the Legislature and with not more than half a dozen members knowing what they contain.

The same period of time has witnessed an abnormal growth in departments, boards, bureaus and commissions—so many in number and so disconnected that the Governor as the executive head cannot secure effective work thru them. Hereafter there will be seventeen civil departments, and all functions, old and new, must be allotted among them. The Governor is given the absolute power of appointment and removal of the heads of most of them, following the provision of the Charter of the City of New York which has done so much to bring about responsible government in this city. Only four instead of seven state officials will be elected, making selection easier for the electors, and fixing responsibility more definitely.

To avoid the necessity of carrying huge sinking funds and paying large interest charges, the state hereafter will issue serial bonds. Bonds will not be payable at a later date than the probable life of the improvement for which they are issued. The emergency message of the Governor, which made possible the passage of bills without the legislators knowing their contents, will be abolished, and no bill can pass until it has been printed in its final form for three days. The salaries of legislators will be increased so that wage-earners can become law makers without the danger of going to the poor-house or the temptation to become grafters.

It will be possible to deal effectively with sweatshop conditions in New York City thru a constitutional provision that will give the Legislature power to prohibit manufacturing in tenements—a power which has been in doubt ever since the decision of the Jacobs case by the Court of Appeals and a power which is essential if legislation already passed unanimously is to be held constitutional. Hereafter, we will be able to say that a person cannot be deprived of his life any more than of his property without just compensation, for the Legislature may extend to "occupational diseases" the principle of workmen's compensation.

In taxation it will be possible for the state to evolve a modern system as other states have done, thru the provisions which, outside of the City of New York, will make possible a county system for the assessment of real estate and give the State board power over the assessment of personal property.

The state every ten years will be saved $500,000 thru the provision in the apportionment article by which future apportionments of Senators and Assemblymen are to be based upon the Federal census, thus eliminating the need of a state census. In connection with the apportionment article, it should be understood that it is not true that the proposed article or the present Constitution provides that Greater New York may never have a majority of the Senators. It may. The limitation which for political purposes is talked about and which is continued is the limitation for which the people of New York City voted twenty-one years ago, and by which Kings, New York and the Bronx (excepting the annexed district) can never have a majority of the Senators. That territory has less than forty two per cent of the citizen population now, is accordingly not entitled to half the Senators, and so far as man can see never will be entitled to half.

Real home rule will be possible, for to every city is given the "exclusive power to regulate, manage and control its property, affairs and municipal government," and the Legislature is forbidden to interfere, the state of course retaining the power to have the Legislature pass general laws such as the Property, Penal and Corporation Laws, and also the power to pass laws which apply to all cities of the state without classification or distinction. The home rule power specifically includes the right "to organize and manage all departments, bureaus or other divisions of its municipal government, and to regulate the powers, duties, qualifications, mode of selection, number, terms of office, compensation and method of removal" of city officers and employees. Every city may also amend its charter and make a new charter, the Legislature only having the power to disapprove changes in the "framework" of city government, and, until the Legislature acts otherwise, a city may even legislate as to matters of state concern, and in cases where a city is concerned with matters outside its territory but relating to its government, action by the Legislature will still be subject to the present suspensory veto power of the mayor.

In the limits of this article it is impossible to give all details, but is it not clear that where it was essential that changes should be made improvements are proposed? Should not the people embrace the opportunity to accomplish these improvements? By contrast the objections are puerile. Despite his eminence, that is the only way that one can characterize the claim of an ex-judge that because the proposed Constitution does not contain something which for 138 years it never has contained and which it is not essential that it should contain, it should be defeated. A prominent local federal official makes the criticism that the Governor is given too much power, which students of government deny, some claiming that he should be given even more. One important city official may claim that the grant of home rule is even more liberal than was advisable, and another that it is not as extensive as his theory calls for. In the face of all these criticisms remains the fact that the proposed Constitution, the result of five months' labor of men from all parts of the state who had had experience in government and earnestly sought to make changes where changes were necessary, contains far reaching and essential improvements and advances. Wherefore it should be adopted.

A NEW CROP OF DRAMATISTS

BY MONTROSE J. MOSES

AUTHOR OF "FAMOUS ACTOR FAMILIES OF AMERICA," "THE AMERICAN DRAMATIST"

FRED BALLARD
Author of "Young America"

CLEVES KINKEAD
Author of "Common Clay"

WE are all writing plays—some of us for the moving pictures, others for the theater. Within a week I have heard of amateurs from the coast, the Middle West, and the South, who have come North from the ranch, plantation and small town, with full-fledged plays to sell. Something big is sure to come out of this activity.

Professor Baker's "Workshop 47" at Harvard—"47" meaning the course offered in play construction—is at all times rich in instances of this widespread desire to write a play. Hitherto, in the past two decades, our dramatists have been men with newspaper training—Augustus Thomas, Eugene Walter, Rupert Hughes, Thompson Buchanan, A. E. Thomas, Charles Kenyon—to mention a few. The college seems now to be the other chief source where new dramatists will be discovered. Baker has given us Sheldon, Knoblauch, Mackaye, Josephine Peabody, and two new men now before the public.

Cleves Kinkead, author of "Common Clay," was not a student at Harvard when he felt impelled to write drama. He was living in Louisville, Kentucky, practising law and writing political "stories" for the Louisville *Evening Post*. When the feeling came that maybe he could write a play, he wrote to Baker, left for Harvard, studied a year, and graduated with a prize manuscript to his credit. Then he went back to Louisville and started "Common Clay," now running in New York.

Today he is much talked about as a hopeful sign in American drama. The Kentucky newspaper man shows himself to be a reporter in "Common Clay," his court scene reveals him familiar with the law; his technique is indication that Baker has taught him a few tricks of the trade. But the be-a-dramatist-quick method leads to disaster, if there is not back of the desire for dramatic expression, a deep understanding of character and a desire for right thinking.

Whether in "Workshop 47" or in the law court, Kinkead learned the old story of heart interest; either from his newspaper or his social observation, he realized that there is a vulgar curiosity always attractive to people interested in sex. He did not learn the fundamental thing about drama, that it should reflect truth. "Common Clay" is not true; it is manufactured out of old material. Kinkead has yet to learn, despite his study of technique, that principles of life in which people believe must not be made subservient to dramatic effect.

Mr. Fred Ballard, another Baker product, and author of "Young America," lived in a town where the price of hogs was more vital to the community than the refining value of art. In order to escape hogs, he became interested in the theater. Entering "Workshop 47" he wrote "Believe Me, Xantippe," which won the Craig Prize and was ultimately brought to New York with a good cast. "Xantippe" was a bright comedy, but it failed because it degenerated into farce. Then Ballard began to evolve "Young America," showing an interest in an unused subject for the theater—one of public concern—the Juvenile Court. "Young America" shows sincerity all thru. Ballard told his story dramatically and with no more artifice than was necessary.

An example of the hopeful playwright from the newspaper is Mr. Charles Kenyon—a San Francisco reporter on the *Examiner*, who probably was a reader of Shaw's "Widowers' Houses," and certainly is a man with a deep sense of social wrong. He wrote "Kindling" in order to show how deep a scar of moral degradation may be left by the evils of tenement house living. The play failed. Unlike "Common Clay," it had no sex sensationalism; it was life down to the raw bone.

After the failure, Kenyon retired. But this year he came back with another play, "Husband and Wife"—a vigorous treatment of a man's disgrace thru the woman's extravagance. It was a hackneyed theme, but burning with sincerity—an unusual criticism of life and an excellent ability to make his characters, not puppets subject to circumstance, but moved to action by natural motives.

The play was on the "boards" a fortnight, and failed. Did its excellent style kill it; did the absence of garish sex, even tho the wife was about to run off with the usual "other man"; did the intensive gloom of the husband's problem? Kenyon is too valuable a man to be discouraged. There are few men writing with his penetration or feeling.

Here, then, are three types of the dramatists recently discovered. Kinkead stands as a warning to himself and to the myriad others who might have the same mistaken notions as to what is drama. It may be melodrama, it may exploit a theory, but it must *not* violate the fundamental questionings of life, cloaking them beneath a mawkish sentimentality, which "Common Clay" does.

Ballard stands for sincerity, and for healthy democratic love of ordinary things. Kenyon, however, represents the most hopeful signs of what is to come in the future. Feeling the life with which he deals, he penetrates its deeper secrets, and would, I think, make few concessions purely for dramatic effect, unless he felt that the truth of it all would not be materially altered.

EFFICIENCY IN THE FACTORY

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

ONE of the greatest social needs of today is for a mental, moral, industrial and financial clearing-house of ideas, where the principles, aims and methods of the leading trades and professions may be interchanged and improved. A teacher or minister could often learn more about his own work from a manufacturer than from another teacher or minister. There are about 250,000 manufactories in the United States, with about 7,000,000 employees, and a yearly output valued at $30,000,000,000. Any field of such magnitude is worthy of close study by a man with a man's size ambition.

A more vital reason for knowing factory conditions lies in the certainty that the *families* of employers and employees are directly affected by these conditions. The health, prosperity, morality and usefulness of perhaps 25,000,000 people thus depend on the right management of the factory systems of this country. Furthermore, every one of us gains or loses by the way in which factories are conducted—most of our clothing, work appliances, house furnishings, even our food and drink, bears a factory mark.

The owner or manager of a great modern factory must know, or know where to find out, at least 10,000 different things, a few hundred of which we will barely suggest in this article.

CONSULT AN EXPERT

The first thing to do, when making a plan for a factory building, is to consult a competent authority, known as an "industrial engineer," and certified by some national organization such as the American Institute of Consulting Engineers or the American Society of Mechanical Engineers. You need an expert's advice, from cellar to roof.

In choosing a location, these are a few primary points for you and the architectural engineer to determine: superiority of city or suburb; area needed and cost of land; wages demanded in that section; proximity and abundance of labor, materials and power supply; weather and climate as affecting work and workers; shipping facilities; market for products; home sites for employees.

The building must be adapted to its own specific use. What are to be the methods of manufacture? Have you collected and compared minute descriptions of other factory buildings and systems—a score to a hundred? What will be your machinery equipment, where and how disposed? How will your delivery scheme be most effective and economical, incoming for materials, outgoing for products, retaining for materials and products in storage? How should the yards, tools, desks, departments, be arranged according to the principle of scientific management? Have you figured in detail your designs, estimates and costs, with all specifications minute and proportional? Does your finished plan allow for changes, extensions and improvements later on, without injury to the building or to the scheme of manufacture? What kind of building offers the lowest insurance rates, the least depreciation, the largest salvage?

CHOOSING THE MATERIALS

The structure may be of wood, or wood and brick walls, or steel frame and brick or hollow tile or concrete walls, or reinforced concrete frame and brick or concrete walls. About sixty-one per cent of all the structural material employed in the United States is wood. The percentage is fast changing to a preference for concrete—in 1890 the output of cement was 300,000 barrels, but in 1913 it was over 89,550,527 barrels. The yearly depreciation of wood is about one and one-quarter per cent, while that of concrete is less than half of one per cent. The insurance rate on wood buildings (with contents) is 100 to 125 cents per $100, while that on concrete buildings (with contents) is only twenty to forty-five, approximately.

A wood building may cost $100,000 and a concrete $140,000, on first estimates. But in the long run they will cost about the same, owing to the lesser depreciation of concrete, its lower insurance, its weather-resistance, its non-susceptibility to vibration and oscillation, its evenness of temperature, and smaller demand for power supply. Among the advantages of concrete are that it is fireproof, waterproof and verminproof, easy and economical to build, allows more windows and less walls, gains strength and solidity with age. Among the disadvantages of concrete are that it has little or no salvage value, may be damp, looks ugly, makes machinery connections difficult and future extensions almost impossible. An advantage of hollow tile is the insulation of the building from heat and cold. The only safe way is to think long and compare widely before specifying the material.

Now as to floors. A floor may be a thief. Do you know that a certain type of floor, for example, robs the workers of the normal body heat so that they feel excessively and prematurely tired? Also, it adds to nerve-strain and foot-fatigue because of the hardness of its compact. Molding-rooms may need a mastic and asphalt composition, concrete or brick floor, forge-shops an earth or cinder floor, car-houses a concrete base and granolithic finish, machine-shops a creosoted wood plank on concrete base, offices a maple or yellow pine over concrete.

Your choice of a roof is even more complex; it may be tile, or tin, or slate, or shingles, or composition, or asbestos, or sheet metal, or concrete, or tar and gravel. The points to consider, in specifying a roof, are its ventilation, illumination, water-shedding capacity, endurance, appearance, low cost of repair, suitability to the nature of the factory.

The matter of fire protection is a very serious one. About 2000 fires occur every year in the factory buildings of the United States, with a money loss of $25,000 each or more —usually much more. Nearly all might be prevented by such means of foresight as these: fireproof building materials; protection of steel framing with brick, tile or concrete; self-closing doors; windows with metal shutters; cut-off walls; hollow metal and asbestos wood partitions; separation of belt towers by brick partitions with fire doors; separate outside stairways; automatic sprinklers, fire alarms and extinguishers; frequent inspections and fire drills; red lights at all exits; inflammable materials fully enclosed; order and cleanliness thruout the factory; printed fire instructions posted largely in prominent places.

THE WORKER'S LUNGS

A worker's efficiency may vary as much as thirty per cent, according to the temperature of the room and the purity, humidity, and circulation of the air. It is now fashionable, and desirable, *to wash the air* in a big factory. As many as 221,000 particles of dust have been counted in a single cubic foot of air on lower Broadway, New York. Dust, being a conglomeration of the worst kinds of filth, must be kept out of the organs

ism of the most effective worker. The heating system should also be a ventilating system. The modern "fan" system of heating largely solves this problem, by keeping the air in circulation, and preventing cold drafts from outside tho forcing gentle currents of pure air into all the rooms of the factory. The average steam engine uses only about twenty per cent of its heat production in work radiation, leaving about eighty per cent unused. Why not heat your building by utilizing all this waste?

The exterior walls of factories are now mostly glass. Many structures have window areas of seventy-five per cent of their whole outer surface. A leading authority on industrial engineering says: "No one single factor is as important as light, whether natural or artificial, as an aid in keeping production at a high efficiency thruout the entire working day." Another says: "Light is more valuable than space. The factories erected today probably require and get fifty per cent more light than was common a generation ago."

INEFFICIENT DARKNESS

Experts declare that twenty-five per cent of all the avoidable accidents in factories are due to poor illumination, On dark days, certain factories have lost an average of an hour a day for each employee; yet a labor improvement or increase of only four minutes daily per man will generally pay for the installation of a good lighting system. A fine scheme of illumination reduces errors, increases production, lowers manufacturing costs, lessens the eye-strain, fatigue, headache, nervousness and irritability of employees, adds to cheerfulness of surroundings, and therefore to the willing spirit of workers, renders supervision easier and more economical, promotes hygiene, cleanliness and order, prevents loss of tools—and tempers, aids regularity and uniformity in work.

Electric light seems to be the only kind fulfilling all the conditions: that it be ample, uniform, steady, mild, shaded but concentrated, both general and specific. An overhead system is better than drop lights; but drops are also needed on close, fine work. A low ceiling indicates small lamps in large numbers; a twelve-foot ceiling takes sixty- to 100-watt tungsten lamps, instead of a glaring arc lamp, while a fifty-foot ceiling calls for perhaps 500-watt tungsten lamps. Efficient reflectors, glass usually being preferred, may increase the power of illumination as much as sixty per cent. The lighting system should be inspected daily if possible, for renewals, cleaning, repairs and so forth.

Color is an important factor. Ceilings should be white, or some tint very near white. Green, or buff, or blue, somewhat darker but still light in shade, with a few ornamental panels, would be desirable for the walls.

From the standpoint of health nothing is more vital to a factory than drainage. Among the requisites are a dry subsoil, prevention of sewer gases, immediate removal of waste, constant ingress of pure air, incineration of garbage and other refuse.

A remarkable feature of modern factory ownership lies in the phrase, "Beauty serves utility." Flowers, drives, and fountains, model cottages and other attractions, now form an integral part of the business scheme of the largest manufacturing plants, with bright colors, mottoes, pictures and statuary gracing the interiors.

MACHINES AND EFFICIENCY

When Charles W. Eliot, President Emeritus of Harvard, said "No man should be employed at a task which a machine can perform," he put into words one of the great Efficiency truths of modern industry. The more the factory man of today eliminates human labor, the more efficient he makes his plant and the more productive he makes the labor of the human machines he employs.

This brings to mind a large factory where the old-fashioned trucking system has been well nigh eliminated by the installation of a mechanical conveyor system which carries on its broad belts a steady procession of merchandise in every stage of manufacture, climbing from floor to floor, running along the ceiling, crossing the street to the packing room, and finally, delivering the finished product, in great boxes and cases, to the warehouse. A complementary device utilizes the cheapest power known. Down smooth spiral chutes goes the mechandise, not only annihilating the space between floors but speeding up (or rather down) the delivery of the product, saving thousands of steps and reducing the pay roll. Many another example of progress in factory economy thru judicious selection of labor saving machinery might be cited. But these are typical and sufficient for my purpose here. The point is this. Study your manufacturing problem closely—do not rest till you are on speaking terms with every machine on the market which will save a step or speed along your product.

TEACH WORKERS HOW TO WORK

In the last few years it has been discovered that workers do not know how to work. There may be 100 ways of doing the same job—and of course ninety-nine of them must be wrong. How to locate and eliminate the ninety nine wrong methods, how to evolve and establish the one right method: this is the great problem of the manufacturer. An authority states that, because of incompetence of both employers and employees, in the trades alone "the loss is probably more than sufficient to pension, under full pay, one half of the workers of the country." To put it concretely, half the motions of the 30,000,000 workers in the United States are utterly wasted. Probably nine-tenths of their thoughts are also wasted. Teach a man how to work and how to think—and you make him at least 300 per cent more valuable to the business and to himself. Scientific management teaches him how to work, and personal efficiency teaches him how to think.

The Taylor plan of scientific management is based on (a) scientific system of work, (b) scientific choice of the man for his work, (c) scientific training of the man in his work, (d) scientific promotion of the man thru his work. The Taylor principle is that tasks should be set only as the result of scientific investigation, and on the basis of mutual interest, benefit and satisfaction. Mr. Taylor himself defines it thus: "Science, not rule of thumb; harmony, not discord; coöperation, not individualism; maximum output, in place of restricted output; the development of each man to his greatest efficiency and prosperity."

An outline, condensed, of the Taylor system, we give as follows:

1. Find ten or fifteen men in a given trade peculiarly skilled in the work to be analyzed.
2. Study their exact series of elementary motions or operations, with implements used.
3. Study with a stop-watch the time required to make such elementary movements, then select the quickest way of doing each.
4. Eliminate all slow, false and useless movements.
5. Collect into one series the quickest and best movements, as well as the best implements.
6. Standardize all work accordingly, and train workers in new methods.
7. Provide just rewards, and human interest factors in rousing, impelling and educating workers.

By the Taylor system, unusual results have been achieved. In a bicycle factory the working period was shortened from ten and a half to eight and a half hours, the pay and the output remained the same, and the accuracy was two-thirds greater than at the former slow rate. In a big steel plant, employees were taught to load forty-seven and a half

tons of pig iron daily instead of their usual amount of twelve and a half tons; their average earnings were increased from $1.15 to $1.88 daily; the savings to the company ran from $35,000 to $80,000 yearly. A very simple example is that of a girl in an office who applied the principles to herself and learned to stamp 110 envelopes a minute.

Next to Mr. Taylor, the leader in this field is perhaps Mr. Gilbreth. He has revolutionized the ancient, onerous and profitless trade of the bricklayer, till now it comes under the dignity and reward of skilled labor. On the Gilbreth system a man lays 350 bricks per hour—as against the former systemless average of 120 per hour. Mr. Gilbreth says: "Wherever motion study has been applied, the workman's output has been doubled." A manufacturer, indeed any employer and any employee, unfamiliar with Taylor and Gilbreth, has overlooked a fine chance for at least a forty per cent gain in working output and income.

INCENTIVES TO BETTER WORK

There is a human side, and a purely mechanical side, to industrial management. Each is indispensable, neither may safely be neglected. No man ever did his best merely for wages. We have the statement of an authority: "The average workman engaged in construction work under the wage system is capable of increasing his output seventy per cent if given sufficient incentive to do so, and this without the least physical injury to himself." And the same truth applies to the mental worker, as I know from experience.

A little reflection will show how unfair the wage method of payment is to both employer and employee, since flat wages can never gage the actual amount of work done. The newer and better systems include the following:

Bonus system. Worker is paid a regular minimum wage, with piece-rate award in addition.

Differential piece-rate system (Taylor). Worker is paid minimum for piece jobs, with higher rate for daily output over a certain amount.

Task work with bonus system (Gantt). Worker is paid regular daily wage, and lump bonus if he reaches fixed standard of output (bonus usually about one-third of wages).

Premium system (Towne-Halsey). Worker is paid bonus, but means and methods are left to the men, not ordained by the manager.

FACTORY EFFICIENCY TEST

FOR SELF-APPLICATION BY ANY OWNER, MANAGER, DIRECTOR, SUPERVISOR, OR OTHER OFFICIAL OF A MANUFACTURING PLANT

KEY TO THE TEST. Where the answer to a given query is Yes, write 5 in the blank space opposite. Where it is No, or uncertain, leave space blank. To find your percentage, add column of numerals. Most of these questions cannot be answered fairly without expert knowledge. Mr. Purinton will gladly suggest books, magazines or other sources of information whereby this Test may be rendered more valuable as a guide to future study. Mail your question or problem to The Independent Efficiency Service; and kindly be patient if the answer should be somewhat delayed, owing to volume of correspondence.

1. Do you consider your product, firm, opportunity, the finest in the world? .....
2. Was your factory planned thruout by a certified engineer, and built for its own specific use on sanitary, economic principles? .....
3. Are the heating and ventilating systems adequate, hygienic? .....
4. Is the light, both natural and artificial, up to the maximum of quality and quantity, but down to the minimum of cost? .....
5. Have you accurate knowledge of every labor saving device applicable to your business? .....
6. Have you taken all possible fire protection and precaution? .....
7. Are all your methods based on scientific management? .....
8. Have you adopted cost-finding and cost-keeping systems guaranteed correct by a leading authority? .....
9. Do you choose your employees by the modern vocation-test plan? .....
10. Does your pay system include the bonus, premium, stint, or other incentive and reward besides mere wages? .....
11. Do you require exact daily reports from all departments? .....
12. Are there systematic ways of improvement established in all departments? .....
13. Have you carried welfare work to its limits of usefulness? .....
14. Is every employee contented, loyal, cheerful, enthusiastic? .....
15. Do you teach your employees how to think, eat, bathe, dress, work, relax, read, play, study, for promotion and achievement? .....
16. Do you tell each worker exactly what to do, how to do it, then hold him entirely responsible for results? .....
17. Have you compared all your methods, in detail, with those of at least a dozen other factories in the same field? .....
18. Have you read at least 10 books on industrial management, and formed a factory library of at least 100 books, for your officials and employees? .....
19. Do you admit employees, elected by employees, to your list of shareholders and board of directors? .....
20. Are you willing to be told you are wrong, by an expert, official employee, or even by outsider? .....

Add column of figures to find your approximate grade in factory efficiency

Copyright, 1915, by Edward Earle Purinton

No car of equal quality can be sold for a price as low as the Cadillac price unless it commands a market as large as the Cadillac market.

IF it were not for the size of the Cadillac clientele, the new Cadillac Eight could not be manufactured and marketed at its present price.

It is too fine in every element that constitutes quality to be distributed in any lesser volume at the present figure.

If its field were limited to five thousand, or even twice that number of purchasers, it would be necessary for the Cadillac Company to advance the price.

A competent engineer, examining the chassis of the new Cadillac Eight, will tell you emphatically that nothing but the large output could possibly justify its superb craftsmanship at so moderate a price.

He will tell you without hesitation that, quite aside from performance, its intrinsic worth is so great that it represents, in the best sense of a much abused word, a value unequaled among motor cars.

Such infinitesimally close and fine mechanical measurements—more than one thousand reduced to an accuracy of one-thousandth of an inch, and more than three hundred to one-half-thousandth of an inch—would be commercially impossible in a car of smaller production.

Cadillac volume ***could*** be used to attain a lower price with the resulting lesser value. It ***is*** used, and ***always has been*** used, to hold down the price and raise the quality higher and higher.

You know how this Cadillac quality expresses itself in the performance of the Cadillac Eight.

"The sweetest running car in the world," it was called a year ago.

And nothing has transpired since to deprive it of that distinction.

The new Cadillac has simply added new lustre to the Cadillac good name.

It is still, as we have often said, "a law unto itself."

Intrinsic-value, performance-value, social-value—in all three it is America's one incomparable motor car.

Styles and Prices

Standard Seven passenger car, Five passenger Salon and Roadster, $2080. Three passenger Victoria, $2400. Five passenger Brougham, $2950. Seven passenger Limousine, $3450. Berlin, $3600. Prices include standard equipment, F. O. B. Detroit.

Cadillac Motor Car Co. Detroit, Mich.

Stint system. Worker is paid regular wage for specified amount of work, then given all spare time left after completing job (this often equals one to two days a week).

Among other incentive systems are the old age pensions, employee-partnerships and stock holdings, mutual insurance policies, and various benefit plans. A business that pays nothing but wages is found wanting by modern efficiency standards.

How to reduce costs is a question of deep concern to every manufacturer. An expert gives these rules: Standardize all items on minimum estimate from experience; eliminate dead work; push every man and machine to capacity, but not beyond; have all work done by machines where possible; use low-priced men for low-priced work; transport and handle pieces in groups, not singly; make all designs in office, not in field; figure all cost items as percentages of total, and reduce accordingly; employ night shifts, to cut down overhead; do most profitable part of work first, to stop interest charges; avoid accidents by inspections, instructions and precautions.

A scientific method of finding and keeping costs is fundamental to factory success.

A cost-finding system should precede a cost-keeping system. Various methods are available: The estimate and test plan, the specific plan, the sold-hour plan, the machine-hour plan, the list-percentage plan, and so forth. Have you become familiar with all these plans?

Welfare work is more and more engaging the attention of the shrewdest manufacturers, and not as philanthropy but as economy. When you provide hot dinners, cooked hygienically and served attractively, at cost price to your employees, you add perhaps ten per cent to their working power in the afternoon. At the Krupp works in Germany the families of the workers join, eat, make merry and get acquainted in the company dining-hall! Here we have one secret of the solidarity of the German fighting machine.

Welfare work now includes welfare secretaries, clubs and associations, vocational books and courses, factory libraries, evening lectures, classes, and musical entertainments, restaurants, cooking and sewing classes, visits of nurses and attendance by physicians, pure water in abundance for drinking and bathing, liquid soap and individual towels and drinking cups, "First Aid" and "Safety First" instructions, vegetable and flower gardens, playgrounds, swimming pools, rest rooms, lawns and parks, roof garden, gymnasiums, ball clubs, annual outings, even music to accompany the work! Said an official in a tobacco factory where Mexican peons were employed: "The work went twice as fast if I told them every day a fairy tale, with the regulation princess and dragon!" We do not advise the telling of a large number of fairy tales in your factory (or about your goods). But we do rejoice that the spirit of romance and idealism is being made to serve a wholly utilitarian purpose—and thus to prove its practicality.

Put briefly, the twelve general principles of modern factory management are these:

1. Standards of time and motion, tools, costs, output. 2. Educational supervision, oral and printed instructions, for training employees in physical and mental efficiency. 3. Subdivision of duties, minimum number to each man, and man chosen to fit the tasks. 4. Coördination of groups or departments, right relationships of work and workers. 5. Separation of plan and execution, with specialists for head work as for hand work. 6. Regular unit cost reports for study and comparison. 7. Increasing rewards, with some form of piece-rate system made to supplement or supplant wage system. 8. Competition or emulation, fostering of the game or contest spirit between groups or individuals. 9. Prompt pay, by cash, not check, with daily or weekly statements of exact amount earned. 10. Managerial authority and dignity, social exclusion but industrial inclusion. 11. Sustained quality of product, means taken to ensure pride of workers in it and favor of public for it. 12. Welfare work (not charity or paternalism), aiming at recreation, education, health, sociability, comfortable and happy home life of employees.

The great new business principle of the twentieth century may be summed in a few words: *The interests of employer and employee are identical; neither gains or loses without corresponding gain or loss by the other; hence the problems of each vitally concern the other and must be solved by impartial study, mutual respect, scientific sympathy, joint endeavor.*

NOTE OF ACKNOWLEDGMENT. In preparing the foregoing article, the writer has consulted the most eminent authorities in the various branches of industrial engineering and promotion. For certain of the facts here mentioned, he is indebted to Mr. F. W. Taylor, Mr. F. B. Gilbreth, Mr. H. G. Tyrrell, Mr. F. E. Webner, Mr. H. P. Gillette, Mr. H. L. Gantt, Mr. G. M. Price. On request of any reader of The Independent, the writer of this article will be glad to suggest the titles of some of the best books on factory building, management and operation.

THE DAY

BY CHARLES ALEXANDER RICHMOND

Twelve mailèd men sat drinking late.
The wine was red as blood.
Cried one, "How long then must we wait
Ere we shall thunder at the gate,
And crush the cursed brood?"
Twelve men of iron, drinking late,
Strike hands, and pledge a cup of hate;
"The Day!"

Twelve men met at the day's decline—
Eleven and One beside.
Their every thought, a thought benign,
Yet One—the One we call divine—
Next day was crucified.
Twelve men of God raised up the sign
And pledged in consecrated wine,
"The Day!"

Now nineteen hundred years have passed:
The day—whose shall it be at last,
Oh Christ!

A Six Pound Aid To Greater Efficiency

One of the first principles of modern efficiency in business is to eliminate waste motion.

No single mechanical device has done more to accomplish this than the Corona Folding Typewriter.

It is a *complete* typewriter that the outside man, as well as the office man can use *personally* and can soon learn to operate rapidly.

If your traveling representatives and desk men were equipped with Coronas they could write their correspondence, reports, specifications, orders, etc., *direct on the machine*—cutting out the lost motion of dictating or writing out in illegible longhand for transcription by typists.

But more than this, the

CORONA

Folding Typewriter
The Machine for Personal Use

increases each employee's personal efficiency by enabling him to do more and better writing, with less effort and in less time. The Chief Claim Agent of a prominent western railroad (name on request) has increased the efficiency of his department 50% by equipping his adjusters with Coronas. The men carry their machines with them on the road—weigh only six pounds each.

Big and progressive concerns in every line of business, are enthusiastic users of Coronas.

The executive, salesmanager, salesman, factory superintendent, purchasing agent, or the efficiency man who wants to reduce expenses and increase efficiency, should look into the possibilities of the Corona.

We have a little booklet full of big facts which we want to send you—write for it.

Note These Modern Features

Visible writing, two color ribbon, universal keyboard, back spacer, double carriage release, mechanical type guide, ball bearing carriage, aluminum frame, keyboard for all languages.

Send for "Proof of the Pudding"

It tells what the Corona is actually doing for hundreds of firms and personal owners—you'll recognize most of the names.

Also ask for catalogue No. 23.

THE NEW BOOKS

THE WAR DRAMAS

War brings some curious emotional reactions. Cross it with minds already mystical in character, and the psychological effect is even more unusual—as much of the war literature has shown. Only thus may one explain such hybrid dramas as Stephen Phillips' *Armageddon* and Leonid Andreyev's *Sorrows of Belgium*.

Mr. Phillips' play is characterized by a kind publisher as "a modern epic drama in a prolog, series of scenes, and an epilog written partly in prose and partly in verse. . . . done partly in the Greek way, but very largely in his own way, which is a new way." Written with extreme bias, making the Germans the emissaries of the devil, in whose antechamber the war is planned, while the British appear as the special guardians of virtue in all its forms, there is little to recall the man who wrote *Paolo and Francesca* and *Herod*.

In six scenes that have little unity the Russian Andreyev has sought to portray the sufferings of the Belgians and their martyrdom to the cause of Liberty, especially as these find their echo in the conscience of their great poet, easily identified as Maeterlinck. Deeply poetical, Andreyev has clothed a theme somewhat slight with majesty, tho it is often obscured by his mysticism. Herman Bernstein has provided an excellent translation.

Armageddon, by Stephen Phillips. New York: The John Lane Company. $1. *The Sorrows of Belgium*, by Leonid Andreyev. The Macmillan Company. $1.25.

PROBLEMS OF CITY LIFE

Altho the urbanization of our population has been anticipated for a quarter of a century, the problems of city life are piling up faster than we can deal with them. Many of these so-called city problems are in reality the problems of our industrial order, which naturally show themselves acutely in the cities. Thus, in four books on various aspects of city life the industrial background is an essential feature of the discussion.

In *Problems of Community Life*, Seba Eldridge presents a comprehensive series of topics that have to do with some ten groups of problems. This is in the form of an outline, and may be used as a guide for study or for classification. The author's aim is to assist in the development of *humanness* in social reform, having no hope apparently that social *justice* is worth striving for, and saying explicitly that after all social justice is not essential to life and opportunity, whatever that may mean. In each of the main divisions the industrial sources of the civic problems are prominent.

George Sharp, former State Senator in Michigan and brother of the Ambassador to France, writes of *City Life and Its Amelioration*, largely in terms of esthetic reaction. There is so much that is ugly and in bad taste, so much frivolity. There is lack of friendliness and fellowship. If we should change our feelings toward each other and be less selfish, things would be much better!

In *Street-Land* a more systematic study of the city is furnished by Philip Davis, director of the Civic Service House in Boston. While he considers the street altogether from the point of view of the child, there are many open windows that give us glimpses of homes, schools and factories which are full of significance. The hazards of the street, of work, of loafing, are described from first-hand experience and the program offered is a direct outgrowth of that experience. Every social worker will want this book. There is a bibliography of works on all phases of child life.

Old Age and Poverty in Greenwich Village is an intensive study by the type method of one hundred poor people over sixty years of age in New York City, made by Mabel Louise Nassau, under the direction of Professor Henry R. Seager of Columbia University. The work combines "the interest and pathos of biography with the objectivity of social investigation," and points out the effects of dependency upon the aged, upon their families and upon society. There are also some suggestions for the practical approach to the problem of old age relief in America.

Problems of Community Life, by Seba Eldridge. New York: T. Y. Crowell Co. $1. *City Life and Its Amelioration*, by George Sharp. Boston: Richard G. Badger. $1. *Street-Land*: Its Little People and Big Problems, by Philip Davis, assisted by Grace Kroll. Boston: Small, Maynard & Co. $1.35. *Old Age and Poverty in Greenwich Village*: A Neighborhood Study, by Mabel Louise Nassau. New York: Fleming H. Revell Co. 60 cents.

BOOKS ON THIS AND THAT

The Little Red Doe, by Chauncey J. Hawkins. If anything could touch the heart of the hunter, it would be this little story of the life of a wild deer.

Boston: Little, Brown. 50 cents.

Trench-Mates in France, by J. S. Zuber, by means of the adventures of two French lads describes the mechanics of modern warfare. Paints its romance, but ignores its horrors. No peace pamphlet.

Harper. $1.

A B C of Architecture, by F. E. Wallis, is a handy guide to the different periods and styles of building, having descriptions of the Greek, Roman, Romanesque, Byzantine, Gothic, and Renaissance.

Harper. 50 cents.

Walks About Washington, by F. E. Leupp. Illustrated by L. G. Hornby's excellent drawings of many not commonly pictured corners of the city, and enlivened by anecdotes, this is a most attractive book.

Houghton Mifflin Co. Little, Brown. $2.

When Hannah Was Eight Years Old, by Katherine Peabody Girling. This tiny book makes accessible the exquisitely simple and touching story of a Swedish child, published last year in the *Atlantic*.

Stokes. 50 cents.

Old Calabria, by Norman Douglas. No business like guide this, but a well illustrated, leisurely work, with time for humorous anecdotes and whimsical reflections on the living and the dead of little known southern Italy.

Houghton. $4.

A Wild Goose Chase, by Edwin Balmer, is an absorbing adventure story of the Arctic, full of exciting adventures. Arctic life is described with such convincing realism that it seems as if the author must have lived it.

Lippincott. $1.35.

Ziska, a Tale of Old Bethlehem, by Montague Perry, is the story of a Hebrew peasant boy and girl at the time of Christ. The pictures of the crowded inn and the weary multitudes of that most wretched night are vivid and picturesque.

Abingdon Press. 75 cents.

The Comfort Magazines, edited by Merle Thorpe, Professor of Journalism in the University of Kansas, is made up of twenty-four articles and addresses on various phases of journalism by leading American journalists. It is of general interest to the general reader and of special interest to journalists.

H. A. $1.25.

FROM THE KEW GARDENS

It is nearly eighty years since J. C. Loudon's *Arboretum Britannicum* was issued, in eight volumes, followed by an abridgment in four volumes, and it has had no successor till the present publication, *Trees and Shrubs Hardy in the British Isles*. Here practical information under such heads as Hybridizing, Transplanting, Arrangment of Shrubberies, Pruning, Street Planting, and chapters on different sorts of trees, pendulous, dwarf, autumn-colored, handsomely pointed, introduce the great body of the work with alphabetic descriptions of trees and shrubs, embracing many thousands of species and varieties, adequately described and often pictured. It is a herculean, yet fascinating labor, and could have been achieved scarcely anywhere but from the Kew Gardens.

Whatever will grow in England can grow in large spaces in the United States. The author gives credit to the beautiful parks and gardens he has seen in this country. The volumes will be indispensable to men who can afford to create beautiful estates, or whose business it is to care for public parks.

Trees and Shrubs Hardy in the British Isles, by W. J. Bean. 2 v. E. P. Dutton & Co. $10.

THE SCIENCE OF BEAUTY

To attempt the reduction of the theory of esthetics to a scientific formula is never easy nor is it always even wise. Colin McAlpin, in his *Harmonia, a Study in Comparative Esthetics*, has gone at the task bravely, but it is questionable whether the result be proportionate to the labor involved. It is a scholarly work, but one which adds

Efficiency's First Rule

Otis Single Spiral Open Type Conveyor. Cross Section View Showing Construction.

Nature is Efficiency's first and foremost exponent. She lets her own laws do all her work for her. Man attains his maximum efficiency when following rather than fighting Nature. Efficiency's first rule is to find and use Nature's laws.

A part of business is the moving of goods from upper to lower floors or levels in a building. Nature proffers free aid in her force of gravity. It only remains for man to produce a practical means of utilizing this force. Such a means has been produced for the manufacturer, wholesale and retail merchant in the

OTIS GRAVITY SPIRAL CONVEYOR

In disputing offhand the value of this Conveyor for your particular business, you overlook its ten year development and its present use in nearly four hundred establishments and nearly every line of business. In questioning its saving, you find yourself confronted with such typical testimonials as these:

"*Without doubt, a great saving of time and money.*"—*HART, SCHAFFNER & MARX* (the famous clothing concern, using the Conveyor for entire thirteen floors).

"*Handles all cases without a hitch—enables us to advertise our ability to get out mail orders within 12 hours.*"—*SELTZ, SCHWAB & CO.* (shoe house, 7 year users).

"*Able to do twice the business with same help—would not be without it for three times the cost.*"—*CHAS. LEICH & CO.* (wholesale drugs).

The earnest student of or seeker after industrial efficiency has never been offered a more valuable book than the new volume, Otis Gravity Spiral Conveyors. Page after page, 56 in all, of the innermost efficiency secrets of gravity conveyance. Full details of the Conveyor's operation in ten typical installations, the improved methods suggested and made possible by the Conveyor.

We are glad to send free copy of this book to any one writing on business stationery, or filling out attached coupon.

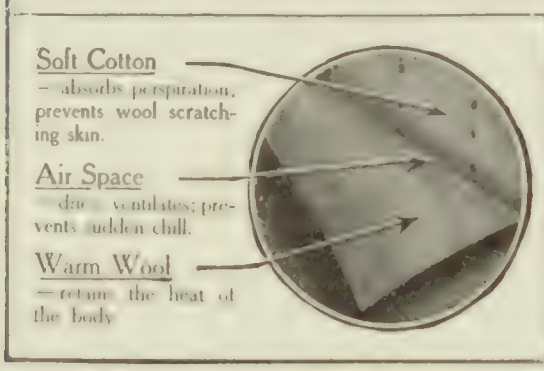
There's no need of having Winter colds

—at least, those colds which come from getting overheated, then sitting or standing still in a draft. All you need is

Duofold Underwear

which keeps the body warm and dry and comfortable, indoors and outdoors, in all kinds of weather.



Duofold is made of two fabrics—cotton and wool—with air-space between. Soft cotton, next to the skin, is comfortable, doesn't scratch as wool does, prevents excessive perspiration, absorbs. The air-space ventilates and dries. The fine light knitted wool keeps out the cold—air-space helps too.

That is the right kind of underwear. Not like all-wool which irritates, doesn't let perspiration evaporate, is close and unwholesome. Not like all-cotton, which doesn't keep you warm, gets clammy, and gives you a chill when the wind strikes you.

Duofold is the logical, sensible, comfortable, and healthful underwear. It gives you all the advantages of both cotton and wool, without their disadvantages.

Duofold is about half the weight of ordinary woolen underwear. It does not shrink. It is made in Union Suits or Two Piece Garments for Men, Women and Children.

Get Duofold for the whole family. Write us for Free Sample of Duofold fabric, Book on Comfort and Health in Underwear, and the name of a Duofold dealer.

little to the sum total of human achievement. The psychological and philosophical side of this question is taken up in *Three Lectures on Esthetic* by Bernard Bosanquet. whose lectures on Individuality aroused so much comment not long ago. Much stress is laid on "feeling" and from there the author narrows his field to more definite points and specific instances. Contemplation and Creation, Nature and the Arts, Beauty and Ugliness are some of the heads under which estheticism is analyzed and its nature and constituents dissected. The volume is a distinctly valuable contribution to the bibliography of art and appreciation.

Hermaia, a Study in Comparative Esthetics, by Colin McAlpin. E. P. Dutton Co. $3.50. *Three Lectures on Esthetic*, by Bernard Bosanquet. The Macmillan Co. $1.25.

SOCIETY AND THE INDIVIDUAL

The Underlying Principles of Modern Legislation, by Professor W. Jethro Brown of Adelaide University, is so clear and illuminating a presentation of the ideals and activities of the contemporary state that, altho intended simply as a college text-book, it must be accepted as a genuine contribution to the science of sociology. The book opens with an analysis of the anarchist philosophy, and then proceeds to the discussion of such topics as the meaning of liberty, the failure of *laissez-faire* to realize freedom, the social will, state paternalism and "maternalism," social legislation and the sphere of individual rights. Altho most of the illustrations of the argument are drawn from British or Australian experience, this will not lessen the significance of the work to American students since Australasia is the corner of the earth where democratic politics and industrial collectivism have been carried farther than anywhere else.

The Underlying Principles of Modern Legislation, by W. Jethro Brown. New York: E. P. Dutton & Co. $2.50.

LOOKING FORWARD

Autobiography, criticism, opinion, scientific conclusion, casual observations and anecdotes combine to make of Dr. Morris' three volumes of essays, *Tomorrow's Topics* Series extremely interesting reading. You may open the books at random and be sure to find something to object to, as he promises in the preface. Dr. Morris was a pioneer in antiseptic surgery, and is still a pioneer in opposing the excessive use of antiseptics in surgery. He had his strenuous fights in theory and method, but without tolerating what he considered error, he always recognized the sincerity of his opponents. Originally intended for physicians, the books contain much on the place of the medical profession in modern life, its duties, opportunities, and its rights, but gradually the notes extended to include topics of interest to the informed layman.

Medical Ethics. Boston and New York: Houghton Mifflin Co. $1.50. *Tomorrow's Topics*. By Robert T. Morris. New York: Dodd, Mead & Co. $1.50.

A FAT GHOST

Resinol Soap
for a clear skin and good hair

Almost any soap will *cleanse* the skin and hair and many toilet soaps are pure enough to do it without *injuring* these delicate textures. But those who want a soap which not only cleanses but actually *improves* the complexion and hair naturally turn to Resinol Soap.

In every way an exceptionally pleasing toilet soap, the soothing, healing properties which it derives from Resinol Ointment enable it to keep the complexion clear, and the hair rich and lustrous, as soaps which are merely pure and cleansing *cannot* do.

All druggists and dealers in toilet goods sell Resinol Soap. For a trial size cake write to Dept. 10-A, Resinol, Baltimore, Md.

Resinol Shaving Stick is most soothing for tender faces.

ster and a Sea Captain worthy to swap yarns with W. W. Jacobs' heroes.

Appleton. $1.35.

SECTS FOR THE HEATHEN!

It is a serious question for ecclesiastics to answer which Secretary Brown of the Presbyterian Board of Foreign Missions asks in his volume, *Unity and Missions*, "can a divided church save the world?" We commend this volume to those who realize how essential it is that our schisms should not be perpetuated among the Chinese and Hindus and who observe that in their huge, financial organizations the children of this world are wiser than the children of light.

Revell. $1.50.

PSEUDOLOGIA PHANTASTICA

Lawyers, pastors and teachers will find it well worth their while to consider the cases reported by Dr. William Healy in his curious book on *Pathological Lying, Accusation and Swindling.* It is astonishing what a lot of trouble can be caused in a community by some sixteen-year-old girl with a diseased imagination.

Boston: Little, Brown. $2.50.

THE CARE OF CONSUMPTIVES

Whatever is connected with the Johns Hopkins Medical School deserves confidence. *The Tuberculosis Nurse*, by Ellen N. La Motte, of the Baltimore health board, is introduced by Dr. Hammond and is an authoritative handbook for all practical workers in the cause whose inspiring aim is the absolute extinction of the White Plague.

Putnam. $1.50.

MAKING LIFE BETTER

Citizens in Industry was the last work of Dr. Charles Richmond Henderson before his death. Prepared as a part of the *Social Betterment Series*, it serves as a handbook both to Professor Henderson's own writings and teachings on the subject, and to the practical results that have everywhere followed the introduction of better housing, cleaner recreation and better education.

Appleton. $1.50.

HOW TO BE AN ORATOR

Kleiser's Complete Guide to Public Speaking is a fat volume of extracts from many writers, arranged alphabetically under such headings as Dialog, Speaking to Be Heard, Training of the Orator, Voice. If any one be bewildered before these six hundred pages of miscellaneous advice, he may be aided by the suggestion in the preface that it will be "interesting and profitable to peruse this book in regular order, from beginning to end."

Funk & Wagnall's. $5

EFFICIENCY

A study of *Scientific Management* from a historical and economical point of view, by Horace B. Drury of the Ohio State University, likens the movement in its economic effects to the introduction of labor-saving machinery, and brings to the foreground the fact that our great problem is not an increase in wealth but more equitable distribution. The historical and biographical materials are quite as interesting as the technical side of the study.

Columbia University. $1.75.

THE ROMAN SOLDIER'S FAITH

Mithraism, the creed most favored by the legionaries and the civil servants in the later Roman Empire, is expounded in a brief volume by W. J. Phythian-Adams. The author has succeeded in compiling an interesting account of information on his subject. Mithraism was a secret cult, and unlike Pythagoreanism, and in consequence we know less with certainty about its doctrines and ritual than about those of almost any other historic religion of equal importance.

Cornell University Press. $1.00.

girl, is herself accused of being the mother of the child. To make matters worse she falls in love with the child's father. As one would expect, Rachel Crothers' technique is excellent. The play as a whole is convincing in plot and characterization, but one cannot help doubting if a woman of Frank Ware's calibre would be attracted by such an ordinary bounder as Malcolm Gaskell.

Boston: Badger. $1.

THE VAGUEST SCIENCE

Frank W. Blackmar of Kansas University and John Lewis Gillin of Wisconsin have done conscientious and creditable work in their *Outlines of Sociology* for college use, one of the series of Social Science text books edited by Richard T. Ely. But the opening chapters are overloaded with technical terminology. The book is strongly *Tendenz* and the authors commend social reform, prohibition and eugenic legislation and indulge in valuable plain speaking as to the social effects of sexual immorality.

Macmillan. $5.

A SOUTHERN VIEW OF RECONSTRUCTION

The Political History of Slavery in the United States, by the late Senator James Z. George of Mississippi, deals less with slavery than with reconstruction. Even the earlier chapters are as much concerned with the ethics of secession and the principle of the balance of the two sections of the country as with slavery *per se*, and the bias of the lawyer is more evident than the bias of the partizan. The book is prefaced by a personal tribute to the author from Professor John Bassett Moore and a sketch of his life by William Hayne Leavell.

Neale. $3.

JAMES VERSUS BERGSON

William James and Henri Bergson, by Horace Meyer Kallen, is an attempt to prove that the life philosophies of the two great thinkers were radically divergent, even opposed to each other. Bergson is represented as a typical metaphysician whose principle of the *élan vital* really binds the universe together into a rational whole, while James, according to the author, rejected metaphysics entirely and held that the business of philosophy was not to conceive the structure of the universe, but to deal in a practical way with discrete fragments of experience.

University of Chicago Press. $1.50.

THE MELTING POT

The Western Hemisphere in the World of Tomorrow, by Professor Franklin H. Giddings, is a brief but comprehensive summary of the various races, religions and social ideals which have gone to the making of the two Americas. Professor Giddings shrewdly points out that an American—Benjamin Thompson — first introduced "Kultur" into Germany, and insists that beyond all other peoples we have had and still have the will to serve mankind and the potential power to do so.

Revell. 35 cents.

FRESH VEGETABLES

Productive Vegetable Growing, by John William Lloyd, is a guide to commercial gardening, storage and packing. There are 350 practical illustrations, and designs for laying out the home garden in lines instead of beds to save time in cultivation. A good idea this, but it was a slip to set the melons beside the squash and cucumbers, unless one likes them mixed.

Philadelphia: Lippincott. $1.50.

THE TRAPPER TRAPPED

In the words of Timothy, H. B. Somerville's new book, *Some Women and Timothy*, is a "topping" story. A man entering the lists for a lady's favor, to disentangle a younger brother from the meshes, succumbs to the fascinator's charms himself and that with considerable alacrity and entirely satisfying results. And the ingeniousness with which Timothy tells of his own adventures is most entertaining.

Dutton. $1.35.

Are You Using The Independent's Investor's Service?

Are you reading the "Talks with Investors?"

A prominent member of the New York Stock Exchange writing to a client secured through an advertisement in The Independent, says: "We beg that you refer to the excellent financial article in the same number of The Independent in which you saw our card. It is absolutely correct."

A WORLD CENTER FOR PEACE

BY HENDRIK CHRISTIAN ANDERSEN

REAL peace is brought about only thru education, and after this terrible war is at an end, education will receive a new impetus. It will work on broader lines; not only individuals but nations will feel its greater power. For this purpose a World Center of Communication will be more and more necessary.

In the sixty-fifth anniversary number of The Independent there was published a perspective view of the World City, or World Center of Communication, that is being proposed to the nations as a possible vehicle for the establishment of more friendly and practical international relations in the future.

The main object of this city is to facilitate the endeavors of national expansion by enabling every nation to understand the others better thru intimacy, fellowship and more open moral, economic and spiritual relations. It is a city built to concentrate the energies of peoples and spread them in freedom to all parts of the earth; a city to become the center of human inspiration; a city to untangle the ever-increasing complexity of questions that arise in all countries, the settlement of which is essential to the welfare of all humanity; a city to preserve the highest accomplishments of all peoples in all parts of the earth; a city that will endeavor to pacify judicially all international disputes and advance harmonious relations on a *practical* and *economic* basis; a convenient, open, free city, to belong to all the nations and facilitate their intercourse. A World Clearing House. A spot consecrated to facilitating every form of science and human progress, in which the nations could come together, study and settle their problems in relation to one another.

Such a city has been planned in every detail, and we hold it out to the whole world with its temples and walls, its universities and congress buildings for law and criminology, medicine and hygiene, agriculture, transportation, commerce and industry, electricity and invention, the sciences and all branches of human culture, with its art palace and schools of art, its stadium and gymnasia, its world press to serve as voice for the peoples, with doors open to the whole human family and avenues free to the pilgrims of the earth.

The plans of this city have been presented in book form to the rulers of the leading nations as well as to their leading libraries and universities. And from no quarter where the work has been presented has an objection to the construction of this city been made. In Europe such men as Léon Bourgeois, former President of the Council, senator and member of The Hague Court; Charles Richet, winner of the Nobel Prize; Gaston Darboux, secrétaire perpétuel de l'Académie des Sciences; Louis Liard, vice-rector of the University of Paris; Baron d'Estournelles de Constant, senator and member of The Hague Court; Baron Pierre de Coubertin, founder of the modern Olympic Games; the Prince of Monaco; the King of Belgium; Henri La Fontaine, head of the Union of International Associations at Brussels, senator and winner of the Nobel Prize; Paul Otlet, secretary of the Union of International Associations; Wilhelm Foerster, director of the Royal Observatory at Berlin; Wilhelm Ostwald, professor emeritus at Leipzig, and Ernst Haeckel of Jena, favor and uphold the idea.

It is encouraging to feel that no opposition is made to the proposition of establishing a World Center of Communication, and that many people in the European nations are confident that its establishment would in a practical and logical way facilitate the expansion of their interests commercially as well as morally and spiritually, and that such a World Clearing House should have a central administration dignified in aspect and practical in plan.

TRINITY—AN ALL-AROUND CHURCH

A GREAT HOTEL-CLUBHOUSE-GYMNASIUM-THEATER-HOSPITAL-AUDITORIUM IN LOS ANGELES.

CHARLES C. SELECMAN
A pastor who believes that the church should keep in touch with present-day tendencies

"THE world wants an electric-lighted, self-starting, eight-cylinder church," says the pastor of the Trinity Methodist Church South, of Los Angeles, and in the erection of the Trinity Auditorium—a million-dollar institution—the requirements for a "1915 Model" religious plant seem to have been adequately answered.

The completion of the nine-story church building, with social rooms, motion pictures, hotel for men, roof garden, cafeteria, barber shop, smoking room, nursery, hospital and bowling alley, marks the largest enterprize in church building for the Pacific Coast, where many churches are breaking away from convention al ecclesiastical architecture and housed in "white temples" and the like, are showing that adaptability on which the Coast prides itself.

Five thousand people attended the all-day exercizes which opened the church several months ago. The program began with a picture show at nine o'clock Sunday morning for the children and ended with a thirty thousand dollar collection.

There are nine floors in operation. Activities of the church and Sunday school are confined to the first three floors and roof. There are 326 hotel rooms on the remaining floors and offices and club rooms of various religious and secular organizations. In the hotel, all are outside rooms and many have sleeping porches and shower baths. On the roof there is ample room for tennis and basketball courts and an auditorium to seat five hundred. The roof garden is also used for entertainment features of the church activity. Typical of these was the three-day boys' carnival of fun held during dedication week.

The auditorium, seating 2300 people, is fully equipped with stage, orchestra pit, the usual stage curtains, drops and footlights. In addition to the main auditorium are four others seating from three to five hundred persons. These rooms are being used for Sunday school classes, recitals, club meetings and social events. Motion pictures begin the regular Sunday school service and are also used thru the week when feature photoplays are presented to the public at regular motion picture show rates. The annual income from the auditorium alone is expected to be $15,000, while the hotel is expected to yield $75,000 annually, the cafeteria $10,000 and the club rooms and storerooms $10,000.

The Trinity people have organized a new institution in their new building—the Junior Church. They have brought two people from Kansas City to take charge of the work among the boys and girls from six to sixteen years of age. In addition to the regular church services in the main auditorium there will be a service of the Junior Church every Sunday morning from eleven to twelve.

In discussing the new field of activity for the church, the pastor has this to say: "Many churches need to wake up and step out of their shroud. A shroud is a very prim, conventional thing, but it is a poor fighting garb. The church needs to be belted and buckled for war, for in these complex days of strange forces we are facing a new moral Armageddon. Trinity Auditorium will stand for reverence of the past, but it will also seek to keep in touch with present tendencies and have a share in all movements for community uplift.

"Most churches deal with the soul's salvation to the exclusion of the mind and body. The church has been getting a few people, the club a few, the lodge and other organizations a few. We have combined the advantages of all of these in one comprehensive institution. There is just enough difference between Trinity and other churches to make it interesting to many who have lost interest in religious work in general. Trinity Auditorium will not work along the ordinary circumscribed lines of a denominational church, but will labor for the general uplift of the community, and consequently will attract the attention of all people who are interested in the moral and intellectual improvement of the city."

EVERYDAY CHRISTIANITY
A modern-day church effort to meet the needs [illegible]

PEBBLES

Dollar diplomacy appears to look pretty good to the Allies.—*Columbia State.*

Some peace preachers are so averse to war that they even refuse to eat navel oranges.—*Cornell Widow.*

The menace of a social revolution is removed. John D. Rockefeller, Jr., talked twenty minutes with a coal miner wearing grimy overalls.—*Detroit News.*

Business must be dull in Oakland, California. Recently one of the Chinese curio shops displayed a large cloth sign, "Our First Sale in Twenty Years."

"War is a disguised blessing," says a preacher. There may be two opinions about the blessing, but only one on the effectiveness of the disguise.—*Wall Street Journal.*

The San Francisco Exposition is so prosperous that it is not believed Congress will be asked to make good more than two or three millions.—*Boston Transcript.*

New York business men need not leave the city for lessons in trench warfare and mining operations. Nothing is lacking but a hostile warship in the offing and a Zeppelin in the upping.—*Springfield Republican.*

Iva Line—My dog is a regular blacksmith.
Ivan Other—How's that?
Iva Line—Why, I kicked him the other day, and he made a bolt for the door.—*Cornell Widow.*

Lawyer—Judge, I want you to fine this man who was knocked down by my client's car.
Judge—Fine him? Why?
Lawyer—He had a nail in his clothes and it punctured a new tire.—*Topeka Journal.*

A HINT

If you really want her, then use this formula in proposing: "Will you marry me? And have you any objection?"—Don't you see, "Yes" or "No," you get her either way.—*Yale Record.*

WITHIN THE LAW

Rural Constable—Now, then, come out o' that. Bathing's not allowed 'ere after eight a. m.
The Face in the Water—Excuse me, sergeant, I'm not bathing; I'm only drowning.—*Punch.*

Polly—He doesn't know anything about the little niceties of paying attention to a girl.
Dolly—Why, I saw him tying your shoestring!
Polly—Yes; but he tied it in a double knot, so it couldn't come untied again.—*Judge.*

My Xylophone,
My silly phone,
O how I love thy shrilly tone,
E'en more than any fiddle's drone,
Or oboe's moan,
Or organ's groan,
My love is fixed on thee alone,
My trilly, chilly Xylophone.
—*Cornell Widow.*

William 'Enry—Billy, wha's 'ee think av our Mary Ann playin' the organ?
Billy—She do play 'un accordin' to the Scripture.
William—Wha's 'ee mean?
Billy—She do let not the right 'and knaw what the left is doin' av.—*Sydney (Australia) Bulletin.*

Knowing that the daughter of her laundress had been married recently, Mrs. Blank, of Boston, said to the laundress:
"Is your daughter happy, Chloe?"
"Well, no, ma'am, she ain't what you might call right happy. To tell de plain truf, ma'am, she's done had to pitch in an' gib her husban' two or three good lickin's already, so dey ain't neither ob 'em what yo' might call *right* happy, ma'am, no, ma'am.—*Exchange.*

"Will I be hale and hearty when I'm old?"

If even now—when you should be in your prime—the cares and anxieties of daily life bring periods of lassitude, of weariness and of exhaustion, what of your health in the future? How can you hope to have the vigor of youthful buoyancy you see in so many hale old men who enjoy life so thoroughly, *if you neglect to make good the over-draughts on your body and nerve strength?*

Thousands of your fellow men and women have found the answer in *Sanatogen.* For making good the over-draughts upon nerves and vitality and for rebuilding waning strength, Sanatogen is used by physicians the world over, with results that have prompted more than 21,000 of them to write letters of hearty commendation.

For Sanatogen is a pure, natural food-tonic—not a medicine—is as harmless to the old as to the young—just concentrated material for building and conserving strength and vitality. That explains, for instance, why Dr. Ernest Ott, late King Edward's private physician, wrote:

"I have been using Sanatogen for a number of years in my practice with excellent results. These results have been notably good in the case of elderly people when it was desirable to build up the strength, to stimulate bodily functions and to improve the circulation of the blood."

And there are hundreds of famous laymen in the forefront of public life who praise Sanatogen as a giver of new strength and vitality. For example, John Burroughs, the venerable naturalist and author, wrote:

"I am sure I have been greatly benefited by Sanatogen. My sleep is fifty per cent. better than it was a year ago, and my mind and strength are much improved."

When Sanatogen has helped so many, you can begin to realize what wonderful help it offers *you* in keeping "hale and hearty."

Sanatogen is sold by good druggists everywhere in sizes from $1.00 up

Grand Prize, International Congress of Medicine, London, 1913

Send for "The Art of Living," a charming little book by Richard Le Gallienne, the popular poet-author, touching on Sanatogen's kindly help and giving other interesting aids in the quest for contentment and better health. This book is free. Tear this off as a reminder to write THE BAUER CHEMICAL CO., 26 R Irving Place, New York.

A Number of Things

by

Edwin E. Slosson

ONE of my favorite and most malicious amusements is to get a lot of schoolma'ams together and ask them to explain to me the difference between "shall" and "will." This they will do in a very kind and definite manner and then I suggest as an illustration of the rule the story of the Boston bride who when asked by the minister "Wilt thou have this man to be thy wedded husband?" replied, "I shall." Now it is almost equally inconceivable that a mistake in grammar should be made by either the prayer-book or a Boston girl, consequently the teachers are apt to divide instantaneously into two factions and set out to convince one another. Later the parties subdivide until there are as many opinions as there are people, and since each is willing to explain not only what she means but what her opponent means as well, it makes a very lively conversation. Some appeal to reason; some fall back upon intuition; some rely upon custom; some quote authors and some cite grammarians, while thruout the current of the controversy there bobs up repeatedly the foreign gentleman who committed suicide, instead of being accidentally drowned, because of his deplorable ignorance of English grammar.

The question of when to reverse tangles up the disputants like couples on a ballroom floor. Any good rule works both ways, but this one, it seems, has to be reversed as often as you use it, depending on whether you are talking or somebody else, whether you are expressing your own view or another's, whether you are asking a question or answering one, whether you are demanding or inquiring, whether you have made up your mind on the spot or some time ago, whether you intend to be courteous or insulting, whether you are of a positive or a timid temperament, whether you think you are bigger than the other fellow or not, whether you are a Presbyterian or a Methodist, and nobody knows what else. One thing leads on to another; the scope of discussion widens to take in such side issues as the relative merits of American colleges, where the purest English is spoken and the psychological state of a bride at the altar, altho about this last question few of the disputants are qualified to speak, owing to the tyranny of school boards.

If the turmoil shows any signs of clearing up and approaching unanimity of opinion I toss another golden apple among the goddesses in the form of the anecdote told of Bryan, Taft or any other possible personage. As he was being shaved the barber remarked "Will you have your hair cut?" to which the statesman replied in his usual diplomatic manner, "I know it." This also is apt to start something and I can have another quarter of an hour of placid enjoyment.

For this question is one of the few on which I maintain a strict neutrality. Don't misunderstand me. My attitude is not due to ignorance. Far from it. I have preserved a blue card from the Leavenworth High School which bears "100" after the words "English Grammar" and therefore proves that I knew all there is to know on that subject when I was seventeen. But as a determinist in science and a predestinarian in theology "shall" and "will" are alike to me. From this aloof standpoint the controversy is meaningless, but not uninteresting to watch. I may say with Barrie, tho perhaps in a different sense, that "I never could tell the difference between *will* and *shall* and I never will."

With most of the world under martial law and the United States getting what little news the censors permit to transpire, with professors in, or rather out of, half a dozen universities complaining that they are not allowed to speak their minds, there is a certain appropriateness in the following lines by Bodenstedt, which my friend, Miss Kate Stephens, has called to my attention:

Wer die Wahrheit denkt,
Muss sein Pferd am Zuegel haben;
Wer die Wahrheit schreibt,
Muss den Fuss im Buegel haben;
Wer sie aber spricht,
Muss statt Fusse Fluegel haben.

Since there are many people whose principles will not allow them to read German now, I venture to append a rough translation:

Who thinks the truth,
Must hold the bridle in his hand;
Who writes the truth,
Must ready in the stirrup stand;
But who speaks it,
Must put on wings to flee the land.

The New York *Sun* comments as follows on my plea for Melville in The Independent of June 28:

"Unless, then, all signs fail," says our alert and clever contemporary the Hon. Edwin E. Slosson, in The Independent, 'the time has come for a [Herman] Melville revival.' All signs usually fail, don't they? Why should there be a Herman Melville "revival" now? There has been one for some time, we take it, and the long unknown master of more famous writers, Clark Russell, for example, and the Caledonian poseur Stevenson, needs no rescue now from oblivion. We seem to stumble him in the dark backward and abysm of time as an employee of the Custom House in this town, unknown, unheard of. Reputations must be shaken by at the bar of higher gods than those of justice. Possibly it was a gleam of Herman Melville's later days that he was the son-in-law of one of the greatest and most stiff-necked of American Judges, Chief Justice Lemuel Shaw of Massachusetts.

Melville died substantially obscure, a sufficient tribute to his merit. Typee," "Omoo", who that had the happiness to read those black old volumes in the late '70s, say, when Melville with all his perfections on his back must have been visible and probably shabby in a town where Timothy Titcomb was famous, can forget their charm? All good Americans wanted to go to the South Seas. They can do it for 35 cents in Mr. Everyman's library now.

Mr. Slosson swears by "Moby Dick" and seems to have read it. We never could get out of Nantucket in it. Lovers of Hermanity, we can't deny—without reference to "Moby Dick"—that Herman wrote also some of the dreariest works that clog the libraries.

This very criticism proves how great the need of a Melville revival even among his friends. One who professes to be "a lover of Hermanity" but admits that he can't get away from Nantucket with "Moby Dick" needs to hit the salt sea trail. The National Federation of Melville Societies, when formed, will rightly refuse to admit to membership any one who cannot swallow the Great White Whale.

The pronunciation of these war names bothers me a great deal. For instance, that town which was bombarded the other day, do you pronounce it Atrecht or Arras? And the goal of the British advance, shall I call it Ryssel or Lille? Should I say Lüttich or Liège? Nanzig or Nancy? Neuenburg or Neufchateau? Mechlin or Malines? Kortrijk or Courtrai? I shan't be able to tell which pronunciation is right until the war is over and then I shan't have any chance to pronounce them.

Owing to the war a distinguished Boston man, deprived of his summer trip to Europe, went to the Panama-Pacific in its stead. Stopping off at Salt Lake City he strolled about the city and made the acquaintance of a little Mormon girl.

"I'm from Boston," he said to her, "I suppose you do not know where Boston is."

"Oh yes I do," answered the little girl eagerly. "Our Sunday school has a missionary there."

A New York department store, evidently desirous to put all the races of mankind upon the same footing, advertises in this way:

The newest [illegible] for Young Men and Men of Mahogany. Dress Tan or Black Russia Calfskin, with [illegible] of same, $7.50

Said an indignant lady of Teutonic origin: "It is outrageous the way they talk about 'hyphenated Americans.' We are just as true Americans as anybody. Why, the other day at the meeting of the German-American Society we all stood up and sang 'America' first. Then we sang our own songs afterwards."

Sometimes the thought of what lies beyond the grave appals me. I should hate to have to shave thru all eternity. Yet I have never seen a picture of a red-bearded angel.

It is curious how many great discoveries have been made at the same time or before by somebody else.

PROBLEMS OF ACOUSTICS

It is difficult if not impossible for an architect to guarantee the acoustics of a large auditorium. Duplication of halls known to have perfect acoustic properties does not always serve because even if the shape is duplicated the materials may be somewhat different and thus a different degree of reflection and absorption of sound may be introduced.

The elaborate studies of Sabine at Harvard and Watson at the University of Illinois have done much to suggest precautions and remedies. They find that the main defects in auditoriums are reverberation and echoes. With hard, smooth walls sound is reflected many times from surface to surface before its energy is exhausted by friction. This slow weakening of sound is reverberation. With music it may be helpful at times by giving the effect of the continued use of the loud pedal on the piano, but with the voice of a speaker it brings confusion. The desirable treatment was found by Watson to consist in the substitution of porous, soft, absorbent surfaces in place of hard, smooth walls. Canvas paintings, tapestries, banners, and heavy curtains proved most effective in shortening the time of reverberation. A large audience is helpful to a speaker, too, in this respect.

Resonance often introduces unpleasant effects. Sounds of certain pitch may set a wall in vibration and thus distort certain components of the speaker's voice. Each room has a definite pitch to which it responds, and it is only by careful test of its effect that a speaker can use the room to the best advantage.

The annoying echo results when sound reflected from a wall reaches the hearer at least one-fifteenth of a second after the original sound. This causes two distinct impressions. Since sound and light waves are reflected in much the same way it is possible to study the sources of various echoes in a hall by two methods that check each other. The first method utilized the faint sound of the ticking of a watch. This was placed at the focus of a curved reflector and turned toward various walls suspected of producing echoes. Using the relation that the angle of incidence equals the angle of reflection, the reflected sound was readily located and the watch ticks heard distinctly after they had traveled a total distance as great as 80 feet from the source. A metronome enclosed in a sound-proof box served as a louder source of sound. The sound emerged from the box only thru a long narrow horn which made it possible for the operator to aim at any spot on the walls.

The second method utilized an alternating current arc light as a source of both light and sound. Placed at the focus of a parabolic reflector a beam of parallel rays of both light and sound emerged and could be directed to mirrors placed at suspected points. Eye and ear both helped to detect spots where hangings or some corrective material should be placed to kill any particular echo.

The Doran Books

GENERAL

VAGRANT MEMORIES
By William Winter
The days when the greenroom echoed to the wit of Booth, Rehan, Morris, Irving, made to live again. Richly illustrated. Net $3.00

THEISM AND HUMANISM
Arthur James Balfour, P.C., F.R.S.
A declaration that the naturalistic interpretation of life fails to do justice to human effort. 8vo. Net $1.75

The Market Place

MORE REVENUE NEEDED

For some time past the revenues of our national Government have not been sufficient to pay current expenses. The shortage is due mainly to the reduction of imports, and of tariff duties, by the great war. In the near future the annual expenditures are to be increased, in all probability, by about $150,000,000. Secretary Garrison and Secretary Daniels have prepared the estimates of the War and Navy Departments for appropriations assigned to the coming fiscal year. Reports from Washington, apparently trustworthy, say that the proposed increases are about $100,000,000 for the navy and $70,000,000 for the army. The additions may be reduced to $150,000,000. They relate to an increase of the number of new ships, the projected naval laboratory for experiments, an enlargement of the army from 87,000 to 120,000 men, coast defenses, field artillery, etc. The suggested additions to the naval fleet are part of a five years' program.

To meet the increase of expenditures, as well as to provide for the deficit under present conditions, there must be more revenue or an issue of bonds. Secretary McAdoo said a few days ago that he would recommend an extension of the emergency war tax law (which, by limitation, expires at the end of the present year) until a restoration of peace in Europe; also, the retention of the present duties on sugar for several years. An existing law says that these duties shall be discontinued on May 1, 1916. If Congress approves these recommendations, however, the revenue will not thereby be increased. The duty on sugar should be retained. It yields about $45,000,000. The reduction of one-quarter, made not long ago, has not lowered the price. The duty is easily collected and is not a perceptible burden on consumers. Removal of all of it might ruin the cane sugar industry of the South and the beet sugar industry of the West. It would injure the growers in Hawaii and Porto Rico by depriving them of the favorable discrimination which they now enjoy in our market. Exceptional conditions, due to the war, have opened the way for repeal of the unwise legislation that was designed to put sugar on the free list. The money will be needed, but much more will be required.

There are indications that bonds will be issued. Some propose an increase of the income taxes. A prominent member of the House is writing a bill for a Fed-

12,283 Men Joined This Cigar Club

Exact Size

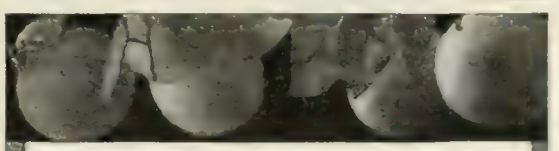
For forty years I've been smoking a cigar made from a tobacco I buy in the Vuelta district in Cuba. I've never found its equal.

My friends and their friends have insisted on my supplying them from my private stock.

So now there are over 12,000 of them ordering together. We keep one man busy selecting only the choicest leaves.

Co-operative Plan Means Mutual Saving

This Co-operative Club buys over 2,000,000 cigars a year. So they secure quantity prices. We have no dealers nor salesmen. Here again is a saving.



We can sell about 12,000 of our present supply. We've put the price at $5.00 per hundred, $2.60 for 50—which is about what they cost us. If they could be purchased at a store they would cost twice as much.

First Five Free

We're perfectly willing to have you try a few to decide for yourself that they can't be matched anywhere. We are sure you'll enjoy their rare, mild flavor and delightful aroma.

Merely send us 10c for packing, revenue and postage and try your five free. If they please you, we'll be glad to have you join our club. Don't delay. Write today for trial cigars, **but please use your business letter head or enclose your business card.**

Real Parson Brown Oranges Now Are Ripe In Florida

That you can't find ripe Florida oranges in the markets at this season does not indicate that there are none. Only a few varieties are yet ripe enough to eat. Carney Parson Brown oranges and Carney Early grapefruit, grown on famous Lake Weir, in the north part of the citrus belt are earliest to mature. Special selections from the Carney groves are now ready for shipment direct to consumers who want better than ordinary fruit. Three dozen extra select oranges, ***or*** one dozen superfine grapefruit, ***or*** assorted package oranges and grapefruit, prepaid to any address east of Colorado, for $1.50.

How Girls Live Outdoors

Going on "hikes," building fires and shelters, learning to cook, swimming, diving, paddling canoes, holding "council fires," acting charades, and doing all sorts of delightful things while growing into strong, splendid, capable women, with abundance of health and energy. All this is woven together in a beautifully romantic story called "Sebago-Wohelo Camp Fire Girls," telling the doings of sixty girls who spend a summer together on the shores of Lake Sebago. It breathes the very spirit of the woods—of joyousness and play. Open it anywhere and you want to read forward and back. Fifty wonderful pictures of girls having fun outdoors. No girl's library complete without it. A most welcome gift. Price only $1.25 postpaid to any part of the United States. Send your order today. You take no risk. If not satisfied, return the book at once for prompt refund. Send order and remittance to GOOD HEALTH PUBLISHING CO., 310 W. Main St., Battle Creek, Michigan.

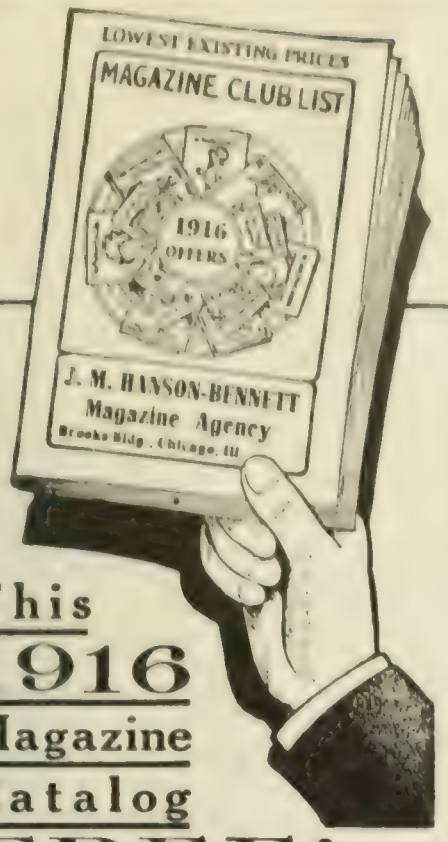
eral inheritance tax. It is not to be expected that the tariff question will be reopened at the coming session of Congress by any revision designed to enlarge the revenue. The most satisfactory solution of the problem may be found in an issue of bonds.

THE MARKET FOR STOCKS



There was less activity on the New York Stock Exchange last week, altho the record shows three million-share days. The warnings of the press, with the restraint imposed by larger margins and more rigid requirements as to loans on stock collateral, tended to check the wild movement in war order shares. Transactions, beginning with 1,255,400 shares on Monday, were cut down to 856,900 on Friday, and the result of the trading for the four full days was net losses for nearly all the stocks on the list. In the latter part of the preceding week, a notable and unexpected revival of interest in railroad securities had caused net gains for the leading issues, ranging from 3 to 10 points. These gains were not lost last week, but a reduction of from 1 to 4 points marked the reaction. Advances had led to sales by European holders.

On Monday the net changes, almost without exception, were favorable. Wild trading on Wednesday caused decline, but the losses were small. To the price of Bethlehem Steel, however, 12 points were added, and Studebaker's gain was 19. Thursday saw a long list of losses. There was more European selling of railroad shares on Friday, and the war news was not liked. With the long list of losses was a gain of 10 for Bethlehem Steel, which rose to 477. In January last this stock, on which no dividend is paid, was sold at 46. The motor stocks were not in agreement. With a gain, for the full days of the week, of 17 for Studebaker, a loss of 21 for General Motors was shown. Net advances (2 to 4 points) for the three Maxwell motor issues were due to the decision of the directors that a dividend of 14½ per cent (arrears) shall be paid on the first preferred. This calls for $1,749,804, which probably will be paid in new stock.

More than 500,000 shares of United States Steel were sold, with a net gain of 1 point. A few sales were made at 84½. The strength of this stock is due to a demand which taxes the capacity of the great company's mills. Large quantities of what are called rounds are needed for ammunition. The wire mills are so busy that they cannot take new orders until February. Last week's shipments and sales of steel for export were the largest ever reported.

OFFERING THE WAR BONDS

The five-year five per cent bonds of the $500,000,000 Anglo-French loan have been offered to the public by a great group of banks, trust companies and bond houses situated in sixty-nine cities of twenty-eight states. Payment may be made in full on October 20, or, at the option of the purchaser, fifty per cent on that date and the remainder on December 1. In the course of the de-

In ordering specify whether for 1913, 1914 or 1915 car.

WADSWORTH MANUFACTURING CO., 1249 Jefferson Ave., Detroit, Mich.

bate which preceded, last week in the British House of Commons, the passage of a bill authorizing and approving the Government's negotiation of the loan, Mr. Montagu, Chancellor of the Exchequer, asserted that the terms were fair and reasonable. Great Britain owed $[illegible],000,000 in this country, he added, and the British and French Governments had tried to make the loan $1,000,000,000, but could get only $500,000,000. He remarked that those who were saying that the Americans had got a good bargain should remember that twice as much was offered, and the Americans would not take it.

Already there have been informal conferences for the consideration of plans to meet future requirements for which this loan is not sufficient. It is understood that there will be additional shipments of gold and an attempt to arrange for credits amounting to 250,000,000 or $300,000,000.

Speaker Champ Clark said at Denver last week that the loan would not have been made if he had had the power to prevent it. The German-American association called the American Truth Society continues its campaign against savings banks that are not hostile to the loan. In Chicago, Mrs. Olga Walsh has applied to the Federal Court for an injunction to restrain the Mutual Life Insurance Company from investing in the bonds. She holds a policy in the company. Officers of the Mutual say the company has bought none of the bonds, altho it would be lawful to make such an investment. Jesse S. Phillips, the New York State Superintendent of Insurance, publishes a statement in which he says that the law permits investments in foreign bonds to be made by insurance companies a part of whose business is done abroad. The Mutual does insurance business in both England and France.

RAILROAD TAXES

When the railroad companies ask for permission to increase their freight rates, they point to additional expenses, or reduction of income, caused by legislation. They also speak of a growth of taxes. A statement prepared at Washington by the Bureau of Railway Economics shows that the recent increase of taxes deserves to be considered. From 1905 to 1914 the taxes paid by all the railroads increased 137 per cent. The sum paid in 1914 was $150,371,100. For the group of anthracite coal-carrying roads the addition in this decade was 208 per cent. Comparison with revenues is made. In the same period the increase of gross revenue was 43 per cent, and the addition to operating expenses was 58 per cent. To nearly 1,700,000 employees in 1914 the companies paid $1,373,422,472. The advance of wages since 1905 is indicated by figures showing that the average daily compensation has risen from $2.07 to $2.53.

The following dividend is announced:

Westinghouse Electric and Manufacturing Company, common, quarterly, 1½ per cent, payable October 30.

What are you kicking about?

—You men who think you're underpaid

The men who get big pay are those who are *trained* to earn it. Your pay is small because you have no special training—*and you only are to blame.*

You can *learn* to *earn* more, no matter what your age, where you live or how little you now earn. It has been and is done by the International Correspondence Schools to train you for a *better position* and *bigger pay.*

If you want to get out of the rut, read the "Wordings" and let us help you, by marking and mailing the coupon on this page today. Thousands of others *just like you* who have used the coupon are now receiving positions of power and high pay. You can join them.

W. E. UNDERWOOD

TAX ON INSURANCE PREMIUMS

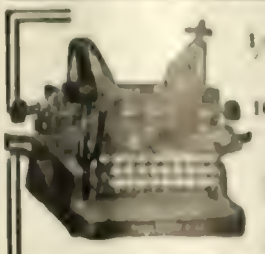
It is not generally known to policyholders that all forms of insurance are heavily taxed in this country, nor do they realize that their expense for such of its protective service as they maintain is, to that extent, increased. It escapes their notice because it is included in their premium payments to the companies.

I have pondered over this question for years in an effort to discover the principle which actuates legislators in including insurance among the objects of taxation, and I am now further away from a solution than when I began. It is simply incomprehensible by me, however clear it may seem to be to the many who justify it. I always get back to the hard fact that insurance is a system of loss-distribution; and I cannot understand why anybody should have to pay the government for the privilege of losing a little money every year. Every time a man pays an insurance premium he is making his ratable contribution to the losses sustained by his associates, under a reciprocal agreement which guarantees him benefits of a like character in the event he becomes a victim under similar circumstances.

If insurance were a form of gambling in which the premiums paid represented the stakes of the participants and the fund, or "pot," thus accumulated were divisible under prearranged rules of proportion between the management and agents of a company, or "the house," and the gamesters, I could understand the attitude of the state in laying a heavy tribute on the enterprise. We would not have to go far geographically or historically for a practical parallel of this idea, for the foregoing description accurately describes the relations sustained at one time between the state of Louisiana and the Louisiana State Lottery Company. In the gambling game, a few of the players win all that their many fellow players lose; in insurance everybody loses. Why? Because the value—generally a part of it only is covered by insurance—of the thing insured (the building, the stock of goods, the human life, a leg, an arm, and so on) has actually been subtracted from the common stock, and the insured loser becomes the recipient of contributions made by his associates out of their share of all the community wealth remaining. When a warehouse, the actual property value of which is $100,000, containing 5000 bales of cotton worth in the market $75 a bale is, with its contents, completely destroyed by fire, we know that the wealth of the nation has been diminished by the sum of $475,000. The

man who owned that property, let us assume, receives $175,000 from the insurance companies, but the money was furnished by his fellow-policyholders. There has been no restoration of the values burned up; there can never be. They are removed beyond human use.

This insured person's loss was paid him out of contributions made by his fellow-policyholders. In what way? Each paid to the common agent, the company, a sum of money, known as premium, his proper share of the compensation requisite to the maintenance of insurance on his own property. These premiums combined compose the fund out of which all losses and expenses are paid.



Now, if that is true—and it is—then we must conclude that a tax on insurance premiums is a tax on insurance losses; and as all insurance losses represent by so much a depletion of the world's values, then we must also admit that a tax on premiums is a tax on that portion of the world's vanished wealth as is represented by the insurance claims paid. And that is why I say that the scheme is incomprehensible by me. I cannot understand the philosophy which results in making our common misfortunes a source of income to the state.

D. C., Girard, Kan.—You can get from any reputable casualty company a policy paying you a weekly indemnity against loss of time due to sickness only. The rates, using $5 a week indemnity as a unit, are, approximately: ages 18 to 39, $7.50; ages 40 to 49, $8.50; ages 50 to 59, $10. I do not think the premiums charged by either the Preferred or Aetna are excessive. The price in both varies with the service furnished under the different policy contracts. Both companies are excellent, financially and managerially. The other company you inquire about is too young to permit of a just estimate of its quality.

J. W. H., Reynoldsville, Pa.—The company about which you inquire is eight years old and in point of financial size, comparatively small; but such information as I can procure respecting it justifies the belief that it is ably and carefully managed. Its growth has been steady, its expenses normal. The funds are invested in sound securities at good rates, the earnings in 1914 on mean amount of assets equaling six per cent. I have cautioned readers to use discrimination in considering the life companies which commenced business during the past ten years; this is one which I believe up to the standard.

H. A. H., Fort Valley, Ga.—The National Life Association does business under the assessment system, which eventually means trouble for the policyholders. Its so-called reserve consists of a charge of fifty cents for each year of the member's age for each $1000 insurance. The sum thus collected has no relation whatever to the amount actually necessary to maintain the policy for its face during life. In 1914 an examination of the Association's affairs disclosed many irregularities, and these resulted in the resignations of the principal officers and all but one of the directors. The present management is reputable. I cannot encourage any one to maintain a policy of life insurance in any concern which does not provide for a scientific reserve. The accident company you name, tho comparatively small financially, is of good repute. You say your premium is $10 a year. In that case you have a "limited" policy; that is to say, you have only ten dollars worth of accident and sickness insurance—something very much less than is provided under "unlimited" policies running in premium from $25 a year upward.

From Spinning Wheels *to* Motor Cars

Side by side with the first advertisement of the Hartford Fire Insurance Company, printed in the Hartford Courant in 1810, Donald McAulay, Turner, announced that he "made and repaired all kinds of spinning wheels."

Old Donald would look in vain through the pages of this magazine for advertisements of spinning wheels, and we can imagine his amazement at phonograph, telephone or motor car. But one familiar friend he would find—the announcement of the "Old Hartford," as ready today to give protection from all the risks of a motor car as it was to insure a spinning wheel in 1810. Such is the complete

INSURANCE SERVICE *OF THE* TWO HARTFORDS

For the Hartford Fire Insurance Company has granted protection against loss by fire for 105 years. It has grown with the country's growth, and the development of its insurance service has always kept pace with the country's insurance needs.

The Hartford Accident & Indemnity Company was organized by the Hartford Fire Insurance Company to conduct a general casualty and bonding business, and inherits the parent company's reputation for the fair settlement of every honest obligation.

FROM STATE TO STATE

CALIFORNIA: Prof. Thomas Jefferson Jackson See, astronomer and United States naval observer at Mare Island, is reported to have said: "Gravitation is an electric phenomenon. It does not act instantly across space, but is transmitted with velocity equal to that of light, thus coming from the sun to the earth in eight minutes." It is said that Professor See some time ago submitted a treatise on this discovery to the Royal Society of London, saying that he wished to make its first announcement to that society because Newton presented his original theory concerning gravitation to it in 1685. The See treatise, it is said, seeks to prove that gravitation is due to elementary electrical currents circulating around atoms of matter.

COLORADO: The West Colfax viaduct, in course of construction at Denver, is said to be the largest reinforced concrete viaduct in the world. Its length is 8300 feet. It will contain 9200 cubic yards of mass concrete and 25,000 cubic yards of reinforced concrete, the whole requiring 55,000 barrels of cement. The total cost is to be $800,000, of which only $100,000 will be spent outside the state.

DISTRICT OF COLUMBIA: The Smithsonian Institution recently published a fully illustrated pamphlet containing brief accounts of the most important explorations and field work undertaken during 1914 by members of the staff of the institution proper and of its branches, the National Museum, the Bureau of American Ethnology and the astrophysical observatory. The researches covered practically the entire world, expeditions having been sent to fifteen different countries, on every continent, and to seventeen states in this country. They include work along geological, zoological, botanical, anthropological and astrophysical lines of investigation.

IDAHO: The Idaho Mining Association intends to test in the courts the right of the Federal Government, as laid down in an opinion of the United States Attorney General, to control the waters and water-power developments of tributaries of navigable streams. The association hopes to have similar suits brought in other interested states, so that several cases may go to the United States Supreme Court at the same time, the belief being expressed that the larger the interests involved the more thoroly the court would go into the whole question of water-power and stream control.

INDIANA: What is believed to be the greatest percentage increase in wages ever granted in this country by a large corporation to its employees is in process of fulfilment in this state. Beginning in August one of the heavy manufacturers of war supplies in northern Indiana increased wages ten per cent and announced its intention of making a similar increase each month until the normal wage scale has been doubled, provided the war and the demand for the company's products continue.

IOWA: A new office, that of "liquor censor," has been created by the city council of Mason City. According to the ordinance creating the office the incumbent is supposed to determine how much liquor the people of the city require and to see that they get no more. On the day that he was appointed to the office Mr. R. D. Mason sent back to the breweries thirty out of sixty barrels of beer that they attempted to deliver in the city. He is making a list of the more or less bibulous citizens and says he intends to see that they do not get too much to drink. He is quoted as having said: "One barrel, or three cases, of beer and one gallon of whisky is as much as any one man should have in a month without a physician's prescription."

KANSAS: Indian students at Haskell Institute, Lawrence, have just built a new gymnasium for the school, doing the work with their own hands, making practical use of their knowledge of manual arts and crafts gained in the regular terms of school. The building, which is in readiness for the present term, provides adequate facilities for the physical training of the 700 students enrolled from nearly all the states. The United States makes an annual expenditure of more than $240,000 for the maintenance of Haskell Institute.

MINNESOTA: Mr. John F. Uhlhorn, for more than fifty years a gold miner and mining engineer, now a resident of St. Paul, claims to have discovered a process by which gold miners can save "float," the very fine gold which does not sink to the bottom of the sluice box where the granular gold is caught. Mr. Uhlhorn says that thousands of acres of land in Minnesota carry from $1 to $5 worth of this gold to the cubic yard. Engineering and dredging companies, it is said, have spent large sums of money in efforts to extract this gold from the "dirt," but without success. Mr. Uhlhorn's discovery is described as a semi-liquid substance which, placed in a sluice box, rises to the surface of the water, carrying with it practically all the floating gold. The whole is then skimmed off and the gold extracted from the attracting substance by another process.

MISSISSIPPI: The policy of establishing cooperative creameries in different parts of Mississippi with a view to encouraging increased utilization of the excellent grazing grounds of the state has met with more response from farmers than the leaders of the movement had dared to hope for. In the five of six sections where such creameries have been recently established there is a decided improvement in numbers, size and quality of herds, many farmers at distances of more than fifty miles from the nearest creamery finding it profitable to turn their attention to dairying.

NEW MEXICO: This state has now become a steady producer of tungsten, hundreds of tons of which were thrown away in years past, when its value was not known. A carload of the ore taken recently from a pocket at a 600-foot level in Lincoln County sold for $30,000. This pocket is said to be the largest lens of tungsten ever found in any mine in the world.

NEW YORK: The first definite step has been taken toward drawing up a comprehensive plan for the development of the port of New York. The Board of Estimate has appointed Mr. John F. Stevens, Professor George F. Swain and Mr. William C. Loree a commission to make an analysis of the situation and to report a plan of development which shall coördinate rail and water traffic, minimize cartage and otherwise improve the port facilities. The commission expects to complete its analysis in about two years. Experts say it will take many years and cost hundreds of millions of dollars to carry out its plan. New York City has 578 miles of water front. Of this the city owns 127 miles, and only forty-seven miles have been well developed. Last year this port handled 54.92 per cent of all the imports and 36.56 per cent of all the exports of the entire United States.

NORTH CAROLINA: Mr. S. A. Jones of Willets, who for many years has tried to interest the state authorities in a highway along the Appalachian plateau, is now encouraged by the many movements for good roads to believe his dream may come true. The road which he proposes and which he says would surpass in scenic beauty any highway in this country, would, as he describes it, "extend from Asheville, via Mt. Pisgah, along the crest of the Great Divide; over the Caney Fork Bald, the most beautiful crowned mountain in the southern Appalachian range; along the great scenic view of Double Top, one of the highest in the range, and on by way of Sugar Loaf Mountain to the Tuckseigee River near Webster." From many points on this route three states can be seen.

OHIO: Work has begun upon an improved highway which is to connect the three most populous Ohio cities and link together one-third of the residents of the state. The plan contemplates the immediate improvement of what is known as Main Market Road No. X, connecting Cleveland, Columbus and Cincinnati by the shortest route. The project is being carried out by the Ohio State Automobile Association and the Ohio Good Roads Federation, cooperating with commercial and civic organizations along the way.

OREGON: The School of Commerce of the University of Oregon is planning to make an exchange of professors with a South American university. The purpose is to bring Oregon and the Northwest into closer commercial relations with South America thru an interchange of knowledge concerning business methods and conditions, products and manufactures, commercial needs and trade languages of the two countries. The plan, developed by Mr. H. B. Miller, director of the department of commercial and industrial survey, contemplates a preparatory season of special detailed study by each of the exchange professors thru interviews with leading producers, importers and general business men of his own country before going to the other field.

RHODE ISLAND: Notable changes in the topography of Scituate are to take place in the next year. Preliminary operations by the Water Supply Board of Providence for the acquisition of the watershed and for the submerging of a large part of Scituate have been practically accomplished. Manufacturing villages, highways, railway tracks and farmhouses are on the land taken by the city. Some of those which will have to be removed are landmarks which have considerable historic interest.

SOUTH CAROLINA: Mr. A. W. Brabham of Olar is confident that he will yet succeed in producing black cotton. He has been experimenting systematically for a number of years, gathering seed from all the cotton-producing countries of the world and crossing scientifically the plants yielding the darker or tinted fibers. As yet the nearest he has come to the coveted black is a pronounced bronze. Warm tan, yellow green, light brown and olive green are among the other hues he is producing. The Savannah Cotton Exchange has an exhibit of Mr. Brabham's products.

TENNESSEE: Thruout this state the week beginning October 25 is to be known as "Made in Tennessee Week." For months the Tennessee Manufacturers Association has been arousing statewide interest in it. Producers and manufacturers have taken special pains to place their products in every part of the state, retailers have promised to push the homemade goods and the public has been solicited thru persistent advertising. The association will give cash prizes to merchants having the best window displays of goods made in Tennessee.

WEST VIRGINIA: [illegible] speaking at the recent celebration of Home Coming Week in Tyler County made it clear that he intends to maintain intact that part of the old Virginia debt which the United States Supreme Court has said is due from West Virginia to it. It shall be shown that the court has the power to enforce its judgment. He is quoted as saying that it is not as impossible to collect it hereafter, and [illegible] it is not to be paid as heretofore contracted obligations.

JUST A WORD

"A Little Trip to the War" is the title of Mr. Howland's third article from the warring countries. It tells of his glimpse of Rheims and the adjacent trenches, and will be published next week.

The Independent will begin this month what is in some respects the most important series of articles it has ever published. Under the general title of "The Next Generation" the men and women who have, by their own achievements, earned the best right to prophesy will tell what they believe to be in store for this country. Among these contributors are William Allen White, who will discuss "Government of the People, by the People, for the People"; Judge Gary: "The Long Look Ahead in Business"; Thomas A. Edison: "Looking forward in Science"; Gutzon Borglum; "The New Birth of Art in America"; President George E. Vincent of the University of Minnesota: "The Expansion of Popular Education"; Liberty H. Bailey: "Country Living in the Next Generation"; Melvil Dewey: "What the Next Generation Will Read and How"; Margaret Deland: "Women in the World and at Home"; Shailer Mathews: "Religion, the Church and the People."

REMARKABLE REMARKS

ROSE O'NEAL—All shoes hurt.

MARGARET WILSON—Society isn't a career.

JOHN D. ROCKEFELLER, JR.—No plan is fool proof.

HENRY FORD—I have never met a really bad man.

G. K. CHESTERTON—Let us continue not to notice Zeppelins.

HARRY GORDON SELFRIDGE—There are no loafers in England.

PROF. GEORGE SANTYANA—The days of liberalism are numbered.

KAISER WILHELM—I know my courageous troops are tired.

JAMES HUNEKER—As for golf—that is a prelude to senility.

W. H. TAFT—You never will have a chance to vote for me again.

EX-PRESIDENT ELIOT—Military calisthenics are of doubtful expediency.

ANDREW D. WHITE—The best teachers ever known to me had no theories.

PROF. W. H. BURNHAM—Imbecile girls make capital nursemaids, sometimes.

PAULINE FREDERICK—Play soldiering may be attractive, real soldiering is not.

OCTAVE THANET—I have no illusions about my sex—I have been one of its boys.

W. J. BRYAN—If civilization could kill a man I would have been dead a million times.

KING GEORGE—If ever this war ends in an inconclusive peace I shall abdicate the throne.

JOSEPH H. CHOATE—Busy men do not require three or four months of the year for vacation.

CHARLOTTE PERKINS GILMAN—The men hold all the money. They hold the whip hand over us.

SECRETARY DANIELS—I am not one who is in a nervous tremor over the conditions abroad.

DOROTHY DIX—Not one married man in a hundred is free to stay down town of a night to dinner.

CONSTANCE DREXEL—In the long run it is the most humane thing to have no relief funds or nurses.

EUGEN NEUHAUS—Art exhibits of the generally accepted modern type are logically intolerable.

CONGRESSMAN VICTOR MURDOCK—The Democratic party is on the verge of an internal explosion.

CHAUNCEY M. DEPEW—I have never met a man who wouldn't rather be an orator than what he is.

ENRICO CARUSO—Why should I talk about anything for publication? I am not a banker or an inventor.

ARTHUR STRINGER—Matrimony is like motoring because it is traveling by means of a series of explosions.

VINCENT ASTOR—The condition of the laboring people has greatly improved during the last few generations.

REV. CHARLES STELZLE—A good bartender will make a good clerk or salesman in any other kind of business.

LYMAN ABBOTT—I see no reason to believe that God has fixed all the incidents and events of any man's life in detail.

BISHOP J. W. BASHFORD—The Chinese are not the peaceable, easily governed people they are commonly represented to be.

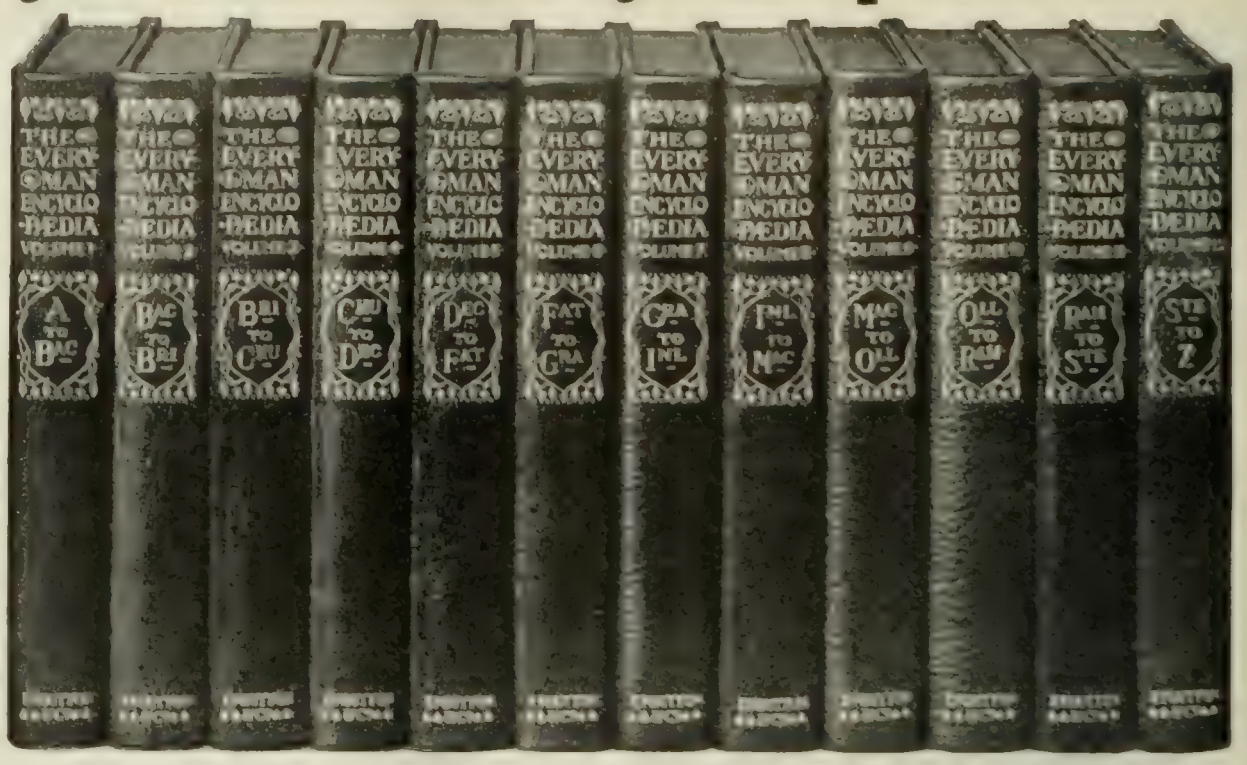
PROFESSOR JOHN B. CLARK—It is too easy for a student to get thru college and escape the necessity of getting information.

DR. W. A. EVANS—The number of dust particles found in the Boston street cars varies from 200,000 to 3,000,000 to each cubic foot.

UPTON SINCLAIR—The country is moving with the speed of an avalanche into one of the most terrific cataclysms in the history of mankind.

DR. LUCIEN C. WARNER—If you are conducting a successful business, do not add to it any other business, unless so closely related to it that one helps the other.

LIEUT.-COM. MATHY—A Zeppelin is the strictest Sunday school institution—no drinks and no smokes. Each man's pocket is his pantry and he carries a snack. I take a bottle of cognac along and some first aid material in case someone gets hit.



ADMIRAL FISKE, U. S. N.—Were it not for the tendency to decadence, we should expect that the nations of the earth would ultimately be divided into two great nations and that these would contend for the mastery in a world-wide struggle.

MINISTER MAURICE FRANCIS EGAN—It would certainly be an advantage for an American Ambassador or Minister if he had an official ribbon or two, a star or a garter or any symbol you like that would enable him to repay courtesies due to his Government.

NICHOLAS MURRAY BUTLER—Membership in a company of scholars, living the life of the constructive, forward-facing, productive scholar, carrying on the life, the work, the traditions of a great university, is the most satisfying occupation that has yet been offered to the ambitious American.

The Everyman Encyclopaedia

All the World's Important Knowledge in a Twelve-Inch Shelf.

AND all the information up-to-date. You are invited as a reader of The Independent to accept for inspection a set of the wonderful Everyman Encyclopaedia in any binding that you may select.

You owe it to yourself to make the acquaintance of this epoch making work. Just think of it! A great, authoritative, up-to-the-minute encyclopaedia covering the whole range of human knowledge, all in twelve beautiful bound volumes, each one of which can be handled and read with the ease of a small novel.

You would not have believed it possible, but the thing has been done and thousands acclaim the achievement, and literary critics of the greatest papers and magazines in the world unite in hearty commendation of this really sensational achievement. "Truly astonishing" says the Baltimore Sun; "More up to date than the larger works" says the New York Sun; "No work one-quarter as good and useful for a man in my position" says a leading publisher; "A veritable mine of information" says the Philadelphia Public Ledger; "If a friend had but $6 to spend for books of reference, I would advise him to spend the entire sum on the Everyman" says the editor of the Kentucky Post; "Here is just what I can afford, just what I can carry around with me" says a college professor.

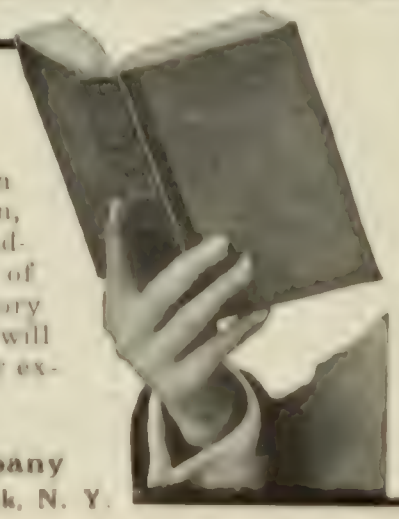
The Everyman supplies exactly what is required by the family that needs an encyclopaedia but cannot afford, and really does not require the ponderous high-priced works. The Doctor, Teacher, Lawyer, Banker, College Man—every person who reads —will recognize in these twelve compact, pocket-fitting books an indispensable, modern, intellectual tool; the acme of reference *efficiency*.

Every classroom needs a set, every business office, every home. No student at college should be without this compact ready information on literary, scientific, historical, political subjects. No educator but can use it profitably in the daily work at school or college. No parent with growing children who "ask questions" should fail to put the Everyman on the Christmas tree. No woman who is seeking broader culture should fail to own it. No alert business man should fail to have it on his desk.

Remember these points. It is a distinct effort, and means loss of efficiency, to look up matters while you work in the bigger volumes on your book shelves. It is easy and efficient with the Everyman, which can be right at your elbow, occupying only a foot of space seven inches high, on desk, table, shelf or in your trunk. You can always have the Everyman with you wherever and whenever you need it.

And *everyone* of you can have the Everyman Encyclopaedia now, instead of "some day" as you say about the big, expensive encyclopaedias. For the price has been fixed to place the Everyman within easy reach of all. Only the nation wide demand for such a reference work, only the large production, could make these prices possible.

The set of twelve volumes in red cloth with gold stamping is SIX Dollars ($6.00). Volumes open flat; carefully sewed for hard use; type clear and readable; paper thin opaque and tough; tinted tops. The set with box reinforced in cloth at $8.00. In full red leather with gilt tops and gold stamping on side and back at $10.00 the set. Quarter pigskin at $12.00 the set.



In accepting our invitation you need send no money now, unless you prefer to remit immediately with coupon. But do not fail to mail the coupon today to

E. P. Dutton & Company
681 Fifth Avenue
New York, N. Y.

Acceptance

Send one set of the Everyman Encyclopaedia for examination, charges prepaid to name and address in margin below. Style of binding ..... If satisfactory will remit full price. If not, will return set in original box at your expense and owe you nothing.

MARCHING FOR THE VOTE

TWENTY-FIVE THOUSAND WOMEN AND 2500 MEN PARADED UP FIFTH AVENUE LAST SATURDAY, TEN DAYS BEFORE ELECTION, TO CONVINCE NEW YORK VOTERS OF THE MAGNITUDE AND EARNESTNESS OF THE SUFFRAGE CAMPAIGN

A BRUTAL DEED AND A LASTING MEMORY

THE execution of Miss Cavell adds another to the long list of acts by which Germany has outraged the humane sentiment of the age. It will confirm and intensify the feeling that prevails in neutral nations that German methods of warfare are unnecessarily ruthless and inexcusably brutal. This feeling will not be relieved by any further evidence as to her guilt. We assume that the published report is correct, that she did on her own admission help English and French soldiers to escape, and that she was tried and sentenced according to the forms of military law. We recognize, also, that her position as a trained nurse aggravates rather than lessens her offense, because a nurse, like an ambassador, is a privileged personage in war time and therefore under special obligation not to take advantage of her position inside the enemy's lines to aid the armies of her own country.

But, admitting all this, we do not believe that any military necessity demanded the execution of Miss Cavell. We do not believe that the German Empire would have been endangered if she had been allowed to live a few days longer, to permit of an appeal to the Kaiser for pardon or diminution of penalty. The Kaiser pardoned the Countess de Belleville and others at the intercession of the Pope and the American and Spanish Ambassadors at Berlin. He might well have listened to the plea of the American and Spanish Ministers at Brussels. For this is a case where justice—if it be justice—should be tempered by mercy as a matter of policy if not of chivalry or mere humanity.

Because of the shooting of this one weak woman thousands of strong men will take up arms against Germany. We in America know how such a thing is felt and how long it takes to forgive. In front of the City Hall of New York there stands a statue of a noble young man of twenty-one with his arms tied together ready for slaughter. Of the throng that hurry by all day long many stop to read the words inscribed on the pedestal: "I only regret that I have but one life to lose for my country." And those who read and look up into that handsome face feel a thrill of the same self-sacrificing patriotism and of resentment at the military system that imposes such sacrifices.

Yet Nathan Hale was undeniably a spy. His countrymen never attempted to deny that his guilt brought him under the capital penalty of martial law. What they resented was that he was executed without trial, without benefit of clergy and without being allowed to send a farewell message to his mother. But "humanity sweeps onward." Would General French, if he were in possession of New York now, behave as harshly toward an American spy as did General Howe in 1776? We do not believe it. Would the British, if they were in Cologne, shoot a German woman who had aided German prisoners to escape? We do not believe it. But, if they did, they would deserve the abhorrence of the world.

Some day there will be erected in Brussels a statue of Edith Cavell, and those who see it and read her dying words, "I give my life willingly for my country; I have no hatred or bitterness toward any one," will honor her as we Americans honor Nathan Hale. So shall she speak as long as bronze shall stand and inspire the generations to come with her own heroic self-sacrifice.

THE DEFEAT OF WOMAN SUFFRAGE IN NEW JERSEY

AS was expected, constitutional suffrage for women was last week decisively defeated in New Jersey. Of all the Eastern States from Maine to Virginia, New Jersey had the least chance to carry such an amendment. It will come later, following the other states, as when it abolished slavery. And yet a hundred years ago New Jersey had female suffrage. There was a most corrupt election and the legislature, composed of white men, took away the suffrage from free negroes and women, altho men had done the bribing and received the bribes.

Previous to the late election a number of the first citizens of New Jersey signed an address to the voters stating very clearly the case for female suffrage. They told how the industrial civilization which had taken women out of the home and put them in factories had made women the competitors of men, and given them their individual interest like those of men apart from the home. They told how the sphere of legislation had of late years been enlarged, so that it was not concerned merely with life and property, but with a hundred things that make the conditions of life more decent and more easy; with these, women are as much concerned as men. They told how in a dozen states female suffrage had been tested, in some cases for over forty years, and there is not a word against it. It has proved itself a success, and the charge that it makes for the deterioration of the home is proved frivolous. The considerations in favor of female suffrage are conclusive, but the voters of New Jersey are not yet ready to accept the conclusion to which logic forces them.

The main conditions which led New Jersey to refuse the ballot to women are these: First, there is in all the older states a large body of well-to-do, satisfied, conservative women, belonging largely to the wealthy and fashionable class, who have leisure and do not wish to add to their responsibilities. They are antis by nature, and think it good form to stand by the good old way.

Again, the bosses and machines of both parties violently oppose suffrage; they understand the methods of their present corrupt control, and they will take no such risk as the admission of women to the ballot would involve.

Once more, the saloon is immensely strong in all the cities of New Jersey and is controlled by the bosses. Every saloonkeeper was an anti-suffrage missionary, and his patrons were easy converts. Here was probably the strongest influence against the women. Women are not fond of the bar. The breweries and distilleries were solidly against suffrage, and with them went all that coarser, rougher and more beastial element of the population that lacks chivalry.

We unwillingly add one other element. There were Catholics who favored suffrage for women, but the influ-

ence of the clergy and episcopate and journalism of that church was strongly against it. It was not from any lack of regard for women, but from the genuine belief that the God of Nature and revelation intended that women should devote their energies exclusively to the home and leave the rule of the world to men. To women belong the kitchen and the cradle and service in the church ruled by men. This was settled in the beginning when Eve tempted Adam and God ordained that he should rule over her. The ablest of the Catholic press, *America*, edited by Jesuits, has been of late giving its long leading articles to an attack against suffrage. It has based its argument on the doctrine that the unit of national government is not the individual but the family, and that the man represents the family. This assumption is palpably false. Here are two families dwelling in two adjacent houses. In one of them the father and his three voting sons work in a factory and all have the ballot. In the next house a widow is the head of the family and her three daughters work in the same factory, and not one of them can vote. Whether in practise or theory it is not the family but the individual who rules, and the Bible supports the thesis in that magnificent eighteenth chapter of Ezekiel, which teaches with emphatic reiteration that in the government of God, and we may assume in the government of the state, the individual is the unit and not the family.

These are the influences that have beaten suffrage, some honorable, more discreditable. What the women and their male allies now need to do in New Jersey before they can secure victory is chiefly to fight the saloon and the political infamies that are supported by it. New Jersey is one of those states which have neither prohibition nor local option. We urge them to fight for local option. That will be difficult enough, but constitutional prohibition will be hopeless. The road to female suffrage is through the downfall of the rule of the saloon. The Roman Catholic Church has not uttered its final word on the ballot for women. It is an open question there, and we may hope for a better judgment in time. Those who have so much fear that the ballot will degrade the home may properly consider what is the danger so long as two-thirds of the members of our churches are women and three-fourths of the inmates of our prisons are men.

CHINA'S MOMENTOUS CHOICE

CHINESE republicans have long suspected that Yuan Shih-kai was conspiring to betray the republic, as he betrayed the empire, and to establish himself on the throne from which he deftly ousted the Manchus. Some months ago America was startled to hear that Dr. Goodnow, president of Johns Hopkins, who was called to Peking to assist in the drafting of a constitution, had advised a monarchy for China, but this is now known to be a false report, circulated to facilitate the overthrow of the republic. The Vice-President, General Li Yuen-heng, a stanch republican, recently resigned as a protest against the proposed *coup d'état*.

Any attempt on the part of President Yuan to make himself emperor would probably precipitate another rising among the republicans of the southern provinces, in which they would receive much sympathy and not a little support from America. For the Chinese republic is our offspring and we take a loving interest in it. The young Chinese who have been educated in American universities have gone back to their own country afire with enthusiasm for free institutions and eager to devote their energies to the upbuilding of a true democracy.

It may well be that Yuan Shih-kai, autocratic and unscrupulous tho he be, is a good man to have at the head of affairs in this transition period, but to reestablish the monarchy would be a terrible wrong to China. Even tho China is a republic only in form, the form has its value and may lead to the reality. We can see this in the wording of Yuan's message to the Council of State: "As the office of President is conferred by the people, it should of course depend on the will of the people." Accordingly he is going to submit the question of republic or monarchy to the ballot of some two thousand persons, representing various provinces and classes. Doubtless this will not be an unbiassed and independent electoral body, but even tho the mandarins and notables to whom the question is put should vote for a monarchy, the mere fact that such a referendum was taken is a lesson in democracy which will not be forgotten in the future.

FALL READING IN THE TRENCHES

ONE result of the new form of warfare, where millions of men are kept for a year at a time in the same trenches with watchful waiting as their chief occupation, is that a call for reading matter has come from the front which is almost as insistent as the demand for shells. The need was met in various ways. In England magazines and books left at any post office were forwarded free to the front, and in this way tons of miscellaneous literature of varying value were collected and distributed. British authors were asked to contribute volumes of their own works, and some of them responded with such generosity as to give rise to the suspicion that they had a considerable part of the edition on hand as "remainders." The sixpenny editions of the standard English novels were great favorites in the army, and those admirable series of the classics and of modern works on science and sociology which are sold for a shilling on the English side of the ocean, and for thirty-five or fifty cents on our side, were drawn upon by the serious-minded. Many a man has found in the war a better opportunity for reading than he ever had before. A British naval officer who has been on patrol duty in the North Sea all winter reports with pride that he has at last read *Paradise Lost* clear thru.

But as the war enters upon its second year a need is felt for something better adapted to the soldier's needs and convenience than the casual magazines and the culled volumes which chance beneficence had supplied. Bound books were too bulky to carry and too good to throw away. Periodicals were mostly trivial and trashy, for there is nothing in England to compare with the ten or fifteen cent magazine of America for illustrations and good reading matter combined. So a special literature is being printed for the army. The London *Times* has returned to a primitive form of printing and is issuing "broadsheets" in editions of a million. These are sold in sets of six for a penny, each set containing a variety of selections in prose and poetry printed on single sheets so they can be sent in letters, carried in the

pocket and thrown away when read. Here are the contents of two of the penny sets:

EIGHTH SET	NINTH SET
From Abraham Lincoln.	The City of God.
The West Wind (*Shelley.*)	Five Poems by Herrick.
Mr. Tony Weller on Literature.	Admiralty Instructions on Riding and Dogs.
A Night Attack. (*Tom Cringle's Log.*)	A German Lady in Waiting. (*Burney.*)
The Queensferry Diligence. (*Scott.*)	The Upper Thames. (*William Morris.*)
L'Allegro.	John Gilpin.

In the German army, as we might expect, this matter of the supply of literature was not left to chance, but was well ordered from the start. Dictionaries, grammars and phrase books in French and English were provided for the troops sent west, and in Russian for those sent east. These contained the vocabulary and sentences needed for communication with the prisoners or the inhabitants of the conquered provinces. A German soldier captured in Poland a few months ago carried phrase book No. 90,000, so the edition must be considerable. It is arranged in three columns, German text, Russian text and the pronunciation of the Russian in Latin letters. The German Government has thoughtfully provided the British prison camps with German grammars sold at a penny in the commissary, so that their captives may improve their time. There does not appear to be anything in The Hague prohibiting the imposition of such a task as German grammar upon prisoners of war, but it is to be hoped that their term of confinement will not be so long as to enable them to master it.

In order that the Germans who are now visiting foreign lands at the expense of the Government may improve their opportunities to the full a *Pocket Art Guide for the German Soldier* has been prepared for him. This describes and illustrates in a volume of 200 pages the most important buildings and pictures to be seen in Belgium, Northern France and Western Russia. It does not, however, extend beyond Moscow and Paris, and fails to cover England and Italy. Perhaps these as well as Constantinople are contained in a second volume to be issued later. Among the edifices depicted is the cathedral of Rheims, and we are told that while the Germans were occupying that city the soldiers were personally conducted in squads around the cathedral like Cook tourists while a competent critic, detailed for the purpose, lectured to them on its artistic merits. Doubtless this, their last opportunity of seeing the cathedral in all its glory, was most highly appreciated afterward when it became their painful duty to bombard the edifice from the other side of the river.

Germany is better supplied with cheap editions of good literature than any other country, and since "analphabetism" is absent from the German army, we may suppose that most knapsacks contained a volume of the Reclam or some similar library. The Tauchnitz "Library of British Novelists," which has been issued regularly since 1841, has suspended publication during the war. The last volume, No. 4503, is *Barbara and Company*, by W. E. Norris, in which, curiously enough, a character accuses the Prussians of being "arrogant and badly brought up." The favorite authors in the German trenches are reported to be Dickens and Shakespeare. If, however, this preference is due to a desire on the part of the Germans to perfect themselves in the vernacular with a view of crossing the Channel, they should be warned that neither the Shakespearian nor the Dickensian dialect is in vogue nowadays in London society.

The German poets' memorial foundation has been engaged in supplying good literature to the troops, and up to the end of April had sent 84,562 volumes to the trenches. Hauptmann in his essay "Are We Barbarians?" gives us to understand that we may expect to find in a German knapsack a *Faust* or a *Zarathustra*, a Bible, a Homer or a volume of Schopenhauer. This may account for what we have heard of their doings in Belgium, for these admirable works contain incidents or teachings which it were well not to follow literally.

As time goes on the soldier is becoming more critical of the literature sent him. A German monist complains that he gets nothing but religious books, while he wants Haeckel and the like. A good churchman in the English trenches is shocked at finding Meredith's theory of prayer on his latest "Broadsheet." He demands an ecclesiastical censorship to eliminate such rank heresy. This suggests that here is an opportunity of settling by a colossal experiment the vext question of the influence of literature. Let certain regiments be supplied with optimistic, others with pessimistic philosophy. Let some read the classics, some science, some the Christian fathers. Let some be given detective stories or problem novels, others kept on exclusive diet of sociology and economics. Then see which corps fights best, which is most cheerful, which meets death most willingly.

Here, too, is a chance to extend Secretary Daniels' plan of education in the service. If Kitchener is right in thinking that the war will last three years or longer there would be time for a college course. The military duties would naturally take some time away from the studies, but not more than many college students devote to athletics.

THE SHAME OF YALE

IT is a great grief to us when an ancient and honorable university like Yale is brought to open disgrace thru the misconduct of some of its students. We are distrest to find in the papers nothing about the scholastic work which, we understand from private letters, Yale is still doing, but instead columns about the "weeding out of the evildoers," the "expulsion of tainted men" and the "ridding the university of the stain upon its honor." Going by the headlines we would have supposed that the Yale students had been found guilty of some sort of disorder or dissipation such as destroys the reputation and ruins the lives of some young men in every institution. But as we read further we find it is no personal peccadillo, but a deed which, in the opinion of the press, is much more serious.

We may as well out with the shameful truth at once. Five Yale students, who spent a week at Quogue, Long Island, playing baseball, last summer, failed to pay for their board. Oh, no, they did not "jump their board bill." That is not so rare an occurrence among students as to demand columns in all the dailies. They allowed some one else to pay it for them. They did this quite innocently, it appears. They did not realize, according to their own story, that they were doing wrong. But of course ignorance does not exempt one from the penalty of a crime. The Y has been ripped from the breasts of the guilty students and they are forever debarred from participating in the games of the university, a punishment which certainly matches the crime in magnitude.

The Yale *News* blames the coaches and managers of the teams for not warning the men against such temp-

tations of the vacation season. We heartily agree with the *News*, for we have always believed that ignorance is no protection for innocence and have often urged that those responsible for the youth of our land should frankly explain to them the evils of the outer world and so guard them against the sins that will beset them as soon as they leave the shelter of the campus.

Especially is this true of such cunningly concealed traps as that which has caught these poor young men. Surely Satan never devised a more innocent-seeming sin than this. No one could suspect its evil unless he had had a college education and specialized in athletics. We confess that we ourselves, in spite of the diplomas hanging upon our walls, find it impossible to appreciate the enormity of the offense as, it appears, we should. We understand fully the dangers of professionalism in college athletics. Professionalism consists in making a business of athletics, not in making money out of it. If the term "professional" were confined to those lawyers and doctors who found their profession profitable, the ranks would be considerably reduced. A young man in college is a student by profession altho he is not getting paid for it. Study is his vocation; sports may be his avocation. If he takes more interest in his sports than in his studies, then he is a professional athlete and should be debarred, not from the field but from the classroom. If there are any matriculates in Yale to whom their profession as students is secondary to their interest in athletics, the university owes it to its honor to expel them at once. They constitute the shame of Yale or any other university that harbors them.

THE WILTED GLORY OF WAR

WAR was magnificent as it was carried on in former days, where were the flashing of arms, the later gleam and clash of bayonet and musket, the caparisoned horses, and the swing of sabers as squadron met squadron on the field of battle. The Iliad was a succession of pictures of warring heroes with their auxiliar gods. So crusading knights fought the Paynim champions in open field. And such was war up to our own times, fought bravely, rank against rank, on what was called the field of battle. And so it was painted on a thousand canvases, the mounted leader, with his arm upswung, hewing down the opposite foe and cheering on his followers.

But where is all this showy bravery now? How will the artists paint the present war? How can they picture the invisible periscope of a submarine or the course of the torpedo which smites the "Lusitania"? The painting which will show hands raised above the wall of one trench to fling grenades into the opposing trench will not draw enthusiastic spectators in the picture gallery. There is nothing pictorial in the meeting of two hostile aeroplanes a mile up in the sky, each trying to mount higher than the other and send missiles down upon it. In this war the carnage is produced by cannon dropping shells on distant trenches or distant cities. But what grandeur can any one see or paint in an enormous gun concealed behind trees and discharging every half hour its monstrous bomb into Rheims ten miles away?

The old fighting is no more. Its glory is gone with the new earthworks. The soldier's weapon is the spade, and his purpose is to hide rather than to fight. And yet the glory is not all gone. The magnificence is not so much for the fighting soldier as for the superb purpose of the nations at war. Never was anything finer than their determination. Germany offers a splendid illustration. She believes that she is fighting for more than honor, for righteous defense, for the lofty spirit of her nation, and that "*Ein feste Burg ist unser Gott*." And nothing is fired with more spiritual splendor than the stern defense which Belgium has made for her freedom and her rights. And there is the willing sacrifice which women and men, people and statesmen, in France and Britain have made, giving up the lives of their dearest, accepting the wrecking of home and wealth that they may keep their pledged word, and protect liberty and free civilization. Here is glory, here is grandeur, far past all that of war whose splendor has vanished away with "the glory that was Greece and the grandeur that was Rome."

THE CENSORSHIP OF POETRY

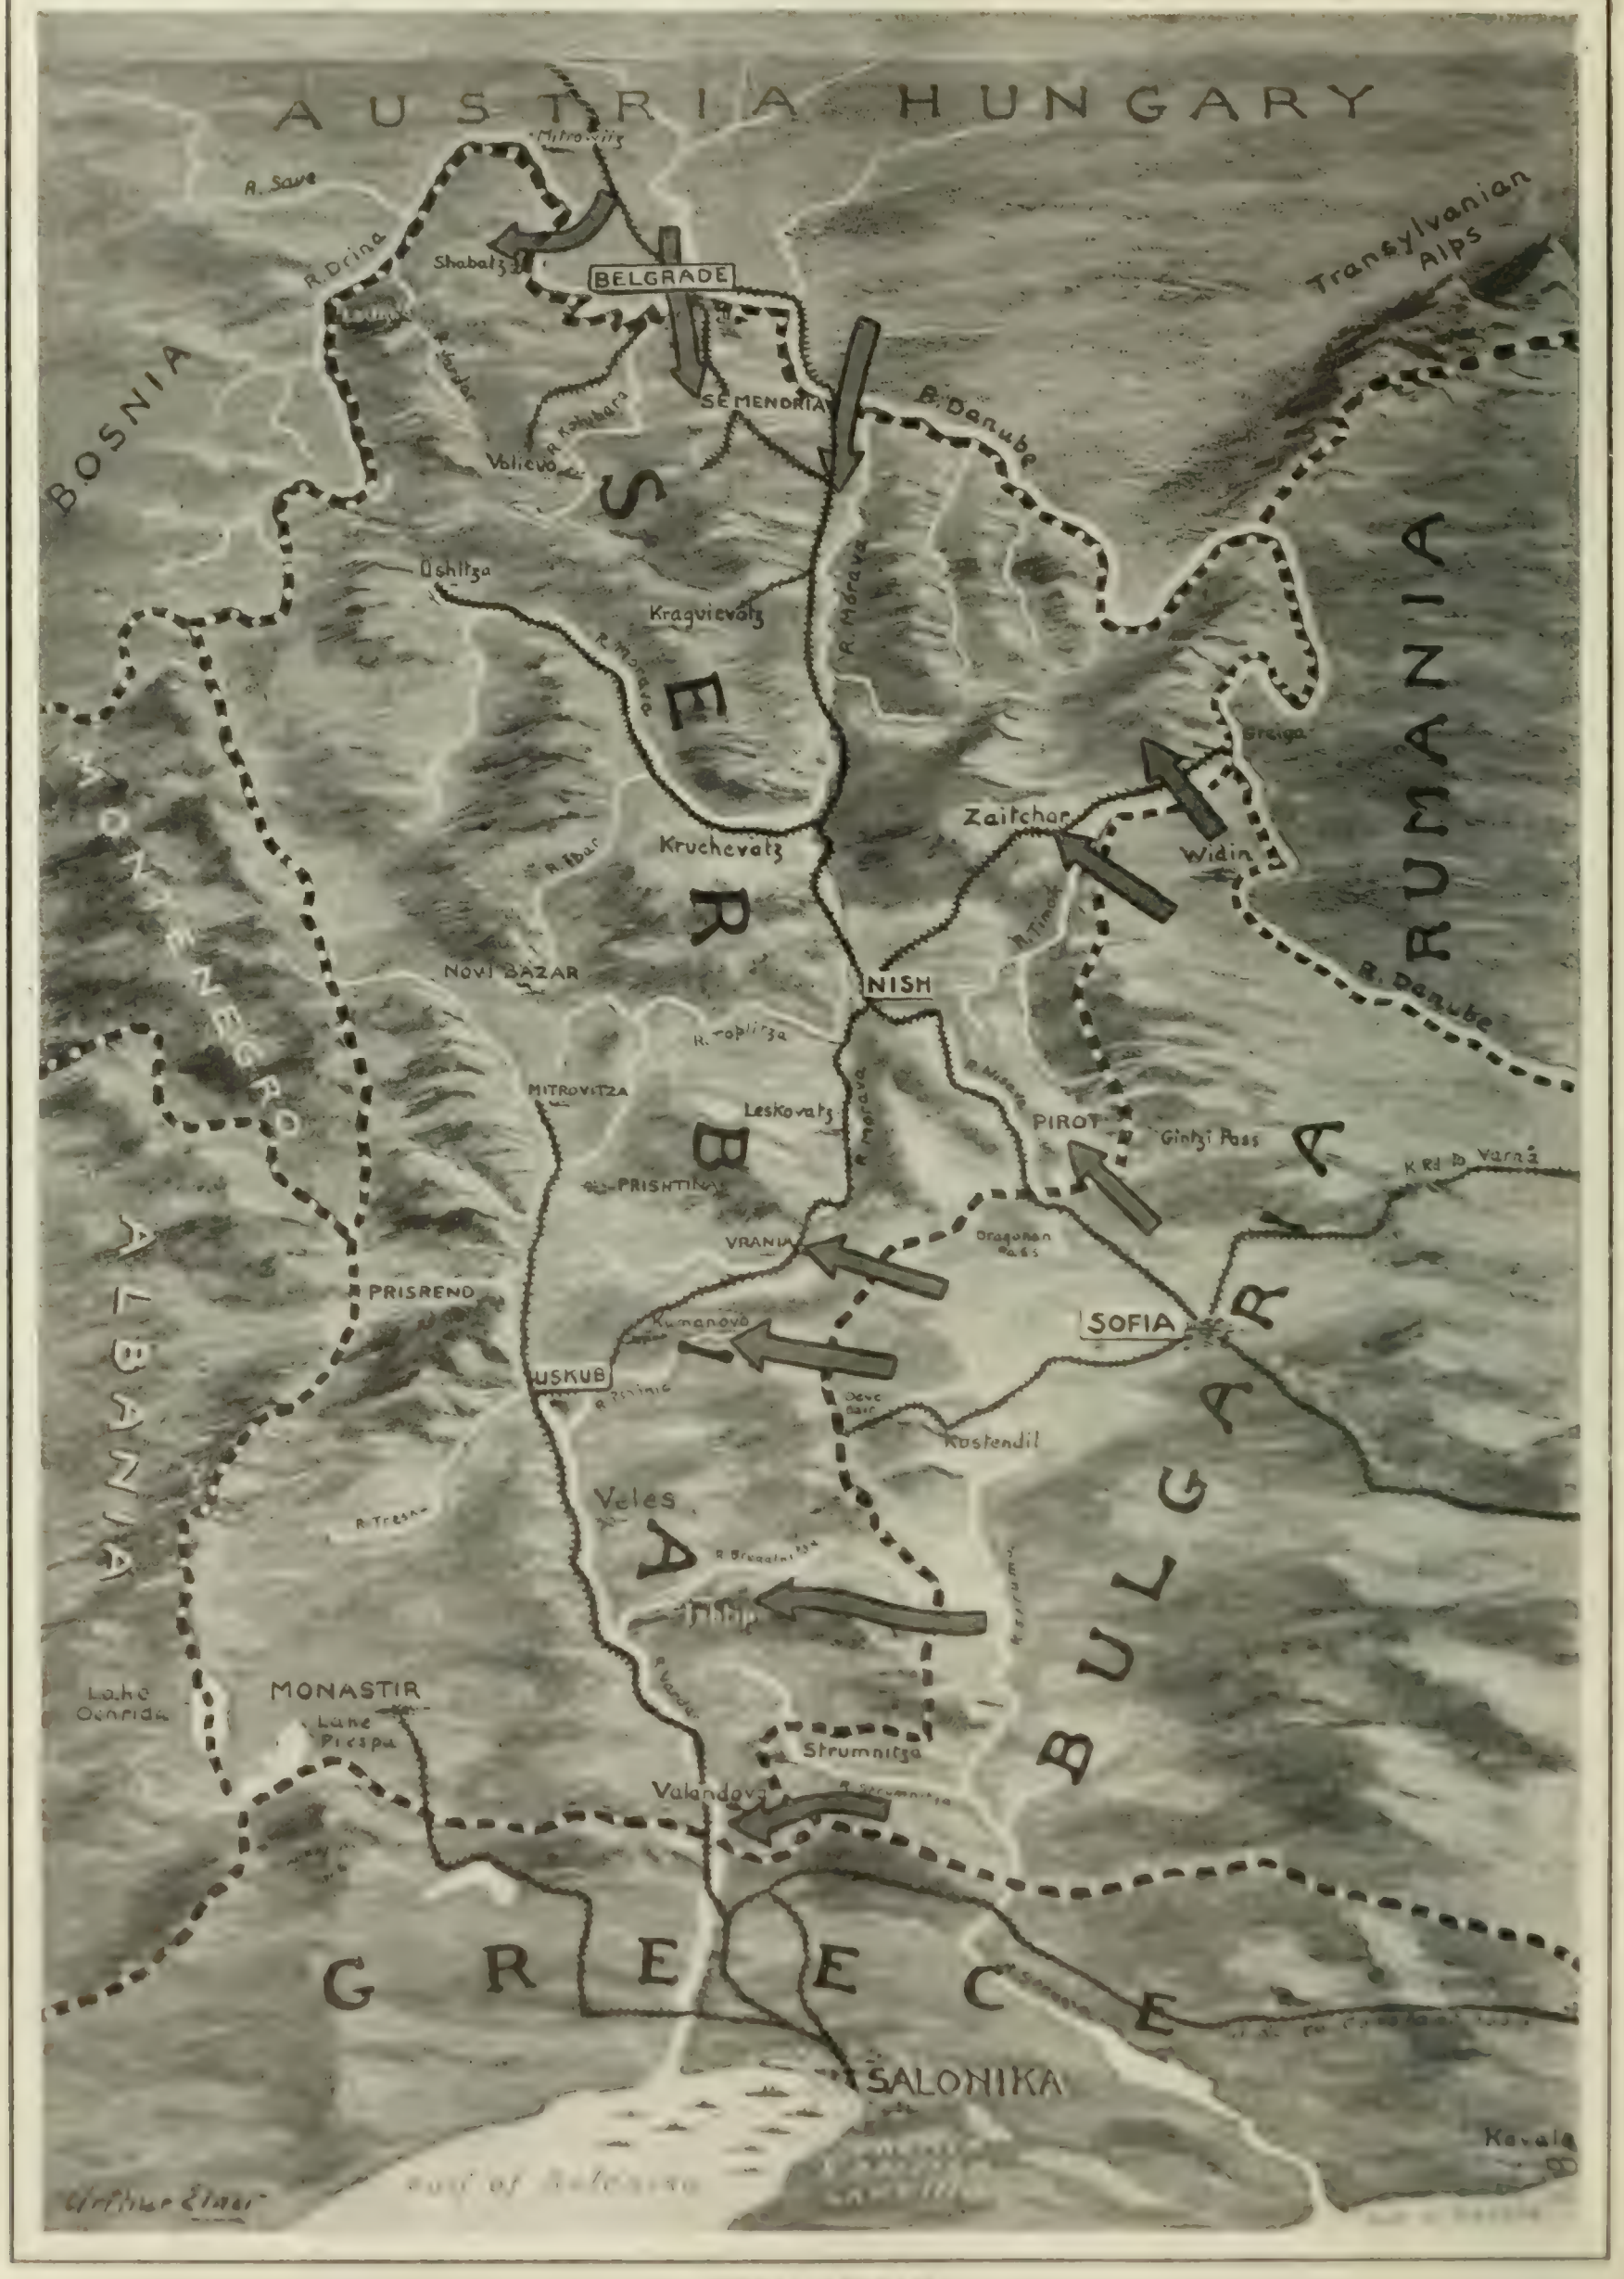
THE censor is much the same in every country. We used to laugh at his rulings in Russia and Turkey. Now it is England which is providing amusement to the world. Ronald McNeill, a Unionist M. P., inquired of the Home Secretary what poets it is permissible to quote. The reason for this interpellation is that the British censor takes his office so seriously that he is expurgating the poets and striking out illegal lines of Browning and Kipling which correspondents include in their dispatches from the front.

Poor Kipling, Poet of Imperialism, Uncrowned Laureate of Greatest Britain, now "somewhere in France" using his sharpest pen against the enemies of England, his only son "wounded and missing," to think that his "Recessional" should be found unfit for patriotic Britons to read! Curiously enough, he got into trouble before over this same pair of lines:

> The tumult and the shouting dies,
> The captains and the kings depart.

It was the censors of language, the grammarians and their devoted followers, who pitched into him before, and it was the first line they objected to, on the ground that it is customary to provide a plural subject with a plural verb. The Kiplingites rushed unwisely to the defense of their master and argued that "tumult" and "shouting" meant the same thing, so the subject was "psychologically singular." Those who took part in this heated controversy of almost twenty years ago overlooked the necessity of making the line rime with "sacrifice."

And now the political censor has attacked the second line and makes it read:



> The captains * * * depart.

The kings disappear among the stars. To suggest that kings could "depart" is obviously dangerous now when so many people are thinking that they should.

What would happen if somebody ventured to quote from "The Man Who Was" or "The Truce of the Bear"? And if Kipling is suspect what shall be done to a red republican like Swinburne, especially the poem on the assassination of the Czar, which The Independent printed many years ago when other magazines were afraid of it? One couplet of it lingers in our memory yet:

> Love grows hate for love's sake; life takes death for guide.
> Night hath nought but one red star, tyrannicide.

Then there are Burns and Shelley and Morris and Byron. Once the censor gets to expunging radicalism from English poetry he will find his hands full.

SERBIA AT BAY

THE [illegible] ENCIRCLING OF SERBIA FROM THE NORTH BY THE GERMANS AND AUSTRIANS, AND FROM THE EAST BY THE BULGARS, HAVE CUT THE [illegible] SECTIONS TO BE CONQUERED SEPARATELY. THE BELGRADE ARMY [illegible] THE DANUBE, SERVIA AND HAVE RIVERS AT SEVERAL POINTS AND ARE APPARENTLY [illegible] FROM BELGRADE. THE GERMANS AND AUSTRIANS HAVE CUT THE RAILROAD LEADING FROM NISH TO SALONIKA AT KRUSHEVAC AND ARE [illegible] THE ARMY OF GENERAL [illegible]

THE STORY OF THE WEEK

The Invasion of Serbia

During the past week Serbia has been entered from all sides; from the north and west by the Austro-German troops, from the east by the Bulgarian troops and from the south by a friendly force of French. The Serbian Government, anticipating the fall of Nish which has served as capital ever since the attack on Belgrade in August, 1914, has left for parts unknown. It was at first reported that Monastir and later that Prisrend was to be made the temporary capital, but the Bulgarian bands crossing the border had cut the railroad south of Nish before the removal could be completed. According to the Serbian reports these attacks were mere raids of light cavalry which were afterward driven back or annihilated. But, however that may be, the breaking of the railroad and telegraph line connecting the beleaguered Serbs with Salonica has interfered with the advance of the rescuing party into the interior. It is announced that French troops from Salonica have crost the Greek frontier and made connection with the Serbs near Valandova. But the railroad between this point and Uskub is said to be held by the Bulgars. The British are not mentioned in this connection and supposably most of them still remain in the neighborhood of Salonica.

The Bulgars have crost the border at a dozen points but it appears their chief advances have been made, as was to be expected, along the two railroad lines leading from Sofia to Serbia. One of these runs from Sofia northwest to Pirot and Nish and the other to Kustendil and Uskub. The latter force invaded Serbia thru the mountain pass of Deve Bair and defeated the Serbs at Sgri Palanka. The Bulgars then advanced to Kumanovo and Ishtip. Then they stormed the Fort of Veles or Kuprulu, on the eastern side of the Vardar River. The Serbs burned the town and withdrew to the western side of the river. From this position their artillery fire was sufficiently effective to prevent the Bulgars from crossing the river and so protected for the time the railroad which runs on the western bank.

The German army which assembled at Serajevo, the capital of Bosnia, has invaded Serbia on the western frontier by means of the railroad to Vishegrad. Here they crost the Drina River and are advancing toward Ushitza. This is the same route as was taken by the Austrians in their second invasion of Serbia. but they met with overwhelming defeat before they reached Nish.

On the northern frontier the Austro-German troops have advanced from Belgrade and Semendria some ten or fifteen miles into the interior, but do not seem yet to have made connection with the Bulgars from the east.

A combined fleet of British, French, Russian and Italian ships bombarded the Bulgarian ports on the Aegean, Dedeagatch and Porto Lagos. The Bulgars denounce the attack as contrary to the Hague rules since these towns have no fortifications whatever. The Allies, however, claim that only the military positions, the railroad station, the shipping and harbor works were shelled and that the residential quarters were spared. According to an Athens despatch twenty-eight ships took part in the bombardment which at Dedeagatch lasted four hours and caused the death of more than a thousand soldiers and ten civilians. The Bulgarian troops were at mess when the shells struck their barracks.

THE GREAT WAR

October 18 Sir Edward Carson resigns as Attorney General. Allied troops land at Enos on Aegean.

October 19 Germans attack French lines east of Rheims. Italy declares war on Bulgaria.

October 20 Great Britain offers Cyprus to Greece for aid in the war. Bulgars take Veles and Vranja, Serbia.

October 21 Allied ships bombard Bulgarian ports on Aegean. Russians victorious north and south of Pripet River.

October 22 Greece refuses to join Allies. Hindenburg nearing Riga.

October 23 Germans cross Drina River into northwest Serbia. Italians push attack on Austrian lines.

October 24 Bulgars take Uskub. Russians attack German position at mouth of Gulf of Riga.

Greece Remains Neutral

In order to induce Greece to abandon her neutrality and fight on the side of the Allies, Great Britain took the surprizing step of offering her Cyprus. This island is about the size of Porto Rico or nearly a third as large as Belgium. It was ceded to Great Britain by Turkey in 1878 as reward for defending her against Russia, but was not formally annexed until the present war. The annexation aroused considerable dissatisfaction among the Cypriotes because they are mostly Greeks and they saw in this act the death blow to their cherished hope of joining with Greece. The island, however, has been more prosperous and peaceful under British rule than ever before.

It is said that additional offers were made to Greece by the Allies such as the Bulgarian territory on the Aegean. Greece was forcibly reminded that her treaty with Serbia obligated her to come to the assistance of Serbia whenever that country was attacked and Greece was given to understand that the Allies expected her to live up to this engagement.

But the Greek Government paid no heed to either bribes or threats and returned a rather contemptuous reply. The Greek note expresses surprize at the intervention of the Allies and insists that the right of interpretation of a treaty of alliance belongs exclusively to the two contracting countries and does not concern a third party. "It must not be forgotten that Greece is an independent nation that disposes of its fate in full sovereignty." Gratitude is expresst for the vague offers made by the Allies and especially to Great Britain for the offer of Cyprus. Greece, says the note, is not under any obligation to defend Serbia against the Austro-German attack and the 150,000 men which, according to the treaty Greece agreed to send to the aid of Serbia in case of an attack from Bulgaria, would be useless under the circumstances. At least 400,000 would be needed to save Serbia and it would be ruinous to Greece to attempt it unless the Allies sent as many more. Greece, by allowing free passage to the Allies' troops over her territory and in maintaining her own army on a war footing, is, according to the note, doing all she can for Serbia.

It is expected that the Allies will either make a higher offer for Greek support or use their Mediterranean fleet to compel her to enter the war.

Riga Gulf and Pripet River

The German campaign in Russia has narrowed down to two objectives, the capture of the port of Riga at the north end of the line and the capture of the railroad on the south. Both these points are of great commercial as well as strategic importance, and if they can be gained the Germans will command a line of over 500 miles running almost straight north and south from the eastern end of the Baltic to the eastern end of Galicia. The railroad from Vilna to Kovno would then run just behind their front, while the Russians would be deprived of any north and south railroad nearer than that which runs from Petrograd to Kiev, over a hundred miles in their rear. With such a line in their possession the Teutonic forces could well afford to entrench for the winter.

By the capture of Vilna and Lida a few months ago the Germans secured the central section of this north and south railroad line. But its northern terminus of Dvinsk is still held by the Russians in spite of all Hindenburg's efforts. Over the southern section, where it crosses the Pripet River, the fiercest conflicts have been raging for weeks with varying fortunes. North of the Pripet the Austrians and Germans reached the railroad, but were defeated on October 21 with the loss of 3637 men prisoners and ten machine guns captured. South of the Pripet, where the Teutonic forces had come within a few miles of the railroad they have

Paul Thompson

MILITARY TRANSPORT UNDER DIFFICULTIES

Russian roads are so bad that they have a positive defensive value as a hindrance to invading armies. Here are forty German soldiers dragging a car over a worn-out highway

been attacked by the Russians and driven back.

The unexpected success of the Russians in the south may have an effect upon the Balkan campaign, for it will tend to relieve the Russians of their fear of an invasion of Bessarabia. They have been afraid that the Teutonic forces would strike at Kiev and Odessa perhaps in concert with the Rumanians, who are anxious to regain Bessarabia, a province largely inhabited by Rumanians, but annexed by Russia in 1878. A new army of Austrians and Germans have been massed upon the Rumanian border, but whether for the purpose of overawing Rumania and keeping her from joining the Allies or of preventing the Russians from crossing Rumania to get at Bulgaria must be for the present a matter of speculation.

Field Marshal von Hindenburg seems to have concentrated his energies on the capture of Riga. He has expelled the Russians from their positions northeast of Mitau and so come within gunshot of Riga. The southern bank of the Dvina River for a distance of sixty miles east of Riga is now in his possession. Illukst, which protects Dvinsk on the northwest, has at last been carried by assault and 3000 Russians made prisoners. The Germans seem to have possession of the mouth of Riga, for we hear from Petrograd that the Russian warships have bombarded the coast here and landed troops.

The War in France The chief event of the week in the western field was an attack by the Germans on a part of the line that has for some months been comparatively quiescent. On a front of about six miles to the east of Rheims a heavy bombardment by the German guns on the night of October 19 was followed by repeated charges against the French lines under cover of dense clouds of suffocating gases. These attacks were repeated on the two days following, but the German soldiers were mowed down by the French artillery before they could reach the trenches at any point. If the Germans had been successful in this effort they would have retaken Rheims and this would have brought them on the left flank of the position about five miles to the east which the French gained in their recent advance.

Here the fighting has continued about Tahure, but with no decisive results since the great French drive of a month ago. Their total gain by this movement amounts to one or two miles along a fifteen mile front. If the secret order from General Joffre which the German War Office published as found on a French staff officer is authentic the French employed in the offensive of September 25, ninety-three divisions and the British eighteen, making altogether about two million men. The order states that this constitutes three-quarters of the French army and that it was supported by two thousand heavy and three thousand field guns with a far greater supply of ammunition than ever before.

The Germans admit the terrific violence of the bombardment and the effectiveness of the poisonous gases used by the French and English. At the battle of Loos the explosive shells dug immense cavities in the entrenchments and tore the barbed wire entanglements to shreds. Then came the gas clouds creeping like a white mist over the meadows and settling down into the trenches and dugouts where the soldiers lived. This was followed by a greenish black smoke, and ten minutes later another white fog and black smoke was wafted over the German lines. After four of these waves had past the British charged out in solid columns out of the cloud, their noses protected by respirators. The Germans also were provided with gas masks but many of them had been overcome by the fumes and forced to lie down. The gases employed by both sides are said to consist largely of chlorine altho nothing definite is disclosed about it. The irritation of the lungs is so great as to incapacitate the soldier temporarily. The victim usually revives as soon as he gets fresh air, but in many cases permanent injury to the lungs results. Other gases are being used which irritate the eyes and cause a blinding flow of tears without other injury.

In the Artois field about Lens the British continue to hold the main trench of the Hohenzollern redoubt against German attacks. The Germans, however, hold Hill 70, which was last month reported taken by the British.

The Execution of Miss Cavell On the morning of October 12, Miss Edith Cavell, an English nurse, was shot at Brussels by a German firing squad in accordance with a sentence of the military court. She had been arrested August 5 with thirty-four others on the charge of aiding British and French soldiers and Belgian young men to escape from Belgium and enter the Allied armies. It appears from the evidence that she used the Medical Institute at Brussels, of which she was principal, to shelter soldiers and recruits until they could be conveyed away by night to the Dutch border. The head of this "underground railroad" was Prince Reginald de Croy, of Bellingnies, who has not been apprehended. But among the prisoners were his wife, Princess Marie de Croix, and a French countess, Jeanne de Belleville, and many prominent Belgians. After a trial of three days eight of the accused were condemned to death. At the solicitation of the Pope, the King of Spain and the American Ambassador at Berlin, the Kaiser pardoned the Countess de Belleville and some others, but Miss Cavell was executed the morning after her sentence, altho Brand Whitlock, the American Minister to Belgium, used his utmost efforts to have the sentence suspended long enough for an appeal to the Emperor. The Spanish Minister and Mr Whitlock interceded for clemency with the German Governor General of Belgium, Baron von der Lancken, but he replied that the military regarded the death penalty imperative.

Miss Cavell's bearing before the court was frank and courageous. She admitted the charges and even added

to the evidence by saying the soldiers she had aided to escape had written from England to thank her. When asked by the president of the court if she wished to petition the Kaiser for pardon she contemptuously refused to take advantage of the opportunity. M. Kirschen, advocate of the Belgian Court of Appeals, was assigned to her defense, but the court found her guilty and according to German military law the penalty was death. Mr. Gahan, the British chaplain, who visited the prison to administer communion, reported her last words before her execution as follows:

I wish all my friends to know that I willingly give my life for my country. I have no fear nor shrinking. I have seen death so often it is not strange or fearful to me. I thank God for this ten weeks of quiet before the end. My life always has been hurried and full of difficulty. This time of rest has been a great mercy to me. They have all been very kind to me here, but this I say, standing as I do in view of God and eternity: I realize that patriotism is not enough; I must have no hatred or bitterness toward any one.

When led out for execution she wore a small Union Jack upon her bodice. She refused to have her eyes bandaged but faced the rifles bravely. The execution has aroused an outburst of indignation in Holland and the United States as well as England. Recruiting jumped to ten thousand in England because of the news.

British Cabinet Crisis

The rumors of dissension in the coalition cabinet received confirmation thru the resignation of Sir Edward Carson as Attorney General and it is expected that others will follow. In a statement to the House of Commons Sir Edward Carson said that his resignation was due to his disagreement with the majority of the Cabinet over Balkan policies. On the day following the resignation it was announced that the Prime Minister was suffering from an attack of gastro-intestinal catarrh which would necessitate complete rest for a few days. This illness has given the Government a respite during which the questions asked in Parliament could be evaded and the efforts to overthrow the ministry were held in abeyance.

It is recognized that some sort of a reorganization of the Cabinet is inevitable and not improbably Mr. Asquith may be among the victims of popular resentment. The past week has been one of the most gloomy that England has experienced in recent times. The losses for the week amounted to about 30,000 and the number of recruits is not keeping up to that figure. The people are beginning to realize that they have been kept in ignorance and deceived about the war and even papers friendly to the Government are outspoken in their criticism. The policy of the censorship in concealing or holding up bad news and allowing the publication of false reports of an optimistic character has created an atmosphere of distrust. Even the official announcements of the German War Office are censored in London before they are allowed to be published in England or cabled to America. This policy was defended in Parliament on the ground that the Government did not propose to permit the British press to be used to circulate German falsehoods and arguments.

A particularly irritating incident occurred in connection with the Dardanelles. The censor allowed the publication of correspondence from Gallipoli which described the landing at Suvla Bay as a striking success and claimed that the British had gained control of the peninsula and the Turkish forces would have to starve or surrender. It is now known that the Suvla Bay expedition was a costly failure and that the officer in charge of it has been relieved from duty on account of it.

It is acknowledged that 400,000 men are needed if the German drive thru Serbia is to be checked, but probably not over 150,000 have been landed at Salonica. The bungling in regard to Bulgaria is probably more the fault of the Russian Foreign Office than of M. Delcassé or Sir Edward Grey because Russia insisted upon conducting the negotiations with Serbia and Bulgaria and it was her twenty-four hour ultimatum that brought on the mobilization of the Bulgarian army.

According to General Sir Eric Swayne, a director of recruiting, "Great Britain needs 2,000,000 more men by spring." Those who favor conscription are urging that it be adopted at once, but the Government desires to give Lord Derby's plan a chance before entering upon so drastic and unpopular a measure as conscription. The national register recently taken gives the names of 1,900,000 men of military age who are not engaged on munitions, productive industries or railroads. These are now being personally solicited to enlist in the army. Recruiting has now, like the manufacture of munitions, been taken out of the hands of the military authorities and is put under civilian control with the Earl of Derby as general director.

New Jersey's Suffrage Election

At the special election in New Jersey for action upon a woman suffrage amendment to the constitution of the state, the majority against the amendment was about 51,000, in a total vote reported to be 330,000. The constitution provides that the question cannot be submitted again for five years, and an amendment annulling this provision was rejected at this special election. The advocates of woman suffrage hold that the legislature is empowered to grant to women the right to vote for Presidential electors next year, and they will ask the Legislature to do this. President Wilson voted for the amendment at Princeton, and was heartily cheered when he went to the polls. Joseph P. Tumulty, his secretary, voted for it in Jersey City. It was asserted by Mrs. Van Winkle, president of the Woman's Political Union, that many fraudulent votes against the amendment had been cast. Mrs. Raymond Brown, president of the New York State Suffrage Association, said the result was not a surprizing one, in view of the opposition of the political machines. Dr. Anna Howard Shaw, president of the National Woman Suf-

Paul Thompson

THE NEW SHRAPNEL-PROOF HELMETS OF THE FRENCH ARMY

frage Association, remarked that the election would give an impetus to work for an amendment to the Federal Constitution.

The approaching vote on similar amendments in New York, Pennsylvania and Massachusetts, states whose population exceeds 20,000,000, is exciting much interest. There were 41,000 persons in a suffrage parade in Philadelphia last week. In New York City, on the 23d, there was a notable parade, the procession, in which more than fifty bands took part, moving up Fifth Avenue from Washington Square. There were about 30,000 women and men in line. Connecticut and New Jersey organizations were represented.

Wireless Phoning to Paris

The transmission of messages by wireless telephone from Arlington, Virginia, and New York to San Francisco and the Hawaiian Islands has now been followed by messages from Arlington across the Atlantic to Paris. It became known on the 21st that three times in the preceding ten days wireless telephonic messages had been sent from the station at Arlington to the Eiffel Tower, and received there by H. E. Shreeve and A. M. Curtis, representatives of Chief Engineer Carty, under whose direction the recent experiments have been made. On account of the war, it was with some difficulty that permission to use the Eiffel Tower station was obtained. Officers of the French Government were present, and they testify to the success of the undertaking. The replies were by cable, because the special sending apparatus was not available in Paris. Mr. Carty predicts that it will soon be possible to reach Tokio and all the great cities of the world by wireless telephone from New York. There has already been communication between Arlington or New York and Panama, San Diego, San Francisco, Honolulu and Paris.

The message received at the Eiffel Tower was heard by the operator in Honolulu. It was sent by B. B. Webb, and the Honolulu operator's report is that he distinctly heard the words "Hello, Shreeve. This is Webb talking." Mr. Carty, in Chicago, told the story to reporters in New York by wireless telephone. By the same agency he then talked with Thomas A. Edison, in San Francisco, where the latter was the guest of honor at a dinner which celebrated the thirty-sixth anniversary of his invention of the incandescent light. There was a similar celebration at the Edison laboratories in Orange, New Jersey, and the two dinner parties talked with each other, by wireless telephone, the distance being 3400 miles.

Army and Navy Plans

Secretary Daniels has given to the public the estimates relating to his five years program for enlarging the navy. The cost, for ships, aviation, a reserve stock of munitions, etc., is to be for the entire period, according to these estimates, $502,482,214. For ships alone the sum is $422,964,187. The proposed expenditure for aviation is $6,000,000, and $25,000,000 is to be invested in the munition reserve. The total for the navy in the five years would be $1,017,482,000. For the coming year the appropriations would amount to $217,652,173, an increase of $68,000,000 over those for the current year. In a public address a few days ago the Secretary said he intended to ask for a Government armor plate factory, because the existing factories do not compete with each other but are in agreement as to prices. It has been estimated that the cost of such a factory would be $6,000,000. He would also ask that projectiles for the navy be made in a Government factory.

Estimates for the changes proposed by the Secretary of War have not been published in detail, but the substance of his program was set forth in these pages last week. It is now known, however, that his plans include $26,000,000 a year, for four years, for an accumulation of reserve supplies of ammunition and arms, and $20,000,000 a year for coast defenses, new forts and guns. For the projected Continental Army of 400,000, and the additions to the regular army the sum assigned is $26,000,000 a year. The increase for next year is said to be $72,000,000.

In an address to be delivered in New York on November 4, President Wilson is to explain and support the plans of the two Departments. Mr. Bryan, who opposes them, says that if the deliberation and investigation required by his peace treaties should fail to settle peacefully any international controversy, he would have the question of going to war voted upon by the whole nation. He hopes that the women would take part in such a referendum. Ex-President Taft says the danger of militarism here is very remote, partly because we could not raise an army of 500,000 men in time of peace without increasing the pay from the present rate of $15 a month to $35 or $40, and this expense would be prohibitive. We need a navy, he adds, as large as the navy of any other nation which has a standing army large enough to spare 250,000 men for an attack upon us.

"EVEN IF THEY DID LOSE IN JERSEY——"

"WELL, BOYS, WE SAVED THE HOME"

and we lack 10,000 men for our coast defenses. Our navy and coast defenses, in his opinion, should be kept up to the proper strength, in order that they may be, on both coasts, real bulwarks against unjust aggression.

Labor Disputes

There has been no settlement of the strike of 13,000 employees of the General Electric Company, in Schenectady, New York, for an eight hour day and higher wages. The company's offer of 9½ hours and an increase of 5 per cent was rejected, and 1500 pickets were placed on duty by the strikers. In sympathy, the employees of the General Vehicle Company, a subsidiary corporation, which has been making automobiles on war orders in Long Island City, have quit work, and there will be an attempt to cause strikes in the company's other plants. In Meriden, Connecticut, the strikers who have left the factories of the International Silver Company are striving to cause similar action in the company's factories in seven other cities. A grant of nine hours, with 15 per cent more pay, has ended the strike of machinists in Torrington, Connecticut, and concessions have brought back 1200 strikers at a screw factory in the neighboring city of New Britain. In Cleveland, the machinists of the Peerless Motor Company are on strike for eight hours.

In Boston a strike of the freight handlers on all the railroads for an increase of pay is interfering with the movement of freight. In Worcester twelve meetings of the State Board of Arbitration have accomplished nothing, in the strike of machinists. Employers will not accept arbitration or recognize the union. A military guard, defending a manufacturing company's property against strikers in Nashua, New Hampshire, last week, killed a man and bayoneted a woman. In Whippany, New Jersey, fifty strikers who had left a boxboard factory, were arrested for attacking a sheriff's deputies. It is expected that the wireless operators on the Atlantic coast will go on strike. Such action might tie up two-thirds of the coast shipping. A strike has been declared by 300 operators on the Pacific coast. A considerable increase of pay is demanded.

Trust Cases

The first important suit brought under the Clayton Anti-Trust law is one begun by the Government in St. Louis last week against the United Shoe Machinery Corporation, its subsidiaries and several of its officers. The Government asks the court to forbid the company to enforce the contracts by which it binds lessees of its machines to use no machines of its competitors. It alleges that the company's practises are unlawful and tend to create monopoly. A former suit against the same company, now pending in the Supreme Court on Appeal, was brought under the Sherman act, the Government asking for a dissolution. This one does not seek dissolution, but asks for injunctions. The company, it is alleged, controls 95% per cent of the trade in shoe machinery.

Testimony as taken last week in the suit in which the Government prosecutes William Rockefeller, Lewis Cass Ledyard and nine other past or present directors of the New York, New Haven & Hartford Railroad Company, for conspiracy to monopolize railway traffic in New England. The chief witness thus far has been Charles S. Mellen, formerly president of the company, who testified for the Government, having gained immunity by doing this. But his testimony has not been wholly satisfactory to the Government, and it is said that he may be called as a witness for the defendants.

In the Supreme Court the Government has filed its brief in the suit against the steamship combination, the case having come to that court on appeal. In this suit it is alleged that certain transatlantic steamship companies had an agreement as to sailings, rates and traffic, and used what were called "fighting ships" to prevent competition. The Federal Trade Commission has ordered an investigation of charges that the cotton buyers in North Carolina, South Carolina and Georgia have combined to depress the price of cotton.

FIVE YEARS' WORK AHEAD

Mrs. Mina Van Winkle, president of the Women's Political Union of New Jersey, leaving headquarters for a campaign round of speeches. Owing to a peculiar constitutional provision, an amendment to which was defeated with the Woman Suffrage amendment, no further vote on the question is possible until 1920

The Situation in Mexico

Carranza's Government was formally recognized on the 19th of October not only by the seven nations that had been represented in the conference, but also by Colombia and Nicaragua. The words used were "the de facto Government of Mexico, of which General Venustiano Carranza is Chief Executive." The note of our Government suggested the appointment of an Ambassador. It is expected that Carranza will appoint Eliseo Arredondo, recently his agent in Washington, who is his cousin. He was a judge and a member of Congress under Madero. Our Ambassador, it is reported, will be Henry P. Fletcher, now Ambassador to Chili. President Wilson declared an embargo on all exports of arms or ammunition, except those going to Carranza's forces. This order will seriously affect Villa. At Vera Cruz our ships saluted the Mexican flag, and the salute was returned by Carranza's gunboat. Carranza is to provide for municipal elections in places which his forces control, but it is his opinion that a year must elapse before national elections can be held.

For some days past there has been but little fighting. Villa has begun a campaign in Sonora. In the south, Carranza's forces took Toluca, not far from the capital. In the battle there with Zapata's men, General Lagor Chazaro, recently the Provisional President of the Villa faction, was killed. Five Zapata generals and 3000 men surrendered, receiving a grant of amnesty. Villa's bother, Hipolito, said to have been shot, is still alive, but the story about the death of Fierro was a true one. It is now reported that Villa killed him, and that he was not drowned. Among those recently executed at the capital for connection with the assassination of Madero were Gustavo Navarro and Jose Portillo, formerly in Huerta's Cabinet.

Parties of Mexican bandits, crossing into Texas, have committed many outrages. On the 19th twenty of these outlaws wrecked a train on the St. Louis & Brownsville road, seven miles from Brownsville, and robbed the passengers. One American soldier, Corporal McBee, was killed, and also Dr. McCain, Deputy Health Officer of Texas. The bandits were pursued and ten of them killed. Two days later, at Ojo de Agua, sixty miles up the river from Brownsville, thirty Mexicans attacked fifteen of our soldiers, who were in camp there. They were driven away, with a loss of five, but three Americans were killed and eight wounded.

WHAT IS THE MATTER WITH ENGLAND?

BY SIR GILBERT PARKER

AUTHOR OF "THE SEATS OF THE MIGHTY," "THE RIGHT OF WAY," "THE MONEY MASTER"

SINCE the beginning of the war I have had a very large correspondence with American citizens, and have watched closely the trend of opinion in the United States thru a great number of newspapers which come to me regularly. The United States being the most important of all the neutral nations, and with a scheme of government and with ambitions for civilization differing only in color and detail from our own, its opinion and judgment are of deep importance to all other nations engaged in war. During the last few months, some correspondents, friendly but critical, and a few others, unfriendly and censorious, and also newspapers, impatient with the slow progress of the war, and impressed by Germany's great military organization, have asked questions which may be condensed as follows:

Why is there so much drinking in Great Britain in this crisis?

Do not the strikes in South Wales show a lack of patriotism and an indication that the trades unions are not strong for the war?

Why are your able-bodied men so backward in answering their country's call to the colors?

Why are the armies you have managed to raise proving so inactive and ineffective on the western front?

Why have you not met the demands made by your generals for munitions?

Above all, why is your navy—Britain's pride and boasted bulwark—doing so little to justify its reputation? Why does it not search the German navy out in the Baltic and come to blows?

I feel that these questions ought to be answered thus publicly to several correspondents and to newspapers, which, bearing us no ill will, are almost nervously anxious about our progress.

Let me begin with Drink.

Drink has always been "a canker of industrial civilization." If it is so conspicuous now, it is largely due to the sense of responsibility so greatly felt by the best part of our population. It is because they are pursuing a course of patriotic effort and individual sacrifice with almost sacred conviction, and indulgence such as attracts no vital attention in normal conditions seems an offense when the nation's existence is at stake. Also, in every urban population there is always a percentage of selfish, disreputable and irresponsible people who reflect discredit on the whole community.

The economic dislocation of war has brought unexpected earnings into the pockets of this stratum, which represents about ten or twelve per cent of the whole, and the money has gone where it would always have gone, alas! had it been forthcoming. There is no difference in will here, only in opportunity.

BUT "boozing" has been rife among the working classes in general, it is said by the critic, private and journalistic.

Well, the stimulus of war intensifies all passions, good and bad. In time of war all is abnormal. All virtues are intensified and, till the inevitable level is found, vices also are unduly emphasized. It is only natural that war should call out the moral opposites in fuller action than is possible to peace; should do so till the better spirit leavens all that is done and said, till pure patriotism possesses in some degree all varieties of mind and character.

What are we doing about this drink evil?

Well, its cure was the most burning question of party politics in time of peace, but since the beginning of the war ordinary political controversies have ceased and new methods necessary to the moment have been adopted for minimizing the evil. It must be remembered that any spasmodic increase of drink which there may be in any particular district is not due to vicious idleness and self-indulgence, tho in a small degree that may play its part. Some of the heaviest drinkers, strange to say, are the hardest workers; are men who toil every day in the week and put forward all the energy they have. Great exhaustion follows; they resort to drink to pull them up to the normal; and unhappily, it sends them for the moment beyond the normal, with a corresponding reaction. Overwork, in a vast number of cases, is the cause of extra drinking, sad as it is. The Government, however, have been compelled to deal with all cases of excessive drinking severely. Local authority is given, under a law passed in the present Parliament, to inflict punishment for neglect of work thru drink, and local authorities have sternly imposed fines for idleness due to over indulgence, or for idleness due to any other cause. A moral evil cannot, of course, be suppressed suddenly by law, but the bad effects of this moral evil are being reduced, first by salutary punishment, and secondly by the fact that the workmen themselves, over-excited at first by the war and all its horrors, and, because of it, flying to intoxicants, are regaining their normal condition. They are now exhibiting no more self-indulgence than would be found in any other community where wages had suddenly nearly doubled in a great many trades, and earners had not adjusted their social position accordingly, or raised their standard of living, but had momentarily expended the surplus in pleasure. It is, however, a gross misrepresentation to say that Great Britain is drunken, in the sense that her critics in some of the neutral countries—the United States included—have declared her to be. A percentage of the workers may be unpatriotic in not grasping their own individual responsibility where the nation's safety and security are at stake, but the vast majority have a grave view of how they should act in the nation's time of trouble.

BUT what of the coal strike in South Wales which has shocked the United States? Was not that a deliberate and unpatriotic act?

Yes, if ignorance can be deliberate, and everybody knows how peculiarly miners everywhere are, by the very circumstances of their calling, isolated from the general current of life and public feeling among their countrymen above ground. Consider. War comes with its huge industrial demands. It inflates the owner's profits, it increases the miner's grievances. Not only in South Wales has the miner resorted to strikes in time of war. He gave way to them in the North fifty years ago at the hight of your own Civil War, and he has struck work in Hungary, Saxony and Silesia since this war began (not to speak of a recent strike among the prosperous armament workers at Krupp's). The late strikes in South Wales are unfortunate, but they are not caused by an inherent viciousness in the miners of South Wales. It is an almost automatic result of an abnormal situation, of a strained excitement, the more powerful because the British man is not outwardly demonstrative; but the really remarkable thing about the South Wales strikes is, that disputes which might have opened up the whole social problem have been settled so speedily. Also,

it must be remembered that South Wales is not the only mining district in the British Isles, but is one of many. Yet the strikes have been mainly confined to this particular region, which is isolated and where there is an excitable population.

WHAT about the lack of munitions? Is it not due to strikes and drink? Germany has munitions enough and to spare—why has not Great Britain?

No, there are deeper causes for the lack of munitions than these things. These have played no extensive part, especially the former. Germany laid up her stores in time of peace, and she organized in time of peace her whole engineering industry, so that she could mobilize it immediately for armament production during war. It was not her way to make war in Europe, or on the world, without preparation in keeping with her prodigious ambitions. She had no intention of setting the powder magazine alight till she could be sure of making a sufficiently large explosion. Great Britain, however, not planning an Armageddon for Europe, was accordingly not competing with Germany in this respect. If she had determined to be supreme in offensive armament, her capacity for production would have given her a national arsenal far exceeding that of Germany. That, however, would have meant a policy of aggression, while ours was a policy of defense. Building up a huge army for the defense of Great Britain was not necessary. Our navy could perform that task, and it was a purely defensive force. We were a non-militarist nation, and before this war any Government of Great Britain proposing to pile up munitions of war, after the manner of Germany, would have been driven from power without shrift. All our interests demanded peace; we were committed to vast social reforms, and we were thinking of them and not of war. We went to war because we were in honor bound so to do; to defend Belgium, whose neutrality had been violated and her people sacrificed; to prevent France being reduced to a third-rate power; to prevent all western Europe being given over to the German conqueror. Before this war came we estimated our munitions supply for our garrison in India and for an expeditionary force of 160,000 men, and no army has ever gone forth to war more splendidly equipped than the force which went from England to Flanders in the autumn of last year. But it was not enough. We found at once, contrary to advice and expectation, that we must support our allies with all our strength on land as well as on sea.

What have we done during the past year? We have raised an army of 5,000,000 men and are steadily equipping them—as fine a body of men as the world has ever seen, so every neutral observer has said—so Frederick Palmer, who knows the armies of the world, has declared.

We have multiplied our production of munitions nearly three hundredfold, and we are taking steps to multiply it many times more. To keep the equipment of our own army abreast of the enormous increase in its personnel would have been impossible in any case, but, from the beginning, it was necessary to place our resources at the disposal of our allies as well. Germany's sinister preparedness enabled her armies to occupy some of the most important industrial centers of French Flanders and Russian Poland; and Woolwich, Sheffield and Birmingham have had to take over the work of Lille and Lodz. And yet, at the present rate of progress, it is certain that we shall ere long produce enough to supply ourselves and to give further help to our allies—that, in fact, we shall overhaul and surpass the German supply of munitions during the next phase of the war. With time on our side, we shall prove equal to this gigantic task; but we cannot perform miracles. It would have been a miracle if we had had munitions enough for the unexpected demand. In spite of all skepticism we have done far more than might reasonably have been expected.

BUT what about that big "Kitchener" army of yours? The Germans say it is a bluff. They assert cynically that it is a rational economy to minimize your output of munitions when you have no men to handle them.

Lacking in men? A fiasco in recruiting? No reproach could be more ludicrously undeserved and at variance with the facts. The self-governing dominions alone, with their sparse populations, have trained or are training 350,000 men—one hundred thousand more than the total strength of the British standing army (excluding the reserves) at the outbreak of the war. And the proportion of enlistments among our home population has been much higher. The much-abused miners were the first to volunteer freely, when the news came that the German invaders had battened down Belgian miners to perish in their pits at Charleroi. Men enough for five battalions presented themselves within a week at the recruiting depots of the Durham Light Infantry. They flocked in from the mines in such numbers that we became anxious for our coal supply—until we found that the patriots who stayed at home were able and eager to shoulder the work of the patriots who left the mines for Flanders. And when the Ministry of Munitions was formed its first care was to search out and recall the skilled mechanics and engineers in the new armies, who had not already fallen in battle or been indispensable to the military forces. If that was worth while, it shows in what large numbers the engineering profession must have responded to Lord Kitchener's appeal, and there is no reason to believe that the engineers have been more specially patriotic than the other trades, professions and classes in the country. No, the great bulk of able-bodied men in Great Britain, working class and upper class, married and unmarried, have put their lives at their country's disposal, and are either fighting, or learning how to fight, at this moment. It would not be far from the truth to say that the vast majority of men have done their duty and proved their patriotism.

WHY did your great spring offensive never materialize on the western front?

Who declared officially that we were going to undertake such and such operations at such and such a date? It may be ascribed to a section of the British press, speaking in its hopefulness during last winter when there was such hard going; and certainly it may be attributed to the German press at the present time, whose transparent object is to congratulate itself that our hypothetical plans have failed. But, in any case, is our Supreme command bound to "fulfil the scripture" of journalists, and enemy journalists to boot?

Lord Kitchener never promised an offensive in the spring. He kept his own counsel, as we would expect of any minister charged with a public trust; and he is not likely to depart from that policy to gratify the curiosity of the world. He spoke of May as a momentous period. He said that the war would really begin in May. Has it not been so? Have not the armies of all the belligerents greatly increased since then, and have not the operations developed enormously? It may be said that it has been Germany's operations of attack which have so vastly increased. Granted; but so have our operations of defense increased proportionately. The offensive has now been made,

and the world is watching the results.

We are well content with what our troops and their French and Belgian comrades have done and are doing under their appointed leaders. Between them they are holding up and wearing down over 2,000,000 Germans in the west, and if there is little of progress to record, it is because the Germans have been given too rough a reception to keep up a demonstration in their earlier style. The eventual strategy in the west probably hinges upon the competition in munitions; but after all we are not confining our energies to the trenches of Belgium and France. While the Germans are making their costly "drives" in Poland, the Turkish Empire is at bay in the Dardanelles, and Germany has more to lose at the Straits than she can ever gain on the Vistula. Is it realized how many men and how much munitions we have sent to the Dardanelles, and what the prodigious nature of that operation is? It has been said that we entered upon it light-heartedly. That is not the truth. It was a deliberate decision, in which were taken into account all the difficulties and all the necessary sacrifices.

Our armies have been fighting in France, Belgium, the Dardanelles, the Balkans, Egypt, British East Africa, Southwest Africa, the Cameroons and the Persian Gulf.

WHY doesn't your navy get a move on? Why doesn't it come out and make the German navy fight?

Well, that is the one thing it cannot do. It takes two fleets to make a battle. To meet the German battle squadron in the open sea is what we have been asking for since the beginning of the war. If the interested neutral thinks we should meet it by ramming our dreadnoughts against the ring of mines behind which it lies in hiding, I hardly know how we shall counsel together. Mines are mines, and they can lay intrepid dreadnoughts low at no cost save that of the making.

What service could our navy be doing that it is not doing now? It has swept the German merchant marine from the seas, sent the German commerce raiders to follow it, and isolated the German colonies from all commercial or military intercourse with the Fatherland.

It has prevented the German navy from giving any assistance to its colonies, either with supplies or men.

It has enabled our own commerce and the commerce of our allies to keep the sea in war as safely, for practical purposes, as in time of peace. Our mercantile marine and our navy are larger than they were when the war began, so the First Lord of the Admiralty has informed us.

It has covered the transport of our troops from every part of the world to the British Isles, and from the British Isles to Flanders and the Dardanelles. A year of war passed before the first British transport was sunk on seas otherwise traversed without let or hindrance from German warcraft, whether on the surface or below it, not to speak of their boasted fleet in the air.

It has made possible the incredible disembarkation on the Gallipoli Peninsula.

Naturally the Germans talk big about the Zeppelins and U-boats. It distracts attention from their battle fleet. That fleet was Kaiser William's masterpiece. It has cost untold millions of dollars and absorbed the services of hundreds of thousands of highly skilled men. And it is now a negligible quantity. It is having no influence whatever upon the course of the war, and it is likely to go on eating its head off in the Kiel Canal till the German General Staff runs short of metal, and melts down its armor plate for shells.

That is what our navy has done—deeds worthy of its own tradition and of all the greatest accomplishments of sea power in recorded history. But I can do no better than refer your readers to Mr. Balfour's recent letter in the New York *World*, for the First Lord of the Admiralty states what his service has accomplished, with a brilliance and lucidity which I cannot rival.

The neutral world is in danger of misunderstanding Great Britain's temper, because we have been thrashing out in public the gigantic problems set us by this war, in political debate and in the controversies of the press, with a frankness of self-criticism peculiar to people of Anglo-Saxon blood. Those who know us will not take this characteristic as an indication of discouragement and miscarriage. We are not bestirring and berating ourselves because we have done too little hitherto, but because we are inciting each other to do more than we have done. The broad facts I have put forward ought to be sufficient proof of this; but if America is "looking for a sign," and a dramatic sign, of the British people's spirit at this crisis of its history, I need only dwell for a moment in conclusion upon the recent and second great war loan.

The subscriptions to the loan were the largest ever made to any single issue, namely three thousand million dollars ($3,000,000,000) and the number of subscribers, namely, 1,300,000, testified to British determination to win the war.

This memorable success was insured by the fine energy and faith and loyalty of the ordinary citizen and the devotion of his savings to the national cause. What clearer sign of resolution could be asked than this incident in the history of a people's patriotism?

HAS England played her part with the Allies in this war?

Her navy was her natural contribution to any great war. It was to do the work of preserving the overseas trade of her allies, of preventing the fleets of belligerent nations from possessing the coasts of her allies, of crippling and neutralizing completely the power of enemy navies. It has done that far more successfully than could have been dreamed. The German navy is powerless as a navy. A fleet of submarines, steadily diminishing, and preying upon a peaceful mercantile marine, has taken its place.

What has Great Britain done? Without her, France would now be under the heel of the Teuton. With Great Britain's army helping her, France has been able, slowly but surely, to complete her own equipment, and both Belgium and herself have been saved from the worst by that army of Great Britain which has paid its toll of 500,000 casualties since the beginning of the war.

Great Britain has given to France and Russia munitions of war which she needed for herself; and it is a remarkable fact, but a true one, that, as the Chancellor of the Exchequer recently said in the House of Commons, Great Britain has loaned to the Allies and the Dominions of the British Empire the vast sum of £425,000,000. The strength and outgiving of a nation is not to be judged alone by men, and the variety of Great Britain's contributions to the war is stupendous. It has not reached its limit, while the startling and onerous increase of taxation in the present budget has been cheerfully and gallantly met by a people who before the war felt that they were carrying all they could bear. Its greatest efforts are now being made, and the friends of the Allies may be sure that Great Britain, which did not fear Napoleon, brought him to his doom and rescued Europe from his tyranny, will save European civilization and the civilization of the world from that German kultur which makes of Belgium a charnel-house and an abattoir.

London

MARY SCULLY, LIVE WIRE

THE LEADER OF THE WOMEN'S FIGHT FOR AN EIGHT-HOUR DAY

BY GERTRUDE BARNUM

"IT took three weeks to turn P. T. Barnum's old home town into an eight-hour city. It ought not to take so long in other Connecticut towns."

Thus speaks Mary Scully, the now famous general organizer for the American Federation of Labor, who has just completely organized the women of the entire city of Bridgeport, Connecticut, for a forty-eight-hour week, and who proposes to carry the eight-hour banner for the working women of every state in the Union during the next twelve months.

Judging by her start, she easily will finish her triumphant American tour in time for a long and happy vacation next summer. For, beginning in Bridgeport with a corset factory with over 4000 workers, which capitulated after a twenty-four hour strike, and wending her way via two other large corset factories, a huge electrical plant, textile mills, rubber shops, graphophone company, lace works, etc., this jolly feminine "agitator" in less than three weeks had turned a city of non-union women into one of the most solid of women's union strongholds in the country. She had initiated the women of all nationalities into trade organizations of all sorts of crafts, had stacked up union membership books that overflowed her temporary offices, had filed away eight-hour agreements from every firm of consequence employing women in the city, and had wound up with a grand celebration, parade, floats, and a steamer excursion.

"Don't make any mistake," she said, "it is the women of Bridgeport who have made it a union town. The machinists' agitation had been in progress for some time and while much success had attended their efforts, men of other trades were not making any headway. It was not till the women started things by striking in thousands that the men's union spirit really woke up."

The woman's eight-hour movement is already well started in New Haven, Meriden, Hartford, Waterbury, and many other Connecticut towns. Organizer Roche and Mrs. Scully receive daily appeals for organization from all parts of this and neighboring states, from every sort of committee a school teachers' and trained nurses, assistant scullery maids and domestic servants. Mrs. Scully has conducted successful strikes and established large organizations in the cities just mentioned, and has held preliminary meetings in many other Connecticut towns and cities. To use her own expression, "P. T. Barnum's show started from Bridgeport, but the people of America never have seen such a circus as the American woman will now pull off. Believe me, it's going to be a continuous performance."

How does she do it?

"I make them sneeze and get the cobwebs out of their brain. That's all." Such is her explanation. "We don't do any waiting around outside of offices, begging for interviews with superintendents. We don't creep to the top of the Woolworth Buildings on our knees, petitioning to kiss the hand of managers. We just go up to the main boss direct. We tell him we remember well when his father, the country doctor, used to drive ten miles to collect a dollar for a case of mumps. Or we remember when he himself was a cutter working at the next bench to ours. And while we want him to get what is rightfully coming to him, we have seen him pocketing our share of the good things of life as long as we mean to stand for it. We tell him we have made engagements to start for a swim at five next Thursday afternoon, and it will take an eight-hour day to make that date good. And we go for that swim on Thursday right on time. That's all there is to it."

MRS. MARY SCULLY

Mrs. Scully is working under the direction of James E. Roche, general organizer of the American Federation of Labor, who has been assigned to Connecticut for some months. So much confidence has he in her ability that in many cases he has left to her even the drawing up and signing of important trade agreements; the first time in labor history that a woman organizer has been so honored. She declares that she owes a great deal to Mr. De Vere Warner, of Bridgeport, the head of the Warner Corset Company, and president of the Bridgeport Manufacturers' Association, because he had intelligence enough to see that the eight-hour movement would not ruin business, and he was "game."

"In all our agreements, besides getting eight hours, we abolish child labor, fines, unfair charges and bad sanitary conditions, and we get increased wages and establish committees in every department to take up grievances. Discipline of the employees is administered by the workers themselves, under a self-governing scheme. Massachusetts will probably be the next state visited, as the working women there are sending in repeated calls for organization."

Tho born in New York, Mrs. Scully has the ready wit of her Irish ancestors, which is greatly enjoyed even by employers who have been "licked." Labor leaders welcome her advent wherever she appears, as it means not only "something doing" in all their organizations, but also because, as they say, "She's a scream for fun."

"Barnum won't have anything on us when we get thru our travels across the country to California," said Mary Scully. "Just keep your eye on the feminine circus; believe me, we've started something. It's going to be the greatest show on earth."

CHARGING GERMANS—AN ACTUAL PHOTOGRAPH OF AN ASSAULT ON THE TRENCHES

AT THE EXTREME LEFT A LINE OF GERMANS, BAYONETS FIXED, CAN BE SEEN COMING ON THE RUN. THE LIEUTENANT IN THE CENTRE IS HIS COMMANDING ALL WAITING THE ORDER TO RETIRE THEM

WHAT WE CAN DO IN CHEMISTRY

BY LEO HENDRIK BAEKELAND

Many more people are acquainted with "Bakelite" and "Velox" than are acquainted with their inventor. Dr. Backeland was born in Ghent, and was a professor of chemistry in Belgium until he came to this country in 1889. Here his inventive genius and business ability have made him a leader in the development of our chemical industry. He has recently been appointed a member of the Naval Advisory Board of Invention.—THE EDITOR.

THE present war has been aptly called a "chemical war." But do not imagine that this is the first chemical war: The art of men's killing and robbing each other became "chemical" the day gunpowder was invented; at that time, however, the existing knowledge of chemistry was just of pinhead size. Napoleon knew very well how to use adroitly exact knowledge and chemistry for furthering his insatiable ambition to dominate the world; so he surrounded himself with the most able chemical advisers and scientists, and for a while at least, he placed himself at a decided advantage over his many enemies; incidentally, he thus helped to lay the foundation for some very important branches of chemical industry.

Ever since then, science, technology and chemistry in particular have played a role of increasing importance in the armament of nations. This accounts perhaps for the strange fact that the really great military inventions have practically all emanated from civilians and from non-military nations like our own. If the men of the military class, essentially conservative in all countries, had been left to their own devices, they would probably still be fighting with bows and arrows, or perhaps with the traditional sling.

But let us direct our attention to more peaceful chemical pursuits and more particularly to the chemists of this country. Right here in the United States, the chemical profession has made such development during the later years that our national American Chemical Society, which counts over 7000 members, has by far the largest membership of any chemical society in the world, with all due respect to England, France and Germany.

The development of any chemical industry is a matter of local opportunities. The magnitude and earning capacity of the largest German chemical enterprises, however imposing they may be, look less important if you take into consideration that some of these companies have been in existence for more than half a century. Nor is the value of the output of some of our largest purely chemical companies much less important than that of the German concerns.

The outcry which has been raised as to our shortage of artificial dyes is out of all proportion if we consider the fact that the annual importation of dyes and synthetic products from Germany amounts only to about $9,000,000. This represents about the same money value as the amount of candy sold annually by the Woolworth Ten Cent Stores.

This country is now the greatest producer of sulphuric acid, with an annual production of about 3,000,000 tons. Yet it is not so long ago that the first maker of sulphuric acid had trouble to find purchasers for a triflingly small production of a few tons per week. It needed the opportunity of a home market; by and by this market was created thru the refining processes of petroleum after the discovery of our oil fields; the discovery of natural phosphates and the resultant industry of superphosphates; the use of dynamite for blasting, the development of the glucose industry, electrolytic copper refining, and so on.

I doubt very much whether the talented foreigners who have now become famous in chemical manufacturing would have tied their initiative and enterprise by specializing in coal-tar-dyes manufacturing, if they had had the limitless opportunities of an immense undeveloped country like ours, in which to give other outlets to their spirit of pioneership; mining, transportation, agriculture and similar subjects all beckoning for more urgent attention, and offering at the same time more immediate rewards.

In the meantime, some of our other chemical industries better suited to our local conditions have taken such an enormous development here as to make the United States an undisputed leader in at least some of them. If there had been a shortage in some of the products of our electrochemical industries in which the United States has been a pioneer, the consequences to our national economics would have been so serious that the present complaint of our aniline-dye users would have sounded like a timid whisper, compared to the bellowing lamentations of so many more important industries which would have become absolutely paralyzed. The German manufacturers, possessing every opportunity and inducement for specialising in these coal-tar industries, could afford to concentrate their efforts so as to supply not only their home consumption and that of the United States, but that of the whole world, in about the same way as the United States sends to the remotest corners of the globe its sewing machines, its typewriters and its Ford cars.

If hitherto our chemists have been deficient in this special line, we can, with some satisfaction, point to better efforts in other chemical industries. For instance, it is not sufficiently known how many research chemists in our different American manufacturing establishments are busily occupied in studying and improving manufacturing processes, nor what large sums of money are devoted every year to industrial chemical research. If we hear it constantly repeated that some of the largest German chemical companies employ hundreds of chemists and engineers, it is less known that right here in the United States the number of chemists employed in some of our better organized chemical enterprises is scarcely less; but nobody finds it necessary to boast about it.

Conditions were quite different some fifteen or twenty years ago; but this country has grown, and as the requirements and opportunities grew, at the same time new chemical problems arose thereby. The urgent nature and the magnitude of some of these new chemical problems are shaking our chemists awake —making new men of them. The chemist of today is no longer confined to purely chemical enterprises; even the most stubbornly conservative manufacturers have learned, thru competition, that every industry, however mechanical be its nature, has its chemical problems. Things have changed rapidly since the day Andrew Carnegie listened, with a sly twinkle in his eyes, to the fun his competitors were poking at him when he first engaged a "spectacled professor" to investigate the chemical problems in his iron-works. Conditions have now become reversed; today, a steel or iron works without a competent chemist justly provokes contempt and distrust.

We know where the work of the chemist begins. We can never tell where it ends, and thru what unexpected ramifications it may lead.

THE STRONG MAN OF THE BRITISH CABINET

DAVID LLOYD GEORGE, THE WELSH LAWYER WHO BEFORE THE WAR WAS BITTERLY HATED BY PEERS, CLERGY AND LANDOWNERS, IS NOW REGARDED BY ALL PARTIES AS A MOST CAPABLE AND EVEN PROPHETIC PREMIER BY HIS FORMER OPPONENTS. SINCE HE BECAME MINISTER OF MUNITIONS A NEW MONTH, AND THE OUTPUT OF WAR MATERIAL HAS QUADRUPLED.

TOWARD DEMOCRACY

THE TREND OF WAR-TIME LITERATURE

BY JOYCE KILMER

IT is fortunate that the brilliant young English novelist who bears the astonishing name of Oliver Onions wrote his book *Grey Youth* when he did. Coming from the presses in the year 1914, it was an accurate piece of of realism; it was contemporary, a sort of inspired reporting. But the life which Mr. Onions effectively pictured has utterly vanished. The young Bohemians of London, whose strangely unyouthful youth Mr. Onions described in what was in some respects the most significant book of the year, are now hard to find. The boys who tried to prove that their Vorticism could produce art more extracrdinary and less comprehensible than did Marinetti's Futurism, the girls who lived on lemonade and walnut steak and wished to regenerate the world by folk-dancing—where are they now? Well, some of the girls may be found with red crosses on their sleeves, washing the mud and blood from battered bodies to make them ready for the surgeon. And the boys—some of them are very busy behind piled sandbags in deep trenches somewhere in France, and others are no longer busy, and are in trenches where there are no sandbags.

It would be absurd to comment upon this appalling waste of youth and talent. But the destruction is not absolute. There will be young men come home from the fight, to take up their old tasks of making books or pictures, but they will not make the sort of books and pictures that they made before. They will not be so terribly in earnest about trifles; they will have seen a thing so tremendous as to shock them into the possession of a sense of perspective. The most serious of things will have given them a saving frivolity; the greatest of tragedies will have given them humor. Their youth can no longer be gray; it has been baptized in blood and fire.

This is a conclusion which cannot be avoided by anyone who observes what is going on in literature. Not only in England but in all the countries at war and even in the United States it is evident that literature is in a state of transition. And the trend of this transition is toward democracy.

There can be no doubt that literature is becoming less literary. Poets and prose writers are no longer concerned with cults and catchwords and minutiæ of their art never of interest except to their colleagues. Writers are now human beings endeavoring to convey their ideas to other human beings by means of the printed page. And this was by no means the case a little more than a year ago.

Of course, there are the propagandists. They remain, but they have taken up new and more human propagandas. But when we find Mr. Blatchford, Mrs. Pankhurst and Mr. Hillaire Belloc animated by the generally shared emotion of patriotism and writing with the purpose of furthering the cause which is nearest the hearts of all their countrymen, we find them more human and democratic than they have ever been before. And it is a particularly surprizing thing to find a Socialist becoming democratic, for, especially in England, socialism has been the most exclusive and, as the word is used, aristocratic, of all literary cults.

The war has put the blood of life into the work of many men whose writings had been highly artificial, mere verbal decorations. Rupert Brooke was a typical example. He had been an eager seeker after novelties, a poet who wasted his splendid energies in the foolish task of shocking the burgesses. He had been cynical and affected. But in the months that passed between his enlistment in the Royal Naval Division and his death in the Aegean he wrote five sonnets which most people will agree with Lascelles Abercrombie in calling "incomparably the finest utterance of English poetry concerning the great war." Here is one of these sonnets—in it Rupert Brooke speaks not only for himself but for all the literary youth of England.

Now, God be thanked Who has matched us with His hour,
And caught our youth, and wakened us from sleeping,
With hand made sure, clear eye, and sharpened power,
To turn, as swimmers into cleanness leaping,
Glad from a world grown old and cold and weary,
Leave the sick hearts that honor could not move,
And half men, and their dirty songs and dreary,
And all the little emptiness of love!

Oh, we, who have known shame, we have found release there,
Where there's no ill, no grief, but sleep has mending,
Naught broken save this body, lost but breath;
Nothing to shake the laughing heart's long peace there
But only agony, and that has ending;
And the worst friend and enemy is but Death.

There are many things which might be said about this passionately felt and finely wrought sonnet. But its conspicuous virtue is the virtue of democracy. The poet is not analyzing his own private emotions. He is not cynical, he is not precious; a few months before he had been both.

The writers have become more democratic and yet more individual. They are writing what they themselves feel passionately, instead of merely what is believed by the members of some social, economic or ethical cult, therefore they are more individual. And the thing which they feel most strongly is the thing which everyone feels, and therefore they have become more democratic. They have actually discovered the brotherhood of man. Even the people who used to write about the brotherhood of man have discovered it.

Gilbert K. Chesterton is less paradoxical, Bernard Shaw is less fantastic, Arnold Bennett is less scrupulously attentive to the minor details of provincial life, H. G. Wells is less dogmatic. Literature is gaining in sincerity, directness and potential popularity.

What will be the effect of all this upon the literature of our own country? Shall we accept the cynicism and artificiality which an angel with a flaming sword has driven out of Europe? Shall we hospitably give shelter to Imagisme, Vorticism, Futurism and all the other disreputable literary refugees?

It is not likely that we shall do so. Our writers are being vicariously disciplined; they are seeing that certain arts and artifices which they have been accustomed to regard with considerable respect prove worthless in the time of trial. They will profit as the European men of letters are profiting, but without the pain of their lesson.

The art to which we are returning in the novel, the short story and the poem, is an art that is simple, human and democratic. Not for many a year will people speak seriously of so utterly ridiculous a thing as art for art's sake. The schools and cults and mutual admiration societies have disappeared. The great insanity has made our literature sane, the great illness has made our literature whole. The new era in letters will be an era of democracy. When this ravening monster, the war, is dead, this is the honeycomb which we shall find in his carcase.

New York City

For the Expansion of American Commerce

THE recent articles in The Independent by Dr. Edwin E. Slosson, entitled "The Conquest of Commerce" and "American Made" have attracted wide attention among business men.

¶ These articles will be followed by others by Dr. Slosson for the purpose of showing how the American business man is affected by the changed conditions brought about by the Great War.

¶ Dr. Slosson recently has visited Australia and the West Indies and will show what opportunities for the extension of our trade are afforded by these countries.

¶ Next he will take up certain chemical industries in the United States which are rapidly assuming great importance. The triumphs of Synthetic Chemistry, by freeing man from the limitations of nature, affect almost every trade and household to an extent unrealized by the public. These stories of the marvels of applied science will be written in a way that every reader can understand and appreciate.

The Independent

A JOURNAL OF THE HOUR

Are Women People?

We quote by permission the following verses from "Are Women People?", a timely collection of suffrage rimes by Alice Duer Miller, published by George H. Doran. Some of them are whimsical, some keenly satiric, but all are delightfully piquant and to the point.

ADVICE TO HEROINES

With apologies to R. L. S.

A heroine must be polite
And do what others say is right,
And think men wise and formidable—
At least as far as she is able.

REPRESENTATION

I'm in a hard position
  For a perfect gentleman;
I want to please the ladies,
  But I don't see how I can.
My present wife's a suffragist,
  And counts on my support,
But my mother is an anti
  Of a rather biting sort;
One grandmother is on the fence,
  The other much opposed,
And my sister lives in Oregon
  And thinks the question's closed;
Each one is counting on my vote
  To represent her view.
Now what should you think proper
  For a gentleman to do?

OUR IDEA OF NOTHING AT ALL

("I am opposed to woman suffrage, but I am not opposed to woman."—*Anti-suffrage speech of Mr. Webb of North Carolina.*)

O women, have you heard the news
  Of charity and grace?
Look, look, how joy and gratitude
  Are beaming in my face!
For Mr. Webb is not opposed
  To woman in her place!

O Mr. Webb, how kind you are
  To let us live at all,
To let us light the kitchen range
  And tidy up the hall,
To tolerate the female sex
  In spite of Adam's fall!

O girls, suppose that Mr. Webb
  Should alter his decree!
Suppose he were opposed to us—
  Opposed to you and me.
What would be left for us to do—
  Except to cease to be?

WHY WE OPPOSE POCKETS FOR WOMEN

1. Because pockets are not a natural right.

2. Because the great majority of women do not want pockets. If they did they would have them.

119 West 40th St. New York

FOR RENT A light, airy furnished, seven room cottage, overlooking a lake half a mile across, in the very healthful pine woods section of Florida. Two miles from the town of Sorrento. On the estate of the late E. P. Powell. Terms $125 for the season of five winter months. Address (Miss) Grace Powell, Clinton, N. Y.

Romeike's Press Clippings

are used nowadays by every modern up-to-date business man, they keep you in constant touch with all public and private wants, and supply you with news bearing upon any line of business. We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC. 106-110 Seventh Ave. New York City

3. Because whenever women have had pockets they have not used them.

4. Because women are required to carry enough things as it is, without the additional burden of pockets.

5. Because it would make dissension between husband and wife as to whose pockets were to be filled.

6. Because it would destroy man's chivalry toward woman, if he did not have to carry all her things in his pockets.

7. Because men are men, and women are women. We must not fly in the face of nature.

8. Because pockets have been used to carry tobacco, pipes, whiskey flasks, chewing gum and compromising letters. We see no reason to suppose that women would use them more wisely.

THE PROTECTED SEX

With apologies to James Whitcomb Riley

("The result of taking second place to girls at school is that the boy feels a sense of inferiority that he is never afterward able entirely to shake off." *Editorial in London Globe against co-education.*)

There, little girl, don't read,
You're fond of books, I know;
But Brother might mope
If he had no hope
Of getting ahead of you.
It's dull for a boy who cannot lead.
There, little girl, don't read.

INTERVIEWS WITH PROMINENT ANTI-SUFFRAGISTS

"Woman's place is in my home"—Appius Claudius.

"I have never felt the need of the ballot"—Cleopatra.

"Magna Charta merely fashionable fad of ye barons"—King John.

"Boston Tea Party shows American colonists to be hysterical and incapable of self-government"—George III.

"Know of no really good slaves who desire emancipation"—President of the United Slaveholders Protective Association.

SUCH NONSENSE

("Where on earth did the idea come from that the ballot is a boon, a privilege and an honor? From men."—*Mrs. Prestonia Mann Martin.*)

Who is it thinks the vote's some use?
Man. (Man is often such a goose!)
Indeed it makes me laugh to see
How men have struggled to be free.

Poor Washington, who meant so well,
And Nathan Hale and William Tell,
Hampden and Bolivar and Pym,
And L'Ouverture—remember him?

And Garibaldi and Kossuth,
And some who threw away their youth,
All bitten by the stupid notion
That liberty was worth emotion.

They could not get it thru their heads
That if they stayed tucked up in beds,
Avoiding politics and strife,
They'd lead a pleasant, peaceful life.

Let us, dear sisters, never make
Such a ridiculous mistake;
But teach our children o'er and o'er
That liberty is just a chore.

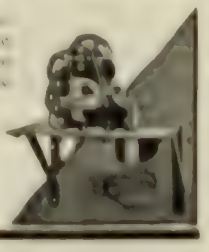
Why Endure Mental & Physical Drudgery and Uncertainty ?



Without a reliable temperature regulator, you open your dampers in the morning (or at night), put on coal and wait for the house to get warm, keeping always in mind the fact that you must close the dampers. Again the rooms get cold during the day and you open the dampers with the same worrying and burden of remembering. Your memory isn't accurate—can't be—and you have a fluctuating temperature with consequent discomfort and waste of fuel.

The "MINNEAPOLIS" HEAT REGULATOR

This device proven satisfactory in thousands of homes for nearly a third of a century, takes complete and accurate charge of the dampers of any coal burning plant burning any grade of coal. It will maintain a uniform temperature of any degree you wish. It will automatically raise the house to night temperature to the comfortable day temperature. We guarantee it to do this to your entire satisfaction.

For the home owner who wishes to eliminate all trouble the regulator needs no base but perfected our electric means which requires no wiring. They are simply connected directly to the electric light fixture of any standard voltage, as the case may be, then sifted and no further attention is required. An automatic regulator without a base.

The "Minneapolis" is used, installed and guaranteed by the heating trade everywhere. Send for booklet—shows models, explains details, gives prices.

MINNEAPOLIS HEAT REGULATOR CO.

2775 Fourth Ave., So. Minneapolis, Minn.

Independent Opinions

Many of our readers are willing to find fault with our editorials, but it is a new experience to have one take the trouble to revise an editorial in detail. Mr. Samuel M. Singer, of Baltimore, writes us approving heartily of our editorial of October 18 and expressing the earnest hope that our appeal to Germany will be heard and the Armenian massacres cease. But he questions the literal accuracy of the title and suggests that we should reprint it with the substitution of Jews for "Armenians" and Russia for "Turkey," which we willingly do. The changes made by Mr. Singer are in italics.

THE GREATEST OF RELIGIOUS MASSACRES

The most extensive, the most atrocious of religious massacres which the world has seen for centuries is now being perpetrated in *Russia*. It had seemed that the measure of her iniquity was full. Almost before she had had time to get over the first intoxication *of her Constitution* which promised liberty, equality and fraternity to Moslem, Christian and Jew alike, the massacres of *Odessa* and the vicinity occurred. But now the fury of slaughter has spread from the *Baltic* to the *Danube*. This is no frenzied dream, but the authenticated fact. We have it from many sources which must be credited. Our *State Department* receiving the story, very slow were they to publish the facts, for *diplomatic reasons. A number of reliable and trustworthy correspondents confirm* the unmentionable details and call on America to do anything she can to save those who remain. This is no local affair; it is so general that it is intended, planned and ordered, thru the opportunity of war, to exterminate the *Jews*. The tale comes from *Kovno, Courland, Vilna and the whole of Poland*, of men slaughtered by the tens of thousands, of women and girls *outraged*. Others are driven in herds from their homes, families separated, to go they know not where and to perish by hunger on the road—first deprived of property and then of life. No massacre of modern times compares with this.

What can we of the United States who have given so much money *for the cause of humanity* do? Indeed what! *Russia* is in the throes of the great world war. We cannot reach *Russia* with army or navy. Mightier armies than ours are now attacking and defending her. Indeed *Russia* is not her own. The munitions defending *Courson* come from *her Allies*. The *Russian* army is led by *French* officers. *England's* will rules at *Petrograd*. Are we then to say that *England and France* are responsible for these massacres? Surely, surely not directly. *They* would not have desired them. But *they have* been busy in the war, and it has not occurred to the War Offices to forbid or prevent them. But the only powers that can stay these massacres are *England and France*. We are powerless, the neutral states are powerless.

We appeal to *liberal England* to forbid *Russia* utterly to exterminate *Judaism* in her empire. We call upon every organ of public opinion in this country to join in this appeal. The public conscience of the world may not be bestowed to its *Publicans and* but it must be heard at *London and Paris*.

But the doom of *Russia* must be sure at hand. The world has endured the intolerable *Russians* to the end. Her crimes cries

to Heaven for punishment. Avenge, O Lord, thy slaughtered saints!

The "Birth of a Nation" film, which we criticized in The Moving World department of April 5, continues to cause trouble wherever it goes. The Rev. Dr. W. W. Brooks, pastor of St. Mark's Methodist Episcopal Church of New York, sends us the following protest against the recent exhibition of the film in the Grace Methodist Episcopal Church before Methodist ministers from all parts of the state:

"The Birth of a Nation," a travesty on history; a breeder of racial antipathy; magnifying the faults of one race while glorifying the lawlessness of the other; peculiarly dangerous because its insidious poison is hidden in scenic beauty—outlawed in some states, condemned in some others—at last creeps out of the theater where it should never have been in to the church of God to furnish entertainment for the saints of the Most High.

This play with its objectionable features condemned by His Excellency the Mayor of the city, the Commissioner of License, by the entire race so grossly maligned, by able representatives of the Jewish, Roman Catholic, Universalist and most of the Protestant faith, finds a welcome in a church of the denomination of which I am a member the Methodist Episcopal—and this church places upon this hatred-breeding propaganda the sanction of our holy religion.

We have been taught that Methodism was raised up definitely to spread Scriptural Holiness thruout the land. Has she finished her task and is now celebrating it with a brass band and theatrical performances?

In spite of this unholy marriage of Theater and Church, the race so grievously misrepresented will live and be strong enough to shed tears at the grave of both of the contracting parties, when God shall say, Dust to Dust, and Ashes to Ashes.

There are many fallacies in current discussions of the economic significance of war. It is manifestly unfair to classify the total cost of war as waste, for a great part of the money poured into the Government's coffers thru war loans and taxation returns even in Great Britain, which is financing half Europe, to the workingman's purse. But in so far as war involves the support of great bodies of men who are engaged in the destruction and not the production of wealth, the net result is enormous waste.

We read that the war is costing Great Britain so many millions a day. But this is not all waste. Is not much of the expenditure a readjustment in the exchange of values? The state pays for the maintenance of the soldiers. Pays for their food and clothes and lodging—all of the simplest, just good enough to keep the men in efficient condition. In time of peace it would pay these same items for the soldiers in the standing army. The volunteer soldiers would feed and clothe and lodge themselves by productive industry, many of them earning enough for luxuries and dissipation. In either case the maintenance of the man in war or peace is supplied by the society in which he is a unit. In peace, society pays the cost directly to the man or to his employer; in war it pays the cost to the government. In peace, society gets its return in what the man produces. In war it gets its return thru the stimulation of extraordinary industries by which the avenues of employment to those remaining at home are increased; the number of idle men living on the labor of others is greatly reduced.

W. E. KEYES

Boston, Massachusetts

STEINWAY

FROM the very beginning of a musical education, nothing is so important as a correct appreciation of tone. Hence the child should receive its early impressions from a Steinway Piano.

The exquisite Steinway tone is recognized as ideal, and it has made this instrument world-famous. Superior craftsmanship builds the Steinway for lifetime usage and all the strain of "practice years" does not make its action uneven or lessen its sweetness and resonance of tone.

Under these circumstances, no other instrument is "good enough to begin on." Consider, too, that a Steinway costs but little more than an ordinary "good" piano. Style V, the new Upright, is offered at the lowest price ever asked for a Steinway.

We shall be glad to send you, free, illustrated literature and the name of your nearest Steinway dealer.

STEINWAY & SONS, STEINWAY HALL

A SHELF OF WAR-BOOKS AND NEW NOVELS

LAST year Herbert Adams Gibbons gave us in his "New Map of Europe" the best general survey of the situation out of which the war grew, and this year in *Paris Reborn* he has given us the best picture of Paris in the latter half of 1914. In diary form, which gives it the vividness of a personal experience, he tells us how the Parisian public was fed on lies, official and unofficial, leading them to believe that Alsace was being reconquered and Berlin about to be captured until suddenly like a bolt from the blue a Taube dropped down the message attached to a German flag:

> The German army is at the gates of Paris. There is nothing to do except surrender. Lieutenant von Heidssen.

But Paris, tho shocked, was not frightened, and did something besides surrender. The Government fled to Bordeaux and the American tourists, grumbling vociferously at their petty discomforts, fled the country, but the men and women of Paris met the crisis with a courage and patience which brings tears to one's eyes as he reads these pages.

Nelson's History of the War, by John Buchan, is just what such a history should be and about all it can be at this stage. The daily despatches from the war zone, always censored and often intentionally falsified, are so misleading that the reader who has only followed the newspaper reports from day to day has acquired a very erroneous idea of the sequence of events. But he cannot afford to wait for the publication of some really adequate history of the war based upon the official records of both sides, for that cannot come for many years. In the meantime there is need for a work like this which appears at intervals in small volumes at low cost and gives a connected narrative of events based upon such material as is available. Two volumes have appeared covering the early operations of the war upon all fronts.

The Campaign of 1914 in France and Belgium, by G. H. Perris, is a similar history, more limited in space, but more extensive in time than the preceding. It is confined to the western front, but extends to the end of the year. Mr. Perris has the advantage of being able to draw upon his personal observations in the seat of war, but he is hardly so clear as Mr. Buchan in his analysis of military movements.

What strikes one most in *The Soul of the War* is not the marvelous descriptive powers of the author, Philip Gibbs, of the London *Chronicle*, but his sense of fairness. In the midst of confusion he sees things clearly and seems never to be blinded by prejudice. He can even find defects in Tommy Atkins and virtues in *Les Boches*. The passions of the war and the horrors he has witnessed have not upset his mental equilibrium and caused him to repudiate his former opinions, as has happened with many level headed men on both sides. Mr. Gibbs saw all that could be seen behind the front in France during the first year of the war, and he tells of heroism, fortitude and suffering without a trace of literary affectation or emotional exaggeration. He does not in this volume deal with questions of strategy tho he cannot help wondering, with the rest of us, why von Kluck did not take Calais, Dunkirk and Paris in August when he had an easy chance.

May Sinclair's *Journal of Impressions in Belgium* is just what its name implies and nothing more. It is more the materials for a book than a book in itself, for the diary of personal incidents and casual observations in the care of the refugees are too fragmentary and confused to interest the ordinary reader.

We have heard so little of the Russian side of the war that Major McCormick's *With the Russian Army* is very welcome. As an officer in the Illinois National Guard he started out with more knowledge of military affairs than the ordinary correspondent, and being in the personal *entourage* of the Grand Duke Nicholas, he was enabled to meet many of the leaders and to see the army in action. The book is of value, not for its style, for he does not write as interestingly as some of our professional journalists, but for his observations of the lessons of the campaign, especially what he says about artillery and fortifications.

Those who wish to follow French opinion from week to week will find convenient the volume *La Guerre*, in which Francis Charmes has collected the series of *chroniques* he has written for the *Revue des deux mondes* from August, 1914, to May, 1915.

The Drama of Three Hundred and Sixty-five Days consists of the character sketches and comments of Hall Caine, brief stirring paragraphs struck out in the heat of passion, effectively phrased, of course, but as a whole not very enlightening.

Who started this war that is so rapidly destroying the resources of the most progressive and enlightened half of the world? Humanity would like to be sure of the answer to that quesion, since could the responsibility for this catastrophe be clearly and definitely located, the guilty party would not only be justly execrated now but receive the everlasting contempt of posterity. Good reason therefore for green and yellow and gray books of defense and extenuation, and costly campaigns in the neutral press and lecture bureaus!

Those who have tried to dig out the truth from the mass of diplomatic correspondence appearing in the poly-colored books of the various nations involved will appreciate the efforts and the success of J. W. Headlam in his analysis of the negotiations from July 24 to August 4, published in the large volume entitled *The History of Twelve Days*. Of course we cannot expect a definitive history of the diplomacy of the war at this time, for each government publishes only such documents as help its case and there are considerable omissions and obvious mistakes in all of the official collections. Nor can we expect perfect impartiality and detachment from a member of a belligerent nation in the midst of the conflict. But Mr. Headlam is fair-minded and skillful at disentangling the diplomatic threads of this Gordian knot which had to be cut by the sword.

The world has been deluged with polychromatic justifications of the conduct of each of the belligerents in the Great War, but there was room for one more. The International Socialist party is not the least of the powers and its conduct has needed, in the eyes of Socialists themselves, as much justification as the conduct of any other nation or party. The result is *The Socialists and the War*, by William English Walling, a monumental compilation of the speeches, writings and resolutions of prominent party leaders and party groups in all the countries where the movement has political importance. These are divided into five sections: the general Socialist attitude to war, the endeavors of the party to avert war in 1914, the attitude taken by Socialists at the outbreak of the war, Socialist action and opinion during the war, and the peace proposals of Socialists in belligerent and neutral countries. Mr. Walling's citations show clearly that the Socialists have everywhere been the strongest champions of peace, but just as clearly that in no country have the majority carried their opposition to war to the point of

FINDING THE RIGHT BOOK

The Independent gets many requests for information as to what books are published on a particular subject. Doubtless there are many readers who have needed such help at times but have not realized our readiness to give it. So we take this opportunity of saying that we do not consider that we have done our full duty when we have sifted the new books and criticized them, but we are willing also to respond to the requests of our subscribers for advice in the purchase of books in general. Whenever you want to know what has been published about some particular subject in which you are interested, please feel free to write to us about it. But be sure to tell just what you want. Don't ask us to say which is "the best book of 1915" or to list "all the books on the war." We are particularly interested in furthering the work of reading clubs and debating societies and shall be glad to assist them in getting the literature they need, whether published in book form or in periodicals.

repudiating the cause of their immediate fatherland.

Now comes a book by Professor Guilland, *Modern Germany and Her Historians*, tracing the growth of German imperialistic doctrines and their resulting war to the writers and teachers of history. They have, we learn, not only legitimatized the worst political crimes, justified a policy of force, and created the "cult of Bismarck," but they have "thru their historical theories" been the propagators of political and moral maxims that only the shedding of "seas of blood" can refute. Typical historians of this class are Treitschke, von Sybel and Mommsen, and their forerunners Ranke and Niebuhr. This is indeed a grave charge to bring against such famous names. It is supported by the conversation of Sir Thomas Barclay with von Bülow, in which the Imperial Chancellor remarked: "We Germans have history on the brain. It is an intellectual disease which makes Germans see current events out of focus. . . . The professor and his pupil are as indignant at wrongs inflicted on Germany a century or more ago as they are at what happens today." Von Bülow then attributed much of the anti-English feeling to this source.

Paris Reborn, by Herbert Adams Gibbons. Century. $2. *Nelson's History of the War*, Vol. I and II, by John Buchan. New York: T. Nelson. 50 cents each. *The Campaign of 1914 in France and Belgium*, by G. H. Perris. Henry Holt. $1.50. *The Soul of the War*, by Philip Gibbs. AND HERE ARE THE NOVELS

In warmth of color and keenness of characterization, F. Hopkinson Smith did nothing finer than his last book, *Felix O'Day*. There is the same artist sense that keyed *The Fortunes of Oliver Horne;* the same genial comradeship with the people of his pen that radiated from *Colonel Carter's Christmas*. But in his sketches of those genuine folk of "The Avenue," big-hearted Kitty Cleary with her sane philosophies, Nat Ganger and Sam Dogger, two derelicts of art, whose indomitable courage no amount of failure could quench, and even hard headed Kling, the second-hand dealer, there is a new finish that mellows without dulling their spirit in the least. And Felix O'Day himself—like Peter, he is another of those true-hearted gentlemen in whom F. Hopkinson Smith took such delight.

If it were possible to refer the question of universal suffrage to local communities, as the temperance question has been referred in many states, the story of Jordan County told in *The Co-Citizens*, by Corra Harris, might be a satisfactory solution of the whole vext subject. Since it must be done by states instead of counties we doubt whether the methods used by the Board of Trust

FIFTH AVENUE AT 48th STREET NEW YORK

"THE GREATEST AMERICAN POETRY SINCE WHITMAN'S"

Anne Rutledge

Out of me unworthy and unknown
The vibrations of deathless music;
"With malice toward none, with charity for all."
Out of me the forgiveness of millions towards millions,
And the beneficent face of a nation
Shining with justice and truth.
I am Anne Rutledge who sleep beneath these weeds,
Beloved in life of Abraham Lincoln,
Wedded to him, not through union,
But through separation.
Bloom forever, O Republic,
From the dust of my bosom!

—From Spoon River Anthology.

Edgar Lee Masters' Remarkable Book

(The Eighth Edition Now Ready)

SPOON RIVER ANTHOLOGY

Mr. Masters' book is considered by many to be the most striking and important contribution to American letters in recent years:—

"An American *Comedie Humaine* brings more characters into its pages than any American novel. . . . Takes its place among the masterpieces which are not of a time or a locality."—*Boston Transcript.*

"A work splendid in observation, marvelous in the artistry of exclusion yet of democratic inclusiveness, piercingly analytic of character, of plastic fictility of handling, sympathetic underneath irony, humorous, pathetic, tragic, comic, particular yet universal—a *Comedie Humaine*—a creation of a whole community of personalities."—*William Marion Reedy.*

"We find a strange impressiveness, akin to greatness in the 'Spoon River Anthology' of Edgar Lee Masters. . . . It is a book which, whether one likes it or not, one must respect."—*The New Republic.*

"Mr. Masters speaks with a new and authentic voice. It is an illuminating piece of work, and an unforgettable one."—*Chicago Evening Post.*

"The natural child of Walt Whitman . . . the only poet with true Americanism in his bones."—*New York Times.*

Cloth, $1.25 ***Leather, $1.50***

THE MACMILLAN COMPANY, *Publishers*, NEW YORK

of the "Co-Citizens Foundation Fund" could have swung a state-wide election so sweepingly in favor of Equal Suffrage. The women are as despotic as the boss they dethrone, albeit theirs is a benevolent despotism, and distinctly for the good of the community; the fact that the Board held the whip over the male citizens because of certain mortgages and notes inherited under the will of Sarah H. Moseley, should have had no political significance whatever; that it did, and why, and the results are told by Mrs. Harris in a vein of rollicking humor. The women of Jordantown fight for the cause of equal suffrage, up to the moment of election, with all the fire and energy and craft their by no means despicable ingenuity can suggest, and then, when election day dawns, one and all betake themselves to an orgy of housecleaning! Whether the act was symbolic of purified politics, or a mere outlet for overstrained nerves, we are not told. *The Co-Citizens* is full of surprizes and irradiated by a gay humor, as well as by stray shafts of satire touching men and women with tricksey impartiality.

Eltham House, by Mrs. Humphry Ward, is the story of a man and woman who had snatched their marriage out of the reluctant hands of English law and who had to pay the price of their audacity. Neither rank nor wealth, nor beauty could secure them the political and social position they coveted. Mrs. Ward intimates that English standards of conduct have changed since the days of Holland House, at least, so far as the man is concerned. The woman was ostracized then and she is ostracized now, but Lord Holland in 1796 could and did go anywhere and hold any office he wished. The heroine has our sympathy, unwilling at first perhaps, because Caroline Wing is really so unhappy under her defiant air of felicity. We see in her a woman greatly daring, greatly sinning, but full of courage and passion and penitence. She plunges straight against the moral law, and is bewildered by the resulting bruises; but she always carries herself with high courage. Lord Wing is greatly her inferior, altho a brilliant figure. Of course there are Prime Ministers and Whips and political persons of various degrees, but the tragic figure of Caroline stands out among them all, a genuine and noble woman, bitterly learning to respect the law which has broken her. *Eltham House* has dramatic power.

Time was when Maurice Hewlett wrote of woodland ways and medieval knights and red-haired ladies, as unreal as the figures in aged tapestry. The woven colors were rich and dark and the dimly discerned pictures fantastic and wavering. Then he wrote of Sen-house and Sanchia in a more modern setting with almost as fantastic an effect. *The Little Iliad*, Mr. Hewlett's latest novel, is in yet another mood, and a most delightful one. It might quite as fitly have been named *The Seven Against Thebes*, as we have seven heroes in love with the same lady and the quest is pursued with a high

hearted devotion worthy of such a heptagon. But, in spite of the ominous title, the story is not of war; on the contrary, it is full of humor and of pure human nature. These men and women are real, and three dimensioned. *The Little Iliad* is charming and most lightly and gracefully told.

The dry bones of the history of the landing and first struggles of the Pilgrims at Plymouth, which might be given in a score or two of pages from all the historical data accessible, have been developed into a story beginning with the migration of the Separatists to Holland and covering the first two or three years of the little colony in Plymouth. The title, *The Founding of a Nation*, is justified, for our great nation in its political principles, its democracy and its moral and religious life, is founded not on the settlement at Jamestown, nor on the Dutch settlement at Manhattan, nor on the merchant colonies of northern New England, but on the loftier purposes of the Plymouth Pilgrims and the kindred spirits that in 1630 and 1634 settled in Salem and Boston. A happy intuition made the author put the story into the mouth of a Royalist gentleman who, despising the Puritan party and principles, has been obliged to flee suddenly from England on account of an affair of honor, and by the aid of the captain of the vessel takes refuge on the "Mayflower." Slowly he becomes acquainted with the Pilgrims, begins to admire their courage and patience, and on landing throws in his lot with them for a season, yet not as one of them but as an occasional sympathetic helper. By the romance the reader gets an intimate acquaintance with the chief characters of the story and especially a lively sense of the sufferings which they endured during that first winter of the Great Death.

Felix O'Day, by F. Hopkinson Smith. Charles Scribner's Sons. $1.35. *The Co-Citizens*, by Corra Harris. Doubleday, Page & Co. $1. *Eltham House*, by Mrs. Humphry Ward. Hearst's International Library. $1.35. *The Little Iliad*, by Maurice Hewlett. Philadelphia: J. B. Lippincott Co. $1.35. *The Founding of a Nation*, by Frank M. Gregg. Cleveland: Arthur H. Clark Co. 2 vols. $7.50.

A STOCK STORY

Making Money, by Owen Johnson, is a story of how not to do it, especially in Wall Street. It is the same sort of setting as *The Sixty-First Second*—a similar king of high finance manipulates both the market and the plot until a climactic crash reveals his noble character at the expense of his fortune, and incidentally flings the heroine into the right man's arms.

Stokes. $1.35.

GOODNESS WILL OUT

A dancer with the soul of an artist, who should nevertheless have been born to a heritage of sun-bonnet and gingham apron, is not a common product of the Big City. But Elizabeth Cooper makes Nancy Lane quite convincing and her struggles in *Living Up to Billy*, the small nephew, told in letters to the sister who had been "pinched and put away for two years," show pluck and pathos.

Stokes. $1.

BACON'S REBELLION ADORNED WITH SENTIMENT

No adventurous feminist could ask for more thrills than were the lot of *A Maid of Old Virginia*. There is a romance in the book, but plenty to make up for this old time touch which William Sage insists upon, in the excitement of masquerad-

A SELECTED LIPPINCOTT LIST

The Drama of 365 Days

By HALL CAINE. $1.50 *net.*

"An extremely vivid and arresting series of short papers on salient features and dominant personalities of the first year of war. . . . The writer shows a burning sense of the historic and human drama and a rare and profound grasp of the principles and passions involved."
NEW YORK TIMES.

"It takes the hand of a craftsman like Hall Caine to put upon paper the moral significance and spiritual implications of a tremendous historical catastrophe like the present conflict in Europe. . . . The distinguished Manxman plays upon all strings and sounds all chords of human sentiment. Nothing like it has been committed to print or otherwise. . . . This story . . . rings like a trumpet blast."
PHILA. NORTH AMERICAN.

Under The Red Cross Flag — At Home and Abroad

By MABEL T. BOARDMAN, Chairman, National Red Cross Board, American Red Cross. Foreword by PRESIDENT WOODROW WILSON. *Illustrated.* $1.50.

This work, the official book of the Red Cross, is of fascinating human interest and is the only complete historical work upon the subject.

The Civilization of Babylonia and Assyria

By MORRIS JASTROW, Jr. 170 *Illustrations.* Net $6.00.

The only book on the subject treating of the entire civilization of these ancient nations—languages, laws, religions, customs, buildings, etc.—other books have treated only partial phases of the subject.

The Magic of Jewels and Charms

By GEORGE FREDERICK KUNZ, A.M., Ph.D., D.Sc. *Illustrated in color; doubletone and line.* Net, $5.00. *Uniform in style and size with "The Curious Lore of Precious Stones."*

The new volume gives much unique and interesting information especially relative to the magical power which precious stones have been supposed to exert over individuals and events during past ages.

Historic Virginia Homes and Churches

By ROBERT A. LANCASTER, Jr. 316 *illustrations, and a photogravure frontispiece. Net,* $7.50. *Half morocco. Net,* $12.50. *A Limited Edition Printed from Type. Uniform with the Pennell's "Our Philadelphia."*

The most important work on any State yet published in this country. It describes practically all the houses of historic interest in Virginia, gives illustrations of most of them, as well as the churches most likely to engage attention.

Lippincott's Universal Pronouncing Dictionary of Biography and Mythology

Thoroughly Revised Edition

The great strides that have taken place in every field of human activity during the past few years demanded a new edition of this magnificent work, which for years has been standard. The thorough revision includes notice of the leading characters of the Great War. The book has been prepared to suit every taste and need.

One volume sheep, $10 *net; half morocco,* $12.50; *2 volumes, buckram,* $15.00 *net; half russia,* $17.50; *half morocco,* $20.00.

FOR BOYS AND GIRLS

Heidi, Johanna Spyri, translated by Elisabeth P. Stork. This is the new STORIES ALL CHILDREN LOVE volume. *Illustrated in color.* $1.25 *net.*

Dan Beard's American Boys' Book of Bugs, Butterflies and Beetles, *with over 300 illustrations.* $2.00 *net.*

Gold Seekers of '49, by Edwin L. Sabin. *Illustrated.* This is the seventh story in the TRAIL BLAZERS SERIES. $1.25 *net.*

The Boy Scouts of Snow-Shoe Lodge, by Rupert Sargent Holland. It's full of winter sports and experiences. $1.25 *net.*

Winona of the Camp Fire, by Margaret Widdemer, author of "The Rose Garden Husband." Camp Fire Girls' fun and adventure. $1.25 *net.*

An Immediate Success

The Little Iliad

German, English, French, Russian, Italian and all other opportunities will cross and recommend this great novel by

MAURICE HEWLETT

Frontispiece $1.35 *net*

HIGHLY PRAISED BY ALL

"Irresistibly appealing."
BOSTON TRANSCRIPT

"Bound to be a success."
PHILA. PUBLIC LEDGER

"A distinctly original plot."
CHICAGO HERALD

"An unexpected gayly ironic ending."
N. Y. TIMES

"A sheer delight from the first page to the last."
PHILA. PRESS

"There is matter for a dozen romances . . . in the profuse flow of incident coursing through the 'Little Iliad.'"
PHILA. NORTH AMER.

"Hewlett remembers to forget himself when he's been fine and furious. I recommend it to discriminating readers of whimsical, subtle, and accomplished fiction."
CHICAGO TRIBUNE

Other Good Fiction

The Man From the Bitter Roots

By CAROLINE LOCKHART. *Illustrated in color.* $1.25 *net.*

It is better than "Me-Smith." You'll enjoy the funny wise sayings of Uncle Billy, and the weird characters of Hinds' Hotel—a tense eagerness will hold you throughout every scene in this story of the powerful, quiet, competent Bruce Burt.

A Man's Hearth

By ELEANOR INGRAM. *Illustrated in color.* $1.25 *net.*

"From the Car Behind" was aptly termed "one continuous joy-ride," and it was a big success. "A Man's Hearth" has all the former story's vim and go, and also a heart interest that gives it a wider appeal.

The Obsession of Victoria Gracen

By GRACE LIVINGSTON HILL LUTZ. *Illustrated in color.* $1.25 *net.*

Another fine, big, optimistic story by the author of "Lo Michael," "The Best Man," etc.

Heart's Content

By RALPH HENRY BARBOUR. *Illustrated in color and decorated.* $1.50 *net.*

Romance and plenty of it; fun and plenty of it; a happy man who "starts things" and who at the end makes a woman happy, too.

"HOW TO USE THE INDEPENDENT IN THE TEACHING OF HISTORY"

It is free to teachers.

THE INDEPENDENT, 119 West 40th Street, NEW YORK

ing as a mere man; in hair-breadth escapes; and in battles not only of man and man, but of woman's wit against masculine force.

Revell. $1.25.

A CAPABLE WOMAN

The alert, confident, and successful business woman of Edna Ferber's former volumes is carried a little further on in her eminently practical and useful life in *Emma McChesney & Co.* Emma is a thoroly wholesome and likable person in addition to being a phenomenally efficient one.

Stokes. $1.

A BENEVOLENT ROD OF IRON

Telling the tale of *Aunt Jane* was apparently for Jeannette Lee just an effortless brushing of a few characters and incidents into story form. It is yet another of those favorite romances of the nurse and the millionaire, but Jane herself does not compare in quaintness with those friendly folk in *A Taste of Apples* and *Uncle William.*

Scribner's. $1.25.

SHORT AND "SNAPPY" STORIES

Perhaps it was the example of Professor Baker's well-known course, perhaps merely the enthusiasm of literary creation that led to the publication of *Made to Order*, a collection of Harvard class-room short stories chosen by the instructor, Howard Maynardier. Some are amusing, one or two are clever, and most of them have well-oiled thrills that show that the student authors were less afraid of unreality than of dulness.

New York: Lloyd Adams Noble. $1.25.

A JESUIT'S DREAM

In a whirl of incident that is fairly breathless, E. Anson More rushes his story, *A Vision of Empire*, with constantly shifting scene, from the siege of Lille to the New World and into the midst of the Canadian Indians. Thru it all moves the striking figure of Philippe de Bellière, his footsteps dogged by misfortune, thwarted alike in love and ambition and coming to the end with body twisted and tortured by the people of his vision and with mind tormented by failure.

Boston: Badger. $1.35.

ON THE BEAU CHEVAL

Gilbert Parker's new romance, *The Money Master*, has the curiously old-world atmosphere of French-Canadian life, modern in time but ancient in setting. The general clerk of the court, the wise judge, the saintly Père Lancon, and the *habitant* philosopher, Jean Jacques Barbille might have stepped from the pages of some seventeenth century French romance. The friendships of these men and the loves and sorrows of one of them, painted in rich colors, make this tale unusual and pathetic.

Harper. $1.35.

A HATEFUL INHERITANCE

Mr. Harben's latest novel of Georgia folk, *The Inner Law*, pictures the effect of heredity with grim realism. No Greek drama of destiny could be more remorseless than the evil inheritance of the Cowling family. Its sudden reawakening in a fine, well-bred, scholarly young man is shocking. But the slow redemption of the man by the working of the inner law of the unsatisfied spirit is wrought out with skill and an honest purpose to serve the cause of the loftiest morality.

Harper. $1.35.

A FAIRY STORY FOR GROWN UPS

The latest novel from Hugh Walpole's tireless typewriter keys, *The Golden Scarecrow*, comes as a surprise to readers of "Fortitude" and "The Prelude to Adventure." It is frankly fanciful and fantastic. The world as it looks to little children before the wonder has died out of their eyes and while they can still see the "Fairies" who help the babies grow, and to the "big, shouting, hurting, unfriendly" grown-ups about them, has a charm which we recognize when we get this peep into it.

Doran. $1.35.

The Chautauqua Idea

SPEAKING of the development of the Lyceum and Chautauqua movement in which he has been a constructive factor for twenty-five years, Mr. Arthur C. Coit, president of the Coit Bureau, says:

We believe that our avoidance of the shoals in a quarter of a century of lyceum management has been due to our stedfast determination to make the lyceum a distinctive enterprise—to keep it out of competition with vaudeville and kindred entertainment, and to make it the forum, in so far as our efforts could control it, thru which the messages of the biggest and best Americans should be given to the public, unsubsidized and untainted with commercialism. In recent years the great audiences drawn by the lyceum courses and Chautauquas have been looked upon with jealous eyes by those anxious to promulgate the propaganda of special privilege, and to create public opinion for private purposes. Against the encroachments of that tendency, from whatever direction they have come, we have stood firm, believing that the preservation of the lyceum and Chautauqua platform as a free forum for the discussion of all reform measures looking toward the common good is a matter of far-reaching and vital import to the future welfare of the republic.

Another manager, Charles F. Horner, of the Redpath-Horner Chautauqua Circuit, addressing a convention of his Chautauqua forces, says:

I admit that I do not agree with all Chautauqua managers. I have never yet found on my program a place for one who gained his reputation by some sensational exploit. But as a whole, I maintain that the offerings of the Chautauqua platform have been above reproach. That the Chautauqua is a sensational, hair-raising, cheap advertising, carnival-thriller proposition, is most interesting and useful for paragraphers of metropolitan papers, but has no foundation in fact.

There are scores of American men, possibly foreign to "Who's Who" and the city newspaper morgues, but yet whose names are household words in thousands of American communities.

Tho derided by the press, the Chautauqua has found fruitage in American manhood and womanhood.

Where the people have been divided into factions and torn by dissensions in politics and religion, here is an institution that is the medium of the freest speech of America, claiming as its own men of all parties—Catholics, Protestants and Jews.

Is it nothing that we have here an institution that, so far as I know, has not been subsidized to the slightest extent save by the cause of humanity, and which in the face of tremendous temptations has wielded the powerful hand of neutrality, content to deal in principles of life and the inspiration that makes better lives?

Once a Chautauquan always a Chautauquan, is true of the Mitchell Circle of Blue Earth, Minn., which was organized in 1883 and has held regular meetings ever since.

THE RILEY READER
Miss Charity Dye, widely known for her unusual work in the teaching of English, has made a careful study of the entire collection of Riley's poetry, and has chosen from it those poems that will most appeal to children. There is a delightful variety, including poems of reflection, of philosophy, of patriotism, of description, of tender home feeling.
With frontispiece in color by Ethel Franklin Betts, and many illustrations by Will Vawter. Cloth, 60 cents net.

THE HOME CORRESPONDENCE SCHOOL

Dept. 305, Springfield, Mass.

The University of Southern Minnesota offers to graduates of Recognized Colleges work leading to advanced degrees either in residence or in absentia. High School subjects also offered by correspondence. Address

WM. W. MEINERS, Ph D., Dean, Austin, Minn.

PEBBLES

Teacher—"What lessons do we learn from the attack on the Dardanelles?"

Scholar "That a strait beats three kings, dad says."—*Judge.*

A group of ice-houses went up in flames recently and, according to a newspaper report, "twelve hundred tons of ice were reduced to ashes."—*Boston Transcript.*

A court has gravely held that babies have the right to cry. Just how would the court have gone about enforcing a contrary verdict?—*New York Evening Sun.*

The young man was disconsolate. "I asked her if I could see her home," said he.

"Why certainly," she answered, "I will send you a picture of it."—*The Advance.*

"I object," says President Wilson, "to riding a horse in a frock coat and silk hat."

Horses are like men. Very few of them look well in silk hats.—*New York Evening Sun.*

"Eat less," admonishes Henry Ford, who seems to have succeeded Andy Carnegie as adviser-general to the universe. But it will be noted that Henry does not add the rest of the prescription—"and walk more."—*Boston Transcript.*

An Irish vicar, having advertised for an organist, received the following reply:

"Dear Sir: I noticed you have a vacancy for an organist and music teacher, either lady or gentleman. Having been both for several years, I beg to offer you my services."—*The Argonaut.*

"I weep for France," the Kaiser said;
"I deeply sympathize."
With sobs and tears he sorted out
Shells of the largest size.
Holding his pocket handkerchief
Before his streaming eyes.
—*Brooklyn Daily Eagle.*

The women didn't vote in Sodom and Gomorrah—
No suffrage rights had they,
And—this ought to fill the anti-suffs with horrah—
Where are them towns today?
—*New York Tribune.*

"And what do you do at your Shakespeare Club?"

"Oh, we discuss Shakespeare."

"Seems rather——"

"While we play bridge, of course," the other lady hurriedly explained.—*Louisville Courier-Journal.*

A small boy who was sitting next to a very haughty lady in a crowded omnibus kept on sniffing in a most annoying manner. At last the lady could bear it no longer and turned to the lad. "Boy, have you got a handkerchief?" she demanded. The small boy looked at her for a few seconds, and then, in a dignified tone, gave the answer: "Yes, I have, but I don't lend it to strangers."—*Love News.*

In a Western town the attorney for the gas company was making a peculiar address.

"Think of the good the gas company has done," he cried. "If I were permitted a pun, I would say in the words of the immortal poet, 'Hence the Light Brigade.'"

Whereupon a shrill voice came from the rear: "Oh, what a charge they made!"

A lady took her ten-year-old nephew to a fortune teller. The woman of wisdom read over the crystal ball.

"Your son will be a very distinguished man if he lives long enough," she murmured in deep, mysterious tones.

"Oh, how nice," gushed the proud mother. "And what will he be distinguished for?"

"For old age," replied the fortune teller slowly.—*Current Opinion.*

EFFICIENCY QUESTION BOX

CONDUCTED BY

EDWARD EARLE PURINTON

DIRECTOR OF THE

INDEPENDENT EFFICIENCY SERVICE

165. Mrs. A. M. P., New Jersey. "Can dish washing be made a pleasant and profitable occupation? If so, tell us how, quick! A million housewives and housemaids want to know."

Any occupation is made both pleasant and profitable by the amount of improvement you put in it. Among the means to serve you are the electric dish washer (if your family is large); the wire basket or rack for drying dishes, eliminating the towel, and substituting evaporation—the sanitary method; the use of paper dishes to the largest possible extent, obviating washing altogether; and the adoption of the wheel tray carrier, on which all dishes are piled from the table and wheeled to the kitchen in one trip. Such devices should economize your strength and time at least a half; then if you reduce the number of dining utensils to those of need and not of etiquet you will omit so many forks and spoons and side dishes that the remainder will seem a small handful.

166. Prof. W. H. N., Ohio. "Should a boy of sixteen be sent to college or put into business, when the father wishes the former and the boy the latter? The son hates books, and yet his family are determined to give him a college education. I often have cases like this to meet, and am puzzled for a solution of the problem."

Why not select a college that has a business department, industrial or commercial, then so combine the studies of the youth as to gratify both his parents and himself? Are you familiar with the new shop-school plan now being tried in New York and other cities, whereby a student alternates book recitation with business employment or trade apprenticeship? Many boys who seem to hate books, hate only the mental congestion of theory, pedanticism and inaction. Line the book up with the boy's progress and the worst student may become the best.

167. Mr. J. H. G., Arkansas. "How can I become an efficient farmer?"

The answer to this question would fill a library. All we can do here is to start your investigations. The U. S. Department of Agriculture issues a monthly bulletin (free on request), giving a list of current publications on various branches of farm life and system. The issues I have before me, for example, contain such titles as these: *Domestic, Educational and Economic Needs of Farm Women; Coöperative Organization Business Methods; Demurrage Information; The Home Garden; The Agricultural Outlook; Energy Values of Feeding Stuffs for Cattle;* and so forth. Apply for this bulletin.

Investigate also the Farm Efficiency Bureau, 320 Fifth avenue, New York; the Farm Service Bureau, 503 Fifth avenue, New York; and the Associated Farm Papers, 200 Fifth avenue, New York. The editor of your largest county paper should know of the best organizations of farmers in your section, by whose aid you could learn of modern methods.

168. Miss R. L., Connecticut. "Is charcoal an aid to digestion? What is your opinion of predigested foods, also of pepsin compounds? All of these have been recommended, in a case of low stomach vitality, which medicines have not helped."

Charcoal may relieve temporarily certain kinds of indigestion, but should not be taken habitually. The best form is probably that contained in whole wheat toast or zwieback, freshly crisped to the point

LONGMANS' NEW BOOKS

A New Series of Books on Popular Philosophy

By **George Trumbull Ladd, LL.D.**, [illegible]

WHAT CAN I KNOW? An Inquiry into [illegible]

WHAT OUGHT I TO DO? An Inquiry into the Nature and Ends of Virtue and into the Conditions, Aims, and Values of the Moral Life.

WHAT SHOULD I BELIEVE? An Inquiry into the Nature, Grounds and Value of the Facts of Science, Society, Morals and Religion.

WHAT MAY I HOPE? An Inquiry into the Sources and Practical Grounds of the Hopes of Humanity, Especially the Social and Religious.

"A work of which America may be really proud. Nothing could be more blessedly remote from the dry and unprofitable posturing of modern [illegible] philosophy than these concrete, clear formulations of the questions that occur and recur to every person's mind, these travelling directions for the pilgrim between two darknesses. You see the other kind as they hurl with Bergsonian acrobatical recondites at Mastbrooklyn 'savagisms.' In a word, Prof. Ladd handles sensible questions in a sensible way, and consults people who thank him for giving them a loaf when they ask for bread, instead of the Belgian block with which so many philosophers fool themselves and try to fool plain John Smith." . . —*New York Sun.*

Prospectus will be sent on application.

The Light Within
A Study of the Holy Spirit

By **Charles Lewis Slattery,** Rector of Grace Church in New York. Crown 8vo. $2.00 *net.*

In this book Dr. Slattery describes the growth of the human understanding of the Holy Spirit, first through Old Testament times, then through the first century, with special emphasis upon Christ's teachings, the Day of Pentecost, St. Paul's Epistles and the point of view of the Fourth Gospel. Incidentally this study bears traces of the great European War, which had begun before the book was published and which demanded of the writer a searching justification of his faith in an immanent and unfaltering Divine Leadership.

Cuba, Old and New

By **A. G. Robinson,** author of "Cuba and the Intervention," etc. With numerous Half-tone Illustrations. Small 8vo. $1.75 *net.*

This is a popular account of Cuba, old and new, by a writer who has spent a great deal of time in the Island and has had for many years exceptional opportunities for familiarizing himself with the progress of events as well as with the people and the land.

A Surgeon in Khaki

By **A. A. Martin.** With Illustrations. 8vo. $3.00 *net.*

Dr. Martin was attached to one of the Field Ambulances, and did his share of its work at the battles of the Marne and the Aisne, and afterwards in Flanders.

Although it is written by a surgeon, and contains one or two chapters on the professional side of the campaign, this book is essentially for the general reader. It is written in a fresh, free style, and one gets a vivid idea of the recent course of events.

The Anvil of Chance. A Novel

By **Gerald Chittenden.** With a Frontispiece in Color by W. C. Rice. Crown 8vo. $1.45 *net.*

"It is a pleasant and well written story."—*N. Y. Sun.*

The Book of the Thin Red Line

By **Sir Henry Newbolt,** author of "The Book of the Blue Sea." With 8 Colored Plates and 38 Illustrations in Black-and-White by Stanley L. Wood. Crown 8vo. Gilt top. $1.50 *net.*

A stirring book of true stories for boys. Besides adventures in travelling, shipwreck, tiger-shooting, hill-fighting, forced marches and retreats, the reader will hear of more than thirty battles in Holland, Spain, Afghanistan, Persia, India, and America. The last story is that of Stonewall Jackson, whose life fitly told would be an epic poem, and whose death is one of the greatest and most moving tragedies of war.

In Mr. Knox's Country

By **E. Œ. Somerville** and **Martin Ross,** authors of "Some Experiences of an Irish R.M." With 8 Illustrations. Crown 8vo. $1.35 *net.*

"They are capital and enjoyable tales. Miss Somerville provides the illustrations, which are very good."—*N. Y. Sun.*

Through a Dartmoor Window

By **Beatrice Chase,** author of "The Heart of the Moor." With 8 Illustrations. Crown 8vo. Pp. xii+272. $1.50 *net.*

"American readers generally feel that they are fairly well acquainted with Dartmoor after the many novels they have read with it as a background, but in this book they will find a new picture of the region, full of warm human interest, and done with genial friendly loving humor and imaginative appreciation."—*N. Y. Times Book Review.*

of burning. Some charcoal tablets are practically harmless.

For a weak stomach predigested cereals are often valuable, provided means are used to tone up the stomach and enable it to digest natural foods. Such means include scientific gymnastics, deep breathing exercizes, various hot and cold baths, outside and inside; thoro mastication of the proper diet; occasional fasting, rightly supervised; and regular cultivation of a sane mental attitude.

Pepsin, being taken from the stomach of a pig, does not appeal to us. The virtue of it seems to lie in the fact that there are worse things.

---

169. Miss L. S., Illinois. "I am twenty-four years old, high school and normal school graduate, have taught for three years, but do not like teaching sufficiently well to continue. The only thing that appeals to me as being terribly interesting is advertising, but I am not clever enough for that. Can you help me to decide what to do? I know I am capable of getting more out of myself."

The fact that anything seems "terribly" interesting to you shows your possession of enthusiasm and imagination—two valuable traits in the advertising expert. You do not need special brilliancy—the day of the merely "clever" advertising writer is past. You need truth, sincerity, versatility, adaptability, logic, tact, persuasiveness, brevity, analysis, memory, concentration, system—plus a technical knowledge of the business. A survey of the field may be had from the magazines *Printer's Ink*, 12 West Thirty-first street, New York; *Advertising and Selling*, 95 Madison avenue, New York; *Editor and Publisher*, World Building, New York; *Standard Advertising*, Chicago. The prospectus of the Course in Advertising by the Alexander Hamilton Institute, Astor place, New York, and that of the one by the International Correspondence Schools of Scranton, Pennsylvania, should give you hints on the possibilities. Cherington's book, *Advertising as a Business Force*, might serve you well. You could start writing advertisements for your local merchants, and soon demonstrate your fitness or unfitness.

---

170. Mrs. G. H. A., Quebec. "I am very much interested in your Efficiency Department. You say energy is the most important bodily factor. I have energy but not strength. Our home has twelve large rooms, for my husband and myself. Have fifty hens and make them pay. My husband is a carpenter, but too many carpenters here make our income very small. How can I obtain larger income and more strength?"

Close up half your house, or rent rooms and hire a maid; why should two people, not millionaires, try to fill twelve rooms? Have you tried raising fancy poultry, at fancy prices, for breeding purposes? Now that parcel post rules admit eggs and other dairy and farm products, could not your husband, in spare time, build up a trade in nearby cities for eggs, chickens and the like? Or, if he should take up fine cabinet work, as well as carpentry, would not your neighbors or dealers in adjacent towns buy furniture and trade-bric-brac, hand made, from your husband? Two books of possible value: W. W. Atkinson's *Mind and Body*, and Elizabeth Towne's *New Thought in Home Life*.

---

171. Mrs. C. P., Pennsylvania. "What and where is The Housewives League? What [illegible] can [illegible] which will help me in [illegible] Our income is [illegible] [illegible] [illegible]

The Brookfield School

An open-air school for a small group of girls

Directors: Miss Helen Fairman Cooke, A B Wellesley College; Miss Marion F. E. Cooke, A B Wellesley College

AIM

To develop a sound mind and heart in a sound body.
To make the girl capable, alert and womanly.
To make her thorough.
To make her reliable and resourceful.
To make her likable and sincere.
To teach her to think and act with intelligence.
To teach her how to study.
To teach her how to use her mother tongue.
To help her to find herself, and therefore
To make her happy and useful.

EQUIPMENT

Colonial house—atmosphere of simplicity—open-air sleeping and dining porches—open-air school-room—unstinted sunshine—gardens for all—space for play—woods and fields—experienced understanding, motherly teachers.

METHODS

Individual and class instruction—close supervision of work—careful study of each girl's nature—work made a joy—power of concentration developed—intimate association with teachers—sports made a means of education—teaching by example rather than precept.

COURSE OF STUDY

An enriched high school course—general, special, and college preparatory—modern languages a part of daily life—Domestic Arts—Music—Gymnastics—foundations laid for culture.

PLAY

Tennis—basket-ball—tramping—coasting—skating—snow-shoeing—dancing—singing—games—story-telling—play-acting.

References given and required.

Conference with the Directors by appointment only.

Address

SCHOOL INFORMATION

FREE Catalogs of all Boarding Schools (or camps) in U. S. Experts advice free. Want for girls or boys? Maintained for all schools. *Write* AMERICAN SCHOOLS' ASSOCIATION 1042 Times Bldg., New York, or 1542 Masonic Temple, Chicago

EARN BIG MONEY

In spare time writing photoplays. Turn your ideas into dollars. We show you how. Experience or literary ability unnecessary. Send for free book, valuable information and special prize offer. Chicago Photo Playwright College, Box 278-WX-2, Chicago.

Patterson's *Domestic Engineering*. Did you read the articles on "The Home Budget," by Miss Helen Louise Johnson, in The Independent of March 29 and September 6, 1915? The secretary of any local woman's club belonging to the General Federation of Women's Clubs should be able to supply the data you need. Write also to the Principal of the Domestic Science Department of your state university, and to the City Librarian of Pittsburgh.

172. Mr. C. W., New York City. "Is there any tribunal or institution by which a husband and wife contemplating divorce may be reconciled, or at least persuaded to keep the home together until every means of agreement has been tried?"

The Domestic Relations Court, 151 East Fifty-seventh street, New York, should come the nearest to solving your problem of any public agency within our knowledge.

173. Mr. W. R. B., Pennsylvania. "I am a stenographer, thirty years of age, with a keen ambition to write. Have had no success in the literary line; think I might do better in advertisement work. How should I begin. Please advise me fully, so that I may make an adequate start."

Investigate the course offered by the International Correspondence Schools, Scranton, Pennsylvania. Write Nautilus Publishing Company, Holyoke, Massachusetts, and see if they have any remaining sets of the G. F. Lord Course in Advertising, at reduced prices. Get a copy of *Advertising and Selling Magazine*, 95 Madison avenue, New York, and study it for ideas. Analyze newspaper advertisements, try to improve on them, submit your suggestions to the advertiser. Talk with the manager of the best advertising agency near you, form some connection if possible. And prepare trial advertisements for your own concern.

174. Miss M. H. W., Pennsylvania. "Will you kindly tell me whether a young girl must be able to joke and talk the witty nonsense common among young persons, in order to make friends among men? How may one cultivate this mode of speech; is there anything that may be substituted for it?"

The popularity of mere wit and cleverness fades early and dies young. It may dazzle the minds of young fellows, but it does not warm their hearts. Fireworks are good on the Fourth of July, but a man doesn't wed a Roman candle, and a very popular girl has few real friends, or suitors. Learn to be a *sympathetic listener*, and you will find the flashy talkers wondering how you stole their admirers. The one topic of conversation that fascinates a young man is—himself. Thoughtfulness, kindness, sincerity, simplicity—these win over smartness in the long run.

175. Mr. C. W. H., New York. "I read your articles with great interest and believe you can help me to eliminate these conditions of ill health: Auto-intoxication, low vitality, spells of mental depression, haze over the mind, excessive desire for sleep, chronic constipation, headaches from worry or prolonged study. Have consulted several doctors, with no marked improvement from their treatment."

Drugs will never cure you. But a sane combination of diet, exercise, baths, and psychology should be effective. Your greatest trouble may be a sluggish liver, producing the constipation. Write for list of books to the Battle Creek Sanitarium, Battle Creek, Michigan; to *Health Culture* magazine, Passaic, New Jersey; to *Physical Culture* magazine, Flatiron Building, New York; to Lindlahr Sanitarium, 525 Ashland Boulevard, Chicago; to Corrective Eating Society, Maywood, New Jersey. Other books of interest: Dr. E. H. Dewey's *No-Breakfast Plan*, Alfred McCann's *Starving America*, Adolf Just's *Return to Nature*. Can you not join a Y. M. C. A. gymnasium, and put yourself under the physical director? He should be able to outline a good system of exercise. A copy of the *Nautilus Magazine*, Holyoke, Massachusetts, should start you to thinking along hygienic lines.

You Say—"I WILL"

YOU have ambition. What you need *now* is the grit-your-teeth determination to say, "I will." "I *will* get out of the rut; I *will* learn more; I *will* earn more."

Man, when you make up your mind to be *well* paid, to be a *success*, no power on earth can keep you down. *All that you need is training.*

If you can read and write, the International Correspondence Schools will do the rest. It has helped thousands and thousands of men in your very circumstances to "*get up*," to *hold* good jobs, to *make* good money.

Lift up your head, throw out your chest and say, "I will." Now, prove your mettle by marking and mailing this coupon *now*. Before turning this page—say, again, "I will"—and mean it. *Mail the coupon NOW.*

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors which will give personal attention to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them either by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

RAILROAD BONDS FOR INVESTORS

GENERAL MORTGAGE BONDS VS. DIVISIONAL BONDS

WE are now in a period of railroad reorganization involving one-sixth of the total mileage in this country and one-tenth of the total corporate capitalization. It has been estimated that the bonded debt of railroads now in receivership is nearly $1,600,000,000 and the capital stock $676,000,000, almost $674,000,000 of the bonds being in default. In times of adversity, it is wise for investors to look carefully over their holdings, or have reliable bankers do so, and arrange to eliminate such securities as are likely to become unsafe at some time or other.

Among the causes for railroad receiverships are found: low transportation rates, high taxes, constantly increasing wages, unjust legal restrictions and a funded debt that is out of proportion to capital stock on which dividends are paid at the discretion of the directors. Due to the decreasing of surplus earnings applicable to dividend payments, railroads have not had any argument in favor of the sale of stocks rather than bonds to investors. With questionable methods adopted by some railroad directorates we have seen the wholesale acquisition by a number of great systems of smaller lines at high prices. These purchases have either been for the purpose of expanding the system and promoting efficiency of operation, or for the elimination of competition at any cost, or both.

What the investor wants to be assured of in these times is, not that a bond is a first mortgage, or is guaranteed by a large and powerful system, or that large earnings are expected, but *what position the bond would have in the event of a reorganization.* In times of prosperity railroads have spent millions in acquiring or building small branch lines that might not pay their way years hence, in case of a depression extending over a period of years. We have heard so much about the safety of underlying, divisional bonds of great railroad systems that we have become accustomed to consider them practically impregnable. They are followed by refunding mortgages which provide for their retirement and all sorts of presumed safeguards exist. But there are various kinds of divisional bonds, and some of the *presumed* safeguards have not prevented one road now in receivership from formulating a plan of reorganization which may change the lien of first mortgage bonds into one of an inferior grade. The attempt is made to prove that while such divisional liens covered property that was productive when built, and for years after until the parent company had acquired it, the property was not now earning fixed charges and that therefore the bondholders are requested to make material concessions.

For instance, a system's main line runs between two large cities; a coal mine is located twenty miles from the main line and the system can advantageously purchase a railway leading from its main line to the coal beds. The system will gain two objects: secure cheaply a supply of coal for use on its locomotives and carry the miners' coal over the branch line and over the main line to the large cities where it can be sold. The bonds of the division are guaranteed by the parent company if stock control only is acquired or perhaps the entire stock is purchased and the branch is merged with the system. Everything progresses very well for many years and the branch earns a large return for the system, which in turn is enabled to pay increased dividends to its stockholders. In about twenty years the supply of coal at the mine becomes entirely exhausted, no cities or towns of any importance have grown up along the branch, so that little profitable business is originated, and traffic lessens to such a degree that fixed charges are not earned or even operation is conducted on a deficit. This means that the system has to assume the burden of interest and other charges which are not being earned and, perhaps, of dividends guaranteed on the stock that may be outstanding. So long as the parent is solvent and flourishing there is no difficulty as, if necessary, it can reduce dividends to its own stockholders in order to meet the deficit on the branch or branches.

However, if a period of depression ensues and many railroads are forced into receivership thru poor earnings, inability to finance maturing debts, etc., the parent concern arranges for a voluntary and friendly receivership. The receiver immediately proceeds to eliminate the unprofitable lines and begins by defaulting on their bonds. Simultaneously a default occurs upon the parent's most junior bond issue, so that foreclosure proceedings may be started to conserve such property as may be desirable. A reorganization plan is prepared which admits stockholders to a share in the new company upon payment of an assessment, for which they receive new stock and new bonds in a specified proportion. The branch bonds are either assessed, or given a smaller par value in new bonds, or income bonds, preferred stock or common stock, as the committee may decide. In case the branch line is not worth keeping it is abandoned altogether and the bondholders forced to foreclose, take the property, operate it independently, sell it to some other system or forget that they ever owned its bonds. There are cases in point.

The question of bonds being *an obligation* does not seem to be considered; there is no mention of the profitable operation of the branch for many years, no question of the dividends paid on the system's stock partly thru funds obtained from the profitable operation of the branches. Had a sinking fund been provided in the case of coal carriers, it might have been possible to retire all of the bonds before the mines became unproductive; however, sinking funds are not yet general in railroad finance, altho many public utility corporations recognize the wisdom of providing them.

As regards earnings on branch lines, the difficulty seems to be that bankers as well as investors have no means of ascertaining the earnings of a merged division and the figures are obtainable only at considerable expense.

This Missouri Pacific Railway gives us a good example of a junior security that is in a better position than underlying bonds. In its secured notes due June 1, 1916. These notes are secured by the first and refunding 6 per cent bonds of the St. Louis, Iron Mountain & Southern Railway, by the preferred and common stocks of the Denver & Rio Grande, and by other valuable collateral. When the notes became due last June it was understood that one of the conditions for the granting of the one year extension was that the holders should receive cash at par in any readjustment that was adopted. Whether any such understanding actually was made is not known, but when the plan of readjustment was

published last summer it was found that the noteholders were so treated, while holders of many underlying bonds, some of which mature in the next few years, were offered new refunding mortgage bonds, general mortgage bonds or preferred stock, in varying proportions.

Natually the plan has been vigorously opposed by various interests upon different arguments; it was claimed in the plan that many of the divisional lines had been unprofitable for years, while some of the bondholders retorted that no proper credit was given to the branches for originating traffic that was profitable, particularly in the case of Kansas lines. Taking the proposition as a whole, the holders of the notes hold the key to the situation. In case of a default they can take the collateral and eventually secure the Iron Mountain, which has been very profitable, excepting for 1914-1915, which was an "off-year." The Missouri Pacific did not want to lose the Iron Mountain and it is undoubtedly for this reason that the notes were given such favorable terms.

In the case of great railroad systems having a large equity in stocks upon which dividends are being paid and have been paid for many years, it is often wiser for investors to purchase general or refunding issues covering the greater part of the system, rather than the underlying, divisional bonds. The only divisional liens which are practically reorganization-proof are those covering mileage leading into large cities, parts of main lines and branches leading into districts that promise good agricultural and industrial growth, altho the latter class are not so safe. Furthermore general mortgage bonds usually yield a higher return than most of the small divisional issues.

To sum up, general or refunding mortgage bonds *as a class* are superior to divisional bonds, some of the reasons being:

1. Usually a very large amount of such bonds are outstanding, so in case of a reorganization a protective committee can afford to stand for their rights and incur considerable expense for investigations and legal expenses that would not be warranted in the case of a divisional mortgage of a small amount; the expense to each bondholder in the case of the general mortgage being very small.

2. General mortgage bonds usually cover nearly all of the essential parts of a system, often including terminals and equipment, and have a more or less strategic position in a reorganization not possessed by divisional bonds upon which fixed charges may not be earned.

3. Most general mortgages provide for the company's future financing on a large scale, aiding in the material development or enlargement of the system and preventing the cropping up of problems about new financing which are ever present in concerns whose financing has been done by means of short term notes.

First Mortgage Railroad Bond

Earning well over double all bond interest.

Serial maturities and stringent mortgage provisions assure constantly increasing equity.

Yield, 4.50% to 5.50%, according to maturities.

A standard railroad bond yielding a public utility basis.

How the French Invest

The French have long been known as the shrewdest investors in the world. In France people of small income buy a few shares of stock, or small bonds, and pay for them in easy monthly installments.

Some time ago this plan was introduced in America and already over 30% of the Stock Exchange transactions are in "odd lots." This shows how safe and profitable people of small income find this method of saving and investment.

You may buy one share or more, and terms of payment may be arranged according to your income. Reliable information about any security provided by our Statistical Department.

Insurance

Conducted by

W. E. UNDERWOOD

V. A. N., Nevada City, Cal.—On December 31, 1914, the California State Life Insurance Company of Sacramento had total assets of $1,222,413; total liabilities, exclusive of capital stock, $421,932; capital stock, $300,000; net surplus, $300,481. The company began business in 1912 and has steadily grown. Judging by the information I can secure respecting it, the company is properly managed.

X. Y. Z., Manhattan, Kan.—The company you name is ten years old, has about $2,000,000 of assets and a policyholders' surplus of approximately $250,000. Last year it wrote new insurance to the amount of $5,500,000 and ended the year with nearly $22,000,000 in force, nearly $8,000,000 of which was secured by reinsuring another company. Its record to date seems to indicate that it has been properly managed. The Presbyterian Ministers' Fund is a thoroly well established and well managed company. Of the three companies you mention, it is the best from a policyholder's viewpoint; and if you purpose putting additional insurance on your life in one of the three, then you should choose the Presbyterian Ministers' Fund.

B. B. B., Monongahela City, Pa.—You omitted your age, which would have some weight in the consideration of the question; but assuming that you are less than fifty, I unhesitatingly answer that, as combined protection for a family against the death of a husband and father on the one hand and his survival to old age on the other, a 10-year term policy is an injudicious provision. If the policy you mention is really a 10-year term, and not a 10-payment life, and there is a big difference between the two, your equity will virtually be extinguished at the end of the 10-year period; if you then require the continuance of a policy on your life you will be compelled to take it at your attained age, which means at a premium somewhat higher than that at which the first policy was secured. The company you are in is an excellent one. Policies providing death benefits and weekly indemnities against accidents and sickness are issued by reputable companies ($5000 death and $25 a week) at from $25 to $60 a year, larger sums at the same rates proportionate. Pay an adequate premium to a company of standing and reputation and get an unrestricted contract.

H. E. L., Medfield, Mass.—You have accepted service with a good company and, whatever the attractions of others may be, you should determine now to remain with it. Your first study must be concentrated on the history, progress and achievements of your own company, all its policy forms and explanatory literature. You must thoroly comprehend all the differences between the contracts, the rates at which they are issued and the reasons underlying them. You should have as part of your equipment a copy of either *Fliteraft's Manual* or *Webb's Policyholders' Digest* and at least two insurance journals, one devoted exclusively to life insurance, the other to insurance generally. *The Life Insurance Courant*, Oak Park, Illinois, is a good life insurance paper, and is also the publisher of *Fliteraft's Manual*. Thru these you can learn of other publications helpful to agents. For thirty-five cents you can get a copy of *Life Insurance Explained*, by Stephen A. Gillis, published by The Insurance Press, 80 Maiden Lane, New York City. Read everything you can get on life insurance. The superintendent of agencies of your company will give you instructions as to the most practicable way to secure pros-

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

This brochure is of special help to teachers of Current History, Current Topics, Civil Government, Law and Economics. It is free. Sending for it will not place you under any obligation. Address W. W. Ferrin, The Independent, 119 W. 40th St., New York.

perfective applicants. Make a systematic canvass endeavor to secure interviews with as many persons as you can in the time you decide to solicit and keep a record of them, repeating them at stated times. Don't devote your time to your friends and acquaintances, but take all as they come in the regular order of your work. Keep in mind always that the service you are endeavoring to render your fellowman in protecting his family and his own old age is more valuable to him than to you.

R. S. B., De Land, Fla.—I cannot say that the company from which you contemplate retiring is unsafe. It is not growing satisfactorily, its premium income and insurance in force are decreasing annually; but its liabilities are all properly protected. There are about 220 life insurance companies doing business in the United States. After describing to me the particular sort of provision you desired to make under a policy, if you consulted me as to the companies you ought to contract with, I should probably suggest that you select one of twenty I would name as best suited to your needs; if you tell me you have a policy four years old in one of the 200 I did not name, I would advise you to keep it unless I had knowledge that it was unsound financially or that its management was incompetent or dishonest. You have certain equities in that four year old policy which, if you surrender now, will suffer abridgement in some degree. Again, you are four years older and your premium rate is higher. In the long run you might do better by surrendering and paying the advanced rate in another company, but there is no assurance that you will improve the result by doing so.

M. S. R., Pittsburgh, Pa.—The Pennsylvania Indemnity Exchange restricts its operations to insuring privately owned pleasure cars against fire, theft, collision, property damage and personal liability. It is conducted by the Pennsylvania Indemnity Company, which has an authorized capital of $15,000. It operates on the mutual system, charging tariff rates and assuming a maximum liability on any one risk of $5000 for one accident and $10,000 for any number of persons in one accident. The liability of the subscriber to the exchange is limited by the agreement to five times the amount of the annual premium. However, it is my opinion that this limitation would not stand a court test if the aggregate unpaid losses exceeded that amount. On December 31, 1914, the financial condition of the Pacific Coast Casualty Company was: Total assets, $689,087; total liabilities, except capital, $321,872; capital stock, $300,000; surplus over all liabilities, $67,215. This company has recently come under the control of a new management and is meeting with some measure of success, as contrasted with results attained under its former management. Taken as a whole, its business has been unprofitable.

E. K., Montreal West, P. Q.—The Merchants Life Insurance Company of Burlington, Ia., had on December 31, 1914, total assets of $1,331,216 and a net surplus of $25,970. In addition, its policyholders have the protection afforded by its capital of $100,000. If you intend to remain in the company I would advise you to exchange your assessment certificate on the best terms you can get for one of the company's legal reserve carrying policies. When this company was transformed from an assessment association to an old line company, the organization, the "plant," so to speak, became the property of the seven men who furnished its capital of $100,000, and they now constitute its board of directors. By way of explaining their failure to offer the stock for subscription to their certificate holders generally they say that the Iowa law requires shares to be of a denomination of not less than $100, and that the issue was allotted to such of them as could promptly pay for it in full. The result is that a former coöperative association, owned by its members, is turned over to a small and close corporation. Answering your question about the Metropolitan Life: it is first class in every respect. Last December the Metropolitan retired its capital and became a mutual company, thus placing its policyholders in control.

FROM STATE TO STATE

ALABAMA: The campaign against illiteracy in this state goes on in earnest. Adult schools are being established in most of the counties where heretofore men and women have not had a chance to learn. Frequently the schools are conducted by volunteer teachers. In many communities practically the entire population attends, the children by day, the adults in the evening.

ARIZONA: Officers charged with enforcing the law in this state are uncertain as to how to proceed under the constitutional amendment relating to the liquor traffic. Judge Shute of the Gila Superior Court has held that the amendment does not prohibit the importation of liquors for personal use, while Judge Baxter of the Yuma Superior Court in a recent decision said: "I am of the opinion that the constitution of Arizona absolutely prohibits the introduction of intoxicants into this state in any quantity, not even excepting the introduction for one's personal use, and that this provision, drastic tho it may appear to some, is not unconstitutional."

CONNECTICUT: The purpose of the founders of Connecticut College for Women, which recently opened with more than 100 students, is that it shall be "an institution the most beautiful and spacious, the widest in scope of instruction, and the most steadfast in faith in woman and her abilities so far founded on the earth." The site is strikingly beautiful. Its 340 acres of woodland and field stretch from one of the highest points in New London down to the bank of the Thames River, and from its six completed buildings on the eminence the view is a charming panorama of hill and valley, sea and shore. The faculty consists of twenty men and women gathered from every section of the United States. The curriculum includes, besides the accepted academic subjects, music, fine and applied art, and opportunity for the combination of a college course with vocational training.

DELAWARE: Two years ago a large majority of the voters of Wilmington instructed the mayor and city council to acquire the land necessary for development of the city's water front. Since that time little or nothing has been done in the matter. Now, with a new council the subject is again being pressed. It is contended that, with suitable harbor facilities [illegible] this city could get a large part of the traffic which now goes to Philadelphia. Wilmington is so located, it is said, as to be [illegible] and to have the benefit of the [illegible] which come so much trouble from ice in the winter and from mobs and shoals at all times.

FLORIDA: A movement is on foot to make Tampa a gala month in Jacksonville. It is planned to have the many civic organizations of the city [illegible] from entertainment such as [illegible] baby parades, [illegible] flower parades and shows of various kinds as a means of attracting visitors and of detaining in Jacksonville those who are passing thru on their way to the more southerly resorts. It is hoped to make this month of entertainment a regular annual affair.

GEORGIA: A United States engineer has reported that it is feasible to make the Chattahoochee River navigable from Atlanta to the Gulf and the Atlanta Chamber of Commerce has taken steps to have a survey of probable traffic made with a view to pushing the improvement if the showing is satisfactory. Only 200 miles would have to be opened, since the river is already navigable from Columbus to the Gulf. Senator Hoke Smith, one of the speakers at the Chamber meeting, said that one of the lessons of the last fourteen months is that this country must become self-sustaining, and that waterways contribute to that end.

ILLINOIS: On Saturday, October 9, Chicago witnessed the greatest demonstration ever made in any American city against the liquor traffic. A procession numbering, by official count, 10,065 persons passed thru the downtown streets, nearly all singing and waving banners. The following day, for the first Sunday in forty-four years, practically every one of the 7152 saloons in the city and all the hotel and restaurant bars were closed. Mayor Thompson had instructed the police to enforce a state law which had been ignored so long as to be almost forgotten.

KENTUCKY: Experiments have shown that in many of the large caves so numerous in Kentucky the atmosphere is so dry and the temperature so even thruout the year that citrus fruits stored in them remain in perfect condition for many months. Lemons have been kept in one of these caves for two years without losing any of their freshness. Associations of fruit growers in states farther south have concluded after careful experimentation, that thru this method of storage these fruits can be held long enough to insure stable market prices.

LOUISIANA: The first pile for the great grain elevator to be built by the State of Louisiana in New Orleans was driven a few days ago. This elevator, which is to have a storage capacity of 1,022,000 bushels, is the second item in the large plan for developing and co-ordinating shipping facilities on the forty miles of New Orleans river front owned by the state. The first item was the cotton warehouse which is already completed. The next will be railroad yards connecting all railroads, warehouses and docks with each other and with the New Orleans Public Belt Railroad, which is owned and operated by the city. For the development of private enterprise which cannot use the state-owned harbor belt an industrial navigation canal is to be opened thru the city from the Mississippi River to an arm of the Gulf, its banks to be available for factories and warehouses and connected with the belt railroad. The entire improvement is expected to cost not less than $100,000,000.

MAINE: The 25-mile federal-aided highway recently completed from Portland to Brunswick is said to be one of the finest roads in the country. It is built entirely of bituminous macadam and is a section of one of the most important arteries of travel in Maine. It is a part of the coast highway to Bath, Rockland and all the shore cities and resorts. It is one of several different types of construction which the federal government is building in various parts of the country as experiments. With the completion of the Portland and Saco highway early next summer Maine will have a magnificent boulevard penetrating for nearly 100 miles into the heart of the state.

MARYLAND: Baltimore has determined to have a municipal lighting plant. Some time ago the legislature authorized a loan of $1,500,000 for the purpose, but the question has never been submitted to the voters. Now the Board of Estimates has decided to try to have the plant built by private enterprise under city specifications and turned over to the city at the end of ten years. It is estimated that during the ten years the city will have to pay about $150,000 less than it now pays for public lighting, and that after the plant comes into its possession it will save from $45,000 to $50,000 a year.

MASSACHUSETTS: The State Forester of Massachusetts declares that the waste land in the state, if planted with pine trees this year, would yield $376,000,000 worth of lumber in 1965, and that after deducting the cost of planting and of care, interest and taxes, the net profit would be $140,000,000. His figures are made on a basis of a million acres of waste land which he says is to be found in Massachusetts. He estimates the cost of planting at $12 an acre. On its 2000 acres of woodland in the town of Petersham Harvard University is demonstrating that white pine is the most profitable tree to plant in that state.

MICHIGAN: The quiet little village of Dearborn, just out of Detroit, is to become one of the busiest centers of industry in the country. Already [illegible] are engaged on buildings for the enormous tractor plant which Henry Ford expects soon to have in operation. Mr. Ford is quoted as saying: "In the new tractor plant there will be no [illegible] no [illegible] no [illegible] sites. That is, there will be no [illegible]. Every man will [illegible] during the period of his employment, which the aim will be to make permanent, will share in the profits of the industry, but there will be no dividends on 'stock' either at par or market value."

MISSOURI: A few days ago thousands of sympathetic visitors, including many of Missouri's most noted men, gathered at Clinton to celebrate the payment of Henry County's famous "bunco" debt and to witness the burning of the bonds. One of the greatest barbecues ever given in the state was served. Forty-eight years ago Henry and St. Clair counties, tho poor, issued bonds in aid of a railroad. The road was not built, and fifteen years later, after expensive litigation, the counties were beaten in the courts. Henry County accepted the decision and has been paying ever since. Principal, interest and litigation have cost the people four or five times the face of the bonds, for which they got nothing, yet the county has prospered and made many public improvements. St. Clair County has evaded payment, yet it has made very few improvements; and the judgment against it now amounts to about $4,000,000, while its entire property valuation is only about $5,000,000.

MONTANA: Fifty of the largest electric locomotives ever built are to be used on the 440 miles of railroad between Harlowton, Montana, 4163 feet above sea level, and Avery, Idaho, 2494 feet elevation. Each of these giant machines is designed to pull heavy freight trains up the grades which heretofore have required two huge Mallet steam engines. They are the first electric locomotives ever constructed for railroad service with direct current motors, designed to carry as high a potential as 3000 volts. They weigh 260 tons each.

NEBRASKA: First definite steps have been taken toward organization for the prohibition fight to be made in 1916 in this state. The general executive committee chosen at the recent "Nebraska dry" convention, which was attended by more than 1500 accredited delegates, has already begun work with Mayor Charles W. Bryan of Lincoln as permanent chairman and a membership including Republicans, Democrats, Progressives, Prohibitionists, Socialists, Laborites, Anti-Saloon Leaguers and Women's Christian Temperance Unionists. William Jennings Bryan is to take an active part in the campaign.

SOUTH DAKOTA: According to the [illegible] of crop estimates of the Department of Agriculture at Washington South Dakota's general crop condition this year [illegible] 1909 or 1909 when the average of all the states [illegible] other state in the Union [illegible] higher. North Dakota ranked at 1894, while Minnesota and South Dakota is rated at 1120. South Dakotans say that a [illegible] generally warm weather at the right time would have placed their state next to the top [illegible] which ranked between the Dakotas and yet western [illegible] Dakota's [illegible].

PHILATELY

Snakes, dragons and fanciful monsters appear on Chinese stamps.

The Czar of all the Russians is an enthusiastic philatelist.

Postage stamp scarf pins and cuff buttons were once popular.

New Zealand has a novelty in a life insurance stamp.

The smallest stamp ever issued is the half-penny of Victoria.

King Alfonso XIII in effigy is given a place on the Spanish stamps.

The first stamps of Uganda were struck off on the typewriter in 1895.

Sir Rowland Hill first introduced adhesive stamps into England in 1840.

The earliest American postage stamps were unperforated and were cut from the sheet with scissors.

The Republic of Colombia has issued more than 1200 varieties of postage stamps and envelopes.

Four methods of producing postage stamps are commonly used, viz., line engraving, typography, embossing and lithography.

Benjamin Franklin's likeness has had continuous representation on the United States postage stamps ever since the first issue.

The first stamps of Salvador were engraved in 1867 by the American Bank Note Company and show a volcano in eruption.

A copy of the two-penny Mauritius, issue of 1847, once sold at auction for $7300. The buyer was said to have been the Prince of Wales.

The greatest stamp collection in the world is owned by M. La Lerotiere of Paris. Two collections incorporated in his gatherings cost him £11,000.

The animals appearing on postage stamps include the lion, tiger, elephant, giraffe, jaguar, camel, hippopotamus, buffalo, bear, ant-eater, leopard, dog, kangaroo, cow, horse, deer, goat, llama, monkey, beaver, lizard, donkey, duckbill, seal, sable, gorilla, cobra, crocodile and tortoise.

"Seebecks" are stamps that were furnished by N. F. Seebeck, secretary of the Hamilton Bank Note Company, New York, to Salvador, Nicaragua, Honduras and Ecuador for a term of years, free of charge. The unused stamps became obsolete by law and were returned to the donor at the end of each year. They were sold to collectors.

PEBBLES

The bottom dropt out of Bryanism and we have a suspicion that it will be Wall Street's turn next.—*Boston Transcript.*

The Turk must be given credit for one thing, at least. He doesn't class the Lord as an ally in the Armenian atrocities.—*Wichita Eagle.*

Herr Doctor: "Your Majesty is much run down. You need a sea voyage."
The Kaiser (distantly): "Vere can I go de Aquarium?"—*Life.*

COURT OF COURT

Defendant (in a loud voice): "Justice! Justice! I demand justice!"
Judge: "Silence! The defendant will please remember that he is in a court room."—*Penn State Froth.*

ANOTHER INSULT TO UNCLE SAM

The Leyland liner *Armenian* was torpedoed and sunk on June 28 by a German submarine. The vessel was carrying 1414 mules, which were consigned for the port of Avonmouth. A large number of the missing are American citizens.—From the *London Shipbuilding and Shipping Record.*

When men in Congress come to blows
At something someone said,
I always notice that it shows
Their blood is quick and red;
But if two women disagree,
With very little noise,
It proves, and this seems strange to me,
That women have no poise.
—*By Alice Duer Miller. George H. Doran Publisher.*

During the hearing of a lawsuit, the judge reproved a man for making unnecessary noise.

"Your Honor," was the reply, "I have lost my overcoat, and I am looking about to find it."

"Well, sir," said the judge, "people often lose whole suits here without making so much disturbance as that."—*Youth's Companion.*

"No man is so well known as he thinks he is," says Enrico Caruso. "While motoring in New York State, the automobile broke down and I sought refuge in a farmhouse while the car was being repaired. The farmer asked me my name, and I told him it was Caruso.

"The farmer leaped to his feet and seized me by the hand. 'Little did I think I would see a man like you in this here humble kitchen, sir!' he exclaimed. 'Caruso! The great traveler, Robinson Caruso!' "—*Life.*

A colored man called at Mrs. Baxley's looking for work.

"What is your name?" she asked, after hiring him.

"Mah name is Poe, ma'am," was the answer.

"Poe!" she exclaimed. "Perhaps some of your family worked for Edgar Allan Poe; did they?"

The colored man opened his eyes wide with amazement.

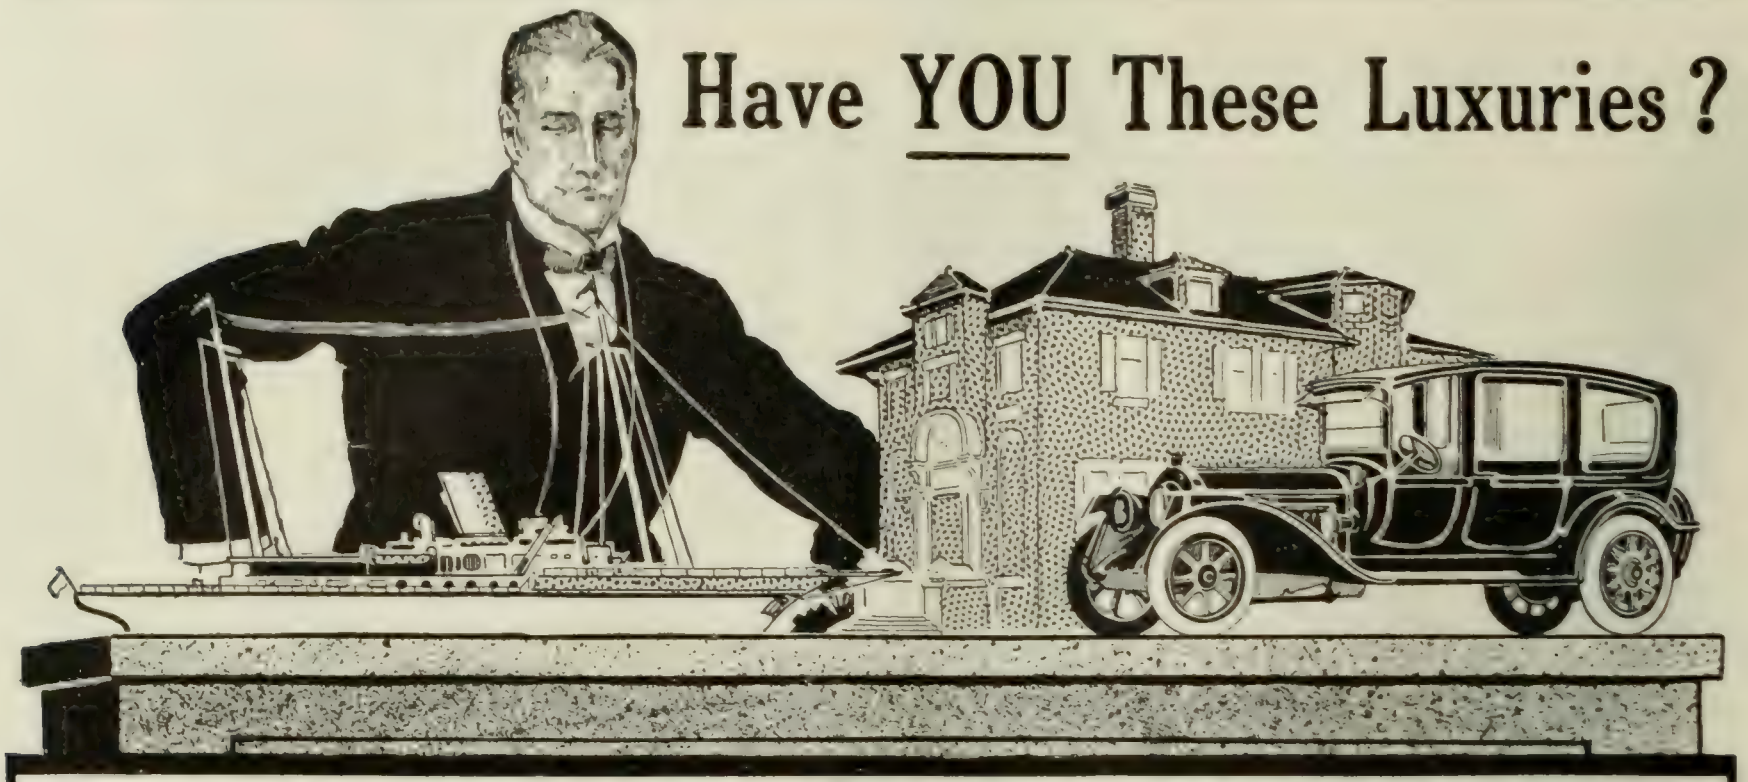
"Why—why, ma'am," he said, as he pointed a dusky finger at himself—"why, Ah am Edgah Allan Poe!"—*Lippincott's.*

THE NEW TELEPHONE TALK

Hello, Calcutta! Canarsie wants you. I'm still ringing 9876 Shan-tung.

Never mind, Montclair! New Guinea was calling, but the party's left the booth.

Here's Chihuahua, Vladivostok! Drop one rouble at a time, please!



Listen, Kansas City! Tibet 2626 has been discontinued.

Hello, Tokio; you say you can't understand the party in Buenos Ayres? I'll have the manager put an interpretress on the line.

That b-r-r-r-r-r from the Glasgow exchange is spoiling the waves!

You want the correct time? Quit your kidding, Greenwich!—*New York Mail.*

Have YOU These Luxuries?

Power of Will

The Secret of Achievement

He had no better chance than you—he simply made the most of that God-given faculty of will, which is latent in all of us. Instead of allowing himself to be everlastingly turned aside by petty fears, by insignificant daily incidents, instead of letting instincts and appetites run away with him—instead of permitting others to control him, he exercised his will—he became master of himself—he learned to dominate others instead of allowing others to dominate him. He learned to get what he wanted and he got it.

Great men—successful men — are born with no greater gifts than others. The secret of their achievements lies in the fact that they use their faculties instead of allowing them to become scotched and dormant.

If you sprained your ankle and didn't touch your foot to the ground for months, it would become so weak you couldn't use it. The same is true of the will. It becomes weakened like a muscle from lack of use.

Complete Course in Will Training

Scientists found years ago that memory can be trained by intelligent exercise. Now it has been proven by over 75,000 people that the will can be strengthened in the very same way by the proper kind of exercises.

Professor Frank Channing Haddock, Ph.D., the great scientist, has written a book containing 28 lessons in will-training based on a profound analysis of Will-Power in human beings. He gives actual methods, rules and principles for training, strengthening and developing will-power; and they are so clear, so easily understood that anyone can apply the simple instructions with noticeable results right from the very start.

Some of the 75,000 "Power of Will" Owners

A list of owners of "Power of Will" reads almost like a list of "Who's Who," and they speak of it is a Bible. They include hundreds of successful business men, statesmen, government officials, writers, physicians, thoughtful men and women in every field of work—in every town and city in the country, and as the news spreads the number grows daily by leaps and bounds.

Master-men like Judge Ben B. Lindsey; Supreme Court Justice Parker; Wu Ting Fang, ex-Chinese Ambassador; Asst. Postmaster-General Britt; General Manager Christeson of Wells-Fargo Express Co.; E. St. Elmo Lewis, now Vice-President Art Metal Construction Co., and Ernest Knaebel, Asst. Atty.-Gen'l of the U. S., are owners. These are but a few. Literally thousands of other men of action and ambition like them use and praise "Power of Will."

Is YOUR Will Dormant?

Look back upon your life. Once upon a time, no doubt, you weaved great dreams of what you were going to make of yourself. *Are they accomplished now?* Why are they not accomplished? Is it not because you lack a strong, powerful, dominating, inflexible WILL? You allowed *others* to control and influence you to their ends, instead of controlling others yourself. You let trifling daily occurrences everlastingly turn you from your purpose. Gradually—like so many of us—you allowed this God-given faculty of will to become lifeless within you. Dr. Haddock has a message for you—*a real message of emancipation from the blighting human curse of indecision and blind habit—a message which every man from 20 to 60 years old should get.*

Send No Money—Examine Book First

The publishers will send you a copy free—without deposit—so that you may judge for yourself how much "Power of Will" will help you to your heart's desire. The price of the book is $3.00, but send no money now. Merely mail the coupon, enclosing your business card or giving a reference. You can keep the book five days. Then if you feel you can afford to be without it, send it back and you'll owe nothing. Don't wait. Do it right now, before you lose the page.

THE RAIDER OF LONDON

THE FIRST PHOTOGRAPH TO REACH THIS COUNTRY OF A ZEPPELIN ACTUALLY ATTACKING THE HEART OF THE BRITISH EMPIRE. HAD THE ANTI-AIRCRAFT GUNS FOUND THEIR MARK AS WELL AS THE SEARCHLIGHTS THERE WOULD BE A DIFFERENT STORY TO TELL

THE ADVERTISER AS A PUBLIC BENEFACTOR

A GREAT deal is said about the value of advertising to the salesman, but very little about its value to the buyer. Yet it is obvious upon reflection that such an expensive piece of machinery as the modern system of advertising could not be maintained unless its benefits were mutual. It takes two to make a bargain and this new method of bargaining, this new channel of communication between producer and consumer, must be giving satisfaction to both, altho the said party of the second part rarely realizes how greatly to his advantage it is. The common saying "It pays to advertise" has a wider meaning than it is generally credited with. Advertising on the whole pays all those concerned. Advertising pays the advertiser in case the money is wisely expended. Advertising pays the periodical, we are happy to say. Advertising pays the purchaser, for it puts him in the proud position of being the sought instead of the seeker.

As the maiden whose hand is sought by a throng of eager suitors is more happily situated than she who has none, so is the consumer today vastly better off than he was before the discovery of advertising. For the expenditure of five or ten cents he can summon to his presence in an instant salesmen of all sorts of goods who will spread out before him their most attractive wares and urge them with their utmost eloquence. Is he averse to investing, he has but to close the magazine and the solicitors of his patronage vanish as tho by magic. But so long as he is willing to listen they are glad to talk business to him, even tho he has not a cent to spend. The signs we see in stores "No trouble to show goods," "No obligation to buy," are not to be taken literally, as a person known to be penniless would soon find to his chagrin. But they do honestly apply to the silent and obliging salesmen who stand behind the pages of a periodical.

Now consider the lot of one who had the misfortune to live before the advertising era. He had first to discover for himself the want of something. Naturally this discovery was not usually made until something he already had gave out, and then he knew no better than to replace it with something of the same sort. This relation of consumer to producer was not merely troublesome to the individual, but a hindrance to progress. It put the burden of instigating innovation upon the person who was least capable of it, the purchaser. Let the reader imagine himself in the position of his great grandfather. His clothes are wearing out. He must first hunt up a man who makes cloth and get from him enough for a suit. Then he must go to a tailor, if in a city, or wait till one comes around, if in the country, and get him to make it under his direction.

Nowadays a man has but to open a paper or periodical to have called to his attention the desirability of new clothes. Artists of ability with the aid of manly models give him free advice on the cut of a coat or the tying of a tie. He learns of new books and musical instruments; he is told of the attractiveness of new foods and drinks. The advertiser is a public educator, more proficient in the art of teaching than the graduates of our normal schools. It is due largely to him that in regard to the conveniences of life we live in another world than our ancestors. New luxuries are invented daily and speedily become necessities thru the medium of the advertisement.

For instance, the use of prepared cereal foods is a veritable revolution in the dietary of the nation. Say five million dollars has been spent in accomplishing it, could the result have been attained as quickly or more cheaply by any other means? How long without advertising would it have taken to have developed and made known to everybody the automobile and the hand camera, the player-piano and the phonograph, the office utilities, the toilet accessories and all the thousand "Yankee notions" that make our life so pleasant and complete?

No, advertising is not "one of the economic wastes of competition," as it is sometimes called. It is on the whole well worth what it costs to the community and it is hard to see how the world can ever get along without it. Even if competition be some time eliminated, advertising of some kind will have to be kept up unless the race is to stagnate. Progress consists in the creation of new wants; happiness in the satisfaction of them. So both progress and happiness are facilitated by the efforts of the advertiser. He is not a producer; no, and neither is lubricating oil a fuel for the engine, but it is quite as indispensable as coal. The advertiser should not be regarded as a parasite upon industry, as an extravagance to be some time eliminated in the interests of economy of distribution. He is more likely to be regarded in the future as a person of greater importance than at present, for the training of the public in new habits and the introduction of new utilities will become more necessary as science and invention become more active. When his real value to the community as an accelerator of civilization becomes recognized, historians will rank the discovery of advertising as an epoch-making event and not less important than the discovery of America.

A WORLD CONSCIENCE

MR. OSCAR STRAUS the other day, in commenting upon the execution of Miss Cavell, said that Germany "has no appreciation of the public conscience of the world." The phrase is striking, and is useful if it is a name for a fact. Is there a public conscience of the world, or any other public conscience?

Conventional and easy answers to this question are of little value. Possibly, as our religious and ethical teachers assure us, mankind—the whole human race—differs from the brutes in having a sense of right and wrong; but what proof have we that these teachers know what they are saying? Plenty of men and women who love the dumb animals are quite sure that dogs, at least some dogs, have a sense of right and wrong. There is abundant evidence that monkeys behave in various situations quite as do human beings whose conduct we explain by conscience. On the other hand, if all human beings have a sense of right and wrong, a shockingly large number of them manage to go thru life without ever betraying the fact. We leave this difficult problem to the psychologists, and such.

And even if every human being has a conscience, us-

dimentary or developed, what practical manifestations can we find of conscientious reactions by the whole human race in specific, concrete circumstances? Obviously, none. From the beginning of recorded history until now, no instance has ever been mentioned of a moral approval or a moral revolt by the entire population of the world at one given moment and under provocation of one specific occurrence.

And of late the ethnologists and the historians have been offering us impressive and cumulative evidence that systems of morality are relative; that they differ one from the other, in time and in space, to such a degree, indeed, that the things accounted right by one people are accounted wrong by another, or by later generations of the same people. How, then, can there be at any time a world-wide, or even a very extensive moral agreement upon a specific set of facts?

Yet we think there is, after all, a big reality to which Mr. Straus's phrase can be applied, and we believe that it has to be reckoned with as a factor in the probable reactions of the peoples of the world to the events now occurring in Europe.

Speaking of the attitude of the public toward dishonesty in business and its alliance with political corruption, a prominent New York business man said the other day that the public never does anything about any evil inimical to the general welfare until the degree of badness passes certain limits. Then (we quote his phrase) "the people throw a fit," and there is a partial and temporary clean-up.

In this sense, surely, there is a public conscience. There is a point in the actual manifestation of wickedness of any description, whether cruelty, dishonesty or indecency, at which great numbers of persons recoil. The numbers are sufficient, and the recoil is sufficiently manifest, to constitute a public fact. It is obvious and undenied that Germany's acts, culminating in the crowning inhumanity and stupidity of the Cavell execution, have provoked this recoil thruout all of those parts of the civilized world which are not included within the area of "Kultur." In this sense it is quite true that Germany has defied the public conscience of the world.

Is the world conscience, as so defined, becoming age by age more sensitive, more definite, more organized?

More organized? Yes, undoubtedly; because thru marvelous development of the means of transportation and communication every part of the world is in touch with every other part, and the thought of every people is quickly known by every other. More definite? Probably, because world-wide discussion clarifies and defines all things that are talked about, and especially all things that are written about. More sensitive? This question is not so easily answered; and certainly mankind could not now agree upon an answer. On every hand we hear the remark that no war has ever been more savagely conducted than the European war now in progress. We are told that barbarism is outdone; that the lust of killing has broken forth on the greatest scale ever known; that all the progress of mankind to this date has been a material progress only; and that in his moral nature man remains a savage, who has simply been veneered with civilization.

We cannot prove that the pessimists who say these things are wrong, but our judgment is that they are. So far as our historical knowledge goes, there is no evidence that cruelties, outrages, and the breaking of oaths has ever provoked so much or so violent recoil as within the last eighteen months. If this is true it is proof, we take it, as far as it goes, that the public conscience of the world, in the sense in which we have admitted that the phrase may in good reason be used, is becoming more sensitive. In some countries, at any rate, it surely is. Comment has been made in various journals upon the execution, in the days of the infamous Jeffreys, of Lady Alicia Lisle, and there is a consensus of opinion that such an act could not be committed in the England of today. It certainly could not be committed in the United States of today. We do not believe that it could be committed in France or in Switzerland or in Holland. We do not believe that any stress of economic pressure could restore slavery in the United States or in England.

Again to use the phrase of the business man whom we quoted, it is probably true that the limiting point of badness, beyond which the public of the more advanced countries recoils, is a higher point on the curve of behavior than it used to be. We cannot prove it, but it is our judgment that such is the fact.

FIGHTING FOR COPPER AND COTTON

ONE of the difficulties of defeating Germany is that the Allies do not yet understand what Germany is fighting for. The French still talk of war in terms of glory and revenge. The English speak of war as a kind of sport, "as it were almost cricket—as it were even your play," to quote from Kipling's "Islanders." But for the Germans war is a business to be conducted in a business-like way for certain practical advantages. They care more for the capture of a factory than a fortress. They attack railroad stations, not capitals. They would turn aside from a royal castle to capture a coal mine or an oil well. Napoleon, with his medieval imagination, had his eye fixed upon Moscow and its Kremlin; Hindenburg is better pleased to have Lodz and its cotton mills. Consequently those who follow the German campaign with maps that omit railroads and natural resources, can have little conception of its aims and achievements.

For instance, why are the Germans striving to reach Nish? Not because it is the capital of Serbia, but because it is the junction of the railroads to Salonika and Constantinople. Now that the Germans have broken thru the thirty-five mile strip of Serbian territory which separates Hungary from Bulgaria, they already have a route, tho not yet a railroad, clear thru to the Bosporus. This opens up to them the cotton fields of Turkey. Ten years ago practically no cotton was raised in Turkey, but the yield had before the war been raised to 200,000 bales a year, and is capable of indefinite development by whatsoever power is fortunate enough to gain possession of the sunny land of Anatolia.

Germany was also short of another raw material neccessary in modern warfare, that is, copper. It was indeed expected that the British blockade by cutting off the importation of cotton and copper, would cripple the German military power. But the other day General von Gallwitz moved up the Mlava River from Semendria some twenty miles to Posharevats. The movement did

not show up much on the map, but it meant that Germany no longer was without a copper supply. W. M. Petrovitch, attaché of the Serbian legation in England, in his recently published book on Serbia, says: "The copper mines of Maydan-Pek, to the south of Posharevats, are the richest in the world and yield a metal of extraordinary purity." We may allow for the natural exaggeration of the patriotic Serb, and we must remember that these mines are undeveloped and that it will take a long time to get them to working at full capacity. But in the year before the war this corner of Serbia now under German control produced 7000 tons of copper and doubtless this can be considerably increased.

By regaining the petroleum fields of Galicia the Central Powers secured a supply of gasoline for their motor cars and aeroplanes. By making connection with Bulgaria they have tapped a new source of meat. By the conquest of Poland and Courland they have acquired Russia's chief industrial section. Perhaps the English papers are right in supposing that Germany is exhausted and near collapse because of her losses of men and available wealth, but however that may be, it must be admitted that in the matter of natural resources Germany was never so well off as she is oday.

AN AMERICAN LEIPZIG

LEIPZIG has been for generations famous for its annual book fair, where are brought together for exhibition all of the publications of the year. We are glad to hear that even in the stress of war times this custom has been kept and we are still more pleased to observe that other countries are adopting the same sensible plan. In England "Leipzig fairs" have been held not only for books, but for various other commodities. In New York City the National Arts Club began ten years ago a very comprehensive annual exposition of the new books. This gives the booklover an opportunity to see and compare various publications at his leisure unhampered by the virtual obligation to buy something which rests upon the visitor to a store. There is no reason why such a book show should not be held in any city. Our methods of book distribution in the United States are curiously cumbersome and expensive, and anything that promises to bring together the reader and his reading should be encouraged.

SWAPPING IN MIDSTREAM

"DON'T swap horses when you're crossing a creek" was the slogan which carried Lincoln into the White House for a second term. But this proverbial wisdom is disregarded by the Allies. In France, Russia and England Cabinet changes have recently taken place. Why, nobody outside can tell. There are two good reasons for ousting a government; one is to carry out a new policy, the other is to secure more efficient leaders. The changes which have taken place or are impending in France, Russia and England find no apparent justification in either of these reasons. They seem to be simply the result of popular dissatisfaction with the management of affairs. It must be admitted that there is abundant cause for such dissatisfaction. The French have not had a real victory since the battle of the Marne fourteen months ago. The Russians have not had a real victory since the capture of Przemysl six months ago. The British, Belgians and Italians have never yet had a real victory. In consequence of this the Grand Duke Nicholas, who overtops all his associates in ability as he does in hight, has been removed from the leadership of the Russian armies and banished to the Caucasus. General Joffre, whose stedfastness and efficiency have won the admiration of the world, has to face a host of internal enemies. Earl Kitchener, to whom almost divine honors have hitherto been paid, has been curtailed of part of his power and is threatened with loss of position. But, assuming that these three have made mistakes, are they likely to be replaced by any abler men? If not, it is poor policy to make scapegoats of them simply because their military operations have not succeeded as well as was hoped.

So, too, in diplomacy. M. Delcassé and Sir Edward Grey are admitted by their enemies to be among the ablest diplomatists of the times. The Germans have frankly confest that their statesmen were no match for them: But Delcassé has been cast overboard like a Jonah, tho too late to save the ministry, and Grey may soon follow him into retirement. The coalition cabinets of France and England as first organized included the ablest men of all parties, and a change in personnel is not likely to strengthen either government materially.

When we examine the new French Cabinet we fail to find any sufficient reason for the change. In fact, seven out of the fourteen men in the old Cabinet are retained in the new. What difference will it make that Premier Viviani has changed places with Minister of Justice Briand? Both are men of ability and experience. They occupy about the same political position, for both were socialistic radicals in their younger days, but became sobered in the course of time by experience and responsibility. Jules Guesde, the veteran leader of the orthodox Socialists, is in the new Cabinet in an advisory capacity, as he was in the old. There have been added three more ministers without portfolio: the octogenarian ex-Premier, Emile Combes; Denys Cochin, chiefly known as an author, and Léon Bourgeois, who was Premier twenty years ago. Charles de Freycinet, who becomes vice-president of the Cabinet and Minister of State, is eighty-seven years old and organized the armies of Gambetta in 1870. These honored names may add prestige to the new ministry, but can hardly be expected to add much to its efficiency as an engine of war.

But if there is no apparent improvement of personnel in the new French Cabinet, is there a change of policy? Premier Briand in his first public announcement says: "I wish to declare emphatically to our Allies as well as to our enemies that the change in the ministry is in no way a sign of policy." This seems positive, but when he adds that "the policy of France is summed up in the word 'victory,'" we suspect it to be a mere rhetorical flourish. Doubtless the new Cabinet will strive for victory no less earnestly than the old, but it may decide upon a different way to it. The sudden shifting of the storm center to the Balkans will inevitably involve some change in strategy. General Joffre suddenly appeared in London the other day and a conference with him took the place of the Cabinet meeting scheduled for the afternoon. It is reported that only 13,000 British troops have

been landed at Salonica, while the French have sent more than ten times that number to the rescue of Serbia. This has caused considerable dissatisfaction in France, for it is felt that the protection of the overland route to Egypt and India is primarily England's duty, and that any French troops sent to the Balkans must weaken the line which keeps the enemy at bay. The argument that the common aim of the Allies is to beat the Germans, and it does not matter where, may be a sound one, but does not altogether remove the growing feeling of the French that the British are not doing all they could for France. The Gallipoli campaign is admittedly a failure, but to withdraw the French and British troops safely from the peninsula is almost as difficult as to land them there.

That there should be perplexity and even disagreement in the councils of the Allies in this critical time is not to be wondered at. The wonder of it is that parties and nations of such diverse ideals should have been able to maintain their harmony for more than a year. Even now there is no reason to think that such discordance as exists is serious enough to disturb their unity of action or imperil their chance of success.

A FRATERNAL CHRISTIAN ACT

THERE is hardly a single large Christian denomination that does not have its extreme wings, sometimes two, and sometimes as many as the six of Isaiah's Seraphim. The Protestant Episcopal Church has long been credited with three, usually called Low Church, Broad Church, and High Church, sometimes profanely designated as Platitudinarians, Latitudinarians and Altitudinarians. In controversies the Low Church and the Broad Church are likely to unite their forces against the High Church. And so they did in a late meeting of the Protestant Episcopal Board of Missions.

The question was a very simple one, apparently a mere business detail. An interdenominational conference of mission bodies laboring in Latin America had been called to meet in Panama next February, and the Protestant Episcopal Board of Missions was asked to send delegates. Such delegates were appointed, consisting mainly of missionary bishops who had served in these countries. A hot discussion arose over a motion to rescind this action, but it was handsomely defeated. As a result five members resigned from the board, including three bishops, and half a dozen other resignations may follow.

Just what does this mean? The conference at Panama is to be nothing but a conference; it will take no action; it will bind nobody. The representatives of missionary societies will come together to compare notes, to get information and report to their boards at home; they meet for brotherly counsel, that is all—yet hardly all. They all represent Protestant mission boards. If the Episcopal Board sends delegates they will naturally be taken to be acting as Protestants, and indeed do they not represent the Protestant Episcopal Church? That is exacly what these dissenting members of the Protestant Episcopal Board of Missions do not like. They are not Roman Catholics, but their sympathies are much more with the Roman Church than with their brethren of Protestantism. With their Christian brethren here in this country they have no ecclesiastical relation. The Roman Church is to them a true Church, but Protestant Churches are not. Therefore they can do nothing but oppose fellowship and can properly resign.

The great majority of the Protestant Episcopal Church is of a different mind. It knows that the Church of Rome has formally refused to recognize the Anglican orders and that to Rome they are no better than Methodists or Presbyterians. The great Protestant Episcopal Church in this country, one of the largest and grandest, is not ashamed of its name, and it loves its other Protestant brethren. At the last meeting of the General Convention the House of Delegates voted to send official delegates to the Federal Council of Churches, and this was defeated by a bare majority in the House of Bishops. The Bishops are a conservative body, while the House of Delegates, as the popular body, represents the mind of the Church in its large dioceses. There is a large number of bishops of small Western dioceses who are the highest of the high; such a one is Bishop Welles of Fond du Lac, whose spectacular consecration some years ago made a famous picture, and who last week led the opposition to the action of the Board of Missions.

We have no criticism to make of those who long for fellowship and recognition from the Catholic Church. It is greatly to be desired, and good Christians may hope and pray that the time may come when the Church of Rome shall hold out her hand to the Churches of Geneva and Canterbury. Doubtless every member of the Protestant Episcopal Board of Missions would gratefully welcome the day. Meanwhile the Board deserves praise for an act of Christian charity and good brotherhood in being willing to confer—nothing more—with those Christian brethren who are glad to take their hand and work with them for the Kingdom.

FAY AND HIS EMPLOYERS

FAY, the German arrested for plotting to disable or destroy ships leaving the port of New York with cargoes of ammunition or other war supplies, says that he is a lieutenant in the German army, that he procured leave of absence from his colonel, and that he was "put into connection with the secret office at Brussels, which arranged for my passage to this country." Scholz, his associate and partner, says that "Fay got $4000 from the German Secret Service officials in Brussels."

There is plenty of evidence in support of Fay's admission that he was planning to blow up the ships. Those who cught to know say that his clockwork bomb would not have stopped with the crippling of a rudder, but would have made a hole in the ship's hull, and probably have sunk her, by causing an explosion of the ammunition on board. Is there evidence that what Fay says about the German Secret Service is true?

If he was sent by the Secret Service, and if he received from the officers of that service $4000 or any other sum for expenses incurred in using the bombs (with a device of his own invention, of which those officers had knowledge), he was an agent of the German Government, and that Government deserves to be held responsible for his plot. There should be careful and thoro inquiry as to the evidence that tends to connect this man with the Secret Service of the German Government.

THE STORY OF THE WEEK

Bulgars Meet Germans

In the northeastern corner of Serbia where the Danube, winding its way thru the mountains, forms the boundary between Rumania and Serbia the Bulgarian outposts have encountered the Austro-German forces which crost the river from Hungary just above the Iron Gates. A Bulgarian patrol consisting of two officers and twenty-five men happened upon an Austro-German patrol on the evening of the 26th in the Dobravada Mountains near the town of Palanka. The encounter was a surprize to both parties as neither had supposed the other had advanced so far in their invasion of Serbia. As soon as the Bulgars were recognized as friends they were conveyed to headquarters and feted in honor of the conjunction of the new allies.

The event, however, is of more sentimental interest than military value. Since there are no railroads crossing this neck of Serbian territory or even leading up to it in either Hungary or Bulgaria the union of forces does not imply the establishment of practical lines of communication. The wagon roads thru this mountainous region would not avail for the transportation of the munitions and supplies waiting to be conveyed to Constantinople. It might be possible to send them down the Danube to Bulgaria but hardly without the consent of Rumania, which controls the northern half of the river.

So the Germans must wait until they get to Nish before they obtain the thru railroad line to Constantinople for which they have been striving. From Semendria, where General von Gallwitz crost the Danube from Hungary into Serbia, it is about a hundred miles to Nish, and his troops have covered about half that distance. The Serbs are bravely contesting every step of the way and inflicting heavy losses upon the invaders. But they are outnumbered and there seems no hope that the forces of the Allies can get to them in time to save northern Serbia. The Austro-German forces have now reached Kragujevatz, the chief Serbian arsenal.

The Serbian troops in this region are being attacked on all sides, for the Austro-German forces have not only entered Serbia from the north by crossing the Danube and the Save rivers on the north, but another army from Bosnia has invaded Serbia and Montenegro thru the western frontier. This brings them into the old Sanjak of Novibazar, which Austria occupied in 1878 but was obliged to relinquish when she annexed Bosnia. It was divided between Serbia and Montenegro after the Balkan war.

The Capture of Zaitchar

But the northern Serbian army is threatened with more than defeat, for the Bulgars are likely to cut off their retreat to the south by the capture of Nish, the temporary capital. During the week the Bulgars have gained possession of both lines of railroad leading east from the Morava valley by their capture of Zaitchar and Pirot, situated respectively about 40 miles northeast and southeast of Nish. (See full page map in last week's Independent.) Zaitchar or Zajecar is a railroad junction on the Timok river and the strongest of the Serbian fortresses on the Bulgarian side. Artillery had been stationed on the tops of the mountains roundabout and their slopes covered with barbed wire entanglements. The defending force consisted of a division of the Serbian first line and about ten thousand men of the third reserve. The Bulgars attacked with two divisions.

For a week the Bulgarian artillery bombarded the Serbian positions and then the infantry stormed the hights. In some places the slopes were so steep that the Bulgars had to take off their shoes and crawl up on all fours. The heavy fire from above mowed down the scaling parties, but they renewed the assault until by noon they had won all points. The Serbian prisoners were found to be mostly without uniforms and some in summer clothing, but they had been provided with abundant munitions from the French and British factories.

Pirot, the chief station on the railroad between Sofia and Nish, was taken by the Bulgars after three days of fierce fighting. The Serbs evacuated the city in the night when they found further resistance useless, leaving behind the stores of war supplies which had been furnished them by the Allies.

About the operations to the south of Nish reports are so conflicting that it is impossible to form a clear idea of the situation. It appears, however, that the Bulgars advancing southwest from Sofia crossed the railroad both north and south of Uskub and even pushed on to the Albanian frontier near Pris-

THE GREAT WAR

October 25—Bulgars take Serbian fortress of Zaitchar. French gain La Courtine, east of Tahure.

October 26.—Bulgars connect with Teutonic forces in northeast Serbia. Venice churches hit by air bombs.

October 27 Germans renew attack in Flanders. Bulgars take Pirot on road to Nish.

October 28—Bulgars cross Serbia to Albanian frontier near Prisrend. Energetic Italian attacks on Isonzo front.

October 29—Germans driven back across Miasa, northeast of Mitau. Memorial service to Edith Cavell held in St. Paul's.

October 30—General Joffre in conference with Kitchener at London. Briand succeeds Viviani as premier.

October 31—Serbian arsenal at Kragujevatz attacked by Austro-German forces. Russian fleet attacking Bulgarian port of Varna.

Paul Thompson

THE EX-SOCIALIST PREMIER OF FRANCE

Aristide Briand has been called to form a new cabinet upon the resignation of Viviani's Government. Like his predecessor Briand was in the past a prominent socialist, but has been expelled from the party. His new ministry is the first coalition cabinet in French history and includes a most distinguished group of statesmen

BREAKING THRU TO CONSTANTINOPLE

In the northeastern corner of Serbia the Austro-German troops crossing the Danube made a conjunction with the Bulgarian troops which advanced northward near the Rumanian border. The four allied central powers, Germany, Austria-Hungary, Bulgaria and Turkey, form then a complete chain of territory extending from the Baltic to the Persian Gulf. As soon as Nish is taken the railroad connection with Constantinople thru Sofia and Adrianople will be complete. The Austro-German forces from the north have advanced about fifty miles up the Morava River, while on the northwest they have crossed the Drina and are moving toward the railroad terminating at Ushita. The railroad leading from Nish to Rumania was never quite completed and is now held by the Bulgars. South of Nish the Bulgars have cut the railroad to Salonica at several points and they have established themselves on the Vardar River below Uskup to await the attack of the Franco-British troops advancing thru Greece from Salonica

rend, thus cutting Serbia completely in two. Somewhere below Uskup they hold both sides of the Vardar river and the railroad in order to keep the Anglo-French force from Salonica from coming to the aid of the Serbians in the north. The situation, then, is not unlike that in Belgium at the beginning of the war. The Serbians, like the Belgians, are holding out against an overpowering German army in the vain hope that French and British reinforcements will arrive in time.

It was stated in the House of Lords that the British had landed at Salonica only 13,000 men. The French force is said to number 140,000.

The Crown Prince of Greece has gone to Salonica to take charge of the Greek troops there, but whether this portends the entrance of Greece in the war and if so, on which side, is a disputed question. Sir Edward Grey has informed Parliament that the offer of Cyprus to the Greeks had been withdrawn since they had refused to accept it.

Rumania Holds the Balance

The hopes of both sides center in Rumania, who has it in her power this week to decide the Balkan situation and possibly even the war. No other neutral nation in the world has so large an army ready for service and none occupies a position of such great strategic importance. Russia is separated from her ally Serbia and her enemy Bulgaria by Rumania. Hungary is separated from her ally Bulgaria and her enemy Russia by Rumania. Under such circumstances it seems impossible for her longer to maintain her neutrality, yet it is up to the present undetermined which side she will espouse.

King Ferdinand of Rumania, of a Hohenzollern, is like King Ferdinand of Bulgaria and King Constantine of Greece, friendly to the Kaiser. But the Rumanian people, like the Greeks and Bulgars, are rather inclined the other way. The Rumanians pride themselves on their Roman origin and have always affiliated with the French rather than with the Teutons or the Slavs. But their choice between the contestants is, as again in the case of Greece and Bulgaria, determined more by interest than it is by sentiment. The primary purpose of each of the Balkan states is essentially the same, that is, to extend their boundaries to include the people of their race who live outside. Now "Unredeemed Rumania" lies on both side of Rumania proper. On the west, across the Transylvanian Alps in Hungary, live some 3,000,000 of Rumanians. On the east, across the Pruth River in Russian Bessarabia, live some 2,000,000 of Rumanians. The Central Powers have been willing enough to offer Bessarabia to Rumania in return for her support but Hungary would not consent to cede Transylvania. The Allies have been willing enough to offer Transylvania but Russia would not consent to cede Bessarabia.

But now it is rumored that Russia under the pressure of circumstances and her allies has been induced to agree to the surrender of Bessarabia and that Rumania has in consideration of this agreed to enter the war on the side of the Allies. Rarely in the history of the world has any nation been offered such a prize and if Rumania hesitates to accept it could only be because she doubts

American Press

SPAHI GUARDS AND GERMAN PRISONERS

These close-cropped Germans were captured in southwestern Flanders and are being marched to Ypres to be sent to a detention camp. The horsemen are Algerians, of whom there are several regiments in the French army

whether the Allies will be able "to deliver the goods." If the Allies win Rumania is likely to get Transylvania and part at least of Bessarabia and Bukovina. This will give Rumania a population of about 14,000,000 and she will take foremost rank among the secondary powers of Europe, a wonderful advance for a nation which attained its independence only thirty-seven years ago. Bessarabia was taken from Rumania by Russia in 1878, altho the Rumanians had just been aiding Russia in the conquest of Turkey, and the European Powers at the Congress of Berlin confirmed the annexation. Because of that act Rumania was unfriendly to Russia up to very recent times when the oppression of the Rumanians in Hungary alienated her from her neighbor on the west.

If Rumania goes in on the side of the Allies or consents to waive her neutrality to permit the passage of troops there would be a very good chance of saving Serbia or at least of preventing the Germans from cutting their way thru Constantinople. The Russian troops which are said to have been assembled at Odessa for the purpose might be sent across Rumania into Bulgaria, a distance of only 125 miles from Galatz to Rustchuck. Or they might be shipped the length of Rumania, about 275 miles, and thrown directly into the northeastern corner of Serbia where the Austro-German and Bulgarian forces have just met.

If Rumania should not consent to the passage of troops and the Allies be unwilling to force her it may be possible for the Russians to transport troops from Odessa across the Black Sea to the Bulgarian ports of Varna or Burgas. This is said to have been already undertaken, and a naval combat is reported to have occurred between the Russian convoy and the Turkish fleet. Varna has been several times bombarded by the Russian cruisers. This port can hardly be called fortified but it is being put into a state of defense by Turkish troops under the direction of German engineers. The "Goeben" and "Breslau," the German warships which escaped the British fleet in some mysterious manner at the beginning of the war and took refuge in Constantinople, are now at Varna for the purpose of repelling the Russian attack.

Cabinet Change in France The Viviani ministry, which has governed France since August 26, 1914, has resigned and a new and enlarged cabinet containing representatives of all parties has taken its place. Aristide Briand, who was Minister of Justice in the old cabinet, becomes Premier and Mr. Viviani takes the portfolio of justice. Mr. Briand is expected to keep the control of Foreign Affairs in his own hands, but will have as chief secretary Jules Cambon, who was Ambassador at Berlin when the war broke out. He was Ambassador at Washington, 1897-1902. The new Secretary of War is General Gallieni, to whom was entrusted the defense of Paris when its siege was thought imminent in August, 1914. The new ministry includes six former premiers. No combination of men of such diverse political views has been known in the history of the country. Briand first attained prominence by the skill with which he carried out the separation of church and state. With him is now associated the ultra-clerical Denys Cochin, as well as the most orthodox of socialists, Jules Guesde.

The meaning of this change in the French Government is, as we explain editorially on another page, a matter of speculation, since the debates in the French parliament are now secret. It is doubtless due primarily to dissatisfaction with the mismanagement of Balkan affairs and this seems to have come about thru lack of coordination in the efforts of the Allies, both diplomatic and military. It is realized on both sides of the Channel that a single general staff in control of all the campaigns of the Allied armies would greatly contribute to efficiency. General Joffre has been last week in consultation with Earl Kitchener at London and it is expected that some system of closer cooperation will be evolved. A reorganization of the British cabinet is expected

According to a statement of Premier Asquith the total British losses up to October 9 amounted to 493,294. Of these 101,652 are killed, 317,465 wounded and 74,177 missing. The daily losses now range between two and five thousand.

The Prussian casualty lists sum up 2,026,209. From this it is estimated that the total losses of Germany and Austria-Hungary amount to more than 4,500,000.

The Italian Campaign It is no wonder that the Allies are disappointed at the part that Italy has taken in the war. It was expected that bringing in a million or more fresh troops would turn the scale in favor of the Allies, and the papers gravely discussed the question of whether the Italian armies would invade Austria from Trieste or Germany from the Trentino. Now after more than five months of fighting the Italians are still on the frontier. The capture of Rovereto and of Görz has been several times announced from Rome, but the reports have proved to be false. Every day victories are announced, but no perceptible progress is made.

The Italian gains amount to this: On Lake Garda, the gate to the Trentino, the Italians have recently taken

MRS. ALICE [illegible] BLACKWELL, MASSACHUSETTS

THE GENERALS IN THE TRIPLE SUFFRAGE CAMPAIGN IN THE EAST

The presidents of the state woman suffrage associations in the three states which voted on the question on November 2 after a driving campaign to break the "solid East"

Pregasina on the western shore, and Dosso-Casina on the eastern. The former is a mile, the latter two miles inside the Austrian boundary. On the eastern front along the Isonzo River the Italians are still trying to take Tolmein and Görz; the former is three miles and the latter seven miles from their own land.

A fourth army has just been called to the colors, but whether it will be despatched to the Balkans or employed like the others on the Austrian frontier is not yet disclosed. In order to divert the Austrians from Serbia the Italians are pushing their attacks upon the Isonzo front with greater energy than ever. They are gradually forcing their way up Monte Nero, which overlooks Tolmein, and they are making violent assaults on the bridgehead at Görz.

During the week ending October 27 the Italians captured 5064 prisoners and twenty-one machine guns in this sector.

The Western Front

For another week the center of interest is in the Champagne hills north of Suippes where the persistent efforts of the French are making slight but continuous gains. On the northern slopes of Hill 199, east of Tahure Butte, the German salient was protected by an elaborate system of fortifications known as La Courtine or the Curtain, which consisted of three or four lines of trenches connected by underground tunnels. This was stormed on the 25th by the French troops. By a prompt counter-attack the Germans regained most of the trenches and for five days following the battle raged over this position. At the end of the week the French were in possession of the greater part of La Courtine. This tends to straighten the line which is here only about three miles south of the railroad running behind the German front.

A renewal of activity on the part of the Germans is reported in Flanders. Here at the extreme end of their line and also opposite Souchez, reinforcements have arrived, including the Prussian Guard, which was transferred from Russia for the purpose. The Kaiser welcomed them to their new field in the following words:

> The Prussian Guards have defeated our enemies in both the west and the east, and they had to realize what it means when the King of Prussia threw in his Guards. With the help of God the regiments were permitted in the course of seventy fighting days to storm twenty-nine enemy positions and help end a campaign which cost the enemy all his frontier fortifications and untold booty. Your work being finished, the order of your King calls you to new deeds. On your way thither I have rejoiced to see you, eye to eye, and to express my royal gratitude.

King George while on a visit of inspection to the British armies in France went so near to the front that his life was in danger. He was standing upon a prominent point with President Poincaré, General Joffre and the Prince of Wales when four shells from a German battery opposite burst within two hundred yards of the group, without, however, doing injury to any of them. On the following day, while reviewing the troops, the King's horse reared twice and fell over backwards, throwing His Majesty to the ground and causing a painful tho not serious injury. The accident is unaccountable as the horse ridden by the King had been especially trained for the review and was thought to be quite safe.

German Bomb Plotters Arrested

Two Germans who were intending to cripple or destroy ships carrying munitions to the Allies from the port of New York were arrested on the 24th near Grantwood, New Jersey. One of them, who calls himself Robert Fay and says he is a lieutenant in the German army, came to this country in April last. His real name may be Frey, and he has used the name of Kealing. The other, Walter E. Scholz, is his brother-in-law. They had been living together in Weehawken, near the harbor water front. In their rooms were found bombs, mines, dynamite and other explosives, with wigs and false beards to be used in disguising themselves. They had other explosives in storage, and they owned a high-powered motor boat by means of which they inspected ships in the harbor.

A few hours after his arrest, in answer to clever questioning, Fay confest or admitted that he had come to this country to disable or destroy ships carrying munitions, and had virtually been sent by the German Secret Service, from which he had received $4000. He explained that he intended to attach to ships' rudders the clockwork bombs found in his rooms, expecting that they would explode a few hours after the departure from port, and would wreck the propellers. As each bomb contained eighty pounds of the most powerful known explosive, experts say that one of them would not only disable the propeller, but would also made a hole in the ship and probably cause disastrous explosions in the cargo. At the time of his arrest Fay attempted to gain his freedom offering a bribe of $1000 to the police officer. His confession, which he signed, was corroborated by Scholz.

A day or two later there were three additional arrests, those taken into custody being Paul Daeche, Max Breitung, nephew and business associate of E. N. Breitung, the banker and mine-owner whose adventure with the steamship "Dacia" will be recalled, and Dr. Herbert Keinzle, civil engineer and the son of the leading manufacturer of clocks in Germany. These men, it is alleged, were associated with Fay in the plot.

Underwood & Underwood

FLANDERS OR RUSSIA OR SERBIA?

None of them. This is in the United States. Mexican bandits wrecked a train near the Texas border, robbed and murdered the prisoners, and then burned this bridge to prevent aid being sent

Fay denied that he had been connected with the placing of bombs in a dozen ships or the explosions at munition plants. There is some evidence, however, that he had in mind the destruction of a chemical plant, had made plans for disabling the patrol boats of the New York police, and even was intending to go out and attach bombs to British warships that are near the coast. He knows, he says, who gave $10,000 to men employed to place bombs in ships, and who "made a poor job of it." The authorities are looking for evidence against certain persons who directed or assisted Fay, and from whom he received, for his expenses here, more than $30,000.

Military and Naval Plans

After a conference with the President, last week, Mr. Hay, chairman of the House Committee on Military Affairs, exprest his approval of Secretary Garrison's plans for increasing the military forces and said he thought the necessary bills would be passed in the House. There had been some doubt as to his attitude, because, at the recent session, he spoke against an increase of the army and opposed Mr. Gardner, a prominent advocate of such changes as are now proposed by the Administration. The plans are heartily approved by Mr. Chamberlain, chairman of the similar committee in the Senate. He will introduce a bill designed to promote the study of military questions in the public schools. Secretary Garrison said he was delighted to hear of Mr. Hay's approval, because it showed that the heads of the two committees would heartily cooperate in supporting the plans. The attitude of the leaders of the naval committees toward Secretary Daniel's program is favorable.

But the new majority leader in the House, Mr. Kitchin, of North Carolina, who is to succeed Mr. Underwood, opposes the projects of both Departments. He says, however, that in his opposition he will stand as an individual member, and not attempt to use his leadership authority on that side of the question. Senator Chamberlain would have the duty on sugar retained, and would impose a tax of some kind on the munitions and other war supplies which we are exporting. There were conferences last week in which the military and naval plans were considered by Cabinet officers in association with the National Militia Board, the executive committee of the National Guard Association, and representatives of the Adjutant Generals' Association.

Labor Controversies

In a riot at Chicago last week, caused by conflict between pickets of the garment-workers on strike and non-union employes, one man was killed and two were wounded. It is reported in that city that there will soon be a strike of the switchmen of eighteen railroads, who asked, a month ago, for a wage increase of 5 cents an hour. The companies have declined to make the desired addition. Conferences are to be held. In Cleveland, where there is a strike of machinists affecting companies working on war orders, several manufacturers are said to have agreed upon a policy which may have been indicated by the action of one of them. This company locked out, last week, 1800 men because they would not sign papers binding them to accept for one year a work schedule of 10 hours a day. The strike of wireless operators on the Pacific Coast has not been ended. Wireless operators on the Atlantic Coast have given their employers ten days in which to answer their demand for higher pay. If the desired increase is withheld, there will be a strike.

At the factories of the General Electric Company in Schenectady, N. Y., a committee representing the several unions concerned in the strike, and empowered to make a settlement, accepted the company's offer of 9½ hours and a wage increase of 5 per cent. Whereupon 10,000 of the strikers returned to work. But the 3000 machinists and 1000 electrical workers rejected the settlement and are still out. Union leaders in Hartford predict that there will soon be new strikes at five factories if the desired eight-hour day is not granted. The railroad freight handlers in Boston are still out. They have proposed arbitration, which the companies reject. Several hundred men have been employed in the vacant places.

The Situation in Mexico

A general improvement of the condition of Mexico has recently been shown in reports to our Government. The influence and power of Villa continue to decline, except in certain parts of the north. Villa's Governor of Queretaro offered to surrender last week and Carranza accepted his pledges of support. More than 200 of Zapata's officers have surrendered under a grant of amnesty. Gutierrez, who was elected Provisional President by a convention which Villa and Zapata controlled, has come over to Carranza. The latter's Government has been recognized by Austria-Hungary, Sweden and Salvador. At a conference of Carranza's generals in Torreon, the formation of political parties was prohibited until pacification should be completed. It is reported that George C. Carothers, an agent of our Government who has been with Villa's army, has been directed to promise protection to Villa if he will resign and come to this country, and also to say that amnesty will be procured for all his officers and men.

Villa has confiscated the smelter in Chihuahua of the American Smelting and Refining Company. The copper works at Cananea are now closed, and 5000 workmen are idle. This was the last of the smelting plants owned by Americans to remain open. But Villa is not the only Mexican leader whose acts have caused corporations to make protests at Washington. There is complaint about the high taxes imposed by Carranza, which are said to be almost equivalent to confiscation.

There were two attacks by Mexican bandits, last week, upon camps of American infantry not far from Brownsville, and one of the soldiers was killed. During the last few weeks eleven have lost their lives in battles with bandits.

Villa, moving westward, planned to attack the Carranza garrison at Agua Prieta, opposite Douglas, Arizona.

FROM STATE TO STATE

ARKANSAS: United States engineers some time ago reported that prospective traffic on the Arkansas River did not warrant the expense of dredging and cleaning the stream for navigation. The opening of the Panama Canal and the extensive transshipping facilities which New Orleans is preparing have, however, awakened people along the Mississippi River and its tributaries to the value of their waterways. The Arkansas River Improvement Association has determined, therefore, to gather new statistics in the hope of making a much better showing than that on which the Government engineers based their report. New industries, such as large bauxite works, increased timber land openings, oil from the Oklahoma fields and many other sources of tonnage not included in previous surveys are expected to be convincing.

CALIFORNIA: Mr. M. H. de Young, vice-president of the Panama-Pacific International Exposition and publisher of the San Francisco *Chronicle*, has proposed a plan for preserving as a vast public park a large part of the exposition grounds, together with some of its drives, gardens and buildings. The project has met with such response as to give hope that it will be carried out. Among other features of the plan is a continuous drive from Van Ness avenue thru the Avenue of Palms, the Avenue of Nations, along the Presidio Drive and the shore to Cliff House, continuing down to Great Highway, along Sloat Boulevard and back by Corbett Road, winding round the crest of Twin Peaks, from which the wonderful panorama of city, bay and ocean is in view.

DISTRICT OF COLUMBIA: The new $2,000,000 Masonic Temple headquarters of the Supreme Council of Scottish Rite Freemasonry for the southern jurisdiction of the United States was dedicated in Washington a few days ago. The stately structure is fashioned after the famous mausoleum at Halicarnassus—one of the seven wonders of the ancient world.

IDAHO: The Idaho Legislature this year created one of the first and by far the most comprehensive of farm market bureaus in the United States. Some of the best months of the year were lost thru an attack on the constitutionality of the law, but in the short time it has been in existence the bureau has done much. The director is empowered to promote economical distribution of farm products, to help improve country life, to warn homeseekers against misstatements by promoters, to bring buyers and sellers of farms and farm labor together, to serve as a free clearing house of information advantageous to farmers and consumers and to recommend legislation for the more efficient production or marketing of farm commodities.

IOWA: Des Moines has become one of the leading horse markets of the country, and those Iowa stock farmers who years ago imported fine breeders from Belgium, France, England and Scotland are now reaping their harvest. Until recently horses for the warring countries in Europe were assembled at Chicago and St. Louis, but conditions there led to the organization of a large syndicate of horse buyers in Des Moines, much to the convenience and profit of Iowa farmers. This state is sending out an average of 3000 war horses every month, but as there are more than 1,500,000 left, there is no immediate danger of shortage. The average price paid to farmers is $150 a head.

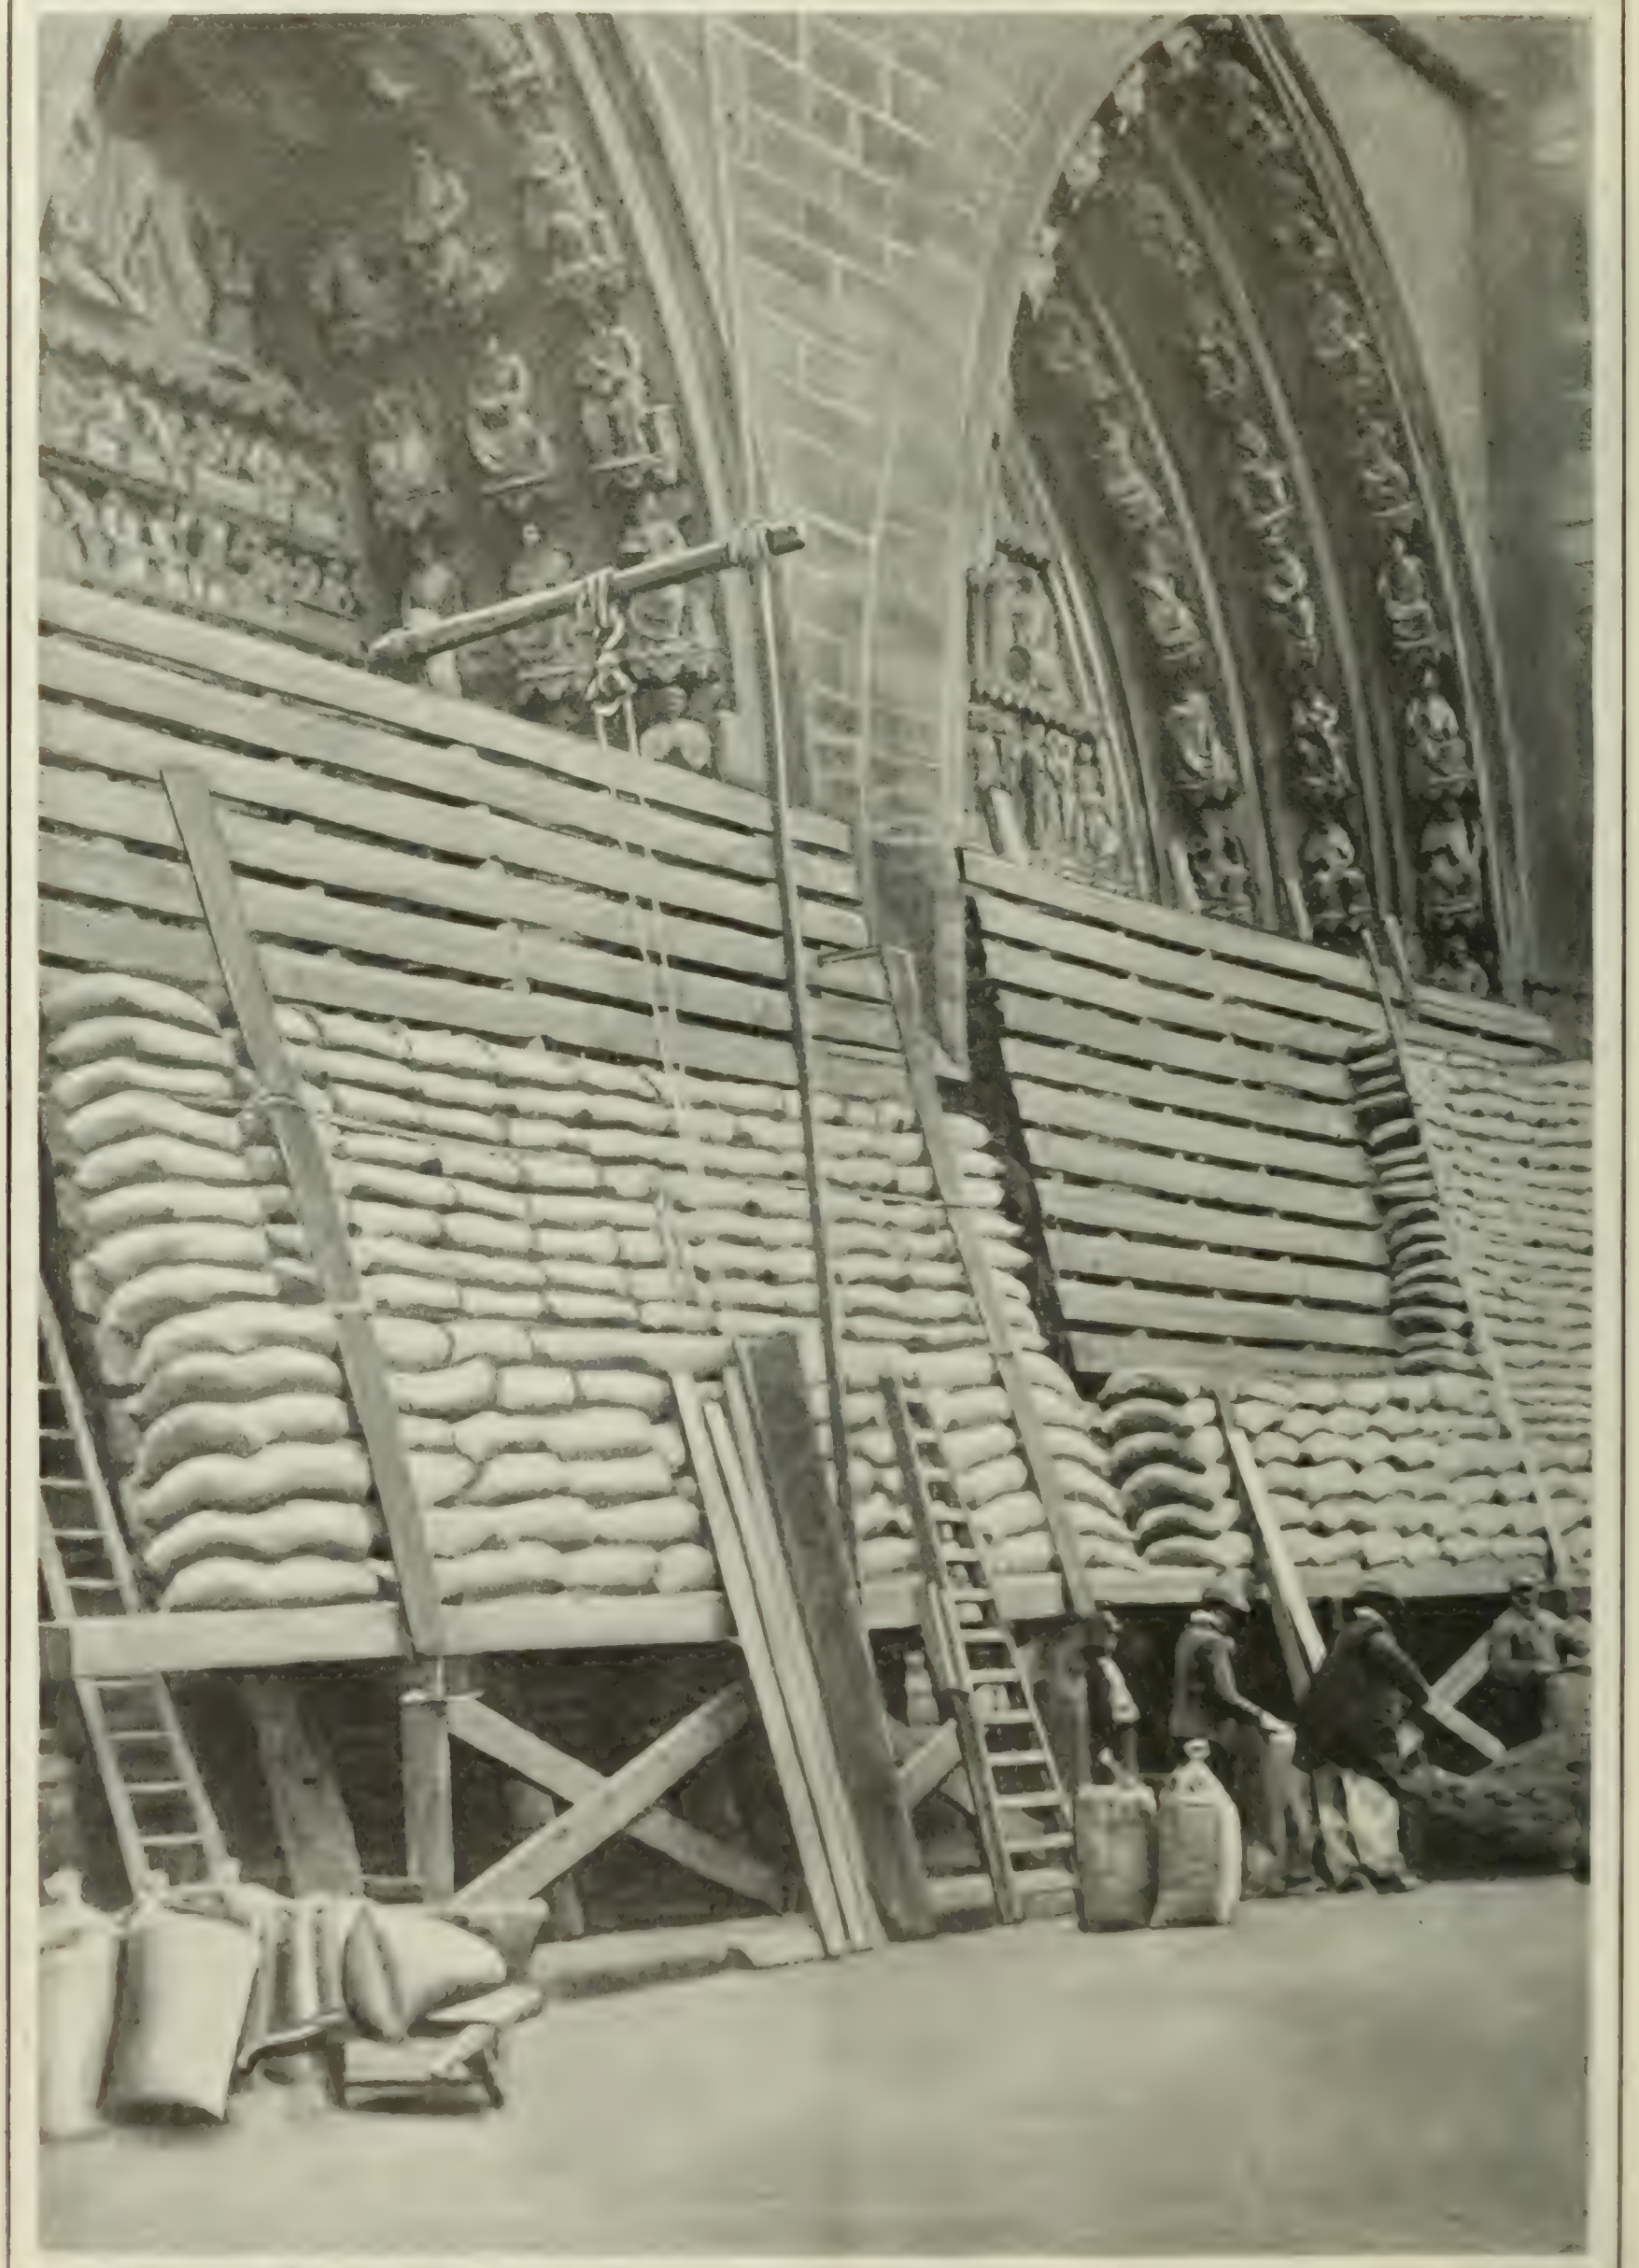
KANSAS: The Kansas University, thru Dean Harold Butler and Professor Arthur Nevin of the school of music, has begun an energetic campaign of extension work in music. Lectures illustrated with Victrola records will be sent to any organization in the state on promise that they will be used for free evening entertainment. Effort will be made to improve musical education in public schools. Community music is to be made a prominent feature of the program. The organization of choruses in all Kansas towns, everybody to sing, is the ambition of Professor Nevin, who will go to any town that wants community music and help in the work of organization, with the understanding that the choruses shall not be confined to trained singers.

NEW HAMPSHIRE: Routes for the new state highway system have been officially laid out and named as follows: The Winnipesaukee road will run from Lakeport in the City of Laconia to Rochester by way of Gilford, Alton, Durham and Farmington; the Sunapee Lake road from Claremont to Plymouth by way of Sunapee, New London, Wilmot, Andover, Danbury, Hill, Alexandria, Bristol and Bridgewater; the Masilauke road from Plymouth to Haverhill thru Rumney, Warren and Benton; the Hudson-Derry road from Hudson to Derry by way of Londonderry; the Raymond-Plaistow road from Raymond thru Fremont, Brentwood, Kingston, East Kingston, Newton and Plaistow to the Massachusetts state line; the Contoocook Valley road from Concord thru Hopkinton, Henniker, Hillsboro, Antrim, Bennington, Hancock, Peterboro, Jaffrey and along the town line between Rindge and New Ipswich to the state line; the Mascoma Valley road from Franklin thru Andover to a junction with the Sunapee Lake road.

NEW MEXICO: In 1875 three Frenchmen used to ride into Mora and Las Vegas at frequent intervals with thousands of dollars' worth of gold which they evidently did not get from placers. On one of their trips one of them died of mountain fever and the surviving two, quarreling over a division of their partner's property, killed each other. Ever since that time search has been made for their mine. Not long ago it was found by a party of Colorado men who are now engaged with lawyers trying to learn whether they can hold the property. The story, which sounds like a Captain Kidd treasure yarn, is vouched for by well known New Mexico men.

NORTH DAKOTA: In 1911, when the Fort Berthold Indian reservation was first opened to settlers, the United States reserved 110,000 acres because of the supposed presence of considerable coal deposits. Now these lands have been opened to surface homesteading, the Government reserving title for the benefit of the Indians to any coal that may be found to exist there. This arrangement is said to insure the development of a desirable agricultural section of North Dakota, the tract being described as containing first and second class agricultural lands and grazing lands.

OHIO: Springfield has shown what a few energetic citizens can do toward changing the character of a community. Five years ago this city was moribund. With a notoriously incompetent city government and an electorate which had despaired of improving it, there seemed to be no civic pride left in the place. But it was there, needing only to be awakened; and this was accomplished by three or four men who resurrected the defunct Commercial Club, leasing an entire floor in the largest office building in the city, furnishing the rooms in modern style and becoming personally responsible for the club's debts. At the good luncheon served there every day civic improvements were discussed. Soon they had 700 enthusiastic members, each of whom had to qualify by doing something for the good of the city. The adoption of the city manager form of government followed, and today Springfield, with many large new industries and old ones prospering as never before, is one of the most thriving cities of the state.



PENNSYLVANIA: Two modern piers, each costing $1,000,000 and known as the Southwark piers, have been officially turned over to the City of Philadelphia. Mayor Blankenburg in his speech accepting them said they will play a prominent part in making the port of Philadelphia one of the greatest shipping centers in the world. The completion of these piers marks the first step in the extensive program of port development involving expenditures of approximately $25,000,000. In addition to water front improvements a comprehensive plan is under way for the development of inshore facilities, such as the elimination of grade crossings, the creation of large freight classification yards and the extension of the belt line service.

TEXAS: Cotton is the absorbing topic of interest in this state. Since the holding movement set in most of the farmowners and many tenant farmers have joined it and are resolved to wait for a 15-cent [illegible] cotton at [illegible] interest. It is estimated by [illegible] that not more than one-fifth of the cotton ginned this year has been offered for sale. The rest is stored in state bonded and state supervised warehouses where it can be held indefinitely without deterioration. It is said the crop in the state this year will not exceed 3,000,000 bales, which is about two-thirds of last year's crop.

UTAH: Secretary Lane, of the Department of the Interior, announces the production in Utah of the first commercial mineral potash in the United States. The potash is found in a vein of a mineral known as alunite, which is the sulphate of aluminum and potassium. The vein found is ten feet wide and has been traced for 3,500 feet. Two hundred tons of alunite have been put thru the mill and two tons of 99 per cent pure potash have been produced, with nearly 100,000 gallons still in solution containing large quantities of potash salts not yet evaporated. As alunite is known to exist in large quantities in Utah, Colorado, Nevada, California and Arizona, Secretary Lane believes that the discovery assures the country an adequate supply of potash for agricultural purposes and for the manufacture of explosives. Our imports of potassium salts from Germany in 1913 amounted to $15,000,000.

WASHINGTON: The new prohibition law in this state provides that for his own use a person may every twenty days, on written application and payment of a 25-cent fee, import "not exceeding in quantity one-half gallon of intoxicating liquor other than beer, or twelve quarts of beer." It has been popularly believed that this would be construed to permit the importation of both the beer and other liquor at the same time, but the State Bureau of Inspection has decided that only one of them can come in each twenty days.

WYOMING: In the recently discovered oil field at Grey Bull in this state there are now twenty producing wells and experts say this is hardly a beginning. In sinking another well the borers encountered three distinct strata of gas, two of which were capped, but the third, described as the greatest gas well in the world, flowed with such force as to hurl an 1800 pound drill skyward and to resist all efforts at capping it. The flow is estimated at 140,000,000 cubic feet of gas a day. Its roar can be heard nine miles away. At last accounts the oil men, who do not want gas, were trying to cap this flow, believing that if they could proceed with the boring there they would strike a tremendous flow of oil.

A LITTLE TRIP TO THE WAR

THE THIRD ARTICLE FROM THE ASSOCIATE EDITOR ON HIS WAR JOURNEY

BY HAROLD J. HOWLAND

IT is late afternoon in the early fall. From our stand on the crest of a little hill in the middle of a great plain the eye sweeps thru a half circle of horizon line. The farthest points before us are dark with wooded hills. The middle distance and the foreground smile with pleasant fields, here green, a little faded by the summer's heat, there brown beneath the recent culture of the plow. To the north, half way to the earth's rim, lies a fair city, its outline unmistakable for two great towers rising foursquare above a massive church. Low in the sky hangs soft the ruddy moon, full circled and immense. Just at our feet a little group of peasant folk work steadily among the vines that grow the grapes that make the wine that maketh glad the heart of man. The road behind us holds a knot of boys and girls returning home demurely playful from a day's work done.

It is the pleasant land of France, the province of Champagne, famous in every corner of the world as a source of gaiety and bubbling life. Those towers yonder are Rheims, the crowning product of an age of flowering art and loving workmanship. Just such a scene as this a painter might portray and call it Peace—and who would say him nay?

Peace? Peace indeed! It is a twelvemonth now and more since this fair plain knew peace. A year it is and hardly more since hungry waves of war passed this way once and twice, in flood and then in ebb. And even now—

The sky is spotless, blue, and sifting down over the distant hills a shimmering blue haze. Besides the moon two objects hang aloft—a lesser yellow ball and slim black speck upon the canopy. Two products of man's ingenuity, to challenge gravity and take men up above the earth to see what they may see.

But suddenly the peaceful three are not alone. A ball of smoke, fleecy and white, its center an instantaneous flash of light, hangs between moon and drifting dot of black. Another and another, then two more; and then all float there motionless upon the windless air. Still the black spot drifts on unhurried, undisturbed.

So here's a little bit of war at last—a peep beneath a lifted corner of the veil that keeps this greatest war of all invisible. That's a French aeroplane that sails calmly on, those German shrapnel shells that burst so prettily and leave it still unharmed. That lesser moon is a balloon riding at anchor and keeping watch for France. It tells the hidden *soixante quinze* those gallant guns so well beloved of Frenchmen—what their next task is, and when it's done, what is the measure of their success.

Do you see off there, just this side of the hills, those strips of brown across the faded green? Those are the German trenches, so they say, not two miles off, where they have lain for twelve months now. And over there, midway between Rheims and them, another patch like freshly turned up earth shows the French trenches. They have held the foe at bay since first the sons of France drove him back headlong from his high-water mark along the Marne.

Just here beside us is another trench, man deep and not so wide, stretching a hundred yards along this little crest. Along its front runs parallel, ten yards away, a wire network, sharp with vicious points. Here and there among the fields are others just like it, the reserve trenches, ready if ever the enemy should summon strength to come this way again.

So, at the end of a pleasant day's excursion, one sees a little war. It is but the fortune of war that there is so little to be seen; for only this morning a lively exchange of gunfire was taking place just here. And before many days are past—the rumor grows and grows—great things will happen over there and all along the line of which we see from here a single narrow stretch.

But if we have seen so little war, we have seen far, far too much of what war does. For we have been to Rheims.

It is an agreeable party that left Paris at noon, a dozen or so of neutrals and a pair of charming hosts. Four Americans, journalistically inclined; four or five Spaniards, among them a future premier, perhaps; a Buenos Aires writer man; a lady journalist from Sweden; an artist equipped with easel, palette, canvas; and others less accurately placed. Our hosts, a young man from the Foreign Office and a former naval officer mobilized from his retirement to act a censor's part, are joined, as we leave the train, by a smart captain of the staff. Two hours, beguiled by luncheon in the dining car, bring us to Epernay. From there by motor cars, all somber in the gray of war, but reminiscent in their fitted luxury of days of peace and *promenades* in the *Bois*.

From Epernay the road turns and winds and mounts a ridge. A splendid road it is, even after months of war—such a road as always makes one say, with Trilby's Laird, "They manage these things better in France." Up thru a village, once the scene of homely life, now half burned down and all but tenantless. An old woman has a ready tale to tell of how the Germans came that long year ago and passed and then rushed back again, burning as they went. A younger woman adds a word, a toddler hugging her skirts the while and pouring out in sobs childhood's mysterious grief. A single cart goes by, conducted by a man too old to fight. And that is all—of Marfoux, one of a hundred villages that were. Then up again, until the top is reached and there before us lies the pleasant plain, the towers of Rheims the focus for our eyes. So on to Rheims along a road the Germans shell from time to time. So says the sergeant in the footman's place, a teasing twinkle in his eye.

Two things impress the mind on entering Rheims; two things that contradict—and yet do not. It is a city void of life. A railway station sans trains, sans traffic, sans travelers, sans everything. A park as lifeless as a desert scene. Street after street empty and echoing to our car's exhaust. Shop after shop, whole rows and blocks of them, tight shut and with their windows boarded up.

Here and there a building wrecked, a front blown out so that the floors hang drunkenly askew, a house apparently intact until one peers in thru a window and finds nothing but debris where had been a home. In some streets more, in some streets less; but everywhere some damage, some destruction. It is no wonder that a city thus assailed, where death and ruin have dropt here and there and everywhere, should have no people in it.

And yet it has. That's the surprizing fact. Folk live here. A few streets show a little trickling flow of life—if one can call it life. A shop stands open here and there, even a cafe with a table or two outside; old men, women, boys and girls pass to and fro or stand and sit and seem to wait for something to turn up. Here in a square a monument stands, its base surrounded by a picturesque design of flowers and foliage plants. An old man waters them with care. The city

is stricken down, but it still breathes and moves a little as if it were in sleep. But what of the Cathedral? There the whole world's interest lies.

It is not damaged much—so the first glance suggests. But a moment after and the heart shrinks with pain. Not injured? Because its towers stand, its form's intact, its walls do not lie prostrate? No, it is not so.

As well one might have said that Helen of Troy, her hair cut off, one eye put out, a hand dismembered, would have lost nothing if she still could walk. Has the world lost nothing with the Milo's arms? Was the sum of earth's beauty nothing lessened when the Nike's head came off?

Rheims was a jewel. It is a jewel flawed. It was a flower, perfect in form, in vein and petal, shade and hue. It hangs bedraggled, mutilated, from the stem.

Its graceful carving, rich and delicate, shows gaps and wounds. The great rose window has lost half its lustrous glass. Statues want their heads, carved spires their tops, windows their tracery—the main façade lacks that perfection that made Rheims unique.

Beautiful still? Of course it is. Such lines as that, such structure, such nobility of outline, do not lose their beauty while two stones remain together. But there was so much else that now is gone. The world is permanently poorer for what happened here. The world will not forget, cannot forgive, the minds that willed it so.

So back to Paris from our little trip. We have seen little war; but who sees *any* war in these new days sees more than most. But what war does—the kind of war that some do wage—we've seen, and seeing, we have hated it.

Paris

DOES THE NAVY NEED ADVICE?

BY PARK BENJAMIN

PATENT LAWYER AND NAVAL EXPERT

THE Secretary of the Navy, having appointed a so-called Naval "Advisory" or "Inventions" Board of twenty-two members nominated by eleven technical societies, with Mr. Edison as chairman, summarizes its functions as follows:

1. To give your expert advice when called upon in the big problems the Navy is always trying to solve.

2. To initiate suggestions which will add to the efficiency of any unit of the Navy.

Mr. Edison takes a somewhat different view, and announces "We're not inventing and we're not even going to develop inventive ideas submitted. . . . The civilian board members . . . will give expert advice to the Navy whenever the Navy desires it."

The foregoing denial seems to apply only to future activities. A storage battery which has been extensively advertised in the service journals for quite a long time and of which Mr. Edison is said to be the inventor, is being actively urged upon the Government for submarine use and is now under trial in a vessel of that type. Mr. Edison also, after announcing that he knew nothing about submarines, has proceeded with much publicity to the Brooklyn Navy Yard, and there for the first time examined one.

He is at present reported as unwilling for philanthropic reasons to turn his inventive talent to war material, and is not known to have claimed any war inventions since his name was hyphenated in that of the Edison-Sims dirigible torpedo which was prest upon the Government some thirty years ago and then asserted to be the most frightfully formidable weapon of its class.

So far, the sole outcome of the board's deliberations is a proposition that the United States shall build and equip a gigantic "laboratory" at a construction cost of $5,000,000 and an operating cost of about $3,000,000 per year. It is to include, we are told, pattern shops, brass foundries, cast iron and cast steel foundries, machine shops, sheet metal shops, forge shops, woodworking shops, a chemical laboratory, a physical laboratory, an optical laboratory, an electrical laboratory, a mechanical and testing laboratory, a laboratory for explosives—and "at least two, and possibly three, shifts of men." It is to be under the control, not of the Advisory Board, but of "a naval officer of rank," under whom will be "naval heads of broad experience in laboratory methods and science in general, besides staffs of civilian experimenters, chemists, physicists, etc." The whole is to be "surrounded by a high fence and guard maintained at all hours. No visitors allowed."

WHY THE LABORATORY?

There being no necessary or even apparent relation between board and laboratory, the precise object and purpose of the latter is somewhat obscure; but there seems to be a public idea that, like Mr. Edison's visit to the submarine, in some way it will cause or stimulate inventions. Inventors, however, like poets, are born and not made. The divine afflatus cannot be pumped. No one has ever invented anything to order, and altho there have been cases where after accumulating many jars of chemicals, and many electrical appliances, people have mixed them together, hit or miss, with the hope that something likely to pay might come out of it, no one today, despite the prospective help of a $5,000,000 laboratory, can announce that he is "going to invent" without provoking general derision. Some forty years ago that sort of prophesy was quite common, and much corporate stock was sold on the strength of it. But as the inventions, if they ever materialized, generally came from wholly unexpected sources, "going to invent" nowadays has lost its efficacy even as a promotion asset.

This renders the proposed laboratory difficult to distinguish from a bureau to be filled with place-holders under the patronage of the Navy Department, or from part and parcel of Secretary Daniels' well known scheme of substituting government-owned plants for those privately controlled. Of course, like every present project having its objective in the national treasury, this one is to contribute to our "preparedness" but precisely how and against what is yet to be explained. Whatever arguments may exist, however, they are sure to apply to more and still more "laboratories" thruout the public service. The Army, which has "big problems" of its own, will likely enough demand not a five, but a ten million dollar establishment. The Patent Office, which really needs something of the kind, is used to poverty and might be contented with something less. The Food Commission, the people studying the Mississippi levees, forest conservation, mosquitoes, the hookworm and Culebra slides, could no doubt all demonstrate to their

own satisfaction a crying need for laboratories of the most comprehensive character. It even seems illogical to stop with the Navy, when we might have a grand composite hundred million dollar laboratory for finding out everything about everything, and incidentally providing a promised land flowing with milk and honey for "deserving Democrats."

WHO ARE THE ADVISERS?

Leaving aside the laboratory, and accepting the denied intention on the part of the Advisory Board to invent or develop the inventions of others, that organization sems to reduce itself to a slumbering oracle to be roused into advisory activity whenever somebody in the Navy wants it to advise. But why should somebody so desire? Is it because of the superior qualifications of the Board for grappling with the Navy's "big problems"? If so, where do they appear? It includes some gentlemen of high professional eminence and it has been chosen, not from the whole country, but from the narrowly restricted membership of

1. The American Aeronautical Society.
2. The American Society of Aeronautic Engineers.
3. The American Society of Automobile Engineers.
4. The Inventors' Guild.
5. The American Chemical Society.
6. The American Institute of Electrical Engineers.
7. The American Mathematical Society.
8. The American Society of Civil Engineers.
9. The American Institute of Mining Engineers.
10. The American Electro-Chemical Society, and
11. The American Society of Mechanical Engineers.

How membership in some of these concerns implies in any sense superior ability to solve "big naval problems," how distinction as an automobile engineer or a subway builder, for example, fits anybody for doing so is not clear. If general technical attainments are a sufficient qualification, why exclude the thousands of engineers and scientists outside of those selected by the eleven societies? If special attainments relative to naval problems are a proper criterion, then altho hygiene afloat is of great importance and naval surgeons now exercize military command, no medical society figures on the list. Accounting and storekeeping in the Navy have of late been the subject of much discussion and study, but no organization of the Accountants is represented. And oddly enough the one society of all others which deals directly with the problems of naval construction—the Society of Naval Architects and Marine Engineers—is conspicuous by its absence.

MEN WHO ARE MISSING

And as for individuals, the contrast between the names of some that are included in the board and of some that are not is probably best accounted for by the internal politics of the contributing organizations. To mention but a few of the missing, where are such aviators as Orville Wright and Glen Curtiss; such shipbuilders as Francis T. Bowles, Lewis Nixon, Richard H. Robinson and (for submarines) Lawrence Y. Spear—all four ex-naval officers, graduates of Annapolis, and famous for their ability long before they left the Navy; where are such experts in wireless telegraphy and telephony as Michael I. Pupin and J. J. Carty; and, most singular of all omissions, where is the name of John Forsyth Meigs, easily the first of American ordnance engineers, another Annapolis graduate and ex-naval officer of long service? Why are there four representatives of aeronautics and none in the fields of ship or gun building?

While an Advisory Board is as unable to produce inventions as a university is to bear children, it cannot, of course, impede or prevent the exercize of inventive genius by its members—and many of them are inventors of distinction. This raises questions. Can the Board properly advise upon the inventions of its own members? Does membership in the Board deprive the country of such inventions? Will outside inventors submit their inventions to a body of other inventors, especially when they know the latter are working in the same field? As the affection of an inventor for his invention is proverbially like that of a tigress for her whelps, is he any more likely to submit its merits to the adjudication of his rivals than a mother is to submit to a jury of other mothers, whether or not her offspring is good looking? Are members of the Board to be permitted to hold patents for their inventions made during their term of office, or to exploit them as against the Government? If so, where is the line to be drawn between inventions of general utility and those specially adapted for naval use?

The regions in which the wayward inventive faculty may happen to stray cannot be circumscribed. Suppose Mr. Hudson Maxim, distinguished as an explosive inventor, but appearing on the Board as an aviation expert (he was nominated by one of the Aeronautic Societies) should invent a shirt-ironer expressly suited to the steam laundry which Secretary Daniels now thinks no battleship should be without. Is it not conceivable that the Secretary might be seriously perplexed between retaining Mr. Maxim on the Board and losing a highly efficient shirt-ironer, or sticking to the shirt-ironer and losing Mr. Maxim? The case is, of course, imaginary, but similar conditions might perhaps arise regarding the storage battery already noted as invented by the Chairman of the Board. Power for submarines during submersion is one of the "big problems of the Navy." Does the Board propose to pass on the merits of its Chairman's already offered battery? If not, why not?

And people are already asking how all these busy chemists, engineers, electricians, automobile makers, and the like, acquired education in the "big problems of the Navy," or whether they have still to get it? Barring the professional biographies of four ex-naval officers who resigned many years ago and went into other callings, the published "who's whos" afford no illuminating information on the subject. A New York newspaper remarked the other day that anybody could open any one of twenty doors in the Navy Department corridors and find an officer who knows more about naval needs than the most distinguished of these distinguished scientists.

SHOULD CIVILIANS ADVISE EXPERTS?

But most anomalous of all, here is a body of men chosen from other pursuits in order to give advice to the undisputed experts of another profession, in the most important matters of that profession. And not only this, but advice calculated to influence the professional judgment of experts upon whose skill, efficiency and independently trained judgment the safety of the nation depends. Is it not astonishing that any one—even the Secretary of the Navy—should conceive of such a proceeding; or should seriously believe that the naval officers charged with such terrible responsibilities would submit themselves to such counsel? Yet either it must be heeded or not heeded. If not, why the Board? If it must be, is the country prepared to shift the responsibility involved in its "big naval problems" from the men whom it has educated since childhood to meet them, and who are bound by every tie of discipline and devotion, to an irresponsible body of civilians created by and amenable to no law?

The naval officers are seldom vocal about the affairs of the Navy, partly because they are muzzled by regulations, and partly because indiscreet utterances are apt to result

© American Press Assn.

U. S. S. "NEVADA," THE NEWEST AND GREATEST SUPERDREADNOUGHT

[illegible]

in long seclusion at distant stations; but so far as the writer has been able to judge, their opinions on the present subject range all the way from silent disapproval to questioning whether this scheme is another of the Secretary's original ideas for exalting the civil above the military power, or a new sample of his peculiar brand of socialism which wants to "down the gold-laced aristocracy of the navy." Others grimly object to amateur efforts "to teach them their business." And indeed of all men this last they least need. From the moment that they enter the service until they retire from it, their education is incessant. No more pitiless self-critics and task-masters exist than they. From generation to generation they teach one another—the elders, the younger. They abolished scholastic control by civilians in the United States Naval Academy, fifty years ago. And because the Navy is always mobilized and ready for war they learn its needs under practical conditions. Is it likely that civilians with no similar knowledge or experience are competent to instruct them concerning the problems at which they are always working?

The Secretary of the Navy seems to regard himself as the originator of making civilian counsel available to the naval officers. If he holds that idea he is misled. The subject is one which has been under discussion for many years. It was suggested to him by his former Aide for Operations and urged during the latter's entire term of office. It has been discussed in the columns of The Independent for upward of seventeen years.

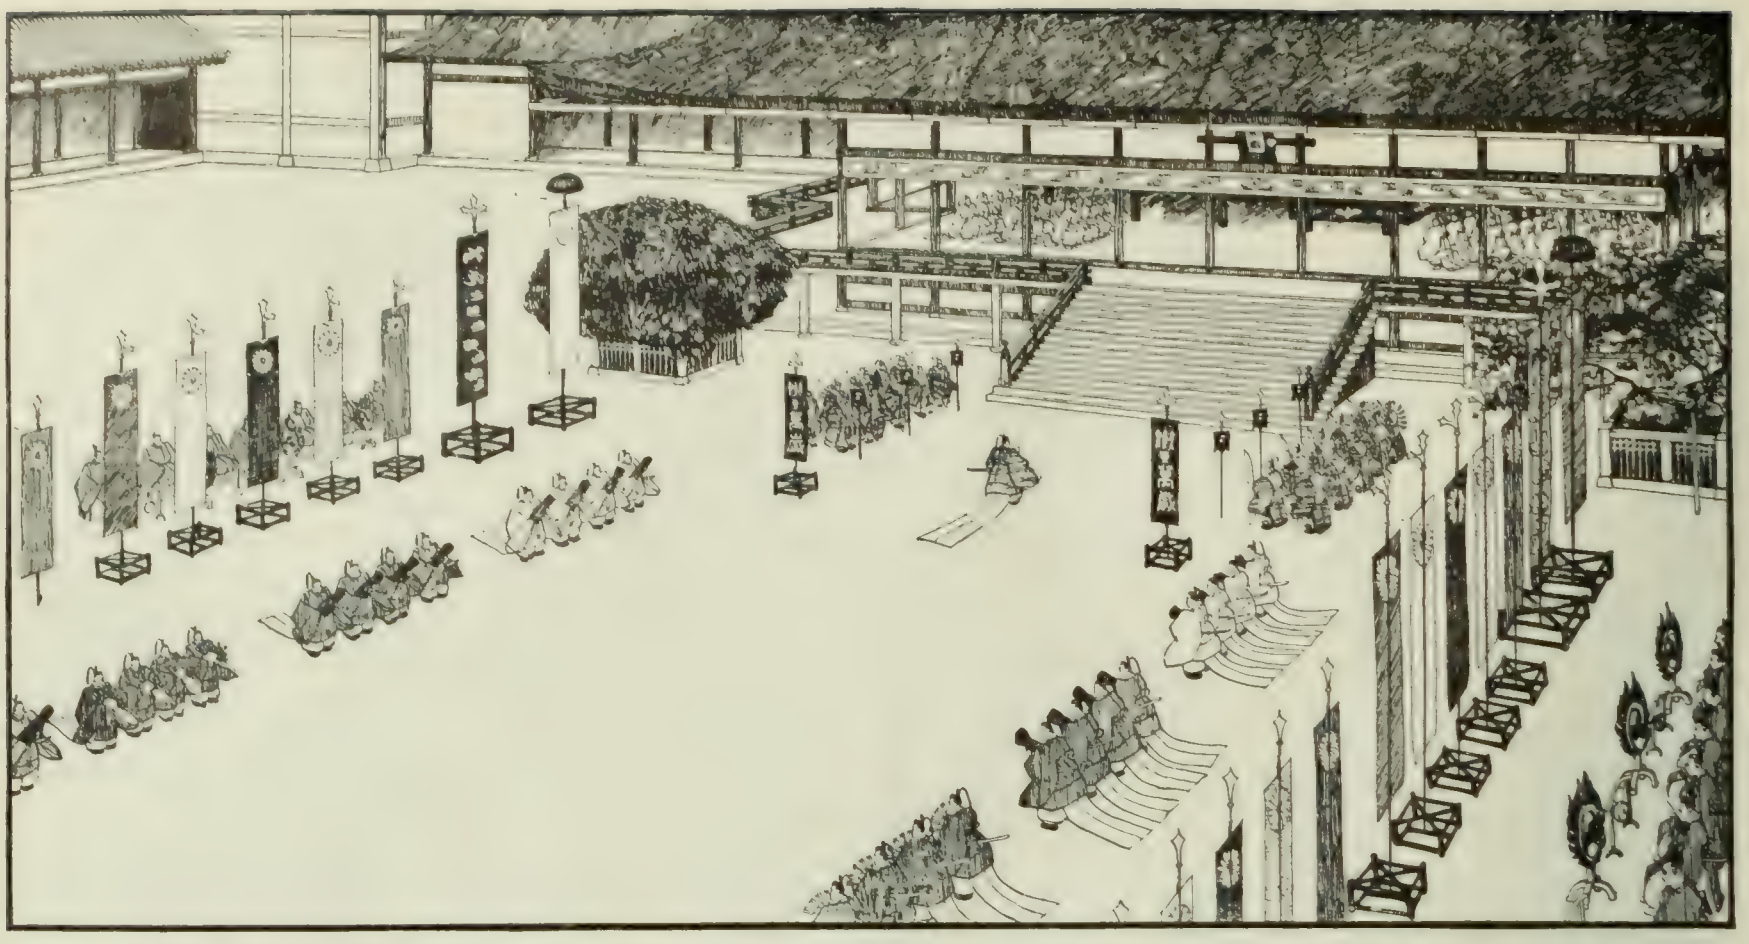
A BETTER PLAN IN ENGLAND

A very much more logical and better plan than that of Mr. Daniels has already been carried into effect by Great Britain. It comprizes a Central Committee under the presidency of Admiral Lord Fisher—"the father of the modern British Navy"—naval head of the Admiralty for years prior to his retirement for age, and recalled to it again during the present war, altho the vagaries of the now extinguished Mr. Winston Churchill led to his speedy withdrawal. With him are associated Sir Charles A. Parsons, an engineer of the highest eminence, inventor of the steam turbine which bears his name, and its principal developer, Sir Joseph Thomson, long Cavendish Professor of Physics at Cambridge and now Professor of Physics at the Royal Institution of London and a physicist of worldwide fame, and Dr. G. T. Beilby, an inventor of many industrial processes and a chemist who has made a special study of fuel economy. In other words, here is a small executive group managed by a famous naval officer, and including an engineer, a physicist and a chemist of the highest rank.

Associated with this Committee is the Royal Society and twelve consultants which advises (not the Navy, but) the Committee on matters specifically referred to them. The Royal Society investigates and develops proposals provisionally accepted from inventors. The examination of new suggestions and plans is confided to committees of naval officers "in order that technical knowledge and experience shall be brought to bear on these matters in the initial stage." And between the naval officers on the one hand and the consultants and the Royal Society on the other, logically stands the coördinating Central Committee, with a consummate seaman at its head. No one has announced that he is going to invent anything, no one has suggested any "laboratory," and no member is known to be engaged in selling anything to the Government. The object is not to teach the naval officers their business, nor to build up the political fences of the Admiralty's First Lord, but

to assist the admiralty in coördinating and encouraging scientific effort in relation to the requirements of the naval service.

ENCOURAGING INVENTION



It is questionable, however, whether any permanent organization of civilian advisers is suited to our naval needs. Intelligent as American naval officers are, the fact that their profession removes them from close contact with the business world and involves much engrossing detail and routine renders them cautious—and sometimes over-cautious—in accepting innovations. When the individual is translated from active service afloat to an administrative position in which he is called upon to deal with lawyers, promoters, contractors, and the like, his caution increases, and is apt to take the form of imposing counsels of perfection upon newly proposed ideas. He tends less to give credit for what has been accomplished than to reject the improvement altogether, because it has not attained some arbitrary standard of his own fixing. Conditions such as this delayed our adoption of the submarine, the telescope-sight and many other inventions which, altho originating here, found their first utilization abroad. This sort of supercaution militates against the advantage which this country possesses in being the most inventive nation in the world.

What we need and have long needed is a more progressive spirit, a greater toleration among the naval officers who are called upon to judge, and more direct official encouragement for those seeking judgment. It is believed that this can be secured by the assistance of civilian experts, not to supplant the naval officers' judgment, but to enlarge the horizon within which he exercizes it. The problem of which a solution is desired should be set forth publicly so as to reach the inventors of the country. They should be assured that counsels of perfection will no longer be insisted upon, and that whatever a man may be found to have actually done in the way of progress will be credited to him. Each solution should be passed upon by experts conversant with the subject-matter of the particular problem involved; and each group of judges should include a majority of naval officers and a minority of civilians, the function of the latter being to bring in the views of the world outside of that bounded by the naval circle. The point is not that these outside views shall prevail, but that they shall be considered. It will be immaterial, therefore, if a given group should on any question divide with the naval officers on one side and the minority of civilians on the other. The former would have had the benefit of the latter's views, and the final and deciding authority in such case might also have them in the form of a minority dissenting report. This, while leaving the naval officers with their full responsibility, gives them the means of seeing and approaching their problems from standpoints different from their own. There is no lack of such civilian experts, and surely no lack of the patriotism which would render them willing to serve. Such service would be an honor to be prized, and unlike that of the present Board it should be made legal by compensation.

Where an idea has been found to be practical and useful so far as it goes, the Government may properly undertake its further development. This may be done by its direct employment in the fleet or in a reserve or obsolete vessel or vessels specially set apart for trial purposes, or in private establishments or Navy Yards where facilities for the particular trials needed are available.

Based upon a study of naval needs and naval invention extending now over a period of half a century, the present writer is unable to avoid the conclusion that the Naval Advisory Board as now created is not adapted to rendering useful assistance to the Navy. The five million-dollar laboratory project Congress can safely be depended upon to squelch.

New York City

COURT DIGNITARIES AWAIT THE CORONATION OF HIS IMPERIAL MAJESTY AT THE SHISHIN-DEN PALACE

THE ACCESSION OF THE MIKADO

THREE WEEKS OF QUAINT CEREMONIES NOW BEING PERFORMED IN KYOTO

"EMPEROR YOSHIHITO announces to the Imperial Ancestral Divinities the fact of his succession to the Imperial Authority, of his coming to the possession of the Sacred Treasures and of his ascension to the *Takamikura*, the Imperial Throne. *Banzai!* Long Live the Emperor!"

By this proclamation Japan began the coronation ceremonies which are being celebrated with all traditional ritual at Kyoto from November 6 to 28, three years after the Emperor actually began his reign. *Senso* and *Sokuyi*, the two impressive ceremonials which are held on November 10, are the actual accession and coronation. The first of these is the ancestor worship at the Shenko-den Palace. There the Emperor formally acquires the Three Sacred Treasures—the *Shin-ki*—and prays for the prosperity of his reign, already proclaimed a "new era of great righteousness."

Gongs and drums give the signal for the weird *Kagura* music, during which the offerings are laid in front of the shrine. Then their Imperial Majesties, escorted by Court dignitaries in their traditional ceremonial costumes, enter the Inner Hall and proceed to the Sacred Shrine. Since shoes may not be worn in the Divine Presence the Emperor walks on a fresh rush mat, spread in front and rolled up from behind as he proceeds, so that no other person may tread upon it.

While the Emperor reads his address a ritualist rings a sacred bell, calling the attention of the gods to the recitation. Their Majesties then make obeisance before the *Kashikodokoro*, the Place of Awe, in which is the Divine Mirror. The Sacred Sword and the Bead Necklace are on a nearby table. These three, the Sacred Treasures of the Realm, symbolize Knowledge, Courage and Mercy—necessary attributes of the sovereign. They were given by Amaterasu Omikami, the Sun Goddess, ancestress of the Japanese nation, to her grandson, Ninigi-no-Mikoto, when he was about to descend to earth from heaven to reign over the Land of the Rising Sun. Fourth in the direct line of descent from Mikoto was Jimmu Tenno, whose accession to the throne in the year 660 B. C. is taken in the records of Japan as the beginning of national history. His Majesty, Emperor Yoshihito, is the 122d in an unbroken line of sovereigns extending over 2575 years.

Having solemnized his enthronement before his ancestors, the Emperor will formally announce his reign to the representatives of his people, from the *Takamikura*, the Imperial Throne in the Shishin-den Palace. At that hour fireworks and bombs and salutes will acclaim the Emperor in Tokyo, Osaka and other principal cities of the realm.

The *Daijo Sai* is a form of harvest Thanksgiving to be held on November 14. The Emperor makes offerings of the newly harvested rice to the deities, and himself partakes of the food with his people. At the shrines of Yuki-den and Suki-den twenty officials of higher rank will guard the gates while the sacrifice is made. Their costume, which, like that of all participants in the coronation, is prescribed to the minutest detail, is the *Sokutai*, a coronet with a pennant of silk gauze coiled at the back, and a pair of *Oikake*, a short robe of light blue, a loose tunic with a long train, a jeweled belt, a sword with a broad girdle, a flat quiver with arrows, a bow, a pair of shallow shoes, and a consecrated surplice.

After the Divine Oblation the Emperor returns to Kairyu-den. Post-coronation banquets are held on three successive days. At the first of these the most ancient of Japanese dances, the *Kume-Mai*, will be given.

The rites of worship at the Shrine of Ise and at the mausoleums of the four last Emperors are the last of the Kyoto ceremonies. Their Imperial Majesties return to Tokyo and perform obeisance at the Kworeiden and the Shin-den. Then as the official Coronation Sheet explains:

"The Emperor and Empress shall leave the sanctuary.

"The Divine Oblation shall be removed.

"The door of the sanctuary shall be closed.

"And while the ritual music plays—

"All the persons assembled shall withdraw."

WHAT THE CORONATION MEANS

BY K. K. KAWAKAMI

Mr. Kawakami, author of "Asia at the Door" and "American-Japanese Relations," has several times contributed to The Independent. His last article, published in May of this year, dealt with the relations between Japan and China. He has studied in the Universities of Iowa and Wisconsin and is an authority on the international relations of Japan.—THE EDITOR.

WHEN the late Mikado, the father of the ruling sovereign, was enthroned sixty-three years ago, no courtiers and officials privileged to participate in the coronation felt the necessity of rehearsing the ceremonies so that the occasion might not be marred by any improper conduct or uncomely appearance. The robes they wore at the coronation were patterned much like the every-day robes of the court, and they were familiar with the etiquet that was observed on all such occasions.

The half century that has since past has proved a millennium. In that short period Japan has effected a complete change of her government. She has cut loose from medieval traditions and has inaugurated a new social order. She has even said goodbye to the beautiful and picturesque, which invested her country with peculiar charm, and has adopted in their place the material civilization of the Occident based upon the principle of efficiency. And what is the result?

So far from her former moorings has she been removed that today her nobles and officials, save the masters of ceremonies of the Court, know nothing of the time-honored custom of coronation. When the Imperial Household announced a few months ago that the coming coronation would, in deference to the memory of the imperial ancestors, be conducted in accord with the ancient traditions of the Court, the personages invited to attend the ceremonies felt that a difficult task was in store for them. For few of them knew how to don the ancient court robes, much less how to conduct themselves as the courtiers of yore would have done on such occasions. As the greatest of great days drew near these privileged subjects of the Mikado organized a class for dress rehearsal and for the practice of the various rites which would constitute the coronation.

This is indeed a significant indication of the signal transformation which Japan has witnessed in the past few decades. To the new generation which dominates the island empire today, the Japan of fifty years ago is like a quaint print of *ukiyoye*. The metamorphosis is not confined to the progressive class of people, but is apparent even in the citadel of conservatism, the Court of the Mikado. The Emperor himself, tho still revered and respected as were his august ancestors, is no longer shrouded in the atmosphere of mystery which surrounded his father. The modern educational system, that destroyer of social castes, could not fail to influence even the princes and princesses of the blood, for they, too, must be educated.

Yoshihito, the present Mikado, in his boyhood days, received a liberal education in a modern school. True, he did not go to school with plebeian sons for he matriculated himself in the Tokio School for Nobles. Nevertheless, he read books, ran races, played ball with boys who, had it been in his father's days, would never have dared to stand face to face with him. The day is gone, never to come back, when the Mikado was simply the Mikado and not a personality animated with desires and feelings common to all humanity.

Not less remarkable than the democratization of the country is the cosmopolitan tendency which it has witnessed in the past half century. Of this tendency the coronation bears strongest testimony. While the ceremonies follow the traditions of Shinto, the representatives of the Buddhists are permitted to be present on the occasion. A most radical departure from ancient usages of the Court is the formal acceptance by the Mikado of the English Bible presented by the Christians of America to commemorate the auspicious day. Dr. F. A. Sturge of San Francisco has gone to Japan with it.

Nor is it only in the matter of religion that the coronation will be cosmopolitan. Take the musical program. At the entertainment following the rites of enthronement, the musical program consists of selections from the classical compositions of Japan. On the next day the music is Chinese, and on the third day Western composers such as Verdi, Wagner and Gounod are well represented. Even in the cuisine of the banquets this cosmopolitan tendency is evident. The banquet on the first day is purely Japanese in style. The next banquet follows the Chinese custom. In the final and grandest banquet the covers are laid in accord with the Western manner, and the cuisine is entirely Occidental.

In spite of all that has been said above the ceremonies are marked with simplicity, for simplicity is the keynote of the Shinto ritual which is followed in the festival. The structure where the enthronement ceremony takes place is of the plainest nature, and is modeled after the Shinto shrine, which is little different from the modest hut of the medieval ages. The robes worn by the Mikado and his attendants are made of equally plain material. There is no gorgeous pageantry. Pomp and grandeur are not the words to characterize such a festival.

The rites of coronation are essentially religious, if we may call Shinto a religion. The Mikado humbles himself before the Mirror, the Sword, and the Jewel, the sacred trinity bequeathed by the founder of the imperial dynasty. The Mirror says, "Know Thyself"; the Sword says, "Be Brave," and the luminous Jewel says, "Enlighten Thyself." Bowed low before the sacred symbols of the imperial dynasty and of the state, the Mikado holds communion with the spirits of his forefathers, invoking their guidance in the discharge of the grave responsibilities which he has assumed as the sovereign ruler of the land. He talks to them humbly but lovingly, as if to his living parents.

This particular scene of the coronation is illustrative of the attitude of the average Japanese toward his ancestors. Even in these latter days of materialism almost every household has a small shrine where rest the spirits of the dead symbolized in tiny wooden tablets. Before this miniature shrine or "god-shelf" members of the household, young and old, sit for a few moments every morning before they break the fast, murmuring a few words of reverence and affection for the spirits that dwell there.

In the glorification of ancestor worship, perhaps, lies the greatest significance of the coronation. Above the apparent change of material life and amid the onrush of Western influence Shinto stands forth unmistakably as a religion of the heart. It is not only a living source of poetry but a national sentiment of tremendous force. And this sentiment receives now and then a strong stimulus from such state festivals as the coronation.

San Francisco

THE WORLD OVER

Measured Mirth

By the use of a new instrument called the acougraph, the exhibitor of comedy "movies" can tell exactly how funny each film is. Nothing is left to luck. He doesn't have to guess that, for example, Charlie Chaplin is the funniest man in the trade: the needles of the acougraph—a horizontal line measuring the duration of the merriment and a perpendicular one the loudness—show that folks laugh ten times as loudly at Charlie as at anyone else and twenty times as long.

"In the Chaplin plays," reports a new trade magazine called *Film Fun*, "the needle's horizontal progress was practically unbroken, showing that laughter was continuous from the beginning of the picture to the end."

What a thing it is to have one's efficiency certified by the acougraph! And what an advantage the film showman has over folks of other trades! Life would be more like a song for us if every job had its acougraph.

Irrigation on a Big Scale

In the valley of the Rio Grande River on the border between the United States and Mexico engineers of the United States Government have almost finished one of the greatest reclamation projects ever attempted. At a cost of $10,000,000 the Elephant Butte Dam in New Mexico, which will turn 180 square miles of almost worthless desert into fertile farms, has been constructed. And for three years the entire flow of the Rio Grande will be required to fill it. This artificial lake is forty miles long and from three to six miles wide. It will hold 650,000,000 gallons, or enough to cover 2,000,000 acres of land with water to a depth of one foot.

The work on the dam was started in the spring of 1911 and more than 1000 workmen have been employed on the construction ever since that time. When the project is finally completed 550,000 cubic yards of solid masonry will have been put in place.

The dam itself is 1200 feet long and 304 feet high at the highest point. The cost, with the exception of $1,000,000, will eventually be paid back into the Government reclamation fund by land owners who will benefit by the dam, and will again be used by the Government for reclamation work in some other section of the country.

The $1,000,000 was appropriated outright and is being used for that portion of the work which will benefit farmers in Old Mexico. The appropriation was made to furnish this water in settlement of several million dollars in claims which the Mexican Government had presented to the United States for damages to land on the Mexican side, as a result of the water from the river being used in small irrigation projects on the American side, thus robbing Mexican farms of water which naturally would have gone to them.

NEW MEXICO'S STEP TO PROSPERITY

Extensive irrigation from the river without the aid of a great dam and reservoir is impossible, because of the rapidity with which the stream changes from a raging torrent to a bed of dry sand.

With the completion of the dam and other irrigation projects which will follow, a great future for New Mexico is assured. New Mexico lies in the heart of the arid section of America. She has 122,460 square miles of broad plains, rugged mountains, sage brush deserts; greater in extent than all New England, with New York and New Jersey thrown in, but with a population of only about 500,000.

When Rover Motors

One of the questions with which many an automobile owner is confronted is "Where shall we put the dog?" A dog develops the "motoring habit" in a remarkably short time, and when once he discovers the joys of touring there is nothing to be done but to "take him along."

This was the case when W. J. Parker of Pasadena, California, purchased his new car. Rover had to be taken along, but it was soon found that as the dog was permitted to ride within the machine his claws were gradually damaging the enamel and the upholstering of the auto. So Rover was transferred to the runningboard at the left side of the car. Everything worked nicely until a corner was turned sharply, but then the dog was sent spinning off into the street.

Finally a simple guard rail was constructed of strips of steel three-fourths of an inch wide and one-fourth of an inch thick. It is about sixteen inches high and two feet long. The lower ends of the uprights are fastened beneath the runningboard. The upper end of the guard is braced by a strip of steel running to the outer edge of the front fender.

A GUARDED JOY RIDE

The Cost of Raising Wages

Suppose the Legislature should decide that working women must be paid a living wage. What difference would it make? First of all, increased wages.

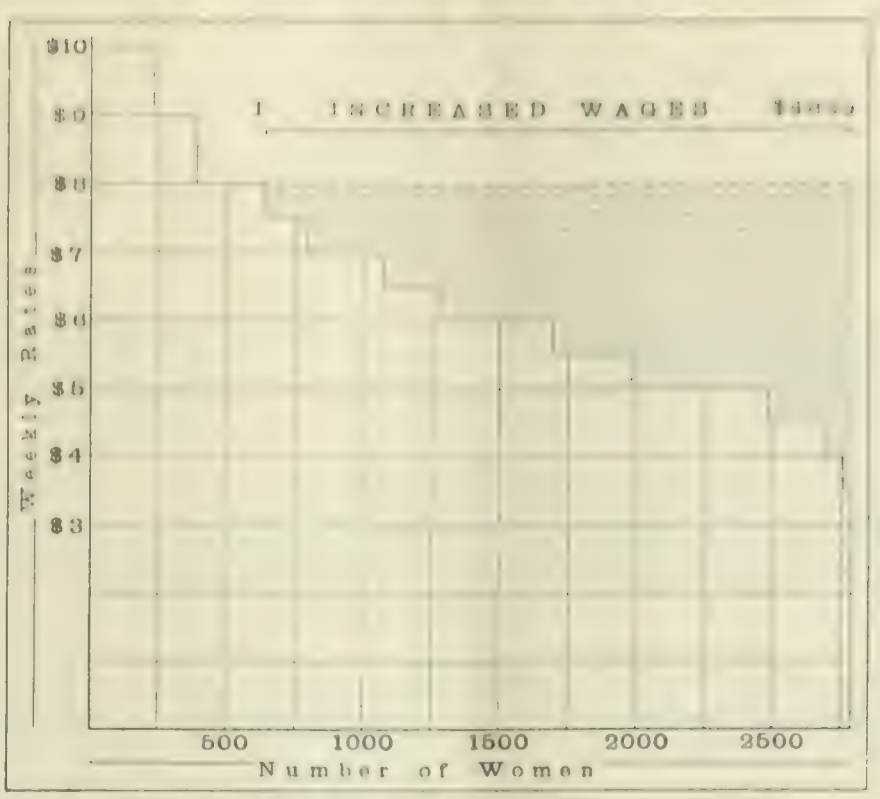
Let us take the weekly wages of 2785 women employed in New York City candy factories, and plot them as shown in the first chart. The hight of each step above the base line shows the rate of pay, and the breadth of the step shows how many persons receive that rate.

Now suppose a wage board should find that eight dollars a week is the least sum a woman in industry must have to live on. Then if these women were to be retained, 2146 (three-quarters of the whole number) would have to be raised to the eight-dollar level, as shown by the dotted line. This increase would amount to $4859 a week, an average of $2.25 more for every underpaid woman.

But the total weekly pay-rolls of these sixty-one factories already aggregate $57,201, so that $4859 more means an addition of only 9 per cent to the wages of productive labor.

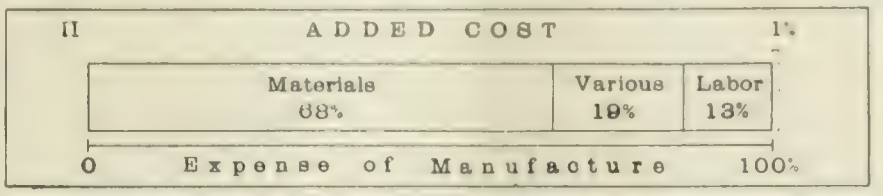
Let us see how such an added expense would affect the cost of making candy. In the second chart the top bar represents all expenses in the manufacture of confectionery. According to the last census, the cost of materials in these lines amounts on an average to 65 per cent of all charges; salaries for non-productive help and miscellaneous expenses constitute 19 per cent; while the wages of labor use 16 per cent

Now if the cost of labor were to be increased by 9 per cent that would mean adding 9 per cent of 13 per cent. or a little more than 1 per cent to the total expense of manufacture. The comparative extent of this increment is shown by the dotted extension to the right.



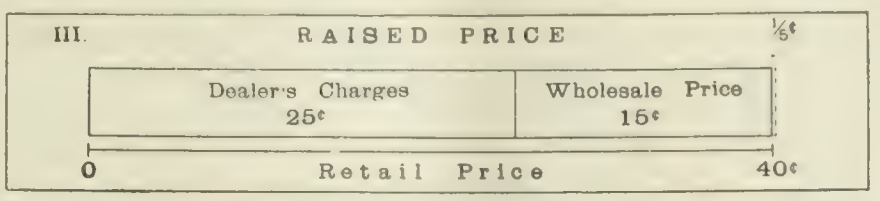
How much more would the consumer have to pay to make up the difference in cost?

Suppose candy that is sold at retail for forty cents a pound costs fifteen cents to make. This is a moderate increase from wholesale to retail rates. Shipping and selling then absorb twenty-five cents of the final price.



If the manufacturer has to add 1 per cent to his price to pay the increased cost of labor, he can charge fifteen cents more a hundred pounds for this brand and cover the difference. Suppose he raises it twenty cents a hundred pounds. That is only one-fifth of a cent per pound more for the dealer to pay.

Finally, when the retailer passes this burden on to the purchaser, he also is obliged to ask one cent more for five pounds of candy, an increase of one-half per cent above the former selling price. The amount of this additional charge to the public may be discerned to the right of the lower bar in the third chart.



In short, a very considerable raise in wages can be met by a slight increase in price, thru the distribution of costs, as illustrated by this example.

ACTUAL WAGES OF WOMEN IN CANDY FACTORIES

WHAT RAISING WAGES COSTS THE MANUFACTURER

WHAT RAISING WAGES COSTS THE PUBLIC

A City's War Against Cigarets

If you chance to stroll by the city jail of Los Angeles, California, on any one of three certain nights a week, you will behold a veritable mob, men, women and children, clamoring for admittance. In the line you will see persons of all ages, all conditions, both sexes, and many nationalities. They have come to attend the anti-cigaret clinic, which the city is conducting free of charge.

The clinics are conducted under the supervision of the Juvenile Bureau, an adjunct of the police station and city jail, and were originally intended for juveniles only. Grown men and women, however, soon began to ask permission to receive the treatment, and in consequence the department has been opened to persons of all ages.

It was thru the efforts of Lee W. Marden, commanding sergeant of the Police Juvenile Bureau of Los Angeles, that the anti-cigaret clinics were begun. He has been in charge of the city's juvenile probation work for eight years, and has made a careful study of the matter of juvenile crime.

"By keeping an exhaustive record of such matters," says Mr Marden, "I find that over ninety per cent of the boys under twenty-one years of age who are arrested and brought to my office are cigaret smokers. The prisoners are almost without exception stunted in growth and under-developed in mind. Therefore, cigarets must have something to do with crime, and it is my idea to treat the cause of crime.

The treatment consists of a simple throat wash and a tonic. From one to five treatments are usually necessary. The solutions administered act upon the patient in such a way as to make smoking or the taste of tobacco extremely repugnant, and also to destroy the craving for it. In other words, the system is returned to the condition which it was in before the habit was acquired, but, after a time, there is nothing to prevent one from cultivating it again. But it is presumed that the patient sincerely desires to stop smoking, and the treatment enables him to do so.

The treatments are being administered by Dr. T. H. Trinwith, of Glendale, California, who has made a long and thoro study of liquor, drug and tobacco habits. Nearly ninety-five per cent of the cases he has treated are resulting in cures.

THE LINE-UP AGAINST CIGARETS

A NOVEMBER MORNING TRAMP

BY E. P. POWELL

Among the articles left in our manuscript file at the death of E. P. Powell was this genial and simple account of a morning's glimpse at the fields and orchards about his home at Clinton, New York. Most of his later writing was done at Sorrento, his Florida home, and this is probably his last word on the north country.—THE EDITOR.

WHEN we looked out of the window this morning the sun was coming up over the eastern edge of the valley. If you have ever given any study to these things you will note the inquisitorial aspect of the rising sun. It goes down with a very different behavior, throwing backward a great flood of scarlet and crimson and gold; covering the little lakes and big meadows; and all the houses and gardens it brings into high relief. But in the morning the sun looks ahead with sharp glances, as if to say "I expect everybody to do his duty." Yes! yes! Lord Nelson of the skies! you are slightly impudent; for we really had been at work before you got up. It is a November sun, and as we face each other, the eaves are dropping, and the roofs are white from the first snow of the year; and in the lower places there is frost also, even down into the valley.

We have no special fondness for this time of the year; yet one may get a deal of good out of it. A tramp in summer or in early autumn is all sketched out ahead of time, for it is then that we have on hand apple picking and potato digging. But just now a tramp leads us almost anywhere; and this time we will hunt mushrooms in Elihu Root's swale, where the little "inkies" come up over night, around the old apple stumps. It is great fun, this finding things out in the lot; things that nobody planted, and for the most part that nobody owns. You know how it is hunting strawberries in the wood's edge in May, and blackberries in July thru the glens, with your dog as happy as yourself.

Nor are mushrooms the only things that one can turn up under the first snows, and rescue from the early frosts that anticipate winter. Possibly you have been thoughtful and have cut down a few bean poles, so that string beans are still forming under the autumn grasses; or perhaps you know where to find under the hedges and in sly places a dish of dandelions or of scoke greens. Nature delights in hiding things away thru these half-and-half days.

And the collie; what a splendid addition to a morning tramp is a genuine dog. Well, he too has been finding out things, a lot of things for himself; but once in a while he has stopped and called us to share his fun. Just this minute, in that butternut overhead there is a red squirrel, sticking his head out of a hole and watching us. As we look at him he barks at us. We see his tail flirt where his head was, and down he goes, still chattering in the hollow of the tree. Following down the slope, we are now tramping thru a young orchard, where the apples were not gleaned as they should have been. The frost has not hurt them, and we will breakfast on a couple of McIntosh and a Walter Pease. We assure you this is big fun, going thru an orchard that has produced a surplus. A man to whom Nature gives an apple ought to know enough to make some use of it; but half the folk waste half they get.

Just now a suggestive noise greets our venture. It does not come from the mill in the valley, but turns out to be from our own cider mill; a home brew of latest Spitzenburgs—and that is just where all these wasted apples ought to go. It is a grievance that more farmers do not have cider mills. These need not be cumbersome, but comfortable affairs—a press and an engine, that may be set away in the tool room all summer, but when the apples begin to ripen can come to the front. The engine which we hear is home made.

We have not heard in all the advice that is so freely given, whether a drink of new cider is all right before breakfast, or not. We might put it off until dinner, but frankly we will not. Puritans devised this drink, and Puritans used it freely. It is not true that one must brew his cider of sweet apples, nor are we confined to the grafted sorts. Only this, there is nothing viler under the sun than cider made of apples rolled in cow pastures, and without washing. A black-eyed boy, full of snap and ginger, hands us each a glass, saying, "Not a rotten apple here, Sir, and every one washed." That is the kind of boy to bring up and this is the kind of cider to drink. He tells us "We get just three times as much per gallon as for common cider, and the market takes up every quart of it as fast as we can grind." This is farm economics.

Starting from the mill, we find every track that we made in the frosty grass is already effaced. The sun is pouring a broadside of heat all over the hillside, and huge boulders of steam are rolling around the valley. One of these fog banks has settled down over the big church, and left nothing outside except the steeple. Some of the farm houses are entirely hid, only that a column of smoke comes up thru the tops of the fog banks.

Have you any idea what this world is made of, and what a single morning can do for you? It is time that our schools understood that the main end of education is to teach the youngsters how to see and how to hear. Sit down on this huge rock, and for once in your life listen. Try right hard to gather in all the fine sounds that are making the music of the morning. It is literal truth that the morning stars sing together; but it is equally true that everything else is making music; only men and women get out of harmony. But the breakfast bell is ringing, delicious odors spread across the lawns, and our tramp is ended.

Retreat

By Wilfrid Wilson Gibson

Broken, bewildered by the long retreat
Across the stifling leagues of southern plain,
Across the scorching leagues of trampled grain,
Half-stunned, half-blinded, by the trudge of feet
And dusty smother of the August heat
He dreamt of flowers in an English lane,
Of hedgerow flowers glistening after rain—
All-heal and willow-herb and meadow-sweet.

All-heal and willow-herb and meadow-sweet—
The innocent names kept up a cool refrain—
All-heal and willow-herb and meadow-sweet,
Chiming and tinkling in his aching brain,
Until he babbled like a child again
All-heal and willow-herb and meadow-sweet.

Should There Be a New Marriage Ceremony For Ministers' Wives?

An astonishing question, astonishingly answered with eight new marriage-ceremony promises for ministers' wives. A woman who knows has daringly written an article on what a church has the right to ask of its minister's wife that promises to be the most-talked-of article in church circles this winter.

"THE THREE THINGS"

BY MARY RAYMOND SHIPMAN ANDREWS

Efficient Underwear

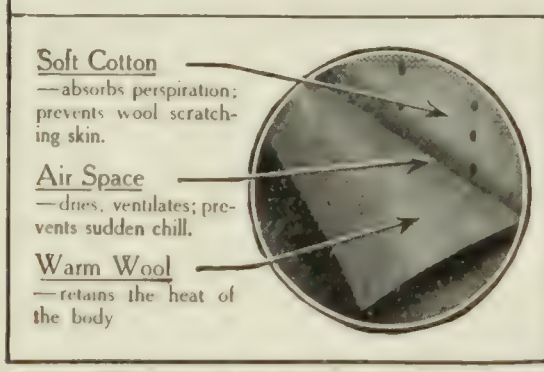
That's a new idea to you, isn't it? Well, think it over!

How efficient are you in underwear that scratches and irritates?

How efficient are you in underwear that gets you too hot, creates excessive perspiration, and then when you sit in a draft in the wind and cool off too quickly, gives you a cold?

Duofold Underwear

keeps your body at exactly the right temperature, no matter where you are, or what you are doing. And it keeps you dry.



Duofold is two-fabric underwear, with air-space between. The soft fine cotton, next to the skin, feels comfortable, absorbs perspiration. The air-space ventilates and dries. The wool (outside) keeps you warm.

No getting over-heated. No getting wet. No cooling off too suddenly. None of those winter colds that come from that sort of thing.

Duofold is the efficient underwear for the man who wants to be efficient. Maintains the natural heat of the body under all conditions.

Duofold is fine underwear. It is made in Union Suits and Two-piece garments for Men, Women and Children. It does not shrink.

Get Duofold for the whole family. Write us for free sample of Duofold fabric, Book on Comfort and Health in Underwear, and the name of a Duofold dealer.

Duofold Health Underwear Co.

ENGLAND'S EGYPT

One of the chief tangible results of the war so far is the definite acquisition by Great Britain of Egypt and the Sudan. This is a gain both to honesty and efficiency, for previous to the war the British Government, tho ruling Egypt as really as since, had no legal authority over the country and in fact had long ago promised to evacuate it. But regardless of technical titles England has proved her right to rule in Egypt by giving that unhappy land a better government than it has had in the seven thousand years of its historic existence. The Assuan dam is England's best title deed to Egypt.

But Mr. Weigall, in his *History of Events in Egypt from 1798 to 1914*, is not concerned with the Assuan dam. Perhaps as an Egyptologist he does not like it. But on the political and personal side of Egyptian government before and after the British advent he is interesting and enlightening. His character sketches of Gordon, Cromer, Ismail Pasha, Mohammed Ali and others are admirable, and he brings out many points hitherto obscure. For instance, he shows that Italy was alienated from the Triple Alliance as early as 1911, when Lord Kitchener prevented the Turks and Arabs from passing into Tripoli to defend that province against the Italians. This was, as the author admits, an infringement of the spirit of neutrality, but it put Italy under a debt to England which she is now repaying.

Egypt from 1798 to 1914, by Arthur E. P. B. Weigall. Charles Scribner's Sons. $3.

CULTIVATING THE COMMONPLACE

To be mediocre and artificial is the sorry lot of most of us, but few of us are so resigned to that fate that we cultivate those qualities deliberately. For those whose intellectual self-respect has, however, quite oozed away, a literary "bracer" has been devised. *The Happy Phrase* is a collection of formulas for every conceivable conversational, epistolary, or oratorical occasion except proposal of marriage and sudden murder. If you are writing a letter of condolence for instance, you may borrow such elegancies as these:

One who ministered so carefully and tenderly

And this thought will be our comfort that

Of gentle presence

All the gentle virtues came into full blossom

Looking forward with a Christian's bright anticipation of a glad reunion

The method of using the manual is thus naively outlined by the compiler:

"The entire volume should be perused for phrases which appeal to one's taste. These should be marked and memorized, and it will be noticed that they will spring spontaneously to the lips or pen."

The most inexcusable thing in English style is lack of clarity; after that is anything more exasperating than the commonplace? Yet this little book, with curious perversity, is put forward to do nothing in the world but vulgarize what is original and disseminate what is trite.

The Happy Phrase, Compiled and arranged by Edwin Hamlin Carr. G. P. Putnam's Sons. $1.

AN IRISH WORDSWORTH?

Forrest Reid borrows the best of such scant biographical details as he deigns to give us in *W. B. Yeats, a Critical Study*, from Katherine Tynan's *Twenty-five Years*. The best thing in Mr. Reid's book is an anecdote told by A. E.: "Some years ago A. E. was teaching him to do pastels, and coming out one day he found the poet at work on a woodland sketch which he was doing from nature. It was in the full strength and heat of a July noon, and Mr. Yeats, while copying what lay before him, was turning it into a moonlight scene." Incidentally, there is not enough about A. E. and his influence upon Yeats (as upon all contemporaneous Irishmen of letters). But A. E. is alive and this is a very literary book. It is sympathetic and fairly well informed, but lacks distinction. Its greatest value is in its presentation of some of Mr. Yeats's earlier, forgotten work, and in its summary of such a piece of early narrative verse as "The Wanderings of Usheen."

W. B. Yeats, a Critical Study, by Forrest Reid. Dodd, Mead & Co. $2.

MIND AND HEALTH SERIES

A new series of little books showing the practical applications of psychology to mental and physical health, appears under the editorship of H. Addington Bruce. The first volume, *Human Motives*, by Professor Putnam of Harvard University and the Massachusetts General Hospital, is founded largely on the psycho-analytic method of Freud, but does not ignore the results of earlier studies of instincts and mental development in children. While the applications are chiefly for the mental diagnostician, there is much suggestive and helpful material for the parent and educator. In *The Meaning of Dreams*, by Dr. Isador H. Coriat, of the Boston City Hospital and author of "Abnormal Psychology," the Freudian method of interpreting dreams is explained and illustrated—with examples that are sometimes far-fetched. The significance of proper interpretation for clinical purposes is well brought out. In *Sleep and Sleeplessness*, by the editor of the series, there is a discussion of the physiology of sleep, in which weird and worthless guesses of earlier students are quoted alongside of scientific views; and an application of the theories of the subconscious to the "supernatural" in dreams. The most valuable half of the

Important Notice Regarding

"Pure Linens"

at McCutcheon's

The loss of the Belgian and Russian flax crops has increased the manufacture and sale of adulterated Linens.

Before being laundered such goods are so like pure Linen in appearance that few housekeepers or even people who are experienced in handling Linens can detect the difference.

But alas, after laundering anyone can tell the difference. The adulterated fabric then becomes unattractive in appearance and woefully lacking in wearing qualities.

If you want pure flaxen products go to "the greatest treasure house of Linens in America"—McCutcheon's. For sixty years our rule and practice have been to deal in "Pure Linens" exclusively, and in spite of the troubled conditions abroad we are able to offer our usual variety and quality at prices which are as honest as the merchandise.

At present we are offering a splendid variety of moderate priced Table Cloths and Napkins as follows:

Napkins *(per dozen)*

Breakfast Size—$2.25, 2.50, 2.75, 3.00, 3.50, 4.00 and up.
Dinner Size—$3.25, 3.50, 3.75, 4.00, 4.50, 4.75, 5.00, 5.50, 6.00 and up.

Table Cloths

2x2 yards, $2.50, 2.75, 3.00, 3.50, 4.00, 4.50 and upwards.
2x2½ yards, $3.00, 3.25, 3.50, 4.00, 4.50, 5.00 and upwards.
2x3 yards, $3.75, 4.00, 4.50, 5.00, 6.00 and upwards.
2¼x2¼ yards, $4.75, 5.00, 5.50, 6.00, 6.50 and upwards.
2½x2½ yards, $5.50, 6.00, 6.50, 7.00, 7.50 and upwards.
Of course, we also have all the finer kinds of Table Linens, in plain Damask or decorated with Lace and Embroidery.

Mail Orders receive our prompt attention.

Fifth Avenue, 34th & 33d Streets, New York

THE METROPOLITAN TRAINING SCHOOL FOR NURSES

offers a **three years' course, FREE**, and pays besides maintenance, $10 a month for the first year, $12 a month for the second and $15 a month the last year.

Classes are formed every month.

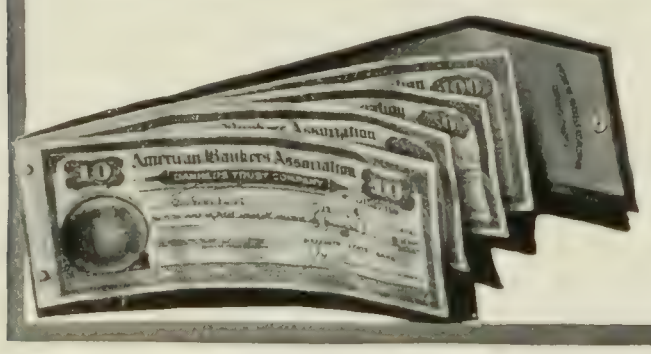
The Nurses' Home is located on one of the finest sites in New York City. The rooms are all single with spacious entrance hall, library and sitting rooms. The school is registered and connected with a hospital of over 1500 beds.

Applicants must be over 18 and under 35 years of age, and have had one year in high school or its equivalent.

Apply at once for information to

AGNES S. WARD, R.N.

Superintendent, Metropolitan Training School, Blackwell's Island, New York City



For the enjoyment of your trip

The pleasure of many a trip has been marred by delay and embarrassment in getting checks or drafts cashed, or by worry over the safety of funds. Such annoyances are unnecessary.

"A.B.A." American Bankers Association Cheques

American Bankers Association Travelers Cheques relieve the traveler of inconvenience and anxiety in regard to travel money matters. They supply him with a form of credit accepted like cash by railroads, steamship lines, hotels, sleeping-car companies, and business houses throughout the world.

Identification is simple: The holder signs an "A. B. A." Cheque when purchasing it and countersigns it in the presence of the person accepting or cashing it. If the counter-signature and signature correspond, no one need hesitate to accept the cheque from a stranger.

Get them at your bank

Ask for descriptive booklet. If your bank is not yet supplied with "A. B. A." Cheques, write for information as to where they can be obtained in your vicinity.

Bankers Trust Company
New York

The Independent for Christmas

Why not send a subscription of THE INDEPENDENT to each of your friends, instead of tramping from store to store thru jostling crowds trying to secure appropriate gifts for your friends. Just send us their names and addresses with your check, and we will do the rest.

An attractive Christmas card will be mailed to each of your friends, announcing the gift, and the name of the giver. We will make every effort to have one of these announcements bearing the name of the person who orders the subscription, as well as our special Christmas number, in the hands of the recipient on Christmas Day.

Many thousands of orders will be received between now and Christmas. Kindly send your subscriptions now to avoid the usual Christmas rush. The easiest way, in this case, is the best way.

book deals with disorders of sleep, and the causes and treatment of sleeplessness.

Human Motives, by J. J. Putnam. *The Meaning of Dreams*, by I. H. Coriat. *Sleep and Sleeplessness*, by H. Addington Bruce. Boston: Little, Brown & Co. $1 each.

PEGASUS PLOWS

Walt Mason is a wise old guy, who puts a truth in rime and sets it up like prose to fool the reader every time. A moral to fit every case—he calls it just *Horse Sense*—is eased up with a lot of fun and writ in "verses tense."

Chicago: McClurg. $1.25.

ANOTHER FRENCH MEMOIR

Claud Saint-André's biography of *A King's Favorite, Madame Du Barry and Her Times* is prepared from hitherto unpublished manuscripts, to show that the lady, for all the unsavory stories that have gathered about her name, had yet all sorts of good human qualities.

McBride. $3.50.

LITERARY CAVIAR

In brilliancy of phraseology and piquancy of criticism James Huneker excels. His subjects are as varied and alluring as the title of his latest collection of essays indicates. *Ivory, Apes and Peacocks*—polished, humanly interesting and colorful—is a book of many moods, all of them delightful.

Scribner. $1.50.

THE JEWISH YEAR BOOK

An account of "Recent Jewish Progress in Palestine," the homeland to which the hopes of the orthodox Hebrew cling even after nearly two thousand years of exile, fills 150 of the 500 pages of the *Jewish Year Book* and "The Federation Movement in Jewish Philanthropy" is another important article.

Philadelphia: Jewish Publication Society.

R. L. S.

"The coupling of the infinite variety of his character and intellect with the extraordinary degree in which he was moved by every feeling and thought" was the most unusual fact about Stevenson, says Graham Balfour, whose revised and abridged one-volume edition of *The Life of Robert Louis Stevenson* will meet a widespread popular demand.

Scribner. $2.

IF YOU ARE BUILDING

The fine art of home-making is being studied as never before, and the expectant householder receiving more attention. *The Small House on a Moderate Income* assists in building an attractive home, and *Inexpensive Furnishings in Good Taste* is a guide to the artistic furnishing of it. Both volumes are by Elkin Wallick.

Hearst's. $1.50 and $1.25.

BELGIAN CHILDREN

Robert Jonckheere, a refugee in this country, has written an excellent little book *When I Was a Boy in Belgium*. It describes the games he played, the candy his grandmother made, the customs of school and holiday, and the closing chapter gives the exciting story of the invasion of peaceful Belgium and the flight to the coast.

Boston: Lothrop. $1 net.

IN COLLEGE—WHY?

The Aims and Defects of College Education are almost as numerous as the criticisms they evoke. So one reads with interest the short and exceedingly pertinent comments on this subject by prominent Americans which have been collected and analyzed by Emory P. Howell, professor of psychology and education at Hobart College.

Putnam. $1 net.

A BRAVE WOMAN

The autobiography of Anna Howard Shaw, *The Story of a Pioneer*, bears as its most distinct impression that of courage. Every page in her history reveals the heroic struggle which has made her the leader among women that she is today.

Born in England sixty-seven years ago, she came to America when four years of age, and shared in the frontier struggles, privations and hard-won successes of the middle decades of expansion and trial in the nineteenth century.

Harper. $2.

IN THE DAYS OF PEACE

Save for the introduction there is no echo of war in *Escape and Other Essays*, this latest book by Arthur C. Benson. The papers have a wide range. One of the most interesting is the study of his own dreams. In "Authorship" is an analysis of amateur writing worth the study of every would-be author, and a very wise and charming reflection on life is entitled "Herb Moly and Heartsease."

Century. $1.50

FOR DEBATERS AND STUDENTS

In the convenient Debaters' Handbook Series are two new volumes, on *Mothers' Pensions*, by Edna D. Bullock, and *Immigration*, by Mary Katharine Reely. The latter question is given a fresh turn by the inclusion of articles on the war's effect. Evidently the publishers think the *Short Ballot* is not a debatable reform, for their manual on that subject is published in the briefless Handbook Series.

White Plains, N. Y.: Wilson. Each $1.

THE LAD OF THE WHITE HOUSE

In its most heavily burdened days, Lincoln's life yet held one wholly merry, happy feature, and F. Lauriston Bullard has done well to set down for other children in *Tad and His Father* the funny doings, the generous enthusiasms, the heedless pranks of the lad whose entrance was warranted to break the stiffness of any call or consultation, no matter how ceremonious or important.

Boston: Little, Brown. 50 cents.

TOO MUCH "GENIUS"

If Theodore Dreiser had made two novels of his latest book, *The "Genius,"* one containing the work-history of the great artist he seeks to depict, and the other his love-life with its wearying succession of emotional episodes, and then had found the courage and good taste to burn the second volume, the reader would have been spared much *ennui*, and the author would have enhanced his reputation.

Lane. $1.50.

A SWEDISH VILLAGE

Tho called a novel, *Jerusalem*, Selma Lagerlof's new book is rather a series of quaint and beautiful studies of Swedish village life centering about the fortunes of an ancient and sturdy peasant family. The simplicity, vividness and distinct character drawing are delightful. Even the mystical incidents take on all the naturalness that they had to those who experienced them, and here is all the force of realism without its effect of sordid hopelessness.

Doubleday. $1.35.

FIRST AID TO AMATEURS

The world of amateur actors owes much to Professor Clapp of Lake Forest College for the thoro and attractive list of plays that he has prepared for the Drama League of America. *Plays for Amateurs* describes carefully and concisely the essential elements of fifty-nine long plays and 138 one-act plays all eminently playable. The one-act list is especially good and introduces us to many men, known only in London, who have done capital work.

New York: The Drama League. 25 cents.

RUSSIAN NEWSPAPER FICTION

One wishes our dailies welcomed as artistic stories as these gleanings from the work of Fedor Sologub, *The Sweet Scented Name and Other Fairy Tales, Fables and Stories*, translated by Mr. and Mrs. Stephen Graham. These run an extraordinary gamut in style and emotion from a tale reminiscent of Hawthorne to one worthy of Howells; from the quaint moral fable "Wings" and the old-fashioned fancy, "Turandina," to the powerful and horrible "Slayer of Innocent Babes."

Putnam. $1.50.

What foods make you stout —what foods make you thin —what foods make you nervous

Do You Know What Happens In Your Stomach?

What foods make you stout?
What produces acid stomach?
What is the great cause of rheumatism, gout, backache?
When is constipation harmful?
What makes your liver complain?
How much starch does your system require?
What happens when you overeat?
What causes constipation and how to avoid it?
What shall be eaten together for digestive harmony?
After what age are starchy foods injurious?
How to keep warm in winter and cool in summer.
How foods establish health by removing causes of disease.
What to eat and omit for all stomach and intestinal disorders.
How should bananas be eaten?
How poor foods rob you of mental efficiency.
How many different things should you eat at each meal?
What combinations of food are not foods but *poisons*?
How should vegetables be eaten?
What causes fermentation?
What is the relation of various foods to age, climate, activity?
Why the appetite cannot be trusted as a guide to what to eat.
Why some foods actually explode in your stomach.
What foods build fat?
What foods build muscle?
What should your correct weight be; how to attain it?
What is the difference between appetite and hunger?
When is water beneficial; when is it injurious?
Twelve great rules of health for the business man.
What are the two most important things to consider in the selection of food?
What effect has food on our morals?
What foods cause nervousness, irritability, insomnia?
What is the one great cause of stomach irritation?

Read What These People Say

"I am feeling fine again. Thanks to you and your course of lessons on Scientific Eating. There ought to be 100,000 men practicing Scientific Eating in America."—F. A. Fuller, Niagara Falls, South Ont. Can.

"I am delighted beyond expression with the lessons. They have proved invaluable to me and have revolutionized both my diet and my health."—Olive M. Sees, 725 East Tipton Street, Huntington, Ind.

"Your work on Scientific Eating is invaluable. It is with much pleasure that I recommend your course to prospective students everywhere."—Chas. A. Ittel, 121 Tremont Ave., North Side, Pittsburgh, Pa.

"Your course in Scientific Eating is wonderful because it has simplified both the chemistry of the body and the chemistry of food and teaches one how to unite these two branches of science so as to make our food prevent and cure disease."—Eugene A. Ayers, Harrington Park, N. J.

"I have read of you for years and I have recently looked over some of your work. You are doing much for humanity. I congratulate you on your latest contribution to the health and happiness of man."—Dr. V. M. George, 2305 N. High St., Columbus, O.

"I think the Almighty sends men on the earth at different periods with independent and fearless minds to rectify the wrongs that have been taught and reveal the truth in all its simplicity."—Edward Brook, 10 N. 10th W. Sts., Salt Lake City, Utah.

Do you know why you eat certain food? Do you know what you *must* eat to increase or reduce your weight? Do you know what foods cause constipation? Do you know what foods cause 90% of our ills? These and a thousand other vital food questions are answered for you in a way that builds health and increases efficiency. Eugene Christian's 24 little lessons on Correct Eating sent for free examination—no money in advance—pay only if pleased.

Eugene Christian has told 23,000 people what to eat, how to eat and what *not* to eat. By adopting his suggestions these 23,000 men and women in all walks of life have discovered the fountain of youth, health, prosperity and happiness. They speak of Eugene Christian as "the wizard of food." Yet after all, his marvelous methods are based on common sense, plus a thorough understanding of the chemistry of the body and the chemistry of foods.

We all know that one man's food is another man's poison. Yet most people eat without knowing what they *should* eat. We have become slaves of certain foods. The result is that, instead of getting better we become worse through continuing the use of these same foods. Yet Dr. Christian does not upset your diet. He does not deny you anything that is good for you. Nor does he ask you to eat things you don't enjoy. He does not revolutionize your daily life. Yet you feel results after the first meal.

Some Foods Explode In Your Stomach

Certain foods, harmless in themselves, literally explode in your stomach when combined with other harmless foods.

What the chemist does in his laboratory, you are doing in your stomach. As surely as you eat certain foods you are producing poisons in your system. These poisons nature must fight. In fighting them, much of your energy is dissipated. That is why, when you eat wrong, you are not as efficient mentally or physically as you could be.

Wrong eating is one great cause of physical and mental wrecks. *Wrong eating* is what drags us down in health and efficiency. *Wrong eating* causes 90% of our complaints. And it is *wrong eating* that you can easily *correct* by reading the 24 simple lessons written by Dr. Christian.

24 Little Lessons on Eating for Health, Strength and Happiness—Sent on Trial—No Money in Advance

We want you to see what foods are best for you—according to your age, occupation, physical condition, climate and season of the year. We want to show you that these are not special foods, are not sold by Eugene Christian, can be obtained at home, at your club or in any restaurant *anywhere*. We want you to see for yourself that results come with practically the first meal. We want you to prove to yourself that you can do better thinking, better work, with less effort when you eat the *right kind of foods*.

So we send you the 24 little lessons, including rules, methods, menus, for free examination. Keep them—read them for five days. If you are satisfied—send us the special introductory price of $3.00. If not—merely return the books to us. Think what this offer means to you. There are over 300 pages in these lessons. If you get but one health-giving suggestion out of all these pages, it will be worth 50 times our price to you. Many people write that *each page* is worth the entire cost of the course.

Send in the Coupon!

If you weigh too much or too little—if you are constipated—if your liver or kidneys trouble you—if you value your health—if you want to eat *right*—you cannot do yourself a greater favor than to send in the coupon now. Dr. Christian's methods have helped 23,000 others—so we feel sure they will help you. That is why we send the 24 lessons without deposit. Mail the coupon *now*—before you forget.

Diet and Digestion

Indigestion, Constipation, and the more serious ills to which they lead are so common and cause so much needless pain and suffering, that Dr. John Harvey Kellogg has written a book, telling how such disorders may be avoided. Dr. Kellogg is the greatest living authority on diet and digestion. For nearly forty years, he has been Superintendent of the Battle Creek Sanitarium, where he has had opportunity to observe, treat and prescribe for thousands of cases of indigestion, constipation and the more serious ills they lead to. What Dr. Kellogg tells you, therefore, is the result of experience. He deals with fact—*not theory*. His new book is called "Colon Hygiene" and, in it, he tells you of all digestive disorders, their causes and natural methods for their relief which you may apply right in your own home. Nearly 400 pages, with many illustrations, diet tables and instructions for exercise, rest and sleep. Price only $2 *postpaid* in the U. S. Order today. You take no risk. If you are not entirely satisfied, return book at once for prompt refund. Send order to—

That belated vacation,—take it among the hills and streams at Pocono Manor.

That short Fall or Winter rest,—try a fortnight in direct, on that 500-acre tract with the "Quietude of the Mount," complete without ostentation. Golf, tennis and garage, no bar or dancing.

J. W. HUFLEY, Manager

Independent Opinions

We have received many replies to the article "Woman Suffrage Must Fail," by Mrs. Alice M. George, in our issue of October 11. We quote parts of one of them:

According to Mrs. George, then, there is, first of all, no definite sex division of interest between men and women and, secondly, that all women's "interests are automatically and inevitably" attended to "by the men of their social group."

There are in New York City some 215,420 women wage earners. Will Mrs. George please tell me who constitute the men of their social group? Is it the men who do *not* support these women or is it the men whom in many cases these women support?

Is there no difference of interest between the abandoned mother and her recreant husband or lover, between a widow with children and a bachelor? Mrs. George seems to forget that for every woman happily married to a husband able and willing to provide for her there are probably a dozen other women either spinsters or widows.

Mrs. George says, "it is right that the state should place the responsibility of government upon those best equipped to perform its manifold duties."

Therefore we must conclude that those best equipped must be *men*. Still, Mrs. George tells us women are not a class, they are a sex. Men, one may deduce from this, are also not a class but a sex. Now what is there in that *male* sex which makes them also the class best equipped to perform the manifold duties mentioned by Mrs. George. Let me cite an example. The janitress of an apartment house is a respectable woman who does all the work connected with the house. She tends the furnace, sweeps the steps, scrubs the area, and washes the street. She has two children, whom she feeds, washes and tends in her spare time. Her extra work enables her daughter to become a trained nurse and her son to become a mechanic (mainly thru doing washing at night). Her husband is a confirmed drunkard who only comes home at intervals. On these occasions he beats his wife and disgraces his children by his actions. This man constitutes the man of this janitress' social group. Are this man and woman's interests identical? Is he better equipped than she for citizenship? Mrs. George may say this is an imaginary case. It is not. It is a real case. She may say it is extreme. It is not. Unhappily these cases are far too common.

In the last paragraph she says "Anti-suffragists are optimists." [illegible] we must infer are the opposite, they are pessimists because they believe that women deserve the vote on the whole, because they are as intelligent as men, as public spirited as men, as possessing peculiar needs due to their sex and most of all as the conservators of their sex, their children which [illegible] understand better than men. We are called "pessimists." If [illegible] because we say that the millions of women [illegible] should have a voice in making the laws which govern them, that the millions of wives and mothers should have a voice in the laws which govern marriage, divorce and child labor, [illegible] legitimacy.

For your own sake, Mrs. George, take up [illegible] New York City.

the stalwart protectionist or the neo-mercantilist may join issue directly with the thoroughgoing free-trader or the moderate tariff reformer. The beet sugar growers of our northern states and the cane sugar growers of our southern states are unable, or believe themselves to be unable, ever to stand the competition of tropical plantations. Shall we then grant them some form of assistance at public expense or shall we frankly abandon the hope of being economically independent and become permanently dependent upon foreign countries for this necessity of life?" Mr. W. D. Hoover in "Independent Opinions" of September 27 made a plea for tariff duties in protection of the beet sugar industry. The two correspondents quoted below strike back straight from the shoulder The point they make is a good one, but is not so convincing as they think. The neo-mercantilist would begin by admitting their point, that a tariff is to some extent a tax upon the whole people for the benefit of a particular industry, and then he would proceed to argue that such a tax was essential for national self-sufficiency. Is not, he would say, economic independence as necessary as political independence? In fact, can one have actual political independence without economic independence? Certainly Germany would have succumbed six months ago if she had not by means of high duties, bounties and various forms of state aid developed the beet sugar and other agricultural products to the point of self-support. It is, as we say, a lovely question for debate and there is going to be some lively talk when Congress meets.

Mr. Hoover says: "The last Congress practically provided for the extermination of this industry." Why not state it from the greater side—the side that discloses the purpose of the action criticised—"the last Congress provided for the freeing of the people of the United States of a tax upon sugar, the proceeds of which, contrary to the spirit of law and justice, were not wholly for public purposes, but largely for private benefit." When the government has to choose between the interests of the whole people and those of a small class, should it be condemned for preferring the former?

If Mr. Hoover, and others interested, want help from Congress for the sugar interest, let them not, if their cause is just, try and put it thru under cover as being something else—for instance, the production of public revenue; but let them bring forward an act clearly stating their purpose, say something like this: "An act to promote the prosperity of the 'irrigated West' by laying a tax upon all sugar consumed in the United States, the proceeds to be distributed among sugar growers and manufacturers." Then everything would be above board and clearly understood. Of course, the Supreme Court might "step on it"; but if they did so, it would not be because it was wrong in form, but because it is wrong in principle.

JAMES R. BETTIS
Webster Grove, Missouri

In our issue of September 20 we called attention to the recrudescence of superstition during the war, and told how the story of St. George coming to the aid of the English at Mons, tho written avowedly as fiction, has found wide credence as fact. Such legends often crop up in wartime, but the following story of the Boxer rebellion, told to

Bell Telephone Exhibit, Panama-Pacific Exposition

A Wonder of Wonders

"It is the most beautiful and inspiring Exposition the world has ever seen."—*President Hadley of Yale, in speaking of the Panama-Pacific Exposition*

EVERY American should feel it a duty as well as a privilege to visit the Panama-Pacific Exposition and view its never-equaled exhibits of achievements in Art, Science and Industry.

In all this assemblage of wonders, combining the highest accomplishments of creative genius and mechanical skill, there is none more wonderful than the exhibit of the Bell Telephone System.

Here, in a theatre de luxe, the welcome visitors sit at ease while the marvel of speech transmission is pictorially revealed and told in story. They listen to talk in New York, three thousand miles away; they hear the roar of the surf on the far-off Atlantic Coast; they witness a demonstration of Transcontinental telephony which has been awarded the Grand Prize of Electrical Methods of Communication.

This Transcontinental Line has taken the thought, labor and ingenuity of some of the greatest minds in the scientific world. Yet it is but a small part of the more wonderful universal service of the Bell System, which makes possible instant communication between all the people of the country

the writer by one of the missionaries of the American Board who were besieged in the British compound at Peking, is new to us:

All thru the weeks and months of suspense and danger, the foreigners wondered that the mobs outside of the walls aimed their guns so high that, tho there was constant firing over the walls, and the inmates were in continual peril, very little injury was done. After relief came, and the missionaries who spoke the language were able to converse with the Chinese, and get their side of the story, it transpired that the fanatical mobs kept seeing indistinct white shapes hovering over the compound, which they took to be the guardian angels (or demons?) of the detested foreigners. Feeling sure that they could do no harm to the human beings below, so long as these protecting Spirits were there, they devoted their energies to dispatching them, and hence their shots went quite wild of any one who could be hurt by them. The missionary who told the story did not make any claim to having seen these Spirits herself, but she was firmly convinced that the Lord had preserved his people by working upon the superstitions of their enemies.

D. BUSHNELL

Peacedale, R. I.

The ingenious explanation of the incident is also novel and quite in accordance with the pragmatic philosophy of the times. Certainly the cultivation of superstition among the enemy may sometimes be an advantage as in this case. One of the reasons for skepticism as to the presence of angels at Mons is that the side they are said to have espoused suffered a disastrous defeat. A British officer who went thru those terrible days is reported to have said that if the angels were responsible for what happened at Mons he hoped they would fight for the Germans next time.

It's mighty hard to read with patience such stuff as the Hoover note from Denver. It's the same old babyist farmer talk that has been spouted since the late sixties, "Will the dear government please enforce such legislation as will enable me to tax my neighbors 25, 50 or 100 per cent to protect my special industry." As to sugar, with our large imports, there is something to be said on the side of revenue. If a specific duty of, say, ½ or ½ cent per pound, without regard to quality, be levied, would not be objectionable. But any schedule that differentiates according to the humbug of Dutch Standard or polarscope tests is absolutely certain to end in fraud.

Is there in all American history a more unsavory record than the methods of our monstrous Sugar Trust. In a just retribution against that monopoly every penny of protection should be wiped out forever. In reply to the pathetic plaint of Hoover, I'd be willing to see his prosperous Western communities lie waste forever if it must be developed by a swindling tax on so universal necessity as sugar—or only favored on a moderate specific tax so laid as to prevent the exasperating gigantic trust frauds of the past. In my entire 77 years' Michigan residence, in church work, temperance work, support of schools and any and all other duties of good citizenship I claim an equally good record as any other citizen of my intellectual equipment, and I deny the right of the nation to tax my limited income to foster the industry of any selfish, ignorant producer, necessities of revenue only excepted. In Michigan our sugar factories have at times earned dividends of 20 per cent, 30 per cent, 40 per cent and 70 per cent. I am as zealous for the prosperity of my state industries as the next man. But I'd be willing to see every dollar invested in Michigan beet sugar factories sunk in the ground unless they can stand on their own resources, like my Eaton county neighbors raise wheat, corn, beans, hay, beef and pork.

HENRY J. MARTIN

1915

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures Against Marine and Inland Transportation Risk and Will Issue Policies Making Loss Payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the company has insured property to the value of	$27,964,578,109.00
Received premiums thereon to the extent of	287,324,890.99
Paid losses during that period	143,820,874.99
Issued certificates of profits to dealers	90,801,110.00
Of which there have been redeemed	83,811,450.00
Leaving outstanding at present time	6,989,660.00
Interest paid on certificates amounts to	23,020,223.85
On December 31, 1914, the assets of the company amounted to	14,101,674.46

The profits of the company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Chairman of the Board
CORNELIUS ELDERT, Pres.
WALTER WOOD PARSONS, Vice-Pres.
CHARLES E. FAY, 2d Vice-Pres.
G. STANTON FLOYD-JONES, Sec.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important and these seem incompatible. As to [illegible] government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. It is a matter of $5,500 to a man aged 67 would secure an annuity income of $718.35 absolutely beyond the risk of change. The Annuity Department METROPOLITAN LIFE INSURANCE COMPANY New York, will give advice as to the return at any age, male or female.

THE MARKET PLACE

THE INVESTOR'S SERVICE

The Independent Service for Investors gives personal attention to the requests of subscribers for information on investments of all kinds. We cannot take the responsibility of recommending specific securities for purchase, but we shall be glad to give either by letter or thru these columns a full and impartial statement of the pertinent facts in regard to any investment.

WAR LOANS AND CREDITS

Italy is borrowing $25,000,000 here by means of one-year 6 per cent notes, offered at par, which are convertible at maturity into 6 per cent one-year bonds. The latter may be exchanged for ten-year bonds bearing interest at 5½ per cent. All the money will be expended in this country for coal, clothing, and other supplies. England and France need more, for their war purchases here, than the proceeds of the $500,000,000 loan. It will be remembered that they sought $1,000,000,000. While no authoritative announcement has been made, there is reason to believe that there will be arrangements for credits amounting to $100,000,000 or more, based upon American and British securities. Gold will be shipped from time to time. About $25,000,000 was recently received in New York from England, by way of Halifax. Gold shipments to us have been $40,000,000 since the middle of October, and $325,000,000 since the beginning of the year.

Russia seeks a loan or credit of at least $50,000,000, and it is said that the rate she will pay is 9 per cent. Her purchases in this country, however, call for much more than $50,000,000. Every week new orders and contracts are reported. Those placed in October amount to more than $70,000,000

THE MARKET FOR SECURITIES

On the New York Stock Exchange the market continues to be active and broad. Last week there were five million-share days, with a daily average of nearly 1,200,000. In the week immediately preceding there had been three. That week saw net gains for nearly all the listed issues, with spectacular advances for several of the war order stocks. The warnings of brokerage houses and the exactions of large margins did not check the wild movement in these shares. For Bethlehem Steel common stock the gain in that week was 101, but it should be said that only 12,200 shares were sold, while the sales of United States Steel (showing a gain of 3⅞) were 802,000. Other remarkable additions in that week were as follows: General Motor, 48; Studebaker, 26¾; Maxwell, 13¼; Willys Overland, 12¼. There were slight advances for the leading railroad shares, with an exception in the case of Canadian Pacific, for which an addition of 6¼ was shown, owing mainly to recent favorable reports about the company's earnings. Because restoration of the dividend on Steel common was expected, there were sales at 87¾, the highest price in five years.

At the beginning of last week the upward movement in war order shares was still to be seen, but after the opening on Monday there were wide fluctuations. Large transactions in Erie Railroad stock, with an advance of 3⅛, attracted attention and were ascribed by some to the work of a pool, altho the evidence of good management of the company's affairs, and of large freight business, was not ignored. On Tuesday there were slight declines for a majority of the stocks. Reports of impending peace negotiations had some effect. Erie common, however, crossed 40 for the first time in several years. Maxwell common declined sharply because of statements directing attention to the high price, when compared with the ruling quotations for the first and second preferred, which have a prior claim on surplus available for dividends.

On Wednesday considerable losses for the war order shares were shown. The news that the United States Steel directors at their meeting had ordered no dividend on the common stock was not made known until after the close of Tuesday's market. This news was disappointing to many, and the quarter's net earnings fell below the sum generally predicted. But the shares were supported and the day's net loss was only 1 point. Railroad issues declined a little in sympathy. The day's net losses for leading war order stocks were as follows: Bethlehem Steel, 21 (on sales of less than 400 shares); Willys-Overland, 10¾; General Motor, 9; Studebaker, 5½; Maxwell, 4½; Baldwin Locomotive, 5¾. There were some additional declines on Thursday, notably in the motor group, where Studebaker lost 18½, General Motor 11, and Willys-Overland 10. But Steel common was firmly held, and 3⅝ points were added to the price of Erie.

All of the prominent stocks, Bethlehem Steel excepted, advanced on Friday in a strong market. There was a noticeable revival of interest in railroad shares, altho the net gains, with one exception, were small. The addition for Canadian Pacific was 7⅜, making 12⅛ for the five full days. Bethlehem's loss of 19, on sales of a few shares, reduced the price to 540. In the preceding week 600 had been reached. This remarkable record is that of a stock which ranged

$2 a Box

Shirts and Neckties by Mail for less than you pay for shirts alone

On receipt of $2 and 15c postage with name and address of five friends, we send a box of 3 DURO shirts and a handsome necktie by parcel post

DURO Shirts are guaranteed to wear six months without fading, shrinking or ripping, or new shirts free. Made of fine white percale shirting fabric with narrow stripes of blue, black, and lavender. One size of each pattern to the box. Cut in popular coat style, cuffs attached, well laundered and very fashionable. Standard sizes 14 to 17, sleeves 33 or 35. Neckties are navy blue, black, and lavender. Take your choice. The shirts would cost you a dollar apiece and you would get no guarantee of wear. The tie would cost you [illegible]. Haberdashers will supply but you can buy by sending $2.15 and 15c postage today, with [illegible] for it all goods are [illegible] your money. Highest bank references.

Full information from
CUNARD LINE, 24 State St., N. Y.

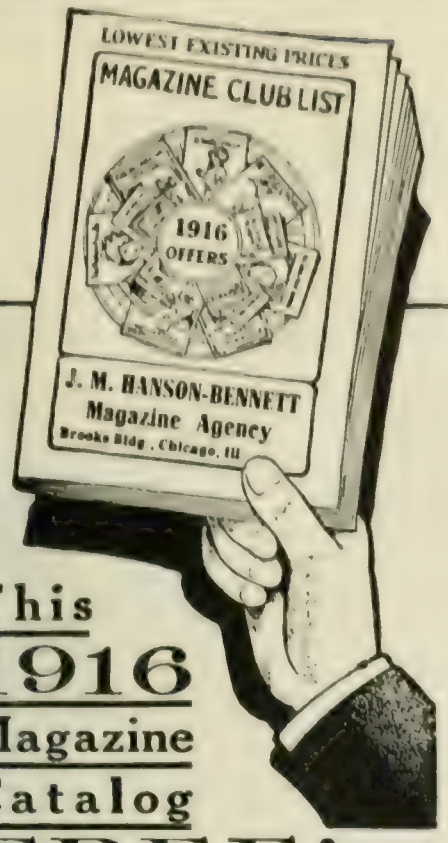
between 46 and 29 in 1914, and was sold in January last at 46¾. In answer to suggestions made by several persons, the company has declined to multiply the number of common shares by ten, making the par value $10 instead of $100. An interesting story is told by a resident of Garden City, Long Island, who accidentally found, a few days ago, a certificate for 28 shares of Bethlehem, which he bought in 1908, he says, at $12 a share, and had forgotten. At 600, the profit on this investment of $336 is $16,464.

For the five full days the net gains in the list of railroad shares ranged from 12⅜ for Canadian Pacific, 6⅜ for Erie and 6 for Reading, down to the neighborhood of 2 for Northern Pacific, Union Pacific, Atchison and New York Central. Railroad securities were helped by reports of the large quantities of freight, the greater part of it to be exported, which are taxing the capacity of trains and ships. While these additions for railroad stock were shown by the Exchange dealings, the following net losses for war order issues were results of the same five days' business: Bethlehem, 45; General Motor, 18½; Studebaker, 17¾; Willys-Overland, 9; Crucible Steel, 7¼; Baldwin Locomotive, 5½; American Car and Foundry, 2¾.

AMERICAN AUTOS ABROAD

Those who read the Government's foreign trade reports will find in them something that accounts in part for the recent great advance of the market prices of certain automobile company shares. In the fiscal year that ended with June the exports of automobiles from this country amounted to $74,000,000, or almost double the value of those that were shipped in the preceding year. A remarkable increase is seen in the sales of automobile trucks, from $1,181,600 to $39,140,682. Nearly all of these were exported to be used in the great war. The growth of this trade is more plainly shown by figures which relate to the seven months that ended with July, the value of motor truck exports having risen to $37,190,768 in those months, from only $648,241 in the corresponding months of 1914. In the same periods, the increase for passenger motor cars was from $16,160,000 to $20,454,000. Several millions should be added for engines, tires and other parts. When this foreign demand is considered, there is nothing surprising in the announcement made last week that one of the manufacturing companies is about to increase the number of its employes by 10,000 men.

The following dividends are announced:



Pittsburgh Steel Foundry Company, preferred, quarterly, 1¾ per cent, payable November 1.

American Locomotive Company, preferred, 1¾ per cent, quarterly, 1¾ per cent, both payable October 30; common, 1¼ per cent, payable November 1.

Pacific Gas and Electric Company, first preferred and common, quarterly, respectively, 2¼ per cent, payable November 15.

Pressed Steel Car Company, preferred, quarterly, 1¾ per cent, payable November 1.

The President's Thanksgiving proclamation this year ought to be a unique pain.—Pittsburgh Chronicle Telegraph.

Insurance

Conducted by

W. E. UNDERWOOD

J. A. L., Lafayette, La.—The financial condition of the International Life Insurance Company of St. Louis, on 31st of last December, was as follows: Admitted assets, $1,463,177; total liabilities (exclusive of capital stock), $3,601,804; capital, $525,000; net surplus, $336,373. Its total insurance in force on date noted was $40,913,384. It paid stockholders in 1913 $133,188 in dividends and $78,909 in 1914. In addition, $100,000 was held as a reserve for "stockholders' dividend account" at the end of 1914. Management expenses are above normal, and the cost of new business is excessive. However, it writes non-participating policies only. The protective qualities of Missouri laws are good.

A. R. L., Columbus, O.—The Peerless Casualty Company is not large, but is in fair financial condition, and I know of no reason why you should refuse its policy if the contract conditions serve your purposes better than that of the other company. I cannot believe that the Philadelphia company declined to issue you an ordinary life policy on the ground that several of your ancestors died under age 60, offering you a 20-payment life, instead. But there are a number of things respecting the underwriting systems of some very good companies which I don't understand. If you can get what you want in the Phoenix Mutual or Equitable of Iowa, take their policies. Both are excellent companies.

P. W. B., St. Paul, Minn.—You are doubtless inquiring about the Postal Life Insurance Company of New York. On December 31, 1914, its assets were, $9,613,849; liabilities, exclusive of capital stock, $9,383,967; capital, $100,000; net surplus, $129,882. Its admitted assets, net policy reserves and total insurance in force have been steadily declining since 1910, while its net surplus has remained about stationary for three years. The great bulk of its premiums is derived from the reinsured policies of other companies which it absorbed, few of which yield a dividend and, from the figures accessible, it is impossible to approximate the rate of dividend earned on its own policies. From *Best's Life Insurance Reports*—1915, I learn that: "Prior to 1915 the company paid in addition to the 9½ per cent guaranteed dividend on renewed policies a contingent dividend. The company has advised us that only the 9½ per cent guaranteed dividend will be paid in 1915; which will, of course, affect the net cost materially."

F. E. R., Albany, N. Y.—In many respects the Canada Life Assurance Company of Toronto is an excellent company. It is 68 years old, has assets of $56,000,000, a surplus of $3,000,000 and has been skilfully managed. Aside from its deferred dividend policies (which are unfavorable to policyholders) my chief criticism of this company is aimed at its increased capitalization from $125,000 to $1,000,000 between the years 1900 and 1903. A going life insurance company not only does not need more capital—it needs none at all. Of course, the increase was made solely in the interests of stockholders. The proprietors simply added $875,000 principal to their private purses. While I would strongly advise against the taking of deferred dividend policies, I cannot encourage you, now that you have them paid seven-twentieths of the way, to surrender them. You would sacrifice too much. Carry them thru. The Connecticut General is a good company. The Connecticut Mutual and Massachusetts Mutual are among the best policyholders' companies in the country.

Ever See A Picture Of This Cigar Before?

Honestly, we believe that we could have the signature on this advertisement and really fair the men who see it would know that it was put out by Herbert D. Shivers, Inc., of Philadelphia.

That is because that same cigar and the offer that follows below have appeared consistently for fourteen years.

Fourteen years is a long time. It is an impossible time for any cigar to be sold that is not an exceptionally good cigar at an unusually low price.

For fourteen years the Shivers' Panatela has maintained the same quality, the same satisfaction, the same flavor, the same fullness. Every tobacco man knows that the most trading changes, even in the color of a package, only attest the value of a product and tribute to the public's favor in tobacco.

Yet for fourteen years we have claimed that our Panatela at $5.00 per hundred was the equal of the 10c or three-for-a-quarter cigar sold by "the trade."

We have repeatedly offered to take back any box that did not convince the smoker of this fact, pay all expenses and no charge for the cigars smoked; and our business has grown every year. Our customers have increased. We have been forced to move to larger and larger quarters—and still we grow.

Aren't you ready at last to try this cigar? Haven't it earned its right to your recognition?

OUR OFFER is: Upon request, we will send fifty Shivers' Panatelas, on approval, to a reader of *The Independent*, express prepaid. He may smoke ten cigars and return the remaining forty at our expense and no charge for the ten smoked if he is not satisfied with them; if he is pleased with them and keeps them, he agrees to remit the price, $2.50, within ten days.

Selling direct from our factory to the smoker is the economic reason why we can offer a hand-made cigar with a selected long Havana filler, and a Sumatra wrapper for $5.00 per hundred or $2.50 for 50. All our sales are by the box. The majority are on reorders that come in year after year.

The Panatela is not our only cigar. We make seventeen different shapes, many of them clear Havana cigars. Our complete catalog mailed on request.

Read that offer again and see if you don't think it's about time you "took us up."

In ordering, please use business stationery or give references and state whether you prefer mild, medium or strong cigars.

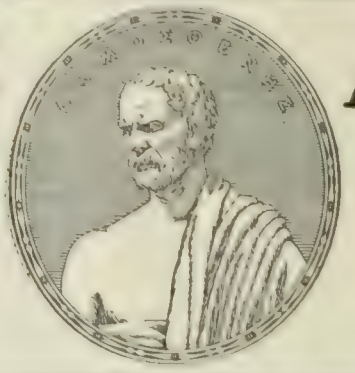
The ROBINSON REMINDER

Couponed Pages—LIVE Notes Only

Important engagements and valuable ideas are lost in notebooks filled with dead memorandums. Use the Robinson Reminder—six coupons to a page. Put each note on a separate coupon—tear it out when it ceases to be live matter. Handsome Black Leather case with pocket for holding special papers. A splendid article for advertisers.



Reminder complete with extra pad, size 3½x5 in., postpaid $1. Name in gold on cover 25c extra; new fillers 90c per dozen.

Vest pocket size, 3x5 in., 4 coupons to a page, complete with six extra pads, postpaid $1. Name in gold 25c extra.

ORDER NOW.

Robinson Mfg. Co., Dept. D. Westfield, Mass.

BOTH SIDES A DEBATE

AN EMBARGO ON ARMS

RESOLVED: That the United States should place an embargo on the exportation of arms and munitions of war to belligerent nations in time of war.

PROTESTS have often been made against neutral countries selling munitions to belligerents, but have never resulted in stopping the practice. There has never been a war in which the outcome has depended so largely on the supply of ammunition as in the present case, and the United States is the only neutral power which can now sell munitions in large quantities. These new conditions have made the question of our right to sell munitions one of the foremost issues before the country. This debate was prepared by Mary Prescott Parsons.

ARGUMENT FOR THE AFFIRMATIVE

I. The legal right to sell munitions does not necessarily justify the practise.

A. A moral wrong may be right legally.

B. International law fails to meet twentieth century conditions. *Independent* 82.131, April 26, 1915.

C. We have a right to place an embargo on the exportation of munitions.

1. International law permits it. 2. The Hague Conventions recognize it. 3. Precedent exists in the history of the United States and of other nations.

II. An embargo would be expedient.

A. We should have no more trouble in enforcing it than we do in preventing the organization of armed expeditions within our territory for use against belligerents.

B. It would not endanger national prosperity.

1. It would not destroy our industries. (*a*) Munition factories would have a chance for legitimate profit in selling to our Government and to neutrals. (*b*) It is not our duty to protect "mushroom industries" which have been started or greatly enlarged because of the present war. (*c*) Munition plants can turn to the manufacture of engineering materials and other supplies. (*d*) As many men can be employed in this way. (*e*) Other industries are already profiting because European exports have fallen off. (*f*) The embargo on munitions need not be extended to cover all contraband. 2. Commerce would increase because of the greater safety of goods at sea. 3. An embargo would stop the tremendous speculations in munitions which are a financial danger to the country.

C. It would increase our national safety.

1. At present it would help to keep us out of the European war. 2. It would protect the lives of citizens at sea. 3. The alleged danger to us if we could not buy munitions in time of war is not a real one. (*a*) Without a powerful fleet we could not import them. (*b*) With such a fleet and our coast defenses we could repel invasion without buying munitions.

4. The more we allow munition interests to grow the greater will be the menace of militarism in the United States when European markets fail.

III. The sale of munitions at the present time is contrary to the spirit of neutrality.

A. The Allies alone can now buy from us.

B. During recent troubles in Mexico our Government placed an embargo on the export of munitions to Mexico because a neutrality which allowed us to sell to Huerta, who had ports, while Carranza had none, would be mere "paper neutrality."

C. We have a right to place an embargo as a protest against England's invasion of neutral rights upon the seas.

D. We have a right to legislate on questions involving moral right altho this may change our relations with belligerent nations during the war.

IV. The sale of munitions to belligerents is morally wrong at any time.

A. War is wrong.

B. Munition sales prolong wars and increase their horrors.

C. Withholding sales would often prevent the declaration of war.

D. An embargo would not place small and peaceful nations at a greater disadvantage.

E. Prohibiting sales would not lead to the piling up of munition stores in time of peace. Some move toward international disarmament and international federation is sure to follow the present war.

F. At present the profit of a few individuals endangers the reputation of our Government.

G. Our sale of munitions will destroy our influence in the cause of humanity, in ending the war and in promoting universal peace.

H. It is untrue to our own sense of national honor.

ARGUMENT FOR THE NEGATIVE

I. The legal right of citizens to sell munitions is unquestioned.

A. It is based on an established principle of international law.

B. It was affirmed at The Hague in 1907.

C. It rests on precedent.

1. The United States has always maintained this right. 2. The nations which now object to our sales have sold munitions to belligerents during other wars.

D. No nation now questions our legal right.

E. No law of the United States forbids this trade.

II. An embargo would be inexpedient.

A. It would be burdensome if not impossible to enforce.

B. It would destroy national prosperity.

1. It would cause industrial depression. (*a*) It would rob munition manufacturers of the means of livelihood. (*b*) It would throw men out of employment. (*c*) It would check the development of many national industries. It is only a step from an embargo on munitions to an embargo on all contraband. 2. It would destroy commerce. 3. Financial depression would inevitably result.

C. It would be dangerous to the United States.

1. At any time it would be likely to involve us in war. 2. At the present time it would probably force us to participate in the European war. 3. It would endanger national safety. If we could not rely on buying munitions in case of attack we should be at the mercy of any invader.

III. At the present time an embargo would be unneutral.

A. In offering to sell to both sides the United States is observing strict neutrality.

B. Refusal to sell would be contrary to the accepted practice of neutrality as stated at The Hague in 1907.

IV. At any time it would morally wrong.

A. It would lead to increased armaments.

1. Nations would be obliged to store vast quantities of munitions sufficient to carry them thru great wars. 2. Private munition interests would try to foment wars. 3. Government ownership of all munition factories, the only alternative, would endanger liberty.

B. It would delay universal peace.

1. Preparedness would increase war. 2. It would make wars longer and more terrible. 3. It would place small or peaceful nations at the mercy of aggressive powers.

C. It would be untrue to American ideals of humanity and love of peace.

Cadillac
Standard of the World

19,000 Eight-Cylinder Cadillacs constitute a larger ownership than any other high grade model in the world

19,000 Cadillac Eight-Cylinder cars are now in service.

These 19,000 owners naturally represent a wide variety of business, professional and social interests.

But they have one striking trait in common.

They are all seekers after quality of the highest order.

And they are satisfied that they have it in the Cadillac.

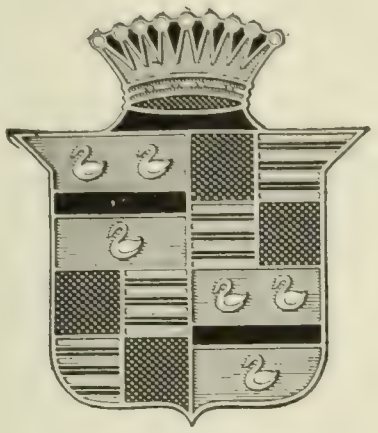
It is perfectly easy to understand their preference—once you have ridden in the Cadillac.

That one ride will compel you to make comparisons—and those comparisons are bound to be favorable to the Cadillac.

You can scarcely help saying to yourself: "I am enjoying this ride as I never enjoyed a ride before."

You feel the fruits of the years of Cadillac devotion to the quality ideal—in every phase of the car's performance.

The steadiness and smoothness and constancy of that performance is so marked that you cannot avoid contrasting it with other rides you have taken.



And it is worthy of remark that the enthusiasm of the 19,000 Cadillac owners has deepened as the months have gone by.

They have all that they want and all that they could hope for—in ease, in range of efficiency from low to high speed, in quietness, in flexibility, in acceleration, in hill climbing, in complete comfort.

They cannot conceive of a manufacturing organization which could give a higher or finer expression to the multi-cylinder principle than the Cadillac Company.

That is why Cadillac ownership is numerically much larger than the ownership of any other model of high grade car.

19,000 owners prefer it to any other because they are satisfied that they can get more out of it, in every sense of the word, than they can get out of any other car.

THE COAT OF ARMS OF ANTOINE DE LA MOTHE CADILLAC WHO FOUNDED IN 1701, UNDER COMMISSION FROM LOUIS XIV, THE COLONY ON THE SITE WHERE NOW STANDS THE CITY OF DETROIT.

THE TYPE 53 CADILLAC CAR IS DISTINGUISHED BY THIS COAT OF ARMS MOUNTED UPON ITS RADIATOR.

Styles and Prices

Standard Seven passenger car, Five passenger Salon and Roadster, $2080. Three passenger Victoria, $2400. Five passenger Brougham, $2950. Seven passenger Limousine, $3450. Berlin, $3600. Prices include standard equipment, F. O. B. Detroit.

Arthur Rackham's New Illustrated Gift Book

A Christmas Carol

By Charles Dickens

12 full-page illustrations in color and many in black and white by Arthur Rackham. Decorated cloth, $1.50 net.

The wide circle of admirers of the distinguished illustrator have long been hoping to see his conception of Old Scrooge, Tiny Tim, and other interesting characters and scenes in Dickens's masterpiece. No one can be disappointed: the human touches and fantastic mysteries are in the artist's best style.

The Magic of Jewels and Charms

By George Frederick Kunz, A.M., Ph.D., D.Sc.

Illustrated in color, doubletone and line. Net, $5.00. Uniform in style and size with "The Curious Lore of Precious Stones."

The new volume gives much unique and interesting information especially relative to the magical power which precious stones have been supposed to exert over individuals and events during past ages.

Historic Virginia Homes and Churches

By Robert A. Lancaster, Jr.

310 illustrations, and a photogravure frontispiece. Net, $7.50. Half morocco. Net, $12.50. A Limited Edition Printed from Type. Uniform with the Pennells' "Our Philadelphia."

The most important work on any State yet published in this country. It describes practically all the houses of historic interest in Virginia, gives illustrations of most of them, as well as the churches most likely to engage attention.

Quaint and Historic Forts of North America

By John Martin Hammond

Author of "Colonial Mansions of Maryland and Delaware." With photogravure frontispiece and 71 illustrations. Ornamental cloth, gilt top, in a box. Net, $5.00.

Timely and interesting to the last degree in these days of war, is this volume, not on "fortifications" as such, but on the old and existing forts, with their great romantic and historical interest.

English Ancestral Homes of Noted Americans

By Anne Hollingsworth Wharton

29 illustrations. Ornamental cloth, gilt top, $2.00 net. Half morocco, $4.50 net.

George Washington, Benjamin Franklin, the Pilgrim Fathers, William Penn, Virginia Cavaliers, and other noted Americans are traced to their English ancestral homes, with much entertaining and interesting information gathered on the way.

The Civilization of Babylonia and Assyria

By Morris Jastrow, Jr., Ph.D., LL.D.

163 illustrations. Net $5.00.

The only book on the subject treating of the entire civilization of these ancient nations—languages, laws, religions, customs, buildings, etc.—other books have treated only partial phases of the subject.

A New Art Work by the Master Draughtsman of the Age

Joseph Pennell's Pictures in the Land of Temples

Containing 50 plates in photogravure of Mr. Pennell's wonderful drawings pertaining to the immortal adventure of "The Color That Was Gone," but to-day stand today,—with notes by the artist. Octavo, lithograph on cover, $1.25 *net*

Under the Red Cross Flag, At Home and Abroad

By Mabel T. Boardman, Chairman, National Relief Board, American Red Cross. Foreword by President Woodrow Wilson

50 illustrations. $1.50 net.

This book, the official book of the Red Cross, is of fascinating human interest. It is the unassembled offering of the men and women who have made and who are making the American Red Cross stand for humanitarianism embracing every nation and every people. This is the only complete [illegible] work upon the subject and is replete with anecdotes and stories of men in the field in hour of death and disaster.

Hall Caine's

The Drama of 365 Days

$1.00 net

FIRST FOUR IMPRESSIONS

It takes the hand of a Hall Caine to put upon paper the mental impressions and spiritual [illegible] of a Continental Commander. He gives vent to all things and people of [illegible] consequence. During the [illegible] has been coming to price on either side.

Happiness follows in the wake of

Heart's Content

By Ralph Henry Barbour

Romance and plenty of it; fun and plenty of it; a happy man who "starts things" and who at the end makes a woman happy, too. The beautiful illustrations in color by H. Weston Taylor, the page decorations, handsome binding and the tasteful sealed package are exquisite. $1.50 *net.*

"A Truly Great Novel"

The Little Iliad

By Maurice Hewlett

Frontispiece. $1.35 *net.*

"Irresistibly appealing." —*BOSTON TRANSCRIPT.*

"Bound to be a success." —*PHILA. PUBLIC LEDGER.*

"A distinctly original plot." —*CHICAGO HERALD.*

"An unexpected gayly Ironic ending." —*N. Y. TIMES.*

"A sheer delight from the first page to the last." —*PHILA. PRESS.*

For Boys and Girls

DAN BEARD'S

American Boys' Book of Bugs, Butterflies and Beetles

280 illustrations, some in color. Large 12mo. Decorated cloth, gilt top. Net, $2.00.

A practical book about bugs, buterflies and beetles, by the Founder of the first Boy Scouts. Dan Beard knows what boys enjoy. In his hands the subject becomes of live interest to wide-awake boys, and he tells them just what they want to know.

A New Volume in the Trail Blazers Series

Gold Seekers of '49

By Edwin L. Sabin

Illustrated in color and [illegible]. Net, $1.25.

The gold seekers travel through the Indians [illegible] Denver to Cape Horn and have many adventures told in the inimitable Sabin way, yet at all times historically correct.

The Boy Scouts of Snow Shoe Lodge

By Rupert Sargent Holland

Illustrated in color and [illegible]. Net, $1.25.

Snow Shoe Lodge in the Adirondacks. Plenty of exciting [illegible] winter sports and [illegible].

ARROWROCK DAM

The striking photograph on the center pages of The Independent this week shows Arrowrock Dam in Idaho, the key to an irrigation system that is transforming 234,000 acres of barren sagebrush desert—adjacent to Boise, the state capital—into fruitful gardens, orchards and farms. This is the largest irrigation project yet undertaken by the Federal Government.

By throwing a dam across a gorge in the canyon twenty-two miles above the city the channel of the river is converted into a reservoir running back eighteen miles into the mountains. It holds, when full, 244,000 acre-feet of water, enough to cover 381 square miles to the depth of one foot. It will reclaim 234,000 rich acres in the Boise valley.

Arrowrock is the highest dam in the world today, 348.5 feet from the low point in the foundation to the sixteen foot driveway over the top. It is 240 feet thick at the base and 1060 feet long. The great mass is below the bed of the river; it was necessary to go down 91.5 feet thru volcanic rock to reach a solid foundation in granite. In its construction 530,000 cubic yards of concrete were used.

The irrigation system includes a diversion dam twelve miles below a network of canals, minor reservoirs and locks. The cost of the whole was $12,000,000; of the dam alone $5,500,000, or $2,000,000 less than the estimate. It is completed a year ahead of time and water stored this year, the driest on record, saved the crops on 100,000 acres.

REMARKABLE REMARKS

JANE WILLIS—Now you question

GEN. JOFFRE—Remember the Marne

RUDYARD KIPLING—Now we see that life can be tragedy.

CHRISTABEL PANKHURST—Another dead delusion is the sex war.

FRANCISCO VILLA—If necessary I will fight the United States.

SENATOR ASHURST—Make no mistake. This is earth, not Heaven.

ED HOWE—If you intend being a fool, be a big and impudent one.

JAMES HUNEKER—It takes brains to be wicked in the grand manner.

PROF. GEORGE F. GUNSELLUSER—Without insanity the world would stagnate.

TOM WATSON—Yes Sir, we Georgians mean to take care of our own affairs.

ISAAC N. SELIGMAN—Personal property tax is making good citizens of New York liars.

JOHN D. ROCKEFELLER, JR.—Every corporation to be successful must be on the square.

H. G. WELLS—The world is sick of dynasts, but also it is sick of party politicians.

ROSE YOUNG—Suffrage has already made a basis of comradeship for women of all classes and kinds.

PROF. SCOTT NEARING—If a man wants to change public opinion he must be prepared to go to jail.

VICTOR MURDOCK—It is hard to imagine the Progressives holding a national convention and not nominating him.

OSWALD GARRISON VILLARD—The *Springfield Republican* I consider our model American morning newspaper.

PRESIDENT HADLEY—Some of the worst treachery in the world's whole history has been intended to promote the Kingdom of God.

RICHARD H. EDMUNDS—Had the South never raised a bale of cotton it would be vastly richer and more populous than it is today.

HOUSTON STEWARD CHAMBERLAIN—If there is anywhere in the world a peaceable, well-behaved, pious people it is the Germans.

G. K. CHESTERTON—The real split is between those who would use conscription to help the war and those who would use the war to help conscription.

BARON D'ESTOURNELLES DE CONSTANT—In addition to the growing importance of Harvard University, Boston has become a first class agricultural center.

MR. DOOLEY—With th' exception maybe iv th' theory iv infant damnation, Scotland has given nawthin more cheerful to the worruld thin th' game iv goluf.

MARJORIE DORMAN—The worst thing which could happen to the wage-earning woman would be for the law to place her on an equality with men. She needs equality plus.

PRESIDENT HIBBEN—If I were asked to name the greatest defect of the present undergraduate, I would say it was his tendency to postpone until tomorrow the task of today.

PROFESSOR M. V. O'SHEA—At least one-third of the girls graduated from high school have curvature of the spine, or uneven shoulders, or stand in a bad position, or have too much flesh or too little.

HENRY JAMES—Great salience, in such a case, do all collective idiosyncrasies acquire—upon the fullest enumeration of which, however, as the Belgian instance and the British atmosphere combine to represent them, I may not now embark, prepossest wholly as I am with the more generally significant social stamp and human aspect so revealed, and with the quality derived from these things by the multiplied examples that help us to take them in.

University of Chicago Press

New and Recent Books

Senescence and Rejuvenescence. By Charles Manning Child, Associate Professor of Zoology in the University of Chicago.

This book differs from most previous studies of senescence in that it attempts to show that in the organic world in general rejuvenescence is just as fundamental and important a process as senescence.

xii+482 pages, 8vo, cloth; $4.00, postage extra (weight 3 lbs.).

The Modern Study of Literature. By Richard Green Moulton, Head of the Department of General Literature in the University of Chicago.

The author's previous well-known books on literary criticism and his long and successful experience in the public presentation of literature have especially fitted him for the authoritative discussion of this problem of modern education.

vi+542 pages, 12mo, cloth; $2.50, postage extra (weight 1 lb. 13 oz.).

A Short History of Japan. By Ernest Wilson Clement.

Because of the intense interest in the present political situation in the Far East this short history of Japan will make a strong appeal to readers and travelers who are asking for a better knowledge of the background of the struggle for supremacy in the Orient.

x+190 pages, 12mo, cloth; $1.00, postage extra (weight 15 oz.).

Current Economic Problems. By Walton Hale Hamilton, Professor of Political Economy in Amherst College.

The work is intended for the use of students in elementary economics and is designed particularly to meet the needs of those who, having had a thorough course in economic theory, need a general introduction to current economic problems. xl+790 pages, 8 vo, cloth; $2.75, postage extra (weight 3 lbs, 1 oz.).

University of Chicago Sermons. By Members of the University Faculties.

In each sermon appears the best thought of a well-known scholar on a particular phase of religious life. The list of contributors includes not only representatives of the biblical and theological departments of the University, but also members of the departments of education, sociology, and philosophy.

xii+348 pages, 12mo, cloth; $1.50, postage extra (weight 1 lb. 6 oz.).

Religious Education in the Family. (Constructive Studies.) By Henry Frederick Cope, General Secretary of the Religious Education Association.

The author interprets past customs and recommends many new and definite practices for the direction of the child's religious ideals and activities.

xii+296 pages, 12mo, cloth; $1.25, postage extra (weight 1 lb. 5 oz.).

The Evolution of Early Christianity. By Shirley Jackson Case, Professor of New Testament Literature in the University of Chicago.

The beginnings of the Christian movement are here studied from a wholly new point of view. By examining the actual religious situation in which the Christians of the first century lived, the author is able to shed fresh light on many parts of the New Testament.

x+386 pages, 12mo, cloth; $2.25, postage extra (weight 1 lb. 11 oz.).

First-Year Mathematics for Secondary Schools. (Fourth revised edition.) By Ernst R. Breslich, Head of the Department of Mathematics in the University of Chicago High School.

This text in correlated mathematics was developed as a result of a successful series of experiments in the fusion method of teaching high-school arithmetic, algebra, and geometry, carried on in the University of Chicago High School. Numerous schools throughout the country have since taken up the system.

xxiv+344 pages, 12mo, cloth; $1.00, postage extra (weight 1 lb. 10 oz.).

Methods in Plant Histology. (Third revised edition.) By Charles Joseph Chamberlain, Professor of Botany in the University of Chicago.

This book contains directions for collecting and preparing plant material for microscopic investigation. Specific directions are given for making such preparations as are needed in a study of the plant kingdom from the algae up to the flowering plants. xii+314 pages, 8vo, cloth; $2.25, postage extra (weight 3 lbs.).

The Evolution of Sex in Plants. (The University of Chicago Science Series.) By John Merle Coulter, Head of the Department of Botany in the University of Chicago.

A presentation of the results of research showing that all reproduction is the same in its essential features and all methods of reproduction are natural responses to the varying conditions encountered by plants in their life histories.

viii+140 pages, small 12mo, cloth; $1.00, postage extra (weight 14 oz.).

Public Libraries and Literary Culture in Ancient Rome. By Clarence P. Boyd.

The treatise concerns itself with the history, equipment, contents, management, object, and cultural significance of the Roman public library, particular attention being directed to the libraries of the first one hundred and fifty years of the Empire. 72 pages, 8vo, paper; 75 cents, postage extra.

The School and Society. (Second edition, revised and enlarged.) By John Dewey, Professor of Philosophy in Columbia University.

The position of authority on educational subjects which the author holds and the popularity which the former edition enjoyed are indications of the value of this work.

xvi+164 pages, 12mo, cloth; $1.00, postage extra (weight 15 oz.).

AN AMERICAN WHOM BELGIUM LOVES

BRAND WHITLOCK, OUR MINISTER AT BRUSSELS, IS ON HIS WAY HOME FOR A TWO MONTHS' REST ON LEAVE OF ABSENCE
HIS GENEROUS AND EFFICIENT WORK FOR THE RELIEF OF BELGIUM HAS MADE HIM THE OBJECT, IT IS SAID,
OF AFFECTION AND REVERENCE AS GREAT AS THAT PAID TO KING ALBERT

THE MILLION VOTES OF 1915

THOSE who believe in the complete sharing by men and women of the privileges and responsibilities of government have never had greater cause for encouragement than was given them by the elections of last week. The result was, for the moment, failure. But it gave perfect assurance of ultimate, and not far distant, success. It leaves no room for doubt that another election will give to women the vote in Massachusetts, New York and Pennsylvania.

In these three great states, old, conservative and disinclined to political innovations, 1,000,000 men recorded their very practical belief in the political equality of women by casting their ballots for woman suffrage. Forty-two per cent of the men who went to the polls voted on the side of progress. One-third as many men as voted for President in the three states in 1912 voted last week to give women the vote. No measure supported on the first test by such an impressive fraction of the electorate could, in the natural order of events, fail of early adoption.

The workers for suffrage have every reason for gratification. The victory is not yet won. But the enemy is already defeated. The opposition to political equality is crumbling, as it was sure to crumble just as soon as men and women began in large numbers to think seriously about the matter. The political machines are still hostile, as is shown by the large vote against the suffrage amendments in the strongholds of the Republican machine in Philadelphia and of Tammany in New York City. Indeed, in Pennsylvania it was only the vote of Philadelphia that overcame the favorable majority in the rest of the state. But the political machines have never been able to hold out against an aroused and informed public opinion. How far the suffrage workers have progressed in the creation of such a body of opinion the million votes of 1915 afford convincing proof.

PREPARATION FOR NATIONAL DEFENSE

THE program of preparation for the national defense set forth by President Wilson is sane, moderate and in consonance with American spirit and American traditions. The President recognizes to the full the incontestable fact that the American people hate the very thought of militarism and that they would prefer almost any risk to the establishment of a great standing army on the European scale or to any form of compulsory military service. But he realizes no less fully that our present preparation on the military side is not commensurate with our national responsibilities. He proposes, therefore, that we shall adopt a more comprehensive plan of national defense than we have been working upon in the past—but that we shall not lose our heads about it or jump from the frying pan into the fire.

The President reminds the nation that the navy has ever been and must ever be its first and chief line of defense. That navy is already a great and efficient force. It only needs that its development along the lines already followed should be somewhat hastened, and that a definite policy of development "not made from year to year, but looking well into the future and planning for a definite consummation," should be worked out and adopted. In this matter there is no need for panic haste. We feel no fear, for our national security is not threatened.

In the matter of the army the President's proposals fall under four heads. We are to be asked to make a modest increase in our regular army, sufficient for "the performance of the necessary duties of the army in the Philippines, in Hawaii, in Porto Rico, upon the borders of the United States, at the coast fortifications and at the military posts of the interior."

The national guard is to be put upon a better and more permanent footing, involving more definite support from the national government and a more definite connection with the military organization of the nation.

A continental army is to be created, to consist of 400,000 men. This force is to be enlisted in the next three years, its members being asked to enlist for three years with the colors and three years on furlough. During the three years with the colors the members of the force would constitute in no sense a standing army, but would merely be required to spend a period of perhaps two months each year in intensive training. This training would be carried out in close association with the organized units of the regular army. The national guard would also be used as an instrumentality in the development and training of this citizen army.

The fourth part of the problem involves the mobilization of our national resources as may be necessary for the national defense and the preparation of the necessary munitions and supplies for the new forces.

This is a rational and careful program. It is solidly based upon the sound American principle of no great standing army, but a citizenry sufficiently trained and prepared to come promptly and effectively to the nation's defense should the awful contingency of war arise.

The country will await with interest the more elaborate and detailed presentation of the plan which the President is to make to Congress upon its reassembling. It is particularly important to know whether any steps are to be taken for the promotion of economy in our naval and military expenditures, and especially for the elimination of useless navy yards and military posts maintained for purely political reasons. Until we have stopped spending unwisely and imprudently the vast sums which we now appropriate for national defense we should be cautious about entering upon large and costly innovations.

The President's proposals will doubtless be opposed by two classes of people—those who will not be satisfied with so modest a measure of preparation, and those like Mr. Bryan—who has already let himself be heard upon the point—who believe that the evils of war are to be avoided not by preparation to resist aggression and injustice but by some other means. But we believe that the majority of reasonable and clear thinking Americans will find in the President's proposals or something like them the American way of meeting the danger which the Great War has shown to lie in wait for even the most peace-loving of peoples.

THE WAR-WRECKED PEOPLES

A LOT of American manufacturers, whose habits of thought are a product of long years of protectionist favors, are already talking about the probability that the American landscape will be effaced by a landslide of goods to be "dumped" upon our unprotected continent as soon as the war is over. The immigration restrictionists are warning the nation that all the human wreckage of the European world will be "dumped" at Ellis Island, for soft-hearted and softer-minded Americans to take care of. It would seem that some nation or other is to have a particularly fine opportunity to build up a profitable steamship business, and that Americans now living in this country should be looking out soon for reserved seats, before the "standing room only" notice is posted.

Inasmuch as it is highly probable that American creditors of European debtors will be entirely willing to get payment of their claims in anything merchantable rather than wipe them off the books as "bad" or sign a receipt for bales of paper money or casks of zinc coins, we shall get, in course of time, consignments of European goods approximating in quantity our importations of former years. And, inasmuch as there is not the slightest likelihood that the American people will, in the near future, radically amend our immigration legislation, it is probable that after the war the so-called "tide of immigration" will begin to flow in with something like its old-time energy. That the importations of goods or the immigration of human beings will be overwhelming is not a proposition within the limits of common sense.

The populations of Europe will be war-wrecked peoples. They will take up the tasks of peace, decimated and maimed. Their working capital will be gone, their fixed capital in large measure a scrap-heap. They will stagger under a taxation almost unbearable. The disbanding armies will be hordes of men unfitted for the quiet tasks of farm and shop and counting house. Millions of women and children, widowed and orphaned, reduced almost to beggary, will clamor for bread. It will not be in a day, nor in ten years, that these war-wrecked peoples will produce exportable goods on a scale to terrify the tariff-bulwarked industries of the United States.

Undoubtedly great numbers of able-bodied European men will wish to flee from taxation and to look for new opportunities in America. But it is highly improbable that they will be permitted to emigrate as freely as their predecessors did before the war. By various influences, possibly by forbidding legislation, they will be restrained and kept at home. Chief of all influences, probably, will be a rate of wages higher than wages in the United States. The aged and the infirm, the more seriously wounded, the inefficient and the good-for-nothings, Europe would gladly spare, and would assist them to emigrate if we would take them. But, as Commissioner Howe has recently pointed out, our existing laws are quite adequate to prevent any "dumping" here of criminals, lunatics, diseased and pauperized aliens. The administration of these laws is year by year more strict, and it is certain that it will not relax under pressure. A recent decision of the United States Supreme Court, that the Ellis Island authorities cannot refuse to admit physically sound and able-bodied immigrants, on the ground that the American town or county to which they are intending to go is unlikely to have work for them, if already there is much unemployment there, has no real bearing upon the problem. The number of immigrants excluded on this ground hitherto has been small, and under any circumstances would be negligible.

Probably we shall get large numbers of women and children, but this fact need not disconcert us. The earlier in life the immigrant comes to America, the greater is the probability that he will quickly take on the ways, and feel the spirit, of American life. There is abundant economic opportunity in America for women able to do useful work. Not only in our textile industries, but in agriculture, in horticulture and gardening, and in a thousand minor occupations, the chance for the resolute and physically vigorous woman is greater today than ever before.

That we shall not have difficult problems to face in consequence of the devastation of Europe no sane man believes or says. But that these problems will be alarming or particularly discouraging is untrue. We should give diligent thought to them, but fear of them may be dismissed.

THE SLIPPERINESS OF THE SNAKE

THE Spaniards seem to have known what they were about when they called the cut Culebra or the "Snake." We were too previous when we tried to change the name to "Gaillard," after the gallant colonel who was supposed to have conquered it. For this old earthworm, this subterranean monster of the slime, is still alive and wriggling. Every week the *Canal Record* reports 200,000 cubic yards of dirt dug out and every week as much more flows in to fill the ditch. The dipper dredge "Gamboa" races day and night with her sister, the "Paraiso," for the championship of the Isthmus, but still no ground is gained. Their names may soon be changed to "Sisyphus" and "Tantalus."

Not content with pouring in soil from both sides, old Culebra humps its back in the middle and suddenly an island, fifteen feet high, arises in the midst of the canal. The earth breaks into waves like water and one follows another into the excavated prism. Anyone who has tried to walk across one of those big pneumatic mattresses which amuse the Midway crowds will understand how it works.

The stuff of which this ground is made is tough enough to dig, but once soaked up with tropic rains it begins to flow like molasses in cold weather or tar in hot weather, under the unbalanced pressure of the hills on either side. There are 175 acres of land now mobilized and they are advancing on a front of more than half a mile.

It is no wonder that the "angle of repose" has not yet been found, because it is very small. Some of these landslides have been propelled by an inclination of one in ten. What a lucky thing for us that President Roosevelt rejected the advice of the foreign consulting engineers and decided on a lock canal instead of a sea level. If we had had to cut down 87 feet deeper the Canal Zone would hardly have been wide enough for the slope of its sides and the working-force might have settled down in Panama for life. As it is, the situation is bad enough. The area in motion is estimated at 10,000,000 cubic yards and if removed at 200,000 yards a week—but there is no use trying to figure out when the canal

will be open to traffic. There are too many *X*'s in the problem.

Meantime, Uncle Sam is in an embarrassing position. Having invited the nations of the world to celebrate the opening of the Panama Canal he finds it closed. The tourists who started for San Francisco by water found themselves obliged to cross the Isthmus ignominiously by rail, as they could have done any time in the last fifty years. A hundred vessels are waiting at Balboa and Cristobal for passage, or, having given it up in disgust, have gone on around by the Strait of Magellan. Fruit from California and Hawaii is spoiling by delay. Miles of switchyard tracks in New Jersey are clogged with cars loaded with locomotives and munitions to be sent to Vladivostok for use in Russia. A million-dollar shipload of wool from Australia, much needed by the mills of Massachusetts, was held up by the blockade.

The seal of the Canal Zone bears the boast, "The land divided, the world united." But Nature has vetoed this. What we see now is the land united and the seas separated.

ON THE MEXICAN BORDER

DURING the three days of Villa's futile attack upon the Carranza forces in Agua Prieta, one United States soldier on duty in the adjoining Arizona town of Douglas was killed by a Mexican bullet and several others were wounded. At first it was assumed that neither of the contending armies intended to injure persons on American soil. But General Funston said in his report to the War Department:

> Yesterday, while Major Hay and other officers were 200 yards north of the boundary and 900 yards from the east flank of General Calles' trenches, they were deliberately fired upon and nearly hit. Also yesterday a detachment of the Ninth Cavalry 1200 yards in front of Calles' trenches and at least 200 yards north of the boundary was fired upon there, first by machine gun and then six times by artillery.

It is unfortunate that these deliberate attempts to kill officers and soldiers of our army could not be resented and that some punishment could not have been given by the American force of 6000 men. General Calles, the Carranza commander, exprest regret when his attention was directed to the incidents. But something more than apologies should be required. The deliberate assaults upon American soldiers were probably made by some part of the force of 4500 men who had been carried to Agua Prieta thru our territory by permission which our Government had granted in response to Carranza's application for it.

THE ORIENTAL PARADOX

ALL things are topsy-turvy in China, travelers tell us. But nothing queerer has ever been reported from the Far East than the present political situation. We behold the three monarchies, Japan, Russia and Great Britain, urging the president of the republic not to establish a monarchy, while the two republics, France and the United States, refuse to join in the request. Japan, at the very moment when she is with great pride and joy enthroning her own Emperor, is for some mysterious reason doing her best to prevent China from having an emperor.

We do not profess to know the motives which have inspired the three monarchies to their efforts to support the republic, and we do not care. The advice they give is good and has the approval of the American people if not of the American Government. It is explained that the Administration fears that to say a word in favor of the republic would seem too much like interference in China's internal affairs. The United States did not used to be so afraid of expressing a preference for republican institutions. The Democratic party in 1900 did not hesitate to characterize the efforts of Great Britain to conquer the South African republics as "the strangling of liberty." But the Democratic party out of power is a very different thing from the Democratic party in power. Political platforms, as one of our practical politicians has observed, are like car platforms, made to get in on, not to stand on. When 300,000,000 people, inspired by our example and under the influence of our schools, throw off a corrupt and tyrannical dynasty and are taking the first hesitating steps toward republicanism, we refuse to give them any encouragement for fear of impropriety. Yuan Shih-kai as dictator is bad enough, but Yuan Shih-kai as emperor, with his thirty-one children to insure the succession in perpetuity, is vastly worse. The so-called election now in progress is a farce, since any one opposing Yuan takes his head in his hand like St. Denis. The French and American Governments are silent in this crisis, but we hope and believe that if the President attempts to ascend the Dragon Throne the republicans of China will show the spirit of '76 and of '93.

PROFESSOR MUENSTERBERG'S CRITICISM OF THE PACIFISTS

IN the New York *Times* for September 19th is an article by Prof. Hugo Muensterberg entitled "The Impeachment of German-Americans." In this article he says:

> It cannot be denied, however noble the pacifistic ideals are, their promotors have not succeeded as yet in proposing a single plan by which war would be abolished and yet at the same time possibilities be given for the healthy growth of progressive peoples and for the historically necessary reduction of decadent nations.

What does the Professor mean by "the historically necessary reduction of decadent nations"? Is this the task in which Germany and Austria are now engaged? Who is to decide when a nation is so decadent as to require elimination? What shall be the standard by which decadence shall be judged? Is it, we wonder, the ability of a militarist nation to overcome them? And are there any decadent nations, or have there been any in modern times, which were incapable of rejuvenating themselves or of being aroused by the modern spirit? China appears to be arousing herself. Spain is awakening. Italy is a young nation once more, as is modern Greece. Even Turkey appears to be vital enough to serve as an ally for the Kaiser.

What are the possibilities required for the healthy growth of progressive peoples? Are they able to find welfare and happiness under other flags than their own provided good government exists there and equal rights are given? Or, to fulfil their destiny, must they extend their dominions at the expense of other empires? Were Germans, previous to August, 1914, finding their place in the sun, in North and South America, and in the British colonies and dominions? In a word, do the German ideals, as interpreted by the Harvard Professor, comport with the safety and the peace of the world? Is the future advance of mankind to be made by ruthless

competition, by strife and conquest, or by cooperation and by friendly rivalry?

Has the Professor heard of the League to Enforce Peace? Under the plan there proposed the *status quo* can be peaceably altered to meet the changing conditions of the world. What other purpose has the proposed Council of Conciliation of the League? Will not also the proposed "Stated Conferences" of the League foresee and remove the possible causes of war? Are not arrangements which would bring the nations together into friendly coöperation for the purpose of obtaining justice, of adjusting apparently conflicting interests and of doing these things in a peaceable manner, likely to lead, as the coöperation of the states in our Union has led, to lifting all of them in their relations with one another up on to a plane where differences which once seemed unsurmountable have now wholly disappeared?

Professor Muensterberg seems to show either a lack of information about recent developments of the pacifist movement or a cynical desire to condemn a promising plan which might run counter to the interest of a nation bent on universal dominion.

THE PERVERSION OF THANKSGIVING DAY

IT is the irony of history that the Pilgrim Fathers should be credited with the establishment of that which they abhorred, a formal holiday, and that we, in "celebrating Thanksgiving Day," look upon ourselves as following in their footsteps when we are actually violating their fundamental principles. Pastor Robinson cast off all the fixed fasts and feasts of the Church of England, believing that they led to formalism, ecclesiasticism and superstition. The American people have mostly departed from this opinion. Even the "Mayflower" descendants have reintroduced Christmas and are gradually coming to observe Easter and Good Friday. This they have a perfect right to do, and their puritanic ancestors would be last to reproach them for thus acting in accordance with their consciences, tho it involved deviation from the footsteps of their forefathers. But we may imagine that the Pilgrim Fathers, if they returned to earth in November, might use some harsh language, not merely about the way their descendants observe Thanksgiving Day, but also about their observing it at all.

The legal institution of Thanksgiving Day dates back to 1637, when the Plymouth magistrates past an ordinance

> that it be in the power of the governor and assistants to command solemn days of humiliation and also for thanksgiving *as occasion shall be offered.*

The words we have italicized contain the essence of the idea. The Plymouth magistracy did not ordain that henceforth and forever the people should proceed to be thankful on the last Thursday of November every year, rain or shine. They were too sensible for that. They empowered the governor to appoint such solemn days at any appropriate time, that is, whenever there was something special to be glad or sorry about. The first Thanksgiving was held in 1621 after the first harvest, a great event, a unique occasion, for it meant relief from imminent starvation and the assurance that they could get a living in these western wilds. The people felt thankful and they kept Thanskgiving. But when other harvests came along with monotonous regularity they ceased to feel that first spontaneous gratitude for an unexpected blessing, and so Thanksgiving in time became perfunctory and meaningless as a harvest festival. And now how can we expect the millions of dwellers in our cities to thrill at the thought of harvest time when all they know of it is that the price of wheat drops on Exchange and big pumpkins appear in the restaurant windows? We shall have much to be thankful for on November 25, but so we have on every day. Those who started Thanksgiving Day did not overlook this fact. They devoted more time to giving thanks every day than we do once a year. If we are satisfied with the way in which the last Thursday of November is observed and think it ought to be kept as a holiday in the interests of religion or sport, well and good. But let us not hold Plymouth responsible for it.

THE FRINGED GENTIAN

HAVE you ever had the good fortune during the days when October was burning the forest with fire of red and gold, or when the Indian summer was lingering in the frosty lap of November, when the bloom of asters and golden rod was faded; have you ever had the good fortune, while the slanting sun was beaming warm from the blue sky, to come across a wide stretch of moist meadow, bluer than the sky itself, deeper blue, violet tinted, where a myriad eyes of the fringed gentian face heaven in daring rivalry of color? If such a rare sight you shall ever see mark it in your diary as one of the blessedest days of your life.

There are other gentians, all worthy but none so glorious as this. In this country the closed gentian has an unsurpassed blue color, but it has not the courage with open petals to face the sun. The dwarf Swiss gentian is charming on the mountain slopes, and deserves the praise it receives, for daring the Alpine hights.

Very different is our blue beauty. It grows two or three feet tall and may have fifty stems on a single plant, each topped with a single blossom. Nothing can be richer than the rare sight of a field of these countless flowers opening their blue eyes within their fringe of lashes to greet the morning sun. From the blossom tube, which is roomy enough for a bumble bee to rest in it, the petals have spread out foursquare, like a Greek cross, each tipped with its copious fringe.

The fringed gentian is a flower of mystery. It is not often met with, but when it comes it comes in squadrons; but why is it that next year and the year after there will scarcely be a flower found? Has not this annual seeded itself? Does it blossom so late that the seeds are not perfected? The botanists do not tell us. Why should we know all of nature's secrets?

Brave, beautiful flower that has clad itself in the richest of all the colors of the spectrum, that it may dare the frost and snow of the expiring year!

So the glory of sunset pleases us more than all the gaudy shows of blinding noon. So the tempered courage of age is finer than the ceaseless activities of young manhood. Till the second snow spreads its white carpet over the meadow the brave gentian will lift its eye of faith to heaven. 'Twas

> Just before the snows
> There came a purple creature
> That ravished all the hill;
> And sunshine hid her forehead,
> And mockery was still—
> The frosts were her condition,
> The Tyrean would not come
> Until the North evoked it—
> "Creator! shall I bloom?"

A TRAIN OF ARTILLERY CAPTURED BY THE AUSTRIANS

Underwood & Underwood

CARRYING AMMUNITION THRU GALLIPOLI FOR THE TURKISH ARMY

THE STORY OF THE WEEK

THE GREAT WAR

November 1—Germans take Serbian arsenal of Kragujevatz. Steamer "Hocking" under American flag seized by British warship.

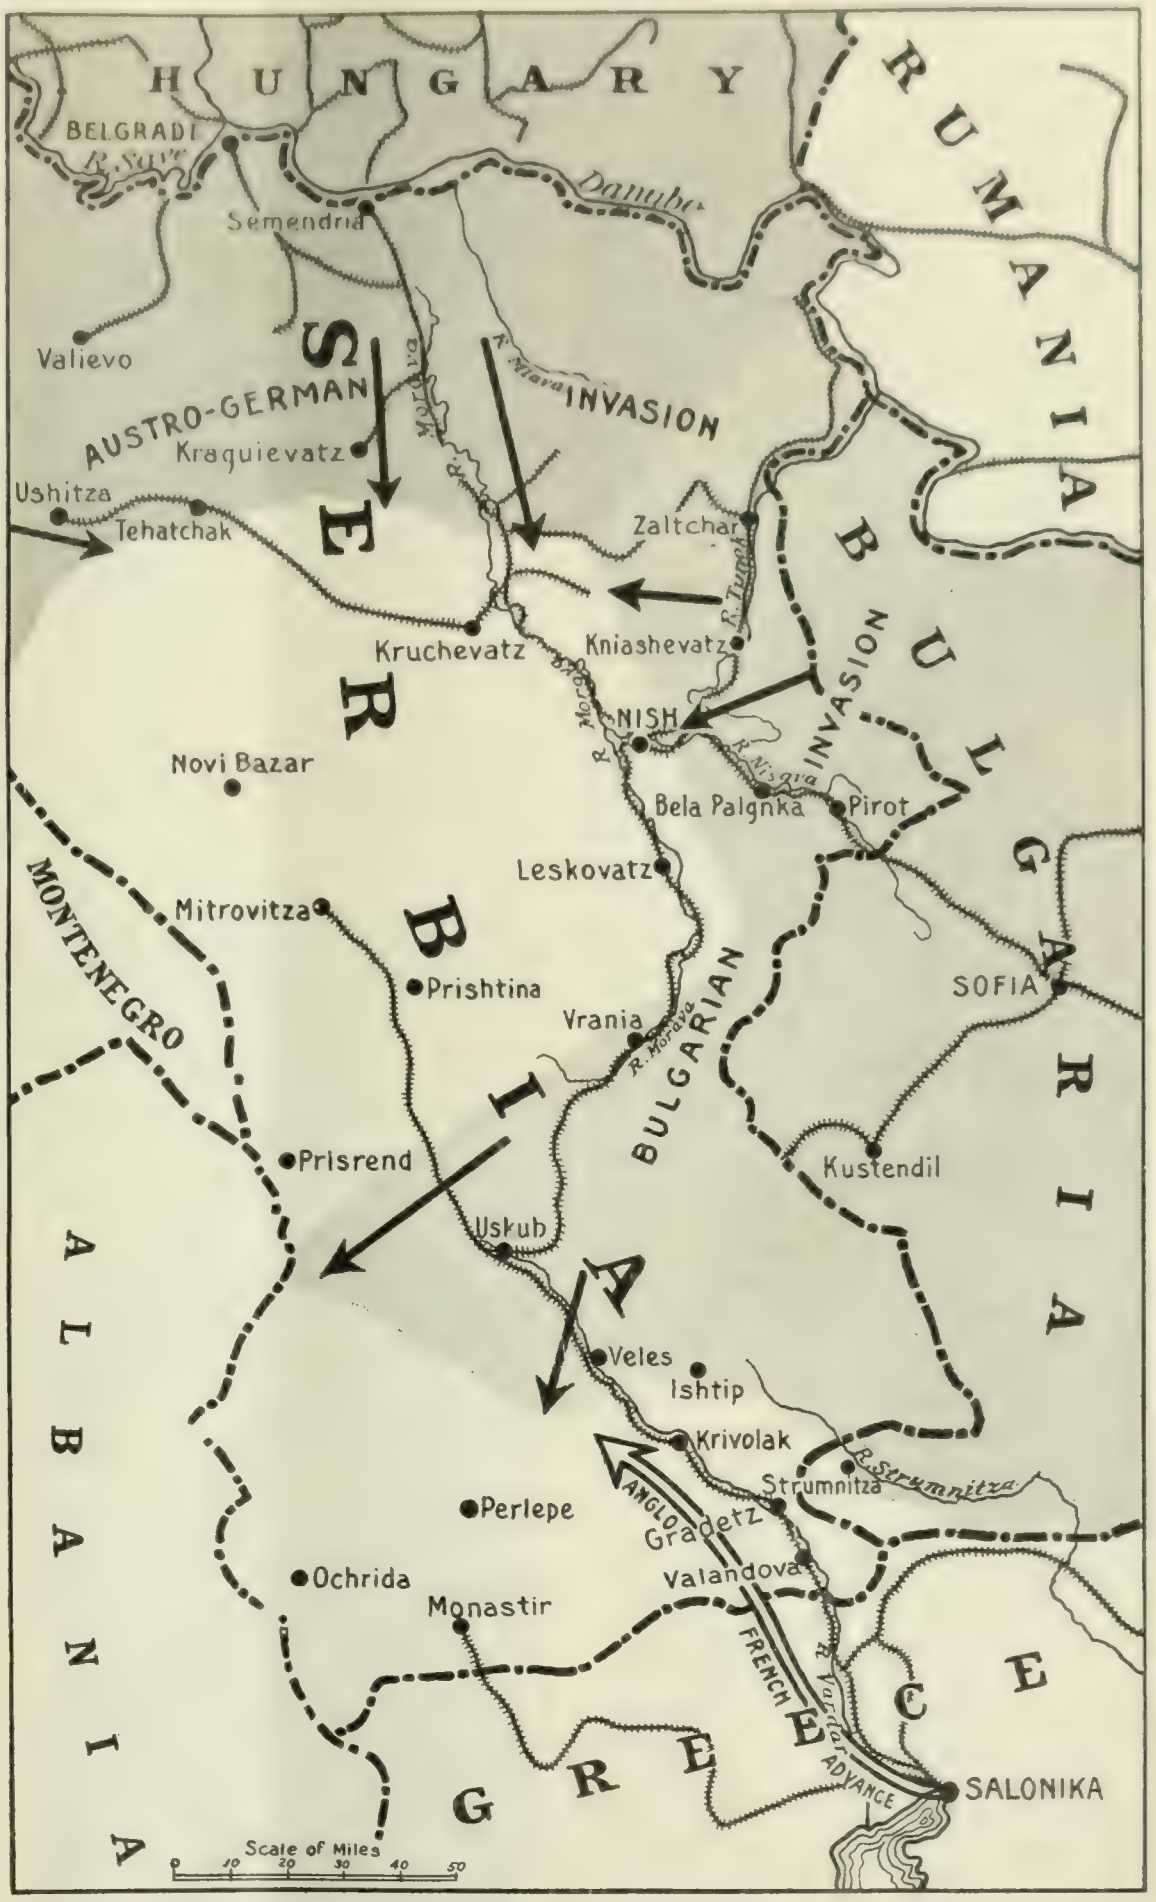
November 2—Asquith explains situation to Parliament. Germans take new Serbian capital of Tchatchak.

November 3—Austrians repel Italian attacks on Gorz. Germans attempt to reach Riga from west along Gulf.

November 4—Zaimis ministry overthrown in Greece. German submarines pass Gibraltar and sink two French and one Italian steamer.

November 5—Russians repulsed on Strypa river, Galicia. Germans repulsed at La Courtine, Champagne.

November 6—Bulgars take Nish. Kitchener leaves for Balkans.



November 7—American note protesting against British interference with American commerce published. Skouloudis forms Greek cabinet.

The Capture of Nish

Nish, the ancient Roman city of Niassus, the birthplace of Constantine the Great, the stronghold of the Turks, the old Serbian capital and since the first bombardment of Belgrade in August, 1914, the seat of the Serbian Government, has now fallen into the hands of the enemy. The Bulgars advancing on the Sofia-Nish railroad took first Pirot and next Bela Palanka, then encompassing the city from the northeast began a three day bombardment of its defenses, finally carrying it by storm.

The Germans advancing southward on the railroad from Belgrade are now only about twenty-five miles away and doubtless the connection will soon be made with the Bulgars at Nish and then they will be in possession of a thru railroad route to Constantinople by which munitions may be sent to the Turks at the Dardanelles and Asiatic Turkey drawn upon for the men and food now so needed by the Central Powers. By the capture of the region between the Danube and the Mlava rivers the Germans have, as we explained last week, obtained possession of rich copper mines which will tend to relieve their lack of this essential material for the manufacture of munitions. It is said that the Serbians flooded the mines and disabled the machinery but they can probably be put into working order again. Preparations were made in advance by the Berlin Government for opening up the mines and by the time they were captured carloads of coke from Hungary were already on the move and mining engineers were waiting in Belgrade to take charge of the work.

The invasion of Serbia is proceding like clockwork and the armies of Austrians, Germans and Bulgars entering from the west, north and south have met in the middle according to the time schedule. The Serbian Government, foreseeing the fall of Nish, took refuge in Tchatchak on the branch railroad leading west to Ushitza, but the Austro-German forces closed in on the new capital from the west, north and east and soon captured it. The Austrian army advancing eastward from Mlava made connections with the railroad at Ushitza while the army of General von

SERBIA CUT TO PIECES

The little kingdom of Serbia is being rapidly dissected. The southern part has been separated from the northern by the Bulgarian raid which, passing thru Kustendil and Uskub, extended to the Albanian border. The three armies which simultaneously invaded northern Serbia from the east, the north and the west have met in the Morava Valley. When the war broke out the capital was changed from Belgrade to Nish and, when Nish was threatened, to Tchatchak. All three of these are now in the hands of the invaders. The Franco-British arrived at Salonica too late to rescue Serbia, but are holding the mountain passes between Prelepe and Veles against the Bulgarian attack

Kövess from the east and the army of General von Gallwitz from the north met before Kragujezatz, the arsenal of Serbia. The place was strongly fortified and well stocked with munitions but the rapid advance of the Teutonic forces disconcerted the defenders and they saw that they would be unable to hold it. So they blew up the arms factory and the magazines and retired into the mountain fastnesses behind. The Serbian troops who were left behind to protect the retreating army held their position until their trenches were flattened out by the German shells and then in some cases died to the last man rather than surrender.

South of Nish the Bulgars apparently hold the railroad all the way to Veles. The rest of it from Krivolak to Salonica is in possession of the French, under General Sarrail. The Serbs in this region, cut off from those of the north, have joined with the French troops in defending Bobuna Pass thru which the Bulgars attempted to advance from Veles to Monastir. A contingent of British cavalry is said to be near Monastir, probably to protect the border from attack by the Albanians. The Albanians have a fierce hatred for the Serbs and would be glad of an opportunity of revenge for the cruelty practised upon them during the Serbian invasion and the annexation of Albanian towns by Serbia after the Balkan war.

The Greek Crisis

The Greek Government is again upset and the question of the attitude of Greece in the Great War is still in the balance. The next few weeks will probably determine whether the King of Greece is an autocrat or a constitutional ruler. Ex-Premier Venizelos, who commands a majority of the Chamber of Deputies, holds that Greece is bound by the treaty with Serbia to go to the help of that country in her distress, but King Constantine is strongly opposed to the participation of Greece in the war unless, indeed, it is on the German side. When Bulgaria mobilized the King consented to the mobilization of the Greek army, but that is as far as he would go. When Premier Venizelos tried to use the army against Bulgaria the King dismissed him and established a new ministry under Zaimis.

But the Zaimis cabinet was voted down in the session of November 4 by a majority of 147 to 114. The occasion was a trivial one. General Yanakitsas, Minister of War, had brought in a bill for extra pay for the army officers called to the colors. A Venizelist deputy challenged his right to take part in legislation and used language which the Minister of War considered insulting. The deputy was called to order and apologized, but the offended general stalked out angrily. The Venizelists then demanded an apology from General Yanakitsas, which the Premier refused, but was voted down in consequence.

In the ensuing debate Venizelos was asked by an opponent if he thought the King wished the country's destruction and in his reply he stated his position in the following frank language:

> I should have preferred not to drag the King's name into the discussion, but since you ask me I will say that in a constitutional Government the Crown has no place in responsibilities. Only foolish political leaders can think of hiding behind the Crown, which is irresponsible, for if they admit that in a parliamentary Government there can be such a thing as a Crown policy, they are unworthy to represent a free and sovereign people.
>
> No, the King does not wish the country's destruction. That is absurd. But our state is a democracy presided over by the King and the whole responsibility rests with the Cabinet. If you want monarchy, say so openly, and call for the necessary changes in the Constitution; but your efforts will be unavailing, because the nation wants the Constitution to remain as it is.

Venizelos also disclosed some of the secrets of his negotiations with the Allies. He stated that the offer of Cyprus by Great Britain was unconditional and that the Allies had offered Greece the Bulgarian territory in Thrace and a large area in Asia if Greece would contribute part of her fleet.

The political situation is a perplexing one. Venizelos does not wish to resume power unless he can make war upon Bulgaria. But no ministry can command a majority in the Chamber without his approval. If the King dissolves parliament no other can be elected while the troops are mobilized. A new cabinet has been formed with Skouloudis in place of Zaimis, but otherwise much the same membership.

Lord Kitchener, the British Minister of War, who has left London on some unknown mission in the Near East, may possibly be able to settle the Balkan tangle.

International News Service

CAN HE PREVENT CONSCRIPTION?

The Earl of Derby, to whom has been entrusted the last campaign for volunteers for the English army. If his efforts are successful conscription may be avoided. He was sixth Lord Kitchener in South Africa.

On the Russian Front

Taking advantage of the weakening of the German and Austrian forces the Russians are making energetic attacks at various points along the line from the Gulf of Riga to Galicia and in some cases have succeeded in pushing back the German front. Their greatest gain is in Galicia, south of Tarnopol. Here three tributaries of the Dniester, running south about ten miles apart, form a series of moats which the Russians in their retirement successively defended. The first German drive thru Galicia was halted at the westernmost of these three rivers, the Zlota Lipa. Their second advance carried them beyond the next river, the Strypa, and nearly to the third, the Sereth River.

But recently the Russians have turned tables, and not only driven the Germans back to the Strypa but crost that river and took the town of Siemkowce on its western bank. The Germans, however, soon regained the western side and attacked the Russians in the forests between the Strypa and the Sereth. Both sides claim the capture of several thousand prisoners here.

In the north the two important commercial cities of Dvinsk and Riga, which two months ago were thought to be almost within the German grasp, are still stoutly defended and the Germans have made no perceptible progress of late. Dvinsk is protected on the south and west by a group of lakes and intervening marsh land. Here Hindenburg should be in his element since it resembles the Mazurian lake region of East Prussia where he used to conduct his maneuvers before the war and where he gained his great victory over the Russians a year ago last August. But the Russians in their own swamps seem to be more than a match for him and by a recent attack forced the Germans from the position they had gained between Lake Swenton and Lake Ilsen, which lie about ten miles west of Dvinsk. But here also the Germans have since regained most of their lost ground.

Foiled in their attempt to take Riga from the south the Germans have undertaken an attack from a new quarter. They have advanced along the southern shore of the Gulf of Riga and reached the river about twenty miles west of Riga. But being so near to the water they are exposed to the fire of the Russian naval guns. The British submarines and the Russian fleet in the Baltic have been so successful of late in their attacks upon the German transports and merchant marine that the army attacking Riga is obliged to depend for its supplies and reinforcements upon the temporary military railroads which they have constructed to connect with Memel in East Prussia.

The Berlin war office reports the capture of 41,000 Russian and Serbian prisoners and 70 machine guns during the month of October. Of these 14,780

Field Marshal von Hindenburg, operating near Riga and Dvinsk, and 12,000 to Field Marshal von Mackensen, who is invading Serbia.

Russia as well as France, England, Italy and Greece has a cabinet crisis. Three members of the Ministry are said to have resigned, including Sergius Sazonoff, who as Foreign Minister had charge of the recent Balkan negotiations which turned out so unfortunately for the Allies.

Asquith's Explanation Premier Asquith won another parliamentary victory by his explanation of the conduct of the war to the House of Commons. The opposition which last week was clamorous for extensive cabinet changes has been quieted if not satisfied. The moment, he said, "calls for three things: A proper sense of perspective, a limited stock of patience and overflowing reservoirs of courage, both active and passive." He believed the nation possest these qualities despite "the small coterie of professional whimperers which keeps our enemies supplied daily with a diet of false hopes."

In August of last year the British Government was prepared to send abroad six infantry and two cavalry divisions. Now Sir John French had not far short of a million men. Canada had contributed 96,000 men, Australia 92,000, New Zealand 25,000, South Africa after conquering German Southwest Africa had sent 6500, Newfoundland 1600 and the West Indies 2000. The Admiralty had transported 2,500,000 troops, 320,000 sick and wounded, 2,500,000 tons of supplies and 800,000 horses and the loss of life on a thousand voyages had been less than a tenth of one per cent.

In France and Flanders up to the end of October the casualties amounted to 377,000 men. The Germans had not been able to gain a foot of ground in this section since last April. The German fleet was locked up in the Baltic and its operations confined to the sporadic operations of a few submarines.

In regard to the Gallipoli campaign for which the Government has been most criticized the Premier explained that the naval attack upon the Dardanelles was undertaken after full consultation with military experts and had been approved by the French Admiralty and the Grand Duke Nicholas, altho Sir John Fisher was doubtful about it. It was hoped to open communication with the Black Sea and to influence the Balkan nations in favor of the Allies. The failure of the operations on the peninsula was the keenest disappointment of the war. Mr. Asquith continued:

It is yet premature to form a judgment whether the Dardanelles expedition ought to have been undertaken, but it is worth while to consider what would have happened if it had not been undertaken. The Russians, who already had begun their retreat in Poland, would probably have had a severe setback in the Caucasus, the Turks probably would have organized a great attack on Egypt, the expedition in Mesopotamia probably would have been swept out of existence and Bulgaria certainly would have joined our opponents months earlier. Moreover it should be remembered that the forces at Gallipoli are still holding 200,000 Turks.

The efforts of the Allies to obtain unity among the Balkan states had been a disappointment and a failure.

Critics think that greater successes might have been attained but they leave one or two points out of account, one being that unity of direction is an important asset in diplomacy as in strategy. Germany had that advantage thruout, but the Allies had to consult at every important step and with the last call in the world there must be degrees of haste and point of view in such matters. Another difficulty was the mutual animosity of the Balkan states still another that the last moment the Allies had every reason to believe that Greece would observe her treaty obligations to Serbia.

Serbia is now left to stand without Greek support a frontal invasion of her Austro-German foes and an attack by the Bulgarians. But Great Britain cannot allow Berlin to become the seat of this sinister and nefarious combination. Her independence is agreed to be one of the essential objects of the war.

AMERICAN PROTEST AGAINST ENGLAND'S UNLAWFUL BLOCKADE

The note sent on October 21 by Secretary of State Lansing to Ambassador Page for presentation to Sir Edward Grey concludes as follows:

I believe it has been conclusively shown that the methods sought to be employed by Great Britain to obtain and use evidence of enemy destination of cargoes bound for neutral ports and to impose a contraband character upon such cargoes are without justification; that the blockade, upon which such methods are partly founded, is ineffective, illegal, and indefensible; that the judicial procedure offered as a means of reparation for an international injury is inherently defective for the purpose; and that in many cases jurisdiction is asserted in violation of the law of nations. The United States, therefore, cannot submit to the curtailment of its neutral rights by these measures, which are admittedly retaliatory, and therefore illegal, in conception and in nature, and intended to punish the enemies of Great Britain for alleged illegalities on their part. The United States might not be in a position to object to them if its interests and the interests of all neutrals were unaffected by them, but, being affected, it cannot with complacence suffer further subordination of its rights and interests to the plea that the exceptional geographic position of the enemies of Great Britain requires or justifies oppressive and illegal practises.

The Government of the United States desires, therefore, to impress most earnestly upon His Majesty's Government that it must insist that the relations between it and His Majesty's Government be governed, not by a policy of expediency, but by those established rules of international conduct upon which Great Britain in the past has held the United States to account when the latter nation was a belligerent engaged in a struggle for national existence. It is of the highest importance to neutrals not only of the present day but of the future that the principles of international right be maintained unimpaired.

This task of championing the integrity of neutral rights, which have received the sanction of the civilized world against the lawless conduct of belligerents arising out of the bitterness of the great conflict which is now wasting the countries of Europe, the United States unhesitatingly assumes, and to the accomplishment of that task it will devote its energies, exercizing always that impartiality which from the outbreak of the war it has sought to exercize in its relations with the warring nations.

ROBERT LANSING

The Seizure of the "Hocking" The steamer "Hocking," sailing under the American flag from New York to Norfolk, Virginia, was captured at sea by a British warship and taken to Halifax where it will be brought before a prize court to determine ownership. The seizure of a vessel under such circumstances is contrary to Article 57 of the Declaration of London, which states that the character of a vessel is determined by the flag which she is entitled to fly. But a British Order in Council of October 20 repudiated Article 57 and France took the same action. The British Government takes the ground that the country to which a vessel belongs depends not upon her legal flag, but upon the nationality of her actual owners and has announced that it will not recognize the transfer to American registry of vessels formerly flying foreign flags if enemy capital is actually represented in the company to which the vessel was transferred. It is said that orders have been issued to the British patroling warships to seize any vessels flying the American flag which are owned by companies in which it is suspected German capital is concerned. The vessels now under American registry are especially under suspicion. One of them is the "Hocking," which was formerly the Norwegian "Solweig" but became the Danish "Ameland" and later the Dutch "Gronland," until finally it was purchased by the American Transatlantic Company of New York. This company, the British claim, is capitalized by Krupp. The president of the company, Richard Wagner, states that no German, Austrian or Turkish capital is represented in the company, and he protests that the British have no right to seize a vessel flying the American flag, which never belonged to a belligerent and is now wholly owned by Americans, while it is proceeding in ballast from one American port to another.

Secretary Lansing has sent a note of protest to Great Britain in which he specifies 275 cases of the illegal seizure or detention of American vessels from March to June. We quote the conclusion of the note in another column.

Mr. Wilson on Defense Plans The President, addressing 800 Democrats assembled to celebrate the fiftieth anniversary of the founding of the Manhattan Club, in New York, on the 4th, spoke in support of the new military and naval

plans. At the beginning, having defined the principles and ambition of the American people, he declared it to be his belief that we would "never take another foot of territory by conquest," and never seek to make an independent people subject to our dominion. He was sure that in no man's mind had been raised the question of the wilful use of force on our part against any nation. If we should develop military or naval force, the world might rest assured that we were gathering the force, not for attack, not for aggression, not for the satisfaction of any political or international ambition, "but merely to make sure of our own security. We have it in mind," he continued, "to be prepared, not for war, but only for defence, and with the thought constantly in our minds that the principles we hold most dear can be achieved by the slow processes of history only in the kindly and wholesome atmosphere of peace."

But there should be a great body of citizens who have received at least the most rudimentary and necessary forms of military training, and the nation should have the munitions and supplies which they would need if they should be called into action. He then spoke of the proposed small increase of the regular army, the projected Continental Army of 400,000, the intended additional grant of aid to the National Guard, and the program for enlarging the navy. With respect to the navy, it was only necessary that we should hasten "our pace in a policy we have long been pursuing," with a definite plan looking well into the future. There was no panic haste in the matter. The country was not threatened from any quarter. But "under the new world conditions we had become thoughtful of the things which all reasonable men consider necessary for security and self-defense on the part of every nation confronted with the great enterprise of human liberty and independence."

Was not the plan sane and reasonable? Did it not conform to our ancient traditions? It represented the best professional and expert judgment of the country. He should ask for it the support of men of all shades of political opinion. He was speaking as the trustee and guardian of a nation's rights, and would not be doing his duty if he should not "speak in terms of the deepest solemnity of the urgency and necessity of preparing ourselves to guard and protect the rights and privileges of our people."

Voices had been raised here professing to be the voices of Americans which were not in truth American, "but which spoke alien sympathies and came from men who loved other countries better than they loved America, men who had forgotten that their chief and only allegiance was to the great Government under which they live." But the vast majority of those who had come to take advantage of America's hospitality were not represented by these men, who were the spokesmen of small groups "whom it is high time that the nation should call to a reckoning." He was confident that upon the first occasion or first definite challenge, the real voice of the nation would speak forth in tones which no man could doubt, and with commands which no man would dare to gainsay or resist.

Mr. Bryan in Opposition On the following day Mr. Bryan published a statement in opposition, saying that he had read the President's speech "with sorrow and concern." Mr. Wilson, he continued, had announced a policy which had never before been adopted in this country or indorsed by any party. The proposed plans were a departure from our traditions and a reversal of our national policy. They were not only a menace to our peace and safety, but a challenge to the spirit of Christianity, which teaches us to influence others by example rather than by exciting fear. The plea that we should be prepared not for aggression, but for defense, was the one on which all preparation for war had been made. "Speak softly but carry a big stick" was a delusive maxim employed by those who put their faith in force. Why reverse our policy at this time? The President admitted that there was no reason for a change. Why choose this time for revolutionizing our national theories and for encouraging the nations of Europe in their fatal folly by imitating them? By taking up such a policy, we might stimulate all Latin-America to preparation and do infinite harm. He felt sure that taxpayers were not in favor of paying the cost of it. There had never been a time in fifty years when there was less reason for increasing the military and naval expenses. He hoped the President had not been deceived by the atmosphere of the Manhattan Club, "the one place where the mammon-worshipping portion of the Democratic party meets to exchange compliments."

Robert M. Thompson, president of the Navy League, has asked Mr. Bryan to repudiate or to accept responsibility for the statement said to have been made by him in a recent public address that the League is "the paid agent of ammunition makers and ship builders."

Secretary Garrison has published the details of his plans, the main features of which have been shown in these pages. The increase of the regular army is from 108,008 to 141,843. It is proposed that $20,000,000 a year, for four years, shall be expended upon coast defences, and $26,000,000 a year in accumulating reserves of arms and munitions; also that the Federal grant to the State Militia shall be increased from $6,614,532 to $10,000,000. Secretary Garrison would open the Continental Army to the militia, permitting individual members or organizations of the National Guard to enter it, rank for rank and grade for grade.

REFERENDUMS

New short ballot Constitution defeated in New York by 460,000.
Prohibition defeated in Ohio by 70,000.
Proposal to bond New Jersey for $1,000,000 to purchase tract for potable water supply defeated.

GOVERNORS

Kentucky—Augustus O. Stanley, Democrat, probably succeeds James B. McCreary, Democrat. Official count may be required.
Maryland—Emerson C. Harrington, Democrat, succeeds Phillips L. Goldsborough, Republican. 3500 majority.
Massachusetts—Samuel W. McCall, Republican, succeeds David I. Walsh, Democrat. 6600 majority.
Mississippi—Theodore G. Bilbo, Democrat, succeeds Earl Brewer, Democrat.

LEGISLATURES

Kentucky retains Democratic majority.
Maryland retains Democratic majority.
Massachusetts Republican majority increased.
New Jersey Republican majority increased.
New York retains Republican majority.

Results of the Elections At the elections held on the 2d, action was taken upon woman suffrage constitutional amendments in New York, Pennsylvania and Massachusetts. In the first of these states the majority against the proposed amendment was about 195,000. The question cannot come before the people again at the polls until 1919. At a large meeting of advocates of woman suffrage in New York City, after the election, $100,000 was pledged by organizations and individuals for the support of a new campaign. The amendment was lost in Massachusetts by a majority of 132,083, and in Pennsylvania the majority against it was 59,300.

For the first time in five years the Massachusetts Republicans elected their candidate for Governor, Samuel W. McCall's majority over David I. Walsh, the present Governor, being about 6000. The Progressive party, which had 128,000 votes two years ago, and 32,000 last year, had only a little more than 7000 at this election. This was not enough, under the law, to give the party a place on the ballot next year. There were Republican gains in the Legislature, where the party has had a majority. In New York the work of the Constitutional Convention, which was in session for several months, and which proposed an elaborate revision, was rejected by a majority of about 170,000. The Republicans retained their majority of almost two to one in the Legislature. One Socialist, Abraham I. Shiplacoff, was elected from Brooklyn. In Philadelphia the Republicans elected Thomas B. Smith Mayor by 80,000 majority. Gas

defeating the independents who have recently been in power. They control the new City Council. Maryland Democrats elected E. C. Harrington Governor, but his majority was less than 1000. In Kentucky it is thought that the result can be determined only by the official count. Augustus O. Stanley, Democrat, probably has been elected Governor, but the latest returns give him a majority of only 621.

For the second time in two years statewide prohibition was defeated in Ohio, but the majority against it was reduced from 84,000 to 40,000. In New Jersey the Republicans made gains in the Legislature. Theodore G. Bilbo was elected Governor of Mississippi. There were Congressional elections in five districts. When Congress assembles in December, the House will be composed of 230 Democrats, 196 Republicans, 7 Progressives, 1 Independent, and 1 Socialist. John J. Fitzgerald, Democrat, who has been chairman of the Committee on Appropriations, was a candidate for Judge of the Supreme Court at last week's election in New York, and was defeated. Therefore he remains in the House.

In Detroit there was a majority of 8298 against the proposed purchase of the street railways by the city. Rev. George R. Lunn, Socialist, was elected Mayor of Schenectady, New York, a second time. In Salem, Massachusetts, the voters rejected the commission form of government, which the city had had for two years, and by a majority of 445 restored the Mayor and Aldermen.

Arizona's Alien Labor Law

The Supreme Court has decided that Arizona's Anti - Alien Labor Law is unconstitutional. This law, enacted about a year ago by the votes of the people in accordance with the initiative process, provided that at least 80 per cent of the employees of any company, firm or individual employing more than five persons must be electors or natives of this country. It was aimed at Japanese and Mexicans employed in the mines and on the ranches. Suit was brought by an Austrian cook named Raich, who had been discharged by his employer. Several foreign Governments have protested against the statute.

The court holds that it is at variance with the Fourteenth Amendment. "It requires no argument to show," said Justice Hughes in announcing the decision, "that the right to work for a living in the common occupations of the community is of the very essence of the personal freedom and opportunity that it was the purpose of the Fourteenth Amendment to secure. If this could be refused solely on the ground of race or nationality, the prohibition of the denial to any person of the equal protection of the laws would be a barren form of words."

Villa Fails at Agua Prieta

Villa besieged Agua Prieta, which adjoins Douglas, Arizona, for three days, and then withdrew to Naco, thirty miles west of Agua Prieta and also near the boundary. Carranza had sent 4500 men to reinforce the besieged garrison. These soldiers were permitted to go by rail thru United States territory. Angry because our Government had granted this permission, Villa said he would fight the American army and that he no longer cared what might happen to foreigners in the territory under his control. The reinforcements raised the garrison to 7500 men. As they were strongly intrenched and well supplied with artillery and machine guns, Villa, with 12,000, could not overcome them. In the three days of fighting, one American private soldier, guarding a supply wagon in Douglas, was killed, and six (a corporal, a sergeant, and four privates) were wounded. Both armies had been warned by General Funston that they must not shoot across the border line.

In his official report he says that the chief offenders were men in the Carranza garrison, and that Carranza's soldiers deliberately fired upon a group of American officers who were 200 yards from the boundary. After his retreat to Naco, Villa asserted that four Americans—two surgeons and two chauffeurs—had been killed by Carranza's men while they were giving aid to the wounded, under the protection of the Red Cross. This was false. The four men were held as prisoners by Villa, who robbed them, condemned them to death and then set them free. They made their way into Arizona. Obregon has come up from the south to take command and pursue Villa, who is moving westward to attack Guaymas. Obregon's offer of amnesty to Villa's men provides that each infantryman shall receive $30, and each cavalryman $100, with free transportation to their homes. The Villa garrison at Ojinaga, on the Texas border, has gone over to Carranza, who obtains full control of the state of Jalisco by the submission of Villa leaders there.

Jose Orozco, recently tried in Texas for violation of the neutrality laws, convicted and sentenced to be imprisoned for a year and a half, has made a confession to the Federal District Attorney about Huerta's plans. He asserts that the Huerta group had $11,000,000, 6000 rifles and 10,000,000 rounds of ammunition. Pascual Orozco was to be commander of their army. Huerta is seriously ill and has been removed from the prison at Ft. Bliss to his daughter's house in San Antonio.

The Question of the Chinese Monarchy

Japan is exerting all her influence to prevent the restoration of the monarchy in China. On October 16 she asked the friendly Powers to join with her in urging upon the Chinese Government a postponement of the decision as to form of government. Russia and Great Britain accepted and joined in the protest. France and the United States declined to take any official action. It was stated, however, that the French Government gave its friendly and unofficial support to the action of the three Powers but owing to the sweeping changes in the cabinet could not give consideration to foreign affairs.

The representatives of Russia, Great Britain and Japan in Peking pointed out to the Chinese Foreign office that the proclamation of a monarchy, while it would not alter the existing state of things generally, might very likely lead to disorders owing to the strong republican party in different parts of China. They said that if disorders occurred, foreign interests would inevitably suffer, especially the missionary interests, and, consequently, they hoped that while the European war lasted no change would be made in the name or the title of the Chinese Government. They fully recognized the fact that the existing government under Yuan Shih-kai formed the best guarantee for the preservation of order.

In reply the Chinese Foreign Office stated that the decision had been referred to the people and that it was impossible to withdraw or postpone it. The Japanese Government is not satisfied with the Chinese reply and has asked for an explanation of it.

The elections are, as was expected, going as Yuan Shih-kai desires they should. It is announced from Peking that fifteen of the eighteen provinces have voted unanimously in favor of a monarchy with Yuan Shih-kai as Emperor. The delegates elected by the notables of the provinces are expected to meet in Peking the last of this month and vote upon the new constitution and the form of government. The representatives of the Allied Powers accuse the Germans of instigating the monarchical movement for the purpose of involving Japan in a continental conflict.

WOMAN SUFFRAGE

Massachusetts rejects amendment by vote of 2 to 1, 164,05 votes cast in its favor.

New York rejects amendment by vote of 2 to 1, 314,198 votes cast in its favor.

Pennsylvania rejects amendment by vote of 2 to 1, 310,000 votes cast in its favor.

Total of approximately 1,000,000 votes for woman suffrage out of 2,500,000 votes cast.

Within a year voters of three more states must decide the question: Iowa at the primary elections in June, and South Dakota and West Virginia in the regular fall elections of 1916.

The National Woman Suffrage Association and the state organizations plan to work together in the campaign for the Federal Amendment, to be presented at the next session of Congress.

There are now twelve suffrage states: Arizona, California, Colorado, Idaho, Illinois, Kansas, Montana, Nevada, Oregon, Utah, Washington and Wyoming. Twenty more states have partial woman suffrage.

IS ENGLAND MAKING GOOD?

BY LORD NORTHCLIFFE

WHENEVER I am asked by Americans about our raising of the British Army and the question of service therein, its equipment and transport, I refer them, and have been so doing for fifteen months, to the history of their own country from 1861 until the end of the Civil War.

The parallels between our respective cases are so numerous that it is quite easy for any American to understand the great difficulty of raising an army from a democracy well organized, as we are, for sea warfare, but almost unprepared for war on land.

The authorities do not permit one to say, and I would not if I could, lest the Germans should get to know, exactly how many recruits we have raised by the voluntary system. It is more than two millions. Canada, Australia and New Zealand have also contributed nobly to swell this astounding figure. The number of volunteers raised in Great Britain is the more remarkable inasmuch as we are an island people and know little more of the war than you do, nay, owing to our censor, even less.

During my travels in the United States I have had many conversations with people in the Middle West as to the value of a navy for the United States. I have talked with American citizens who have never seen the sea. It is difficult to explain to some of them that a battleship is not a useless luxury. Some Americans have even explained to me that the best preparation for war is to have no navy at all! Now inasmuch as England is an island, and a very small one, it has never been difficult to persuade our people that ships and sailors are essential, but it has always been difficult, almost impossible, to get them to prepare an army of any serious dimensions. When the war broke out we had a perfect fleet, which since then has even been greatly enlarged, a fleet which prevents any German ship, mercantile or naval, from showing itself with safety in any sea in the world.

But we had an army, by comparison with European armies, not very much larger than yours. We had suddenly to call to arms and equip these millions of young men, very few of whom understood anything about the war and its cause, and who were, at first, simply fired with anger at the outrage on Belgium and the horrible atrocities revealed by the Germans themselves in German documents which became public. By dint of a gigantic campaign of advertising these more than two millions of men have rallied to the colors, together with some thirty thousand who have been hastily made into officers.

The American people, who have the unique opportunity of hearing day by day both sides of the war story, have been amazed at the success of the British censorship in keeping the English people in the dark about what their enemies were doing and thinking and about the progress of their own campaigns. The British Government prohibits the circulation of literature from enemy countries and sometimes does not even allow the publication of the official German statements. The consequence of this is that the English public have had some rude awakenings to disagreeable truths when too late to remedy the faults and they have come quite naturally to distrust the Government. The papers edited by Lord Northcliffe have done their best, without violating the censorship regulations, to awaken the British people to a realization of the difficulties confronting them. Time and again Lord Northcliffe's "London Times" and the "Daily Mail" have disclosed some administrative or military incompetency and have been furiously denounced by their competitors as guilty of false libel, but in each instance it has later turned out that Lord Northcliffe was right and the revelation has led to measures for rectifying the error. "The Independent" does not always agree with Lord Northcliffe's political views, but we believe that in the future it will be recognized that his journals have done patriotic service in this crisis in the history of Great Britain.—THE EDITOR.

At the outbreak of war many people shook their heads at the prospect of these young clerks, stenographers, stock brokers, store-keepers, actors, doctors, editors, reporters, artists, miners, factory hands and others being of any use against the highly trained soldiers of Germany. But, as a matter of fact, in the supreme test of the long, terrible winter in the trenches and the advance against the machine-gun fire of the enemy, these young men—probably because we are, like you, a nation of game players, football and the like—have done at least as well as the Germans. In all matters where individual courage and responsibility are concerned they have proved far more efficient than our enemy. It is notable that the saying should run thru Germany, "No one returns from Ypres," for it is at Ypres that we face them and have barred the road to Calais.

The difficulty of the men has not been so great as that of the equipment. It is only when you get in the trail of an army that you realize how much a soldier needs. There is the boot question, the belt question, the matter of summer and winter clothes, underclothes, more than one kind of cap or hat, and, now, armor. There is the soldier's rifle and there are his machine guns, trench mortars, field artillery, heavy artillery, bombs, periscopes, even short daggers, which are now taking the place of bayonets in some parts of the firing line. I have made several visits to the scene of war, and each time have come back amazed at the giant appetite of the monster which eats up material as quickly as it eats up men. The whole business is horribly wasteful, but one must take it as it is. It is war.

We have made the mistakes of a democracy, obviously the worst form of government for waging war. We have made the mistakes of our slowness of temperament and in our belief in politicians, who seem quite big in times of peace, but have shrunk to the size of very small men now that they are up against something really large.

But we have recruited well, and as I write we are on the eve of a further attempt at recruiting. It is a kind of compromise between voluntary enlistment and conscription. It is an attempt to bring men into the ranks by the personal canvass of men not themselves eligible for military service, and is being directed by the machinery of the various political organizations working in harmony one with the other and with the voluntary recruiting bodies that have come into existence since the beginning of the war. But I do not think that it will be final. In the last resort we shall be obliged to follow Lincoln's example and enforce conscription, the "draft" as you called it. I believe it will be largely successful, and I believe that it will be a means of teaching our people how serious the war is. They do not know the dangers that beset our Empire during this conflict, because they have been rigorously shut off from news of the war owing to the intense stupidity and lack of patriotism of the censorship.

When the war began it was understood that the censor was employed for the laudable purpose of

THE GREAT INSURGENT OF BRITISH JOURNALISM

preventing the Germans from knowing what we were about and what preparations we had made. It soon became a machine for screening political and other blunders. It has hidden from our people and from the world generally many splendid deeds our men have accomplished, deeds of which the enemy full well knows the weight. On the other hand, it has concealed from us misfortunes known to the Germans, and to the Americans and all other neutrals. I am entirely in favor of a censorship. I know well what happened in the Franco-Prussian War by the leakage of military information thru the press. Several unfortunate incidents involving the death of men have resulted in this war thru the leakage of military information. But the British censorship has become a means by which the public has been chloroformed into the belief that the task before us is comparatively easy.

My own personal view of the war, which may, I dare say, be of very little account, is that which I have strongly exprest in the American newspapers since the commencement of the conflict. I have said repeatedly that I thought the intense German attempts to reach Calais would prove an utter failure, and that they would never reach Paris. They are within a ring of steel on land, and are blockaded by the British fleet. They are trying to make their escape in a gamble to get to Suez, where they hope to hold up the British Empire for an immense ransom by the seizing of the canal. I believe that they will get much further on the road to Suez than they are at this day of writing, but with a great deal of knowledge of Germans and of Germany I have never had any belief in their ability to defeat the Anglo-Saxon in war or any other great test of character. They are a world nuisance, and will be a world nuisance for years to come, for the war cannot, in my judgment, be a short one. They have produced death and havoc on a scale unknown in the world's history. They are causing an upheaval that has no precedent during the Christian era.

I am not sure that the upheaval will be bad for the world. It will prove an abiding advertisement of the evils of a military oligarchy. It will also show the free and easy nations, like the English and the Americans, that a little more national coördination and a little less "freedom" might be for the welfare of the state. But to imagine that people with the horrors of Louvain, Termonde and the rest in their systems can ever dominate is to attempt to prove that Magna Charta, Cromwell, the Puritan Fathers, 1776, Trafalgar, Waterloo and Lincoln were vain and worthless. I do not think that any American of English, Scotch or Irish descent will be inclined lightly to tear out those pages from that history of freedom, which each of us carries in his mind from childhood upward.

London

WHY GERMANY MUST LOSE

BY FRANK H. SIMONDS

Students of the war—which includes everybody—in New York found very soon after hostilities began that the editorial comment in the New York "Evening Sun" was superior for clarity and authority to the average discussion of the war's strategy. Subsequently Mr. Simonds, who based these editorials on long study of European strategical problems, became editorial writer for the New York "Tribune," where he continued his illuminating articles. Mr. Simonds has gathered his editorials into two small volumes, "The Great War, the First Phase" and "The Second Phase." His contributions to various newspapers and magazines have made his work familiar all over the country.—THE EDITOR

FOR many months now the press and the experts of the Allied nations have been discussing with growing insistence the ultimate defeat of the Austro-German alliance thru the mere process of attrition. Despite the splendid achievements of the Central Powers in the field, their enemies have continued to point out that unless they were able to get a decision over one of the nations leagued against them and force it to make a separate peace, the doom of the two Kaisers was as certain as that of our own Confederacy, and for precisely the same reasons.

At the basis of this calculation lies the transparent fact that the Central Powers are greatly outmatched in population. Together Austria and Germany contained at the outbreak of the war some 117,000,000 people. The European population of their enemies, Italy included, was above 270,000,000. If the war were to be protracted, with no change in the alignment, the exhaustion of the powers with the smaller resources in men was bound to come far in advance of the exhaustion of their foes.

Now at the close of the first year of fighting, say on August 15, the date when the real German offensive began in 1914, the Austro-German alliance had not succeeded in disposing of any one of their four foes, they had not achieved a separate peace, altho they had sought a decision, first against France and then against Russia, and in both cases had won magnificent triumphs. Now it is of utmost importance to discover, so far as is possible, what had been the progress of attrition, for it is clear that with any reliable figures it would be possible to get some useful glimpse of the probable duration of the war and the approximate time when attrition would become actually effective and the armies of the lesser nations would begin to diminish actually, their reserves having been exhausted.

On the subject of the German losses there have been an endless number of speculations. Some of them I shall mention presently. But at the moment I prefer to deal with something better than all speculation, and that is the official German casualty list. About the middle of September there was published the tabulation of German losses, up to that time, or rather of the Prussian losses. The tabulation was printed in an Amsterdam paper and its accuracy is not to be doubted. Now, since, roughly speaking Prussia and the smaller states that report with her, make up three-quarters of the population of the German Empire, the further losses of Bavaria, Baden, Saxony and Württemburg, which issue separate reports, may be easily calculated.

The Prussian loss on or about September 15 was 1,920,000. One quarter, the percentage of the other states, would be 480,000. Thus it is clear that the total losses for the German Empire reported on September 15, amounted to 2,400,000. But experience with the reports of all nations indicates that they are always far behind the date, not because of any desire to suppress, but

THE GERMAN HANDICAP

	Available First Year	Loss	Available Aug. 15, 1915	Available Aug. 15, 1916
France ..	4,000,000	1,400,000	2,600,000	1,200,000
Britain ..	3,400,000	400,000	3,000,000	2,000,000
Russia .	5,000,000	3,500,000	1,500,000	1,500,000
Italy	1,000,000	200,000	800,000	1,000,000
Allies .	13,400,000	5,500,000	7,900,000	5,700,000
Austria .	5,000,000	2,400,000	2,600,000	800,000
Germany.	6,700,000	2,400,000	4,300,000	1,900,000
Central Powers .	11,700,000	4,800,000	6,900,000	2,700,000

because of the difficulties of tabulation, while great operations, such as the Russian campaign, are going forward. Thus it is fair to assume that at the least the German reports are a month behind the fact of September 15.

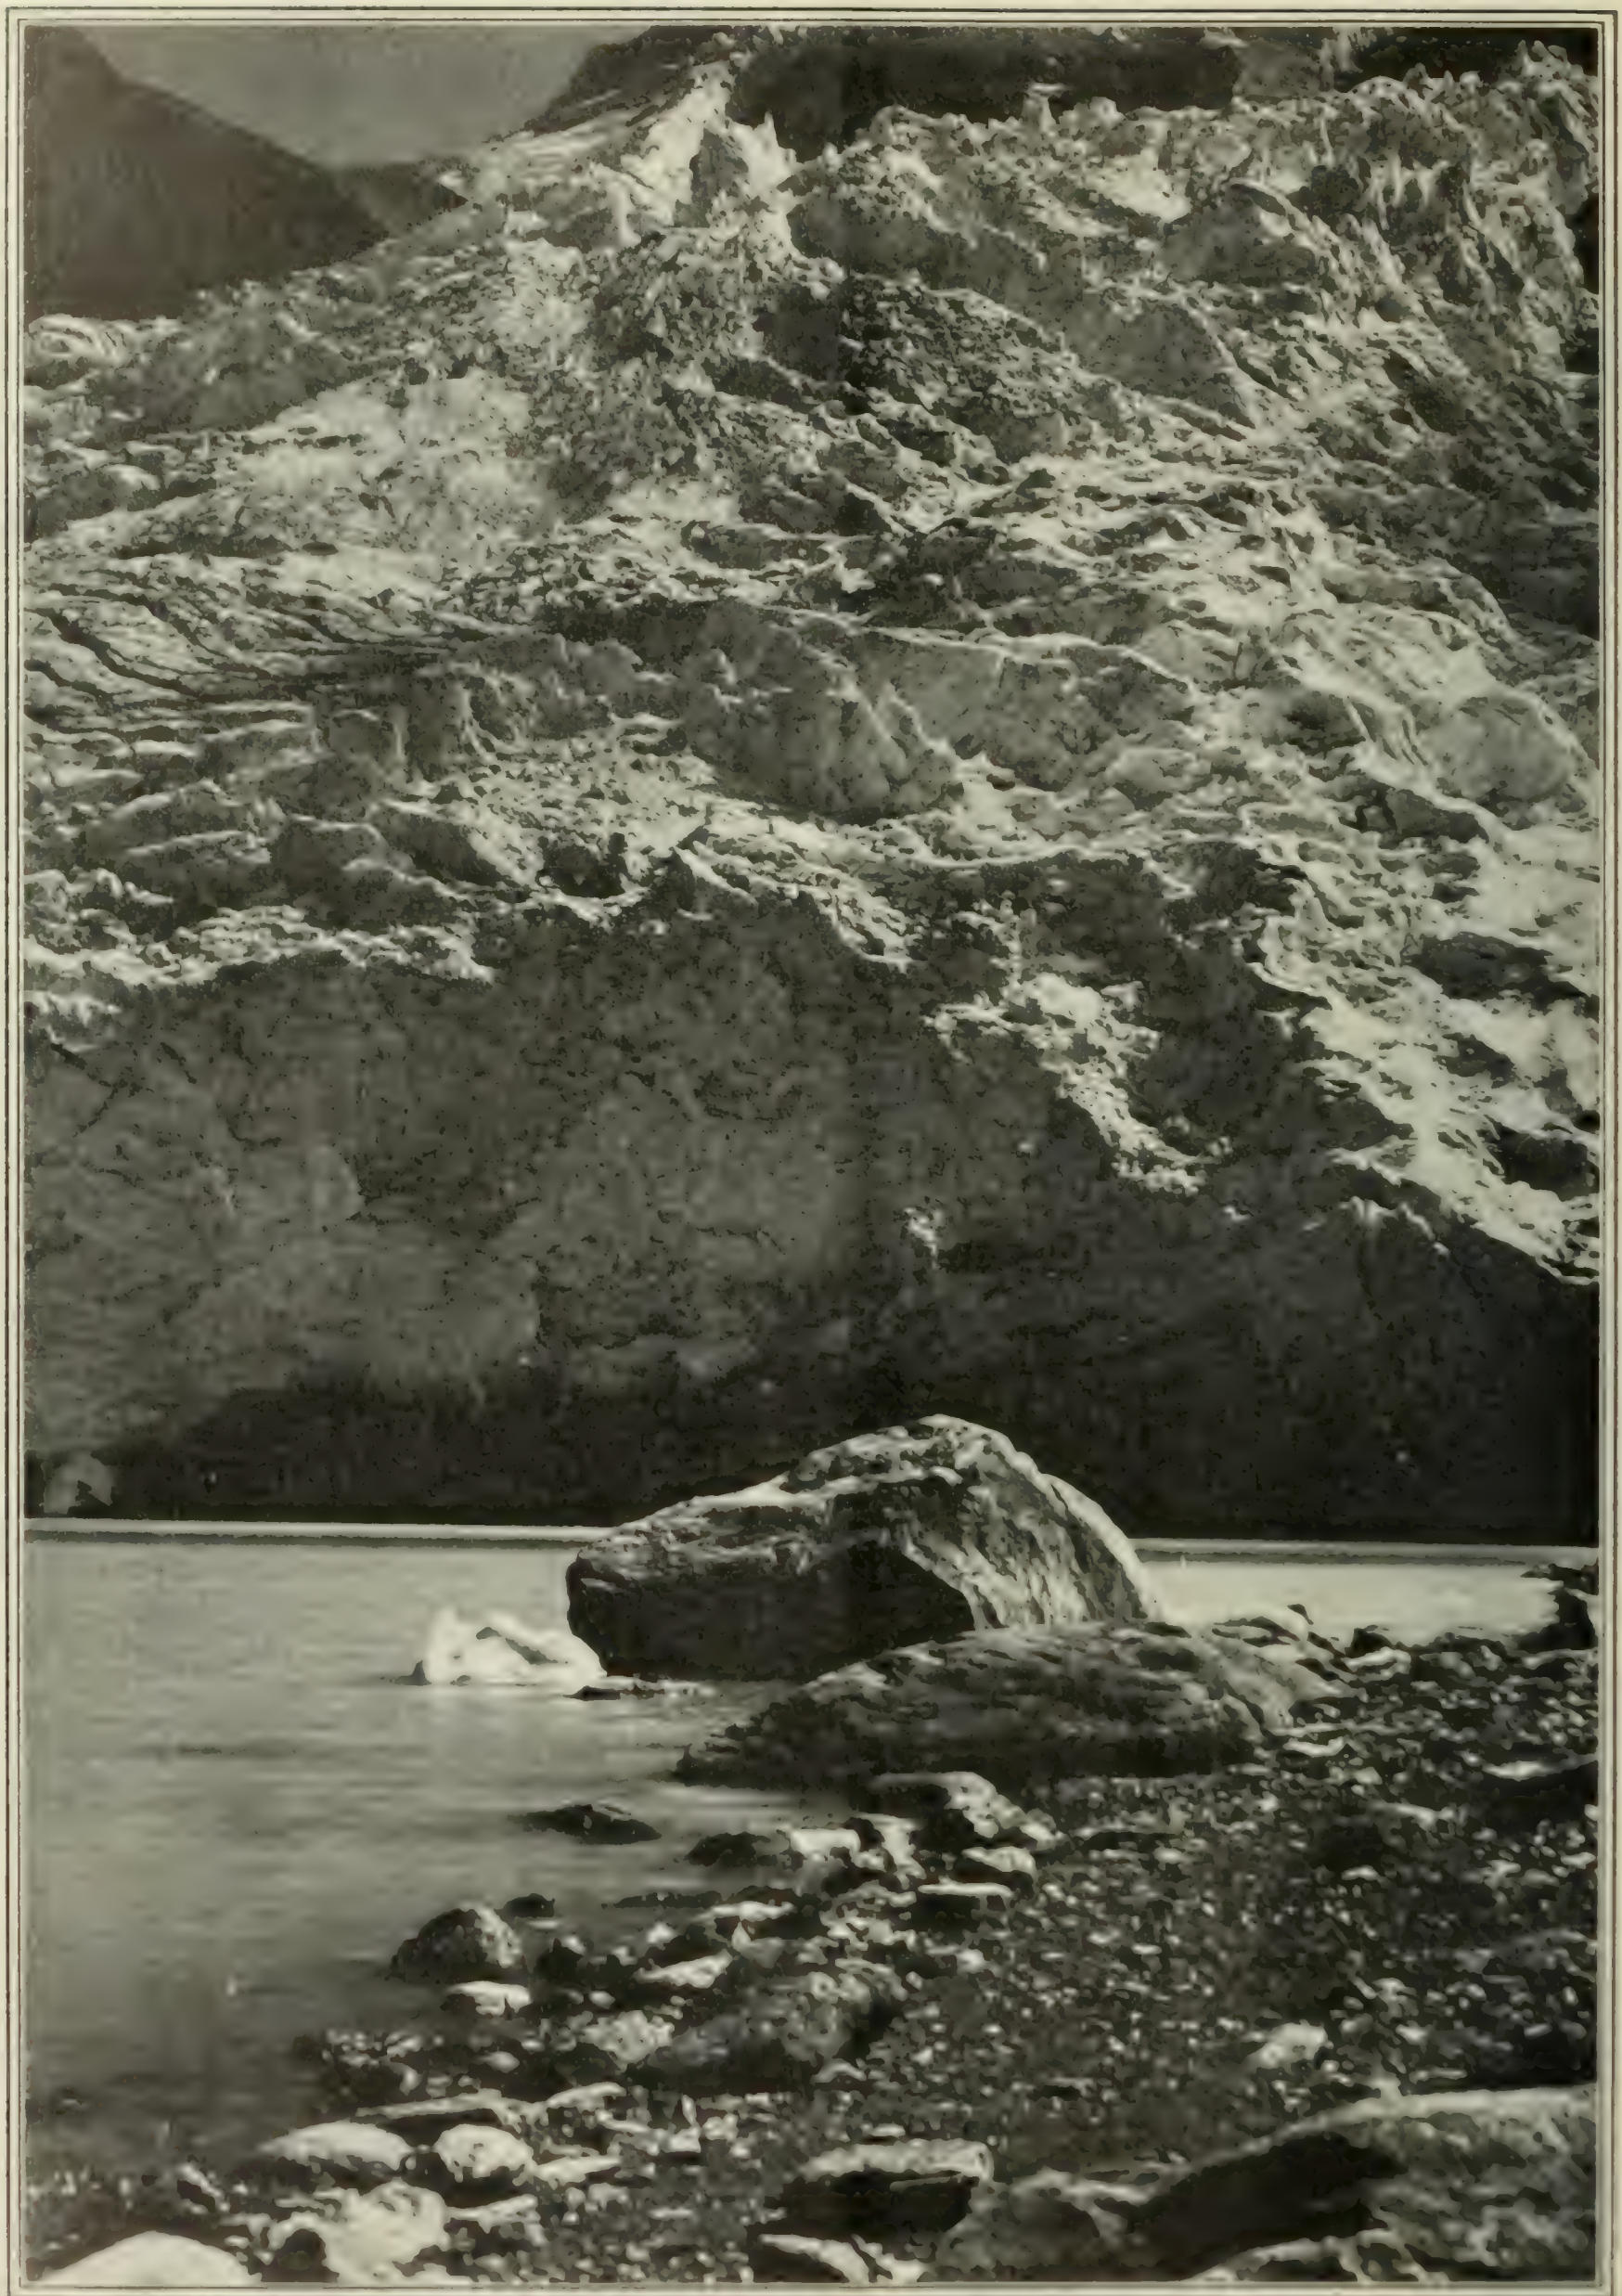
If we start with the assumption that the German loss up to August 15 was 2,400,000, it will be necessary at once to make certain deductions for the wounded who have been returned to duty. But here a new consideration arises. No report is made by Germany or by France, whose reports are not published at all, of the slightly wounded and of the men incapacitated temporarily or permanently by illness. In figuring permanent, as contrasted with temporary casualties, the usual rule is to deduct twenty per cent. Now, given the character of the campaigns, the strain of the winter, it is by no means an exaggeration to estimate that those wounded who were returned to duty did not exceed those who were discharged or died by reason of illness.

We may then fix at 2,400,000 the permanent loss of the Germans in the first year. Now the usual estimate of the percentage of the male population of a country available for military service is one-tenth. The South in our Civil War put a little larger fraction in and the North a much smaller. But the figure may be accepted, and it should be remembered that in all calculations, both affecting German and Allied losses, the same ratios are applied.

As the population of Germany at the outset of the war was about 67,000,000, her available male strength was 6,700,000. Deducting 2,400,000, there would remain 4,300,000, the figure for August 15, 1915. Repeat the process and you have the prospective figure for German strength on August 15, 1916, which would be 1,900,000. But the German armies in the field have never been estimated at below 3,200,000 and the force facing the British and French in the west is estimated at 1,750,000, the minimum that can hold the lines. There would then be left on August 15, 1916, but 150,000 Germans to face the Russians in the east.

Now the French official estimates of German losses—permanent losses, be it understood—is 260,000 a month, not 200,000. Accept this figure and the German loss for the first twelve months was above 3,100,000, or almost fifty per cent. And the German official estimates of the French losses were exactly fifty per cent, or 2,000,000. Now if these estimates were correct, both the French and German armies would disappear in the next twelve months. Accepting the ratio used in the case of the Germans and reached on the basis of German official statistics, the loss of the French for the first year was 1,400,000, their strength on August 15, 1915, 2,600,000, and their prospective strength on August 15, 1916, will be 1,200,000, against 1,900,000 for the Germans.

The Austrian population was around 50,000,000. Assuming that Austrian casualties were on the same ratio as German, the first year's loss was 1,800,000. But in addition to battle casualties and wastage thru prisoners, which for both the French and Germans is estimated at between 200,000 and 300,000, the Austrians lost 600,000 prisoners, or 900,000 in all. The American Embassy in Petrograd, which looks after Austrian prisoners, knew of nearly 700,000 last spring. Austrian total loss then for the first year may be fixed at 2,400,000, or the German figure. It is worth noting that the French official estimates, which make the totals for both much higher, make them approximately equal also.



There were then 2,660,000 Austrians available on August 15, 1915. Assuming that the casualty list be the same for next year, without the excessive loss of prisoners, which antedated German reorganization of the Hapsburg armies, the loss for next year will be 1,800,000 and the number available for service on August 15, 1916, will be 800,000. But 500,000 of these will be required to hold the Italians and the Serbs in check, and this leaves but 300,000 to aid the 150,000 Germans in holding back the Russians, whose European armies have never fallen below 1,500,000.

The case of England is different. The British losses for the first year are officially stated to have been 400,000. There have been enlisted in the first year 3,000,000, outside of those removed by death and disability. These 3,000,000 were available on August 15 of this year. Assuming Britain's loss for 1916 will be at the same rate as Germany's last year, it will approximate 1,000,000, and Great Britain, aside from further gains by enlistment (and she has a population of 1,000,000 available), will have 2,000,000 troops, to assist 1,200,000 French in holding back 1,750,000 Germans in the west. In addition, she will have her colonials and native troops, but these and the French colonials I am eliminating as an offset to the Turkish and Bulgarian troops. I also make no count of Serbians and Belgians.

In the cases of Russia and Italy we have a different condition. Russia's male population available is practically without limit. The only real limit is the number she can equip. She put 5,000,000 in during the first year, she lost about 3,000,000, possibly 3,500,000. Assuming she repeats the process, she will have on August 15, 1916, 1,500,000 troops confronting 150,000 Germans and 300,000 Austrians. As for Italy, she, too, can put large numbers of troops beyond her regular establishment in the field, but it is doubtful if she will attempt to go beyond 1,000,000. We may assume that on August 15, 1916, then, however severe her losses, she will have 1,000,000 troops in the field, as she had at the outset 3,500,000 to draw from and lost less than 200,000 in the first year. This million will be available against the 500,000 Austrians on her western frontier.

A glance at the table published above will reveal the whole weight of the argument based on conquest by attrition. It will explain why the Allies are confident of winning, if their alliance stands until next August. It will explain why Germany must get a decision in the meantime. It will demonstrate why many neutral observers hold the view, in which I share, that Germany has already lost the war. I should add that the figures above seem to me too small and that in my opinion the exhaustion will be felt before midsummer.

WAR AND THE BOOK WORLD

BY FREMONT RIDER

EDITOR OF THE PUBLISHERS' WEEKLY

FEW businesses were harder hit in all countries by the outbreak of the Great War than those which have to do with the making and selling of books. Naturally so: for books are not a human necessity like food, or a war necessity like shrapnel. They are a perpetual protest indeed against all that war stands for.

Here in the United States the effect of the war on the publishing world has been relatively unimportant. In the first weeks there was a sharp slackening; but now, whether as a reflex of our general business betterment or for some other reason, there is an equally decided betterment. The number of new books published—titles not volumes—has shown a significant drop since the war began, partly due to a natural cautiousness of the publishers in venturing new publications in these unsettled times, partly perhaps to an acceptance of the demand for "fewer and better books," which some of the most thoughtful men in the trade have been urging for several years past, but probably in largest measure the result of the shutting off of most of our English "importations." For it must be remembered that a very large proportion, perhaps one-third, of the books "published" in this country for the book trade are really imported small editions of English publications. These the war has largely shut off. Not a few in the trade think the American book trade is going to be prosperous just because fewer books *are* being published. The book production of the country has for some years past hovered around the 12,000 mark; and 12,000 new books a year did seem to be more than the buying public could at once digest.

As for distinctively "war books"—don't mention them to an American publisher! Some fingers were badly burned last fall and winter. Of course good books always sell, no matter what their subject matter, but just now a war flavor seems, if anything, to handicap a book here.

Great Britain is, of course, closest to our sympathies, and her book publishing and selling are in closest touch with our own. In general, and despite some recovery this fall, the war has "cut the heart out" of English publishing. Large proportions of the staffs of book establishments are at the front; many authors are there, too, and about all that is being written has a war tinge. Surest indication of all, the literary journals are flying flags of distress, our old friend *Notes and Queries* nearly going under recently, while the *Bookseller* has turned temporarily from a weekly to a monthly and the *Book Monthly* from monthly to quarterly. The retail trade has kept going, largely thru the increased sale of the cheap six penny, seven penny and shilling reprints and the even cheaper pamphlets, of which the war has brought a flood. Indeed "the return of the pamphleteer" has been one of the phenomena of the war everywhere, but especially in England.

And everybody in England believes the worst is yet to come. It will be some years probably before book business is entirely normal again. The economic load of war is going to be heavy even after the conflict ceases. Fewer books will be the rule in England for the course of the war at least, and fewer sales of those. But that will mean that the second rate book will find it harder to be born—so hard times may not prove an unmixed evil.

In France the book trade was practically paralyzed at mobilization. Authors, publishers, printers and readers were alike sent to the trenches and for months, except for books on some aspect of the war, there has been a practical dearth of new publications. Of late there has been some betterment, but for the present the trade is in hibernation.

But what of Germany, where, of all countries, book publishing is most solidly entrenched and where, of all countries, most has been done by governmental agency to succor staggering businesses? It must be confest that most of the help the German book trade has received from its government this time has been negative. However much the government may have wanted and expected war, the German book trade certainly did neither. It was in mid-celebration of its really remarkable Exposition of the Graphic Arts at Leipzig—and the war knocked that into a deficit of thousands of marks. Then, not content with calling two-thirds of its men off to war or war occupations, the government called in from the publishers all their copper photo-plates and electrotype plates and "shells" (from which most book printing is done nowadays) to make ammunition of. Then, when the book trade was getting over the first blow and developing a nice little trade in the guide books of the invaded territories, came a governmental *verboten* on certain indicated guide books, certain classes of military works, nearly all maps, etc., etc.—and these, in most cases, practically the only things that were selling. And last of all, when the greatest German antiquarian booksellers, who do a world-wide business, were congratulating themselves that at least that business could not all be taken away, came a more stringent censorship that ruled that all foreign correspondence had to be in German and that no code would be permitted. This shut down on all traffic in the classics and with foreigners unable to correspond in German, and that meant most of it.

And yet the German book trade has survived. Hundreds of periodicals have suspended publication; many, no doubt, permanently, the great and growing scarcity of paper—another peculiarly German problem—cutting a figure here. Many well-known publishers and authors and thousands of the publishing and allied trades have been killed in battle. But the *Börsenblatt*, the great German book trade newspaper, was still at last accounts appearing *daily*, as usual, filling up its barren pages with military advertisements begging for literature for the trenches. Stricken tho it is, publishing little new but war books, the German book trade with admirable spirit is still holding on, caring for its own distress and doing besides an immense work of book distribution for the soldiers.

In Belgium the book trade—and it was a flourishing one, too, before the war—has, so far as the Belgians are concerned, ceased to exist. Russia and Italy we know little about; their periodicals reach us fairly regularly; probably their book publishing also has been comparatively little affected as yet. Australia and Canada, reflecting the mother country, reported havoc at first and tell us of caution or stringency now. In short the literary world has received in the year past the greatest, most nearly universal jolt in its experience. In 1913, according to the figures compiled by *Le Droit d'Auteur*, the Swiss international copyright authority, the world's output of books was approaching the 180,000 mark; it is doubtful if in 1915 it will reach 100,000.

WHAT AMERICA READS WHILE EUROPE FIGHTS

A REVIEW OF THE NEW SEASON'S BOOKS

The business of The Independent Readers' Service is to help subscribers to find the right book. When you have a particular need write us about it and we will advise you what books there are that deal with the special subject about which you want to read and where you can get them. We are always interested in furthering the work of reading clubs and debating societies and shall be glad to assist them in getting the literature they need in book or magazine form.

Four American Biographies

EASILY the most important and most interesting of the season's output in biography is the *Life and Letters of John Hay.* Nature made him a poet, and he gave us "Jim Bludso" and "Liberty"; "Castilian Days" he also gave us. Nature placed him in the path of opportunity and she seized him and carried him thru statesmanship to a second fame. As secretary to Lincoln he rendered skilful and true service. "The Great Companion" is the title of the four chapters that show the comradeship in humor, sympathy, and endeavor of the two men. After this confidence and intimacy, John Hay was equipped for any responsibility that could fall to him.

The revelation of a really lovable man is always welcome to the reader, and that Mr. Thayer gives us; the pages are sunny with the charm of John Hay. The intimate Lincoln touches are to be treasured, and there is historical interest concerning the war and its leaders, and much as to later men, Howells, and Evarts, McKinley, Root, and Roosevelt.

The unsuspecting reader seeking relief from today's alarms will be startled when he is told that it fell to Hay "both as Ambassador and Secretary of State, to guard the United States against the earliest masked assaults of Germany." Further on in the chapter on "The German Menace" is shown somewhat of a plan to gather the United States, thru the German-Americans, under the wings of the Hohenzollern Eagle. The publication of this vivid chapter just now is surprizingly interesting.

Occasionally touching on subjects and men dealt with in the Hay biography, notably on Mr. Roosevelt. George Haven Putnam's *Memories of a Publisher, 1865-1915*, has a collateral interest. This autobiography brings to mind two other American autobiographies, those of Joseph Jefferson and Andrew D. White, almost contemporary, yet moving in other orbits. Still, one may easily imagine the three men under the same roof in New York, either the Century Club or wherever the genius of Rip van Winkle might dictate, and with them might have been the late John Bigelow, whose recently published autobiography is a monument to the veteran. Dr. Putnam's title is too narrow. He is truly a publisher with a long and good record, but he was a soldier, too, and he is a reformer to whom city and state are debtors, and then an author. He is, in a measure, a historian of his times, to take a phrase from Harper's famous letter to Mr. Blaine, writing a clear narrative that rapidly notes the leading incidents and touches neatly on the characteristics of the men he writes about. The book reminds one of good dinner-table reminiscence or evening talks. It is this intimate or unstaged quality that gives worth to his many anecdotes of honored men, Gladstone, Blackmore, Curtis, Roosevelt, Maitland, Uchida, Stevenson, and Fiske, of President Lincoln, and General Grant. These are very human stories and some are tagged with a shake of the head and a forgiving smile. Dr. Putnam's own accounts of his grand jury work, the battle for copyright, and of the Independent and Reform movements in city government are matters of permanent record and, as far as they go, must be accepted.

Still another biography, of very high value concerning somewhat different human interests, is that of *Henry Codman Potter*, by Dean Hodges. Bishop Potter may be said to have been born and trained for the large official service that he well performed.
